Re: NMPRC Case No. 22-00093-UT and Rule 17.9.572 NMAC
El Paso Electric Company’s Revised 2021 Annual Renewable Energy
Portfolio Report

Dear Ms. Sandoval:

Paragraph 52 of the Order modified Finding of Fact 5 of the Recommended Decision as follows:

The 2021 Report is deficient in that EPE failed to provide a thorough and prominent calculation of the actual percentage of EPE’s total 2021 retail sales comprised of renewable energy.

In accordance with the requirements of the Order, EPE’s Revised 2021 Report corrects the deficiency of its 2021 Report initially filed on May 2, 2022 and replaces that filing. Portions of the Revised 2021 Report that differ from EPE’s initially filed report are shown in red-line in Attachment A.

EPE has posted an electronic copy of its Revised 2021 Report on EPE’s website at https://www.epselectric.com/company/regulatory. A copy is being served electronically to the persons listed on the service list in NMPRC Case No. 22-00093-UT.
Respectfully submitted,

/s/Nancy B. Burns  
Deputy-General Counsel  
New Mexico Bar No. 7538  
El Paso Electric Company  
300 Galisteo St. Ste. 206  
Santa Fe, NM 87501  
Telephone (505) 470-9342  
nancy.burns@epslectric.com

ATTORNEY FOR EL PASO ELECTRIC COMPANY

Enclosures  
Service List
Based on the presentation in Table 4 below, EPE expects to retire 232,343 RECs towards compliance with the 2021 RPS, which represents 13.7% of actual New Mexico retail energy sales. Therefore, a shortfall of 107,881 RECs, relative to the full 20% REC requirement, will be made up with excess RECs, if any, generated in the future, consistent with the Final Order in Case No. 19-00099-UT.

REQUIREMENTS

A. COST OF CAPITAL, OPERATING, AND FUEL AND CARBON DIOXIDE EMISSIONS FROM RATE-BASED AND DEDICATED NON-RENEWABLE GENERATION RESOURCES
[ANNUAL RENEWABLE ENERGY PORTFOLIO REPORT-REVISED]

Annual Report Pursuant to the Renewable Energy Act, NMSA 1978, § 62-16-4(G) and the New Mexico Public Regulation Commission Rule 572, 17.9.572.19 NMAC
BEFORE THE NEW MEXICO PUBLIC REGULATION COMMISSION

NMSA 1978, § 62-16-4(G); NMPRC RULE 572, 17.9.572.19 NMAC

EL PASO ELECTRIC COMPANY'S 2021 ANNUAL RENEWABLE ENERGY PORTFOLIO REPORT

JUNE 2023
INTRODUCTION

Pursuant to the Stipulation, EPE's 2021 Plan included application of future excess renewable energy credits ("RECs") towards REC deficiencies for plan year 2021. The Plan estimated the RECs needed to achieve 20 percent RPS in 2021 based on EPE's net forecasted 2021 New Mexico retail energy sales of 1,724,010 megawatt-hours ("MWh"). EPE's actual 2021 New Mexico retail energy sales were 1,701,119 MWh.

Accordingly, the actual RECs needed for 20 percent RPS in 2021 was 340,224 RECs, calculated as 20 percent of the actual retail energy sales (1,701,119 MWh). Table 1 below provides the forecasted and actual retail energy sales and corresponding RECs needed to meet RPS on a month-to-month basis. RECs are generally acquired in MWh units and are so stated in the Report unless otherwise indicated.

¹ Subsections 62-16-4(G)(1) and (3) will be addressed in EPE’s 2022 Annual Procurement Plan filing.

2021 Total RECs Needed to Meet RPS: 340,224

Based on the presentation in Table 4 below, EPE expects to retire 232,343 RECs towards compliance with the 2021 RPS, which represents 13.7% of actual New Mexico retail energy sales. The 2021 shortfall of 107,881 RECs, relative to the full 20% REC requirement, will be made up with excess RECs, if any, generated in the future, consistent with the Final Order in Case No. 19-00099-UT.

**REA REQUIREMENTS**

A. **COST OF CAPITAL, OPERATING, AND FUEL AND CARBON DIOXIDE EMISSIONS FROM RATE-BASED AND DEDICATED NON-RENEWABLE GENERATION RESOURCES**
Pursuant to Section 62-16-4(G)(2) of the REA, Table 2 below provides the "capital, operating and fuel costs" during the 2021 calendar year of each of EPE's rate-based and dedicated non-renewable generation resources on a per megawatt basis. Table 2 also provides the "nonrenewable generation resources' carbon dioxide emissions on a per megawatt-hour basis" during 2021.

1. CO2 Emission Data is calculated using 40 CFR 75 Appendix G methodology.
2. Costs are based on the Company’s 2021 FERC Form 1 and general ledger. Depreciation expense is included in the Capital $/MWh calculation.

**B. STRATEGIES USED TO MINIMIZE COSTS OF RENEWABLE ENERGY INTEGRATION**

Pursuant to Section 62-16-4(G)(4) of the REA, EPE provides the following explanation of its strategies used to minimize costs of renewable energy integration. EPE works to minimize costs of renewable energy integration by soliciting generation resources by means of competitive
requests for proposals ("RFP") for capacity and RPS resources. The evaluation of RFP proposals is inclusive of the energy cost, energy storage capacity cost, interconnection and/or transmission upgrade costs, and any other costs associated with delivering the renewable energy to the EPE system. EPE also takes into consideration the reasonable cost threshold constraint as set by the REA in selecting new renewable energy generation options. As EPE integrates higher levels of renewable energy into its system, integration investments in addition to interconnection facilities and transmission upgrades, may be required. Also, EPE's RFP solicitations are open to all renewable energy generation technology types including demand-side and load-management resources, above and beyond, the current Efficient Use of Energy Act requirements.

EPE issues a RFP for RPS renewable energy generation resources when it is projected that existing and approved planned renewable resource energy is not sufficient to meet the RPS targets set forth in the REA. The issuance of the RFP is a mechanism used to solicit competitive bids from interested developers for desired RPS and/or capacity projects and to select the most cost-effective project(s), from the developer bids, independent of renewable generation technology type. The EPE New Mexico RFP selection process includes both, a qualitative review and quantitative review. The qualitative review utilizes criteria such as: bid submitted on time, eligible resource technology, submittal of all required forms, bidder experience, site control, interconnection plan, bidder financial capability, amongst others. The quantitative review takes the economic information for each proposal option and calculates the Levelized Cost of Energy ("LCOE"). The proposal bids are then short-listed based on the LCOE taking into consideration that all resource types and sizes are represented on the short-list. The short-listed proposal bids are modeled using PLEXOS software for selection of the most cost-effective resource portfolio that meets both, RPS and reliability constraints. PLEXOS is a robust power and energy system simulation software that
is widely accepted in the electric power industry for resource expansion, and selection of the most cost-effective resource portfolio, for long-term planning horizon. Interconnection and transmission upgrade costs are also evaluated for each proposal option and modeled in the PLEXOS EPE system model.

To verify the "cost-reasonableness" of the projects selected, EPE conducts a comparative analysis including the most current published levelized cost of energy reports from: Lazard’s Levelized Cost of Energy Reports, Lawrence Berkley National Laboratory ("LBNL") for southwest region independent system operators, Public Service of New Mexico ("PNM"), and the National Renewable Energy Laboratory Annual Technology Baseline reports (“NREL-ATB”).

**MERGER COMMITMENTS**

**A. EFFORTS TO ADD RENEWABLE ENERGY TO THE EPE POWER SUPPLY PORTFOLIO AND ASSURE COMPLIANCE DURING PRIOR CALENDAR YEAR 2021**

Pursuant to Commission Final Order adopting Amended Certification of Stipulation in Case No. 19-00234-UT, at Regulatory Commitment No. 18, EPE provides the status of efforts during the prior calendar year 2021 to add renewable energy to its power supply portfolio and assure compliance toward the New Mexico REA.

In 2021, EPE issued a 2021 New Mexico All-Source RFP to obtain 90-110 MW of capacity resources no later than May 1, 2025, and approximately 175,000 MWh of additional renewable annual energy with associated RECs online no later than May 1, 2025, to reliably meet its New Mexico customer load requirements and comply with the REA incremental RPS targets. The 2021 NM RFP was open to all renewable energy generation technology types. The NM 2021 RPS resource selection process is ongoing.
The 2017 All-Source RFP, 2019 RPS RFP, and 2021 New Mexico All-Source RFPs were open to all renewable energy generation technology types. Thus far, Solar PV has been the most cost-effective renewable resource for generating energy towards meeting the NM RPS and providing capacity for reliability. At higher levels of Solar PV, synergies between diverse types of renewable resources such as Wind and Solar, can be exploited to achieve a greater benefit to the electrical system. For the 2019 RPS RFP, EPE analyzed the synergies and cost effectiveness of the Solar PV, Wind, Battery Storage, and Geothermal bids, but at current levels of Solar PV in the EPE system, did not yield a more beneficial cost-effective portfolio. 2021 New Mexico All-Source RFP bids will be modeled using the PLEXOS software.

Currently, EPE has 3.2 MW of biogas from the Camino Real Land to Energy Facility ("CRLEF" or "Four Peaks") within its RPS portfolio that contributes approximately 9 percent of the current NM RPS energy.

Further, EPE will be joining the Western Energy Imbalance Market ("EIM") operated by the California Independent System Operator ("CAISO") in April 2023. The EIM facilitates greater amounts of new variable renewable resources, whether it's Solar or Wind, to be integrated into the local electrical system by improving wide-area coordination of operations for the bulk electric power system in the Western Interconnection. The primary objective of an EIM is to quickly dispatch generation (every 5 minutes) to meet load across a broad geographic region thus maximizing the use of wind and solar generation across the western region and mitigating the impacts of variable energy resources such as wind and solar by leveraging the geographic diversity of the participating utilities. The benefits of joining the EIM include: enhanced grid reliability, economic advantages for participants, and the mitigation of renewable energy curtailment.
EPE Resource Planning works closely with the EPE Transmission and Interconnection group(s) to quantify the impacts of integrating greater amounts of new renewable resources and battery storage on EPE’s system, identifying reliability issues and providing recommendations, to prepare the EPE transmission infrastructure to maintain the reliability of the system throughout the planning horizon.

Another effort to add renewable energy to the EPE power supply portfolio and assure compliance toward the New Mexico REA includes the development of the EPE Integrated Resource Plan ("IRP") which develops a long-term (20 year) plan that describes how the company will meet forecasted energy and capacity demands using both supply and demand side resources to ensure reliable service to customers in the most cost-effective manner. The IRP ensures that all resource needs, policy goals, statutory requirements, physical and operational constraints are met through the IRP resource choices. EPE’s 2021 IRP modeling and studies began in 2020, and the 2021 IRP includes a detailed roadmap as to how EPE will achieve the NM RPS throughout the planning horizon. EPE’s 2021 IRP Plan was filed with the NMPRC September 16, 2021, in Case No. 21-00242-UT and was accepted by the Commission.

Different from previous years’ IRP, the 2021 IRP, supported by E3 modeling, accounted for both, TX and NM capacity, and renewable requirements. Also, different from the previous years’ IRPs, the Effective Load Carrying Capability (“ELCC”) method was used to assign capacity contribution towards reliability for each resource type, including the existing gas, renewable, and nuclear resources. The industry established metric, (ELCC), is best suited for measuring resource adequacy contribution towards reliability given the inherent variability and intermittency of renewable resources such as wind and solar.
Finally, EPE worked with the "City of El Paso Renewable Generation Study" that provides the technical feasibility of integrating utility-scale renewable generation into EPE's system at greater amounts for its City of El Paso service territory. This study was completed on August 26, 2021.

**RULE 572 REQUIREMENTS**

**A. ITEMIZATION OF RENEWABLE ENERGY GENERATION AND/OR RENEWABLE ENERGY CERTIFICATE PURCHASES AND SALES**

EPE's renewable energy and REC purchases for calendar year 2021, including purchases from customers with distributed generation ("DG") and RECs from EPE's Holloman Air Force Base ("HAFB") facility, are listed below. EPE also used its own renewable energy generation resources to partially supply its Voluntary Renewable Energy Program ("VRE Program") during calendar year 2021.

**EPE-Owned Renewable Energy Generation**

In December 2009, EPE installed a 75.6 kW<sub>DC</sub> (approximately 64.3 kW<sub>AC</sub>) solar photovoltaic ("PV") system, at its Rio Grande Power Station located in New Mexico. EPE used the energy from this system to partially meet customer subscriptions under the VRE Program. In 2021, the PV system at Rio Grande Power Station generated 57,801 kWh.

In addition, EPE has six small solar generation facilities located in Texas that are assigned to its Texas retail jurisdiction. Along with the approximately 64.3 kW<sub>AC</sub> solar PV system installed in December 2009 at its Rio Grande Power Station in New Mexico, an identical size system was installed at the Newman Power Station in Texas, which generated 77,762 kWh in 2021. Another solar project, located on the rooftop of EPE's main offices in the Stanton Tower building in downtown El Paso (the "Stanton Project"), consists of mono-crystalline solar PV panels with a
total capacity of 31.4 kW_{AC}. In 2021, the Stanton Project generated 65,031 kWh. The energy generated by these solar generation facilities is delivered directly into EPE's distribution system.

In partnership with El Paso Community College ("EPCC"), EPE installed poly-crystalline PV panels with a total capacity of 14.5 kW_{AC} at the Advanced Technology Center facility at EPCC's Valle Verde Campus ("EPCC Project"). The panels are roof and awning mounted. Additionally, EPE donated 2 kW of the project's capacity, which is on pedestal mounts, to EPCC for instructional purposes. The system is owned and operated by EPE, and the energy generated is delivered directly into EPE's distribution system. In 2021, the EPCC Project generated 18,404 kWh.

Another solar project is located on land owned by EPE adjacent to the Wrangler Substation ("Wrangler Project"). The Wrangler Project is a 47.6 kW_{AC} solar concentrated photovoltaic ("CPV") system with dual-axis tracking. The CPV technology uses lenses to concentrate a large amount of sunlight onto a small area of solar PV materials to generate electricity. In 2021, the Wrangler Project generated 3,824 kWh. The energy generated is delivered directly into EPE's distribution system.

The "Van Horn Project," located at EPE's Customer Service Office in Van Horn, Texas, began commercial operation in August 2013. This solar installation is a 20 kW_{DC}, PV system that consists of 80 CentroSolar Poly-Crystalline E250 panels mounted on elevated structures. A monitoring system at the Van Horn Project facility allows EPE to measure the performance of each PV module in order to maximize solar power harvesting. The Van Horn Project generated 28,599 kWh in 2021. The energy generated is delivered directly into EPE's distribution system.

On May 31, 2017, EPE's Texas Community Solar 3 MW facility began commercial operation. This facility is located next to EPE's Montana Power Station in far East El Paso County. In 2021, this facility generated a total of 7,949,137 kWh of renewable energy.
In October 2018, the 5 MW Solar Project at HAFB in New Mexico became operational providing additional RECs to the RPS in the same year. The project was approved by the Commission in Case No. 15-00185-UT as a customer dedicated resource for HAFB. The project is owned by EPE and paid for by HAFB via a special rate over the life of the project, as approved by the Commission in Case No. 16-00224-UT. Consistent with the approvals in those cases, and EPE's 2016, 2017, and 2018 Plans, EPE has agreed to use the RECs for the RPS at no additional cost to the New Mexico RPS. In 2021, this facility generated a total of 9,207,261 kWh of renewable energy.

_EPE Purchases of Renewable Energy and/or RECs_

**ATTACHMENT 1** – Summary of Renewable Requirements and Purchases for 2021; 2021 WREGIS Compliance Report

EPE also provides the following required documentation regarding its renewable generation purchases.

**ATTACHMENT 2** – Monthly Solar Energy Purchase Documentation – Hatch Solar Energy Center 1 LLC

**ATTACHMENT 3** – Monthly Solar Energy Purchase Documentation – Solar Roadrunner LLC

**ATTACHMENT 4** – Monthly Solar Energy Purchase Documentation – SunE EPE1 and SunE EPE2 Purchased Power Agreements

**ATTACHMENT 5** – Monthly Solar Energy Purchase Documentation – Southern Power Company Macho Springs Purchased Power Agreement
ATTACHMENT 6 – Monthly Biogas Energy and REC Purchase Documentation – Four Peaks Energy, LLC, Camino Real Landfill Gas to Energy Facility ("CRLEF")

ATTACHMENT 8 – Summary of EPE's Distributed Generation Information

**EPE Other Renewable Purchases**

PSEG Energy Center is a 10 MW single-axis tracking system with poly-crystalline modules. It is located in Northeast El Paso, Texas, at EPE's Newman Power Station, and was commissioned in December 2014. EPE has a 30-year contract with the owner for the purchase of energy. In 2021, PSEG Energy Center produced 26,064,599 kWh.

**EPE Sale of Renewable Energy and/or RECs**

EPE sold 31,845 vintage 2017, 2018, 2019, and 2020 RECs in 2021 from the Texas jurisdictional portion of the Macho Springs facility.

**B. RENEWABLE ENERGY CERTIFICATE INFORMATION**

All RECs used for RPS purposes were acquired pursuant to EPE's Commission-approved procurement plans, purchased power agreements, and approved tariffs, such as Rate No. 16 – Purchased Power Service ("Rate 16") (NMPRC Case Nos. 05-00355-UT, 06-00365-UT, 07-00360-UT, 08-00219-UT, 09-00259-UT 10-00200-UT, 11-00263-UT, 12-00217-UT, 13-00223-UT, 14-00121-UT, 15-00117-UT, 16-00109-UT, 17-00090-UT, 18-00109-UT, and 19-00099-UT).

On December 13, 2007, EPE became a registered Account Holder with Western Renewable Energy Generation Information System ("WREGIS"). EPE also registered with WREGIS on June 21, 2011 as a Qualifying Reporting Entity to report generation of renewable facilities in
New Mexico with capacity greater than 360 kW. EPE also reports to WREGIS the aggregated RECs acquired from customers through EPE's Distributed Generation REC Purchase Program. A summary of all the RECs acquired by EPE in 2021 and the WREGIS State/Provincial/Voluntary Compliance Report ("WREGIS Compliance Report") are included in ATTACHMENT 1. The 2021 WREGIS Compliance Report contains the RECs EPE has retired to meet its 2021 RPS.

C. LIST OF RENEWABLE ENERGY CERTIFICATES

EPE retired 232,343 RECs in 2021 for the RPS.

Table 3 below summarizes the RECs acquired and subsequently retired for the RPS.

Telephone: (915) 222-1633
E-mail: emmanuel.villalobos@epelectric.com

3-7) Transaction Information

Hatch is a 5-MW solar PV facility located in Hatch, New Mexico, that sells renewable energy with associated RECs to EPE under a 25-year purchase power agreement ("Hatch PPA") executed on August 31, 2010. Hatch is obligated, per the Hatch PPA, to sell its entire solar facility output with the transfer of associated RECs to EPE. The Hatch facility began commercial operation on July 8, 2011, and has committed to deliver a minimum amount of renewable energy with associated RECs during each year of the Hatch PPA. In December 2016, the Hatch facility completed a re-paneling of the entire plant to replace the CPV technology with SunPower panels. This re-paneling was performed at no cost to EPE.

The Hatch facility delivered 12,790 MWh of energy to EPE in 2021. EPE paid $119 per MWh with associated RECs for a total cost of $1,522,044 for 2021.

3-7) Transaction Information

Solar Roadrunner LLC operates a 20-MW solar PV facility located in Santa Teresa, New Mexico, and sells its entire solar PV system output and transfers all generated RECs to EPE under a 20-year Purchase Power Agreement dated June 4, 2010. The facility began commercial operation on August 29, 2011, and is committed to deliver a minimum amount of renewable energy and associated RECs during each year of the PPA.

The facility delivered 49,185 MWh of energy to EPE in 2021. EPE paid $127.45 per MWh with associated RECs for a total cost of $6,176,881 for 2021. In August 2021, the facility delivered 2,881 MWh of energy in excess of 115 percent expected and, as per terms of the PPA, EPE paid $95.59 per MWh with associated RECs for the excess which is inclusive of the total cost for 2021.

Please see ATTACHMENT 3 for a copy of the monthly REC Transfer Forms from Solar Roadrunner LLC.

3-7) Transaction Information

In 2010, EPE entered into Purchase Power Agreements with SunE EPE1, LLC and SunE EPE2, LLC ("SunE PPAs") for two facilities located in New Mexico with total capacity of 22 MW. SunE EPE2 is a 12-MW facility located in Las Cruces, New Mexico, which came on-line on May 2, 2012. SunE EPE1 is a 10-MW facility located in Chaparral, New Mexico, which became operational on June 25, 2012. The two facilities sell their entire output and transfer all generated RECs to EPE under two 25-year PPAs, both dated November 8, 2010. Under the PPAs, a minimum amount of renewable energy and associated RECs is committed to being delivered from the Las Cruces and Chaparral facilities at a contract rate of $104.89 per MWh and $104.05 per MWh, respectively.
The combined facilities delivered to EPE 52,967 MWh of energy and associated RECs for a total cost of $5,535,595 in 2021.

Please see ATTACHMENT 4 for a copy of the monthly REC Transfer Forms from SunE EPE1 and SunE EPE2.
**MACHO SPRINGS SOLAR, LLC ("MACHO SPRINGS") PHOTOVOLTAIC RENEWABLE ENERGY WITH RENEWABLE ENERGY CERTIFICATES**

Address: Southern Power Company  
3535 Colonnade Parkway  
Birmingham, AL 35243  
Telephone: (205) 992-0343  
Fax: (205) 992-7953  
E-mail: wbonner@southernco.com

2) **Utility Owner**

Name: EPE  
Address: P.O. Box 982  
El Paso, TX 79960  
Telephone: (915) 222-1633  
E-mail: emmanuel.villalobos@epelectric.com

3-7) **Transaction Information**

In 2012, EPE entered into a Purchase Power Agreement with First Solar for a solar generation facility located adjacent to the Macho Springs Wind Farm in Luna County, New Mexico ("First Solar PPA"). In May 2014, a subsidiary of Southern Company, Southern Power, together with Turner Renewable Energy took over ownership of the plant. The facility is operated by First Solar, with power sold to EPE by Southern Power at the contact rate of $57.90 per MWh. The Macho Springs facility utilizes thin film PV technology on a ground mounted single axis tracking system, with a total capacity of 50 MWac. EPE obtained approval from the Commission for the First Solar PPA on May 1, 2013 in Case No. 13-00386-UT, and the generation facility began commercial operation on May 23, 2014. Macho Springs is utilized by EPE as a system resource and provides energy to customers in Texas and New Mexico. Energy (with associated RECs) from the facility is allocated monthly to New Mexico customers, with the associated cost for energy recovered through the Fuel and Purchased Power Cost Adjustment.
Clause ("FPPCAC") mechanism. As shown in Section F below regarding cost recovery under the RPS, no costs are associated with the RECs allocated to New Mexico from the Macho Springs facility.

The Macho Springs facility delivered 138,081 MWh of energy and associated RECs to EPE in 2021, and 26,943 MWh of that energy and associated RECs was allocated to New Mexico. The total energy costs in 2021 were $7,995,946, of which, $1,560,179 were allocated to New Mexico.

Please see ATTACHMENT 5 for an accounting of the energy allocated for New Mexico customers from Macho Springs, with RECs applicable to EPE’s RPS as approved by the Commission in Case No. 13-00223-UT.
FOUR PEAKS ENERGY, LLC'S CAMINO REAL LANDFILL GAS TO ENERGY FACILITY ("CRLEF") BIO MASS RENEWABLE GENERATION ENERGY AND RENEWABLE ENERGY CERTIFICATES

Fax: (541) 549-8766
Email: bbensonenergyneeringsolutions.com

2) Utility Owner

Name: EPE
Address: P.O. Box 982
         El Paso, TX 79960
Telephone: (915) 222-1633
E-mail: emmanuel.villalobos@epelectric.com

3-7) Transaction Information

The Four Peaks Energy, LLC CRLEF is a biogas Qualifying Facility ("QF"), and EPE purchases all net power produced by the facility under EPE's avoided cost tariff, Rate 16 – Purchased Power Service, on file with the Commission. EPE does not control output from CRLEF and, as a QF supplier, CRLEF has no delivery obligations. Prior to July 1, 2009, under a 10-year Interconnection Agreement executed on May 5, 2006, EPE obtained all the generated RECs associated with the gross output of CRLEF at no additional cost to EPE. In Case No. 09-00259-UT, the Commission approved EPE's ten-year agreement to purchase RECs produced by CRLEF delivered on or after July 1, 2009, at $15.00 per REC. In Case No. 18-00109-UT, the Commission approved extending that agreement with CRLEF for an additional ten years at an amended REC price of $30.00 per REC. The Commission’s Order
approving that REC purchase agreement was appealed to the New Mexico Supreme Court in Case No. S-1-SC-37458.

On November 6, 2019, the Commission issued an Order Granting the City of Las Cruces' Motion For Partial Stay Of Commission Order Pending Appeal To The New Mexico Supreme Court ("Stay Order") which stayed its approval of EPE's REC payments to CRLEF pending resolution of the appeal to the New Mexico Supreme Court in Case No. S-1-SC-37458. EPE stopped making REC payments to CRLEF effective with the October 2019 billing month pursuant to the Commission's Stay Order.

On December 16, 2021, the New Mexico Supreme issued a disposition by decision reversing the Commission’s Order in Case No. 18-00106-UT. On January 26, 2022 in Case No. 18-00106-UT, the Commission issued an Order Upon Remand (“Remand Order”), which (1) reissued the Appealed Order \textit{nunc pro tunc}, effective as of October 24, 2018, as amended in accordance with the Court’s Decision and Mandate, to disapprove the $30-per REC charge associated with energy from the CRLEF and (2) ordered EPE to file an advice notice adjusting its renewable energy rider with the Remand Order. Pursuant to that order, EPE filed its 5th Revised Rate No. 38-RPS Cost Rider, adjusted to return the REC charges collected through the RPS Cost Rider from November 6, 2019, over the remaining eleven months of 2022 and remove CRLEF costs included in the 2022 RPS Cost Rider rate resulting from EPE’s reconciliation of 2020 actual costs to actual revenues became effective February 1, 2022. CRLEF generated 19,840 RECs in 2021.

See ATTACHMENT 6 for a copy of the monthly REC Transfer Forms from the CRLEF and Monthly Outage Reports as required by the Commission's Final Order in Case No. 13-00223-UT.
EPE OWNED HOLLOMAN ATLAS SOLAR ARRAY- HOLLOMAN AIR FORCE

BASE/RENEWABLE ENERGY CERTIFICATES

1) Customer

Name: Holloman Air Force Base
Address: HAFB Air Dev Ct.
        Holloman AFB NM 88330

2) Utility Owner

Name: EPE
Address: P.O. Box 982
        El Paso, TX 79960
Telephone: (915) 222-1633
E-mail: emmanuel.villalobos@epelectric.com

3-7) Transaction Information

In August of 2018, the 5-MW EPE-owned solar facility located at Holloman Air Force
Base in Otero County began generating test energy; and, in October of 2018, the facility began
commercial operation. In the final order approving the CCN in Case No. 15-00185-UT, the
Commission stated that EPE shall make all RECs associated with energy produced by the facility
available at no cost for application towards its RPS compliance. As mentioned in section A on
page 8 of the report, the facility generated a total of 9,207,261 kWh of renewable energy in 2021.

Please see ATTACHMENT 7 for a copy of the REC documentation as well as the monthly
invoices to Holloman from EPE.
1) **Customers**

Customer Installed DG QF RECs

2) **Utility Owner/Purchaser**

Name: EPE  
Address: P.O. Box 982  
El Paso, TX 79960  
Telephone: (915) 222-1633  
E-mail: emmanuel.villalobos@epelectric.com

3-7) **Transaction Information**

In 2021, EPE purchased renewable energy from customer installed DG QFs and obtained 65,469 associated RECs, at a cost of $685,337 and an average price of $10.47 per MWh. These RECs are used to meet EPE's 2021 RPS. EPE's customer-sited DG REC program went into effect March 1, 2009, and program tariff was closed to new customers in 2017.

Please see ATTACHMENT 8 for a summary of EPE's 2021 Distributed Generation QF RECs.
D. RETIREMENT OF RECS TO MEET RPS COMPLIANCE

EPE supplied 13.50 percent of adjusted 2021 retail energy sales from renewable resources which equates to 67.50 percent of the adjusted 20 percent RPS target of 340,224 RECs. Pursuant to the Stipulation in Case Nos. 19-00099-UT and 21-00111-UT, EPE will apply excess RECs generated in the future toward deficiencies. EPE retired 232,343 RECs for the 2021 Plan Year. Accordingly, 107,881 excess REC credits generated in the future will be applied to the 2021 Plan Year, which demonstrates substantial compliance with the 20 percent RPS pursuant to the Stipulation. ATTACHMENT 1 includes a report from WREGIS confirming the retirement of RECs itemized in Table 4 below for purposes of compliance with the 2021 RPS.

E. VOLUNTARY RENEWABLE TARIFF REQUIREMENTS

EPE offers its New Mexico customers a Voluntary Renewable Energy tariff ("VRE Tariff") for those who want to support renewable energy projects. The VRE Tariff allows customers to purchase renewable energy, at a set premium, in 100 kWh blocks. EPE’s VRE Program and the VRE Tariff (Rate No. 32, Voluntary Renewable Energy Rate) were approved by the Commission in Case No. 3705, by Final Order issued December 17, 2002. Pursuant to that Final Order, EPE
provides an annual VRE accountability report to customers who participate in the program, which is filed on or around July 1 of each year. As of December 31, 2021, EPE had 37 New Mexico participants in the VRE Program. For calendar year 2021, EPE’s New Mexico customers subscribed to 625,200 kWh, and EPE collected $54,373 from its participating New Mexico VRE program customers during 2021. As of December 31, 2021, EPE has collected a cumulative total of $1,458,919 towards reinvestment in future renewable energy programs and projects.

EPE supplies renewable energy for VRE customers from its Rio Grande Solar PV installation. However, for 2021, EPE still required additional kWh for the VRE Program. EPE utilized RECs purchased from the Oso Grande Wind Farm owned by TEP and located in New Mexico. Utilizing these renewable energy resources, EPE was able to fully satisfy the 2020 REC requirements for the VRE Program in New Mexico. Renewable energy and RECs provided to New Mexico customers under the VRE Tariff are not used to comply with the New Mexico RPS requirements.

EPE will record and retire all RECs associated with renewable energy production and purchases used to meet its New Mexico customer subscriptions under the VRE Program.

F. APPROVED COST RECOVERY MECHANISMS

The Commission's Final Order in Case No. 17-00090-UT, approved EPE's original Rate No. 38 – Renewable Portfolio Standard Cost Rider, effective January 1, 2018 to recover EPE's Commission-approved procurement costs.

Subsequently, in Case No. 19-00099-UT, the Commission ordered EPE to file an Advice Notice to effect reconciliation of a 2018 RPS Cost Rider overcollection. Pursuant to that order, EPE filed a revised Advice Notice No. 264 to implement EPE's Second Revised Rate No. 38, which was effective January 1, 2020 through December 31, 2020. The RPS Cost Rider in effect
during 2020 additionally collected costs that EPE incurred for bundled energy and associated
RECs, costs for RECs, and costs associated with registration of RECs with WREGIS as required
by 17.9.572.13.E NMAC.

Table 5 below shows the costs associated with EPE's authorized 2021 procurement based
on the approved recovery method.

**2021 CATEGORY REC TOTAL:**

Notes:
1. One (1) REC is equivalent to purchasing one (1) MWh of energy generated from a renewable energy resource.
2. CRLEF weighting is one-for-one effective beginning 2019.
3. “Active RECs” are RECs that have been acquired, registered and certified in WREGIS.

MONTHLY STATEMENT OF RECS

Renewable Energy delivery for the month of January, 2021

Energy Delivered  907,142.10 kWh

SUPPLIER CERTIFICATION

I, Paramjeet Dagar, hereby certify that:

   The energy produced, sold and delivered by Hatch Solar Energy Center I, LLC to El Paso Electric Company from these facilities is from a renewable energy resource, as defined by the New Mexico Renewable Energy Act, NMSA 1978, Section 62-16-1 et seq., and the NMPRC Rule 572, Renewable Energy For Electric Utilities, 17.9.572 NMAC;

   Each kilowatt hour of electricity is generated using a solar fuel source; and

   No other Renewable Energy Certificates associated with the renewable energy produced and delivered by Hatch Solar Energy Center I, LLC to El Paso Electric Company have been traded, sold, retired or otherwise transferred by Hatch Solar Energy Center I, LLC to any other person or entity.

**SUPPLIER CERTIFICATION**

I, Dylan Sontag, hereby certify that:

The energy produced, sold and delivered by SunE EPE2, LLC to El Paso Electric Company from these facilities is from a renewable energy source, as defined by the New Mexico Renewable Energy Act, NMSA 1978, Section 67-16-1.314, and the FMPSC Rule 572, Renewable Energy for Electric Utilities, 17.9.572 NMAC.

Each kilowatt hour of electricity is generated using a Solar fuel source, and

No other Renewable Energy Certificates associated with the renewable energy produced and delivered by SunE EPE2, LLC to El Paso Electric have been traded, sold, retired or otherwise transferred by SunE EPE2, LLC to any other person or entity.

(1) Delivered energy equals gross production net of station power.

(1) Due to an interval data reporting issue with Macho Springs on 9/22/2021, 18,547 kWh were not recorded on the initial REC certificate. An amended REC certificate was issued for 9/22/2021 to account for the underreported kWh on this date. The full 11,502,018 RECs recorded on this date in the amended REC certificate.

Your Rights as a Customer
El Paso Electric (EPE) is dedicated to providing quality, reliable service to you, our valued customer. This booklet is presented as a summary of your rights as a customer and other useful information regarding your service with EPE. Please visit the EPE website at www.epelectric.com to access the "Your Rights as a Customer" booklet.

Energy Efficiency Programs
Energy Efficiency programs are designed to result in cost savings and benefit the environment. For every $1.00 spent on these programs, customers typically save nearly double that amount over time on the cost of providing electricity, and program participants will save even more. Learn more about these programs and rebates that may be available to you at www.epelectric.com.

Renewable Portfolio Standard Recovery
This Rider is established to recover Renewable Portfolio Standard (RPS) compliance costs.

EPE Contact: Brad Green, PO Box 982, El Paso, TX 79960
Ph: (915) 521-4475, Mbl: (915) 526-3978

I, Benny Benson, hereby certify that:

The energy generated, sold, and delivered by Four Peaks Energy, LLC. to El Paso Electric Company from this facility is from a renewable energy resource, as defined by the New Mexico Renewable Act, NMSA 1978, Section 62-16-1 et seq., and the NMPRC Rule 572, Renewable Energy For Electric Utilities, 17.9.572 NMAC;

Each kilowatt-hour of electricity is generated using biomass and/or landfill gas fuel sources, thus representing one (1) kilowatt-hour toward compliance with the renewable portfolio standard set forth in the New Mexico Renewable Energy Act and NMPRC Rule 572;

No other Renewable Energy Certificate(s) associated with the renewable energy produced and delivered by Four Peaks Energy, LLC to El Paso Electric Company have been traded, sold, or otherwise transferred by Four Peaks Energy, LLC to any other person or entity.

Your Rights as a Customer
El Paso Electric (EPE) is dedicated to providing quality, reliable service to you, our valued customer. This booklet is presented as a summary of your rights as a customer and other useful information regarding your service with EPE. Please visit the EPE website at www.epelectric.com to access the “Your Rights as a Customer” booklet.

Energy Efficiency Programs
Energy Efficiency programs are designed to result in cost savings and benefit the environment. For every $1.00 spent on these programs, customers typically save nearly double that amount over time on the cost of providing electricity, and program participants will save even more. Learn more about these programs and rebates that may be available to you at www.epelectric.com.

Renewable Portfolio Standard Recovery
This Rider is established to recover Renewable Portfolio Standard (RPS) compliance costs.

RENEWABLE ENERGY CERTIFICATE

Renewable Energy Generated: 1,991,349 kWh

Renewable Energy Provider: Four Peaks Energy LLC.
QF FERC File Docket: QF06-224-002
Generator Type: 2 x Caterpillar 3520C
Nameplate Capacity: 3.2 MW
Fuel Source: Landfill Gas
Generation Meter Manufacturer and Identification of Serial Number: CAT EMCP SN#15850009HE & 15760019HE

Location of Generator: Four Peaks Energy Plant, Camino Real Environmental Center,
1001 Camino Real Blvd, Sunland Park, New Mexico 88063

Contact: Benny Benson, Manager, Four Peaks Energy LLC.
15820 Barclay Drive, Sisters, OR 97759
Ph: (541) 719-1123, Mbl: (541) 390-7232

Interconnection Utility: El Paso Electric Company
Control Area Operator: El Paso Electric Company

EPE Contact: Brad Green, PO Box 982, El Paso, TX 79960
Ph: (915) 521-4475, Mbl: (915) 526-3978

I, Benny Benson, hereby certify that:

The energy generated, sold, and delivered by Four Peaks Energy, LLC to El Paso Electric Company from this facility is from a renewable energy resource, as defined by the New Mexico Renewable Act, NMSA 1978, Section 62-16-1 et seq., and the NMPRC Rule 572, Renewable Energy For Electric Utilities, 17.9.572 NMAC;

Each kilowatt-hour of electricity is generated using biomass and/or landfill gas fuel sources, thus representing one (1) kilowatt-hour toward compliance with the renewable portfolio standard set forth in the New Mexico Renewable Energy Act and NMPRC Rule 572;

No other Renewable Energy Certificate(s) associated with the renewable energy produced and delivered by Four Peaks Energy, LLC to El Paso Electric Company have been traded, sold, or otherwise transferred by Four Peaks Energy, LLC to any other person or entity.

Dallas, TX 75265-0801
**Your Rights as a Customer**

El Paso Electric (EPE) is dedicated to providing quality, reliable service to you, our valued customer. This booklet is presented as a summary of your rights as a customer and other useful information regarding your service with EPE. Please visit the EPE website at www.epelectric.com to access the "Your Rights as a Customer" booklet.

**Energy Efficiency Programs**

Energy Efficiency programs are designed to result in cost savings and benefit the environment. For every $1.00 spent on these programs, customers typically save nearly double that amount over time on the cost of providing electricity, and program participants will save even more. Learn more about these programs and rebates that may be available to you at www.epelectric.com.

**Renewable Portfolio Standard Recovery**

This Rider is established to recover Renewable Portfolio Standard (RPS) compliance costs.

For the Month of: December, 2021

El Paso Electric Meter #16470755

**9Renewable Energy Certificate**

Renewable Energy Generated: 848,070 kWh

Renewable Energy Provider: Four Peaks Energy LLC.
QF FERC File Docket: QF06-224-002
Generator Type: 2 x Caterpillar 3520C
Nameplate Capacity: 3.2 MW
Fuel Source: Landfill Gas

Generation Meter Manufacture and Identification of Serial Number: CAT EMCP SN#15850009HE & 15760019HE

Location of Generator: Four Peaks Energy Plant, Camino Real Environmental Center, 1001 Camino Real Blvd, Sunland Park, New Mexico 88063

Contact: Benny Benson, Manager, Four Peaks Energy LLC.
         15820 Barclay Drive, Sisters, OR 97759
         Ph: (541) 719-1123, Mbl: (541) 390-7232

Interconnection Utility: El Paso Electric Company
Control Area Operator: El Paso Electric Company

EPE Contact: Brad Green, PO Box 982, El Paso, TX 79960
             Ph: (915) 521-4475, Mbl: (915) 526-3978

I Benny Benson hereby certify that:

The energy generated, sold, and delivered by Four Peaks Energy, LLC. to El Paso Electric Company from this facility is from a renewable energy resource, as defined by the New Mexico Renewable Act, NMSA 1978, Section 62-16-1 et seq., and the NMPRC Rule 572, Renewable Energy For Electric Utilities, 17.9.572 NMAC;

Each kilowatt-hour of electricity is generated using biomass and/or landfill gas fuel sources, thus representing one (1) kilowatt-hour toward compliance with the renewable portfolio standard set forth in the New Mexico Renewable Energy Act and NMPRC Rule 572;

No other Renewable Energy Certificate(s) associated with the renewable energy produced and delivered by Four Peaks Energy, LLC to El Paso Electric Company have been traded, sold, or otherwise transferred by Four Peaks Energy, LLC to any other person or entity.

Your Rights as a Customer

El Paso Electric (EPE) is dedicated to providing quality, reliable service to you, our valued customer. This booklet is presented as a summary of your rights as a customer and other useful information regarding your service with EPE. Please visit the EPE website at www.epelectric.com to access the "Your Rights as a Customer" booklet.

Energy Efficiency Programs

Energy Efficiency programs are designed to result in cost savings and benefit the environment. For every $1.00 spent on these programs, customers typically save nearly double that amount over time on the cost of providing electricity, and program participants will save even more. Learn more about these programs and rebates that may be available to you at www.epelectric.com.

Renewable Portfolio Standard Recovery

This Rider is established to recover Renewable Portfolio Standard (RPS) compliance costs.

Your Rights as a Customer

El Paso Electric (EPE) is dedicated to providing quality, reliable service to you, our valued customer. This booklet is presented as a summary of your rights as a customer and other useful information regarding your service with EPE. Please visit the EPE website at www.epelectric.com to access the “Your Rights as a Customer” booklet.

Energy Efficiency Programs

Energy Efficiency programs are designed to result in cost savings and benefit the environment. For every $1.00 spent on these programs, customers typically save nearly double that amount over time on the cost of providing electricity, and program participants will save even more. Learn more about these programs and rebates that may be available to you at www.epelectric.com.

Renewable Portfolio Standard Recovery

This Rider is established to recover Renewable Portfolio Standard (RPS) compliance costs.

Brad,

I believe we have enough documentation and information to move forward. Unit W7202 has been moved to the approval queue. Mary Frantz will be in touch, should we require any additional information.

Kind Regards,

Chloé Hansen

Chloe, hopefully you have all the files now. I had to still zip the "as built" stamped engineering drawings and the size went from 20 MB to 16 MB and I hope you got it. I did not receive a notification that it did not go. Please let me know. Thanks for your help.

Hopefully you now have everything as below:

Section 3.1 – WREGIS Acknowledgement of Station Service

Section 3.1 (a):

1. EIA 860 for most recent year
2. Utility Interconnection Agreement (Please see attached "as built" stamped engineering drawings as per previous discussions with WREGIS, there is no Interconnection Agreement – See attached e-mail communication with Marshelle Butler back in June 2018)
3. Manufacturer's Specifications
4. Revenue Meter ID – 3180330084 (see pic attached)
5. Purchase Power Agreement – see copy of Holloman Contract for Service between EPE and Holloman – see Exhibit B Special Rate Contract page 33 of 53 – see attached e-mail communication with Marshelle Butler back in June 2018
6. Rights to environmental attributes – see copy of CCN Final Order and Recommended Decision (page 21 under Decretal Paragraph A, (6).
7. Notification of Commercial Operation (i.e. Substantial Completion Certificate)
BEFORE THE NEW MEXICO PUBLIC REGULATION COMMISSION

IN THE MATTER OF EL PASO ELECTRIC COMPANY'S APPLICATION FOR A CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY FOR A 5MW SOLAR POWER GENERATION PROJECT AT HOLLoman AIR FORCE BASE

Case No. 15-00185-UT

---

FINAL ORDER
ADOPTING RECOMMENDED DECISION WITH MODIFICATION

THIS MATTER comes before the New Mexico Public Regulation Commission (the "Commission") upon the September 30, 2015 Recommended Decision issued by Hearing Examiner Carolyn Glick on the Application of El Paso Electric Company ("EPE") for a Certificate of Public Convenience and Necessity ("CCN") for a 5MW Solar Generation Project at Holloman Air Force Base in Otero County, New Mexico (Project) in accordance with NMSA 1978, Sections 62-9-1 and 62-9-6. Having considered the pleadings, testimony and the Recommended Decision and being otherwise duly informed in the premises,

THE COMMISSION FINDS AND CONCLUDES:

1. The Commission has jurisdiction over the parties and the subject matter of this case.

2. No exceptions to the Recommended Decision have been filed by any of the parties to this proceeding.

3. The Recommended Decision, including the Statement of the Case, Discussion, Findings of Fact and Conclusions of Law, and Declaratory Paragraphs recommended by the Hearing Examiner, is well taken and should be ADOPTED, APPROVED, and ACCEPTED as the Order
of the Commission with the exception of Decretal Paragraph A(2). The Commission notes that because decertal paragraphs A(2) and B overlap, but potentially conflict, paragraph A(2) should be removed. Because Paragraph B is broader and affords ratepayers greater protection from potential unrecovered costs of the Project, it should control.

IT IS THEREFORE ORDERED:

A. The Recommended Decision, including the Statement of the Case, Discussion, Findings of Fact and Conclusions of Law, and Decretal Paragraphs recommended by the Hearing Examiner, as modified by the removal of paragraph A(2), is well taken and should be ADOPTED, APPROVED, and ACCEPTED in its entirety as the Order of the Commission.

B. This Order is effective immediately.

C. Copies of this Order shall be provided to all persons listed on the attached Certificate of Service, via e-mail to those whose e-mail addresses are known, and otherwise via regular mail.

D. This Docket is closed.
ISSUED under the Seal of the Commission at Santa Fe, New Mexico this 7th day of October, 2015.

RE: EDF response to El Paso Electric’s 2017 All Source RFP Best and Final Notification

Dear Omar,

EDF Renewables (“EDF”) appreciates El Paso Electric’s (“EPE”) interest in the Oso Grande wind and Rio Grande solar projects. EDF is eager to provide Best and Final responses (“BAFO”) to EPE for consideration of both projects in EPE’s open request for proposals. This BAFO includes updated pricing, clarifications on project sizing and contingent bids, and responses to project sensitivities requested by EPE. EDF looks forward to discussing this updated bid at EPE’s earliest convience, which includes updated PPA pricing below:

![Table showing updated PPA pricing](insert_table)

www.edf-re.com
Both projects presented by EDF Renewables can be built to accommodate El Paso’s load requirements. As with most projects, the larger the size, the more savings EPE can realize. In the case of Oso Grande, however, those savings will be realized through contracts with other utilities and corporate customers, already under negotiation. Under an NDA, EDF Renewables can disclose more to EPE and discuss how those savings, and those at Rio Grande Solar, can be best utilized to achieve EPE’s goals for the 2017 open request for proposal (“RFP”).

Thank you for your consideration of this proposal. Please feel free to contact me directly at 646-287-9912 or Ian.Black@edf-re.com with any questions.

Very truly yours,

Ian Black
Senior Director Development, Regional Lead – West
Below are the responses to the clarification questions posed by the El Paso Electric team. EDF is available for follow up phone call(s) with the EPE team to walk through these answers and provide any further clarification needed on the projects, or pricing and structure.

1. Facility capability for curtailment during off-peak and shoulder months. It may be full curtailment of output and may include a high frequency of occurrence during low load months. Describe project structure for instances when EPE could possibly curtail your proposal’s output due to operational constraints on EPE’s system.
   a. **Response:** EDF can offer EPE the ability to curtail the project, provided EPE compensates Seller at the Contract Price plus (wind only) the grossed-up PTC. For a wind project, if EPE needs the ability to curtail significant volumes of energy then EDF will need to evaluate the impact to the Project (for instance, accelerated wear on blades and bearings).

2. Confirm communication setup will be NERC Critical Infrastructure Compliant (“CIP”) compliant as applicable.
   a. **Response:** Yes, we can confirm that the project(s) will be NERC Critical Infrastructure Compliant (“CIP”).

3. Define the project’s dispatch capabilities and describe your proposals technology capability such as inverter and controls capable of output regulation/curtailment for load following, frequency response and voltage support.
   a. **Response:** The project will have a plant controller capable of regulating generator (inverter + turbine) output from 0% - 100%. The plant controller will be capable of receiving 3rd party signals for regulation of power including dispatching authorities.

4. Include description of battery storage interconnection design (i.e. DC or AC coupled) and total facility output capacity (i.e. can full solar nameplate production and battery nameplate output) be supplied simultaneously.
   a. **Response:** For solar, EDF suggests a DC coupled battery as this: (a) costs less than an AC coupled battery, (b) can capture more of the otherwise clipped energy, (c) has lower losses when charging from solar than an AC coupled battery. The hybrid facility’s max output will not exceed the solar’s/wind’s stand-alone max output.

5. Confirm if design allows for grid charging. If design does allow grid charging, an allotment for grid charging is requested to allow for charging during unforeseen system conditions.
   a. **Response:** EDF is able and suggests using DC coupled, bidirectional batteries, granting the site the ability to charge from the grid or from solar.

6. Define if the charging of the storage must be sourced from the renewable resource due to ITC benefits. Describe if upon completion of acquiring the ITC benefits will EPE have the capability to charge battery storage from the grid.
   a. **Response:** EDF’s price for a solar + storage configuration will assume 100% ITC (100% charging from solar, at least in years 1-5). EDF is happy to provide sensitivities to alternate ITC scenarios upon request.

7. Define fuel cell manufacturer.
   a. **Response:** EDF plans to utilize Lithium Ion batteries at the projects that will be provided by a major battery manufacturer.
8. Re-iterate that capabilities for battery dispatch (charging and discharging) control via EPE EMS is required.
   a. Response: EPE is granted control of the battery charging and discharging during the duration of the contract. Battery operation must be within predetermined guidelines that are agreed upon by both parties (i.e., number of cycles per day, amount of grid charging, etc.) Once short-listed EDF will work closely with EPE to determine the intended application(s), which will inform the Operating Parameters and battery suppliers that will be provided.

9. Describe ability to provide 7-day, day-ahead, and hourly output forecast allowing for EPE the capability to establish pre-defined output schedules for dispatch purposes.
   a. Response: Please see the attached file titled "Short Term Wind Power Forecasting: Notes about Methodology and Validation" for a better understanding of EDF's ability to provide wind forecasting.

10. Describe if your proposal is contingent on acquiring government incentives such as the Investment Tax Credit and provide expected plan to ensure acquiring those incentives.
    a. Response: Yes. Based on EDF RD's extensive experience in New Mexico, it is expected the Oso Grande Project will require 18 months to complete development, allowing the project to claim 100% of the valuable Renewable Energy Production Tax Credit. To take full advantage of the wind resource at Oso Grande, EDF RD is including wind turbines fully qualified for the expiring Renewable Energy Production Tax Credit ("PTC"). On the solar side, IRS guidance is forthcoming and EDF RE is confident the same timeline will apply – EDF RE has secured modules to achieve full 30% ITC qualification.

11. Confirm if your proposal reflects the latest import tariffs and Tax reform.
    a. Response: The proposal reflected here includes all impacts of known import tariffs and tax reform.

12. Provide status update on your proposal's site control/land acquisition.
    a. Response: 100% site control for both Rio Grande and Oso Grande have been secured under long-term lease agreements.
BEFORE THE NEW MEXICO PUBLIC REGULATION COMMISSION

IN THE MATTER OF EL PASO ELECTRIC COMPANY'S APPLICATION FOR A CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY FOR A 5 MW SOLAR POWER GENERATION PROJECT AT HOLLOMAN AIR FORCE BASE

Case No. 15-00185-UT

RECOMMENDED DECISION

Carolyn R. Glick, Hearing Examiner for the New Mexico Public Regulation Commission (PRC or Commission) issues this Recommended Decision pursuant to 1.2.2.37(B) NMAC. The Hearing Examiner recommends that the Commission adopt this Recommended Decision in its Final Order. The Hearing Examiner FINDS AND CONCLUDES:

1. Statement of the Case

On June 15, 2015, El Paso Electric Company (EPE) filed an Application seeking expedited approval of a certificate of public convenience and necessity (CCN) for EPE to construct, own and operate a 5 megawatt (MW) solar photovoltaic generating plant within the Holloman Air Force Base (HAFB) in Otero County, New Mexico, to be called the Holloman Solar Facility (the Project or Facility). The Project would be built at the request of HAFB for purposes of load retention and the costs of the Project would be paid for by HAFB. In support of its Application, EPE filed the Direct Testimonies of James Schlicht, Richard Turner, and Cynthia Prieto.

On June 24, 2015, the Commission issued an Order designating the undersigned to preside over this proceeding. The Commission ordered the undersigned to attempt to conduct any required hearing and expeditiously issue a recommended decision consistent with EPE’s stated goal of obtaining approval of its Application by November 30, 2015.
The PRC may approve an application for a CCM without a formal hearing if no protest is filed within 60 days of the date that notice is given. NMSA 1978, § 62-9-1(C).

The Hearing Examiner issued a Procedural Order which, among other things, (i) set an August 11, 2015 deadline for filing Staff/Intervenor Testimony; (ii) set an August 21, 2015 deadline for filing Rebuttal Testimony; (iii) set a September 10, 2015 protest deadline; and (iv) scheduled a public hearing on September 15 and 16, 2015. However, the Order states that the “hearing may be vacated if deemed not required at the discretion of the Hearing Examiner or Commission.”

Motions for Leave to Intervene were filed by the Coalition for Clean Affordable Energy and Dona Ana County.

Staff filed the Direct Testimonies of Bruno Carrara and David Ault. No Intervenor filed testimony.

In response to Bench Requests, EPE filed the Supplemental Testimonies of James Schlicht and Richard Turner.

EPE filed a Proof of Publication, showing that the Notice attached to the Procedural Order was published in the Las Cruces Sun-News on July 9, 2015.

No protests were filed by the September 10, 2015 protest filing deadline.

On September 9, 2015, the Hearing Examiner issued a Bench Request requiring EPE, after conferring with the parties, to file a response stating whether any party believed that a hearing should be held in this case and, if not, whether the parties agreed to admission into evidence of documents listed in the Bench Request.

On September 11, 2015, EPE filed a Response to the Bench Request, signed and approved by all parties, stating that all parties agreed that the hearing should be vacated.
and that the documents identified in the Bench Request should be admitted into evidence. The Response also states that EPE agrees to the conditions recommended by Staff witness Bruno Carrara at page 13 of his Direct Testimony (conditions 'a' through 'h'), and that EPE and Staff agree that conditions 'c' and 'f' can be combined into one compliance filing to be filed no later than 45 days after the in-service date of the Project.

On September 11, 2015, the Hearing Examiner issued an Order Vacating Hearing and Admitting Exhibits into Evidence. She found that, because no protest was filed and because of the uniqueness of the nature of EPE's CEN Application, a public hearing on the merits of EPE's Application was not required. The Order admitted the following exhibits into evidence:

**EPE Exhibits:**
1. Direct Testimony of James Schicht
2. Direct Testimony of Richard Turner
3. Direct Testimony of Cynthia Prieto
4. Supplemental Testimony of James Schicht (cited as Schicht First Supplemental)
5. Supplemental Testimony of Richard Turner
6. EPE's Corrected Cover Letter, dated August 21, 2015, pursuant to 17.9.570.11 NMAC

**Staff Exhibits**
1. Direct Testimony of Bruno Carrara
2. Direct Testimony of David Ault

On September 15, 2015, the Hearing Examiner issued a Third Bench Request requiring EPE to file additional Supplemental Testimony and, after conferring with the parties, file a response stating whether the parties agreed to admission into evidence of EPE's response to this Bench Request.

On September 18, 2015, EPE filed the Supplemental Testimony of James Schicht. It also filed its response to Third Bench Request, signed and approved by all parties, stating
that all parties agreed that Mr. Schichtl’s Supplemental Testimony should be admitted into evidence without the necessity of a hearing.

On September 30, 2015, the Hearing Examiner issued an Order admitting into evidence the following exhibit:

_EPE Exhibit_

7. James Schichtl’s Supplemental Testimony filed on September 18, 2015 (cited as Schichtl Second Supplemental)

II. EPE’s Retail Contract with Holloman Air Force Base

EPE is a Texas corporation registered to conduct business in New Mexico. Schichtl Direct B; Carrara Direct 4. It is a public utility as defined by the New Mexico Public Utility Act.

In Case No. 2722, the PRC allowed EPE to enter into special rate contracts with non-residential customers as allowed by NMSA 1978, § 62-6-26 (‘Economic development rates for gas and electric utilities; authorization’). The PRC required PRC approval of such special rate contracts before they take effect and ordered that EPE would have the burden of proof in a future rate case to demonstrate why any revenue shortfall resulting from special rate contracts should be allocated to other customers. Case No. 2722, Final Order (9-24-90). The latter provision reflects the PRC’s intent that special rate contracts include pricing terms above incremental costs. Case No. 06-00090-UT, Final Order, ¶ 8 (5-9-04).

In Case Nos. 03-00302-UT and 09-00171-UT, the PRC allowed EPE to continue to enter into special rate contracts, subject to the same conditions. Case No. 03-00302-UT, Final Order (4-27-04); Case No. 09-00171-UT, Final Order Conditionally Approving and Clarifying Unopposed Stipulation (12-10-09), Exh. 1, § 7.

---

The statute was amended in 2015.
In Case No. 06-00090-UT, the PRC approved a special retail contract between EPB and HAFB dated February 28, 2006, governing the terms and conditions of EPB's provision of electric service to HAFB (Current Contract). The term of the contract is ten years and expires on January 31, 2016. Case No. 06-00090-UT, Final Order, ¶ 4. The PRC approved the contract "upon the express condition that EPB shall have the burden of proof to demonstrate why any revenue shortfall resulting from its special rate contract with HAFB should be allocated to other customers." Id., ¶ 4. EPB witness James Schiffel says that EPB does not allocate any revenue shortfall under the Current Contract. Schiffel Direct 5-6.

Under the Current Contract, HAFB pays a monthly demand charge of $13/kW of metered demand and an energy charge of $0.04677/kWh. Schiffel Second Supp. 3. Absent the Current Contract, HAFB would pay the rates under EPB's Rate No. 10 (Military Research and Development Power Rate), which are a monthly demand charge of $19.29/kW of metered demand and an energy charge of $0.04330/kWh.

In 2009, the population of HAFB was 5,854. By 2013, the population had grown to 11,964, a 49% increase. Ault Direct 6.

In 2014, EPB's revenue from HAFB ($5,156,014) was 2.69% of its total New Mexico revenue ($191,983,083). In 2014, HAFB's energy use (70,784 MWh) was 4.51% of total New Mexico energy use by EPB's customers (1,641,388 MWh). Schiffel Second Supp. 3-4.

The United States Air Force's Energy Strategic Plan includes a goal of increasing facility consumption of renewable or alternative energy to 28% of total electricity use by 2025. Exh. JS-1-8, p. 15, in Schiffel Second Supp.
III. **Standard for Approval of a CCN**

The PRC’s Integrated Resource Plan Rule (IRP Rule), 17.7.3 NMAC, is relevant to consideration of a CCN request. The IRP Rule requires that utilities file substantive plans for system-wide resource planning and additions, in part to assist the Commission in its review of plant additions that require CCN approval. Specifically, the IRP Rule states: "In a proceeding concerning a utility's request for a CCN for a new utility resource... the utility shall present evidence that the requested resource is consistent with the commission-accepted utility IRP. Evidence that the resource is consistent with the IRP, and that there have not been material changes that would warrant a different course of action by the utility, will constitute prima facie evidence that the resource type, but not the particular resource being proposed, is required by the public convenience and necessity."

17.7.3.12(11) NMAC.

Also, PRC Rules 17.5.440 NMAC ("Rule 440") and 17.9.570 NMAC ("Rule 570") require certain informational filings for plant additions. Under Rule 440, a utility must
provide notice and technical and cost information to the Commission regarding anticipated transmission, distribution or generation plant extensions and additions. Under Rule 870.11(C)(2), a utility must provide the Commission with notice and cost information for new capacity additions.

IV. EPB’s Request for a CCN

EPB requests a CCN to construct, own and operate a 5 MW ground-mounted solar photovoltaic (PV) generating facility on land wholly within Holloman Air Force Base (HAFB), located southwest of Alamogordo in Otero County (the Project or Facility).

Schlick: Direct 3. The energy from the Project would be delivered to the HAFB distribution system but the Facility would be an EPB-owned resource dedicated to serve HAFB. HAFB would be the sole purchaser of energy generated by the Facility. Turner Supp. 2-3; Carrara Direct 5.

The Project would use a single-axis tracking system to allow the PV panels around one axis to follow the sun as it moves across the sky, which increases the solar radiation absorbed by the panels and the capacity factor of the Facility, in contrast to a fixed system. EPB expects the Project to generate 14,022 MWh in the first year, equaling about a 32% capacity factor. Turner Direct 5.

The Project was requested by the United States Air Force (USAF) to help it meet a renewable energy goal to receive 25% of its energy from renewable resources by 2025. Turner Direct 3. USAF desires to take advantage of the cost reduction available from a 30% Investment Tax Credit (ITC) because a lower cost for the Project equates to a lower cost of energy for USAF. EPB requests the CCN to accommodate HAFB, one of its major New
Mexico customers, in meeting its unique energy needs. Schiebel Direct 6-7, 10; Turner Direct 7.

EPE would incur the Project costs, but would recover all costs from HAFB over the life of the Facility. EPE would not seek rate recovery of the Project costs from its New Mexico customers other than HAFB. The full cost of the Facility would be recovered through HAFB's purchase of energy from EPE under a special rate contract (Replacement Contract) "for load retention purposes." The Replacement Contract would replace the existing 10-year Contract (Current Contract) expiring in January 2016 and would be subject to PUC approval. The Replacement Contract has not yet been executed. EPE says, "As such, the CCN could be conditioned upon HAFB paying for the costs of the Project and its energy output." Schiebel Direct 5, 13; Turner Supp. 3.

In its first full year of operation, the Facility is expected to produce 14,023 MWh or 19.81% of HAFB's 2014 energy use. Schiebel Second Supp. 3.

HAFB would lease to EPE about 53 acres of land on which the Project would be constructed. The cost of the lease to EPE is still being negotiated, but no lease cost would be recovered from any EPE ratepayer other than HAFB. The lease cost would be included in the cost of energy charged to HAFB. Schiebel Direct 10; Turner Direct 4; Turner Supp.

EPE proposes to retain the renewable energy certificates (RUCs) associated with generation of solar energy from the Facility at no cost and would apply the RUCs to its New Mexico Renewable Portfolio Standard with no impact to its Renewable Cost Threshold. Schiebel Direct 3, 8, 10.

Under the Replacement Contract, EPE expects that HAFB would pay a fixed energy price for energy produced by the Facility. EPE estimates a levelized cost of energy (LCOE)
for the 30-year expected life of the Facility at $85.30 per MWh. Schichtl Direct 11-12. Staff suggests that calculating a LCOE for the Facility is not appropriate and estimates a $72.56 per MWh cost of energy, which is the simple arithmetic average of the energy unit over 30 years. Staff estimates a $141 per MWh cost of energy in the first year of operation, declining to $39 per MWh after 30 years. Staff observes that the per MWh cost is relatively high.\[1]\) Carrara Direct 6-7.

EPE would finance the Project through debt and equity and would recover all financing costs from HAFB. EPE expects that financing the Project would not negatively affect its financial condition. During construction of the Project, EPE expects to maintain its current bond ratings for Senior Notes of BBB by Standard & Poor’s and Ba2 by Moody’s. Schichtl Second Supp. 2.

Expenditures for solar PV panels and other equipment to be used in the Project are eligible for an ITC of 30% of the qualifying cost of energy property in service before January 1, 2017.\[2\] For example, if the qualifying cost of the energy property is $12 million, the ITC is $3.6 million ($12 million x 30%). If EPE owes $5 million in federal taxes, it can reduce the $5 million federal tax liability to $1.4 million by applying the full ITC ($5 million - $3.6 million). Priora Direct 5-6.

Also, the tax basis of the energy property would be reduced by 50% of the ITC or $1.8 million. Using the same example, the tax basis of the energy property would be $10.2 million ($12 million - $1.8 million), resulting in accelerated tax depreciation of the...
property. Under this example, EPE estimates a $3.57 million decrease in federal taxes resulting from the accelerated tax depreciation. Id. at 6.

The total net decrease in EPE’s taxes under the above example is $6.5 million.

Taking advantage of the ITC would actually decrease the cost of the Project because EPE would use the decrease in income tax expense resulting from the ITC to reduce the cost of the Project charged to HAEC. Id. at 6-8.

EPE seeks a CCN by November 30, 2015, so that the Project can be placed in service by December 31, 2015, to take advantage of the 30% ITC. Schiebel Direct 5. If the Project is placed in service after December 31, 2015, the ITC drops from 30% to 10%. Price Direct 4; Ault Direct 7. EPE expects to complete the Project by November 1, 2016. Turner Direct 4.

If the Project is not placed into service until after December 31, 2015, and the ITC is only 10%, then EPE estimates that its total net decrease in taxes under the above example would only be $4.9 million, compared to the estimated $6.5 million decrease in taxes resulting from a 30% ITC, a difference of $1.6 million or 13% of the Project cost. Price Direct 8; Exhs. CSP-1 & CSP-2.

EPE did not include the Project in its 2012 IRP Four Year Action Plan for 2013-2016. EPE filed a Notice of Material Change to the 2012 IRP to recognize the Project. Price Exh. 6.

EPE did not issue a request for proposal (RFP) for the Project because it would have had to issue the RFP by August 2014 to complete the Project by December 31, 2016, and the USAF did not have approval of the Project by August 2014. The USAF informed EPE in December 2014 that it had received approval of the Project and desired to take advantage of the 30% ITC. EPE decided that there was insufficient time to issue a RFP and qualify for
the 30% ITC. For this reason, EPE asked a winning bidder of a concurrent RFP process for a similarly sized solar project in Texas to bid on the Project. Through that process, EPE chose Gehrlicher Solar American Corporation because Gehrlicher proposed the most economical option for a similar project. As a check, EPE solicited a bid from the contractor selected for a solar project at Fort Bliss, which had a higher levelized cost of energy than Gehrlicher’s bid. Turner Direct 3, H-9.

EPE provided the information for the Project required by Rules 440 and 570.

Schlicht Direct 19

V. Staff’s Recommendation on EPE’s Request for a CCN

Staff concluded that granting EPE’s request for a CCN is in the public interest.

Carrara Direct 13. Staff identified the following benefits of granting EPE’s request:

- EPE would continue to serve one of its largest customers at no cost to EPE’s other New Mexico retail customers;
- EPE could apply the RBCs generated by the Project toward its RPS at no cost to its other New Mexico retail customers; and
- HAFB would be assisted in meeting its energy goals.

Ault Direct 10,

Staff found that EPE has met the requirements of all applicable statutes and rules.

Carrara Direct 14.

Staff recommends granting EPE’s request for a CCN subject to the following conditions:

1. The CCN should be rescinded if EPE and HAFB do not reach a satisfactory Replacement Contract (upon expiration of the Current Contract); and if EPE does not receive PUC approval to execute the Replacement Contract.
Replacement Contract will include provisions whereby HAFP will pay for all revenue requirements associated with the facility at least through 2046 or until such time as the Commission may determine.

2. EPE will not seek to recover any revenue requirement associated with the Facility from New Mexico jurisdictional customers other than HAFP without prior PRC approval.

3. EPE shall be required to file copies of all construction permits received for the Facility and associated interconnection facilities, in this docket within two weeks of receipt of the final permit required.

4. EPE shall file a notice of the dates that the Facility and the interconnection facilities are placed into service no later than 45 days after the in-service date.

5. EPE shall file the actual costs, including the actual AFUDC amounts and how they were calculated, for the Facility and the interconnection facilities in this docket as soon as they become available after the Facility and the interconnection facilities are placed into service.

6. EPE shall make all RECs associated with the energy produced by the Facility available at no cost for application toward compliance with EPE’s renewable energy portfolio standard. Cost of registration of the RECs shall be the responsibility of EPE and shall be recovered through EPE’s RPS recovery mechanism.

Carrara Direct 13-14.

EPE does not object to these conditions. EPE and Staff agree that EPE may comply with conditions 3 and 4 through a single compliance filing due no later than 45 days after the in-service date of the Project. EPL’s Response to Bench Request (9-11-15).

Staff also recommends that the final order reflect that since the Project is a solar facility, no fuel costs are incurred and no fuel and purchased power cost adjustment clause approval is necessary.

Carrara Direct 13-14.

Recommended Decision
Case No. 15-00185-UT
VI. Hearing Examiner’s Recommendation on EPE’s Request for a CCN

The lack of participation by intervenors in this case and the absence of testimony opposing the application superficially indicate that EPE’s request for a CCN raises no concerns. However, neither RPE nor Staff acknowledges that EPE’s request raises an issue of possibly first impression before this Commission: whether a public utility should be allowed to build generation plant dedicated to a single customer’s use. EPE owns no existing generation plant dedicated to a single customer’s use. Schlecht, Sec. 5A, nor do Public Service Company of New Mexico nor Southwestern Public Service Company of New Mexico, to the Hearing Examiner’s knowledge.

A CCN confers upon a utility not only the right, but also the obligation, to serve within the service territory established in the CCN. A public utility’s obligation to serve in its service territory is a quid pro quo for the monopoly status it is afforded in that territory. Traditionally, therefore, a public utility builds its system to serve the needs of its entire service territory and adds plant to contribute to the efficient and adequate operation of its whole system and serve system load. Ratepayers served by an interconnected utility system all bear the costs of that system. When the PRC sets revenue requirements and designs rates, it does so on the basis of total utility system.

Conversely, public utilities traditionally have not built plant to serve a single customer because a customer should not be allowed to pick and choose the type of energy generation that serves it. This is because doing so could result, for example, in a public

---

1 EPE does own distribution facilities that serve individual customers. Schlecht, Sec. 5.
2 Utility Case No. 2294, Final Order 6-C (10/2001), modified on other grounds by Final Order on Rehearing (3-4-02).
4 Robert L. Haber & Gregory E. Ault, Accounting for Pub. Util., §10.04 (2) (“Most utility costs are incurred as common costs. That is, the customers are served communally by the system.”).

Recommended Decision
Case No. 15-00185-UT
utility building generation plant with a low cost fuel source for a large business customer, and the large business customer leaving the utility's system to receive service at a lower cost than the utility's other customers, possibly resulting in unlawful discrimination.7

Additionally, if a public utility builds new plant for an existing customer, costs are at risk of becoming stranded as a result of the customer leaving the utility's system. A stranded cost is the portion of any prudent investment, deferred cost or commitment not yet paid for by a customer choosing to leave a utility's system, which was made to serve that customer during a period when regulatory statutes imposed a requirement to serve it at a regulated price. Hahne & Aliff, supra, § 20.04. A customer leaving the system will not inevitably cause an increase in rates to other customers, but the potential exists that captive customers remaining on the system will be unduly burdened with fixed costs, including the cost of generation plant no longer needed.

However, these two situations — allowing customers to choose their energy source and creating the risk of stranded costs — have indirectly materialized through the increasing role of renewable energy in electric power generation. A customer can now choose to be served by renewable energy by installing a renewable energy distributed generation (DG) facility on its site. NMSA 1978, § 62-13-13.1. A person not otherwise a public utility does not become a public utility because the person owns or controls a renewable energy DG facility that is located on a host's site and "produces electric energy used at the host's site and sold to the host or the host's tenants or employees located at the host's site." id.

1 With the exception of economic development rates and rates designed to retain retail load, a public utility shall not, as to rates or services, make or grant any unreasonable preference or advantage to any corporation or person within any classification. NMSA 1978, § 62-8-6

Recommended Decision
Case No. 15-00185-U1
Also, the potential of stranded costs is a consequence of the Renewable Energy Act (REA) because the REA requires public utilities to procure renewable resources without showing a need for additional resources. Stranded costs may arise any time a public utility with excess capacity procures renewable energy to meet its Renewable Portfolio Standard (RPS). Stranded costs may also arise any time a public utility customer severs its reliance on the grid by installing a DG facility at its site.1

Because HAFB did not move for leave to intervene in this case and is not a party, obvious questions cannot be asked and answered. For example:

- Why isn’t HAFB building the Project itself?
- Why hasn’t HAFB contracted with a third party to build the Project?

Nevertheless, EPE ratepayers other than HAFB presumably would be better off by EPE building the Project for HAFB than by HAFB (i) self-building the Project, or (ii) financing the Project through a third party. Under the latter two scenarios, EPE would not receive any revenue from the Facility and would lose 20% of HAFB’s load. By building the Facility for HAFB, EPE would retain all of HAFB’s load and earn a return on the Facility, producing revenues that are available to meet its revenue requirements.

There is no evidence that HAFB asked EPE to build the Project so that HAFB can purchase energy at a lower cost than it does by purchasing energy through EPE’s system. In fact, Staff testified that the projected per MWh cost of energy from the Facility “is relatively high[,]” Carvacho Direct 97. The evidence is that HAFB asked EPE to build the Project to assist HAFB in meeting USAF’s goal of increasing facility consumption of renewable or alternative energy to 25% of total electricity use by 2025.

---

1 Generally, a DG facility is a facility that generates energy, is located on a customer’s site, and is used exclusively to meet that customer’s load requirements.
Assisting HAFB in meeting the USAF's goal is consistent with the clear purpose of the RFA to encourage public utilities to use renewable energy. See NMSA 1978, § 62-16-2 (findings and purposes of RFA). In addition to requiring public utilities to include a specified percentage of renewable energy in their portfolios, up to a reasonable cost threshold (RCT), the RFA encourages them to acquire renewable energy supplies that exceed the RPS by allowing the PRC to provide public utilities performance-based financial or other incentives. NMSA 1978, § 62-16-4(A)(5). Also, the PRC may require a public utility to offer its retail customers a voluntary program for purchasing renewable energy that is in addition to the renewable energy provided by a public utility under the RPS. Id., § 62-16-7(B).

In a pending case in which EPE has asked for approval of its 2015 Renewable Energy Procurement Plan, evidence was admitted that the cost for EPE to meet its 2017 RPS requirement would exceed the RCT. Case No. 15-00117-DT, Recommended Decision 11-12 (9-15-15). The Hearing Examiner has recommended that the PRC grant EPE a waiver of its full 2017 RPS requirement. Id. at 21-22. Because EPE could use the renewable energy certificates (RECs) associated with the facility at no cost toward meeting its RPS, when EPE already is up against the RCT and has excess generation, granting EPE's Application furthers a purpose of the RFA.

If appropriate, stranded costs resulting from HAFB no longer receiving 20% of its load from EPE's system could be recovered from HAFB through its Replacement Contract rates, analogously to collecting costs of ancillary and standby service from DG customers through an interconnected customer rate rider. NMSA 1978, § 62-13-13.2. Fuel cost

*See Case No. 15-00117-DT (Process EPE's Application for a CER for a solar facility at Fort Bliss).
savings from HAPB’s use of renewable energy would be enjoyed by all EPB ratepayers because fuel savings flow through EPB’s fuel and purchased power cost adjustment clause.

EPB and HAPB are negotiating the Replacement Contract to include a provision that requires HAPB to purchase all energy produced by the Facility for the life of the Facility regardless of whether HAPB continues to take retail service from EPB. Schichit Second Supp. 4. Also, EPB has agreed to not seek to recover any revenue requirement associated with the Project from New Mexico Jurisdictional customers other than HAPB without prior PRC approval. Therefore, if HAPB is closed before HAPB pays for the cost of the Facility, EPB’s ratepayers other than HAPB should be held harmless.

EPB’s Request for Certification of Estimated Costs of Construction

Commission Rule 17.3.580.11. states that no utility shall obtain rate recovery of any cost overrun in the construction of electric generating plant until the Commission determines, upon notice and hearing, whether those costs have been incurred prudently. “Cost overrun” means—in instances where an allowance for contingencies was included by the utility in the certificated estimated cost—that portion of construction costs which exceeds the certificated estimated cost by any amount. 17.3.580.7(D) NMAC. “Certificated estimated cost” means the total cost of construction of electric generating plant for the utility, including allowances for funds used during construction, as estimated by the utility.
at the time of issuance by the Commission of the CCN for the plant and reflected in the order issuing the CCN. 17.3.580.7(A) NMAC.

The estimated Project capital cost is $11.8 million, excluding land lease costs.

Estimated Allowance for Funds Used During Construction (AFUDC) is $290,000, for a total of $12.1 million estimated Project cost. The estimated additional cost of interconnection facilities is $230,000. Turner Direct 4; Carrara Direct 5. According to PPE's Application, the estimated cost does not reflect the 30% IRC. Application, ¶ 10.

Staff recommends that the PRC establish $12,100,000 as the certificated estimated cost of the Project. Carrara Direct 11.

In Case No. 11-00313-UT, Involving Southwestern Public Service Company's (SPS's) request for a CCN for Jones Unit 4, the PRC approved a stipulation that specifically stated receipt of SPS's certificated estimated cost. The Commission adopted Staff's view that the language "accepted receipt of" simply recognized that SPS's cost estimate was a good faith estimate that had been filed in compliance with Rule 580. Case No 11-00313-UT, Certification of Stipulation 21-22 (1-3-12), adopted by Final Order (2-7-12).

The PRC should in this case accept receipt of PPE's $12.1 million certificated estimated cost of the Project, subject to PPE not recovering the facility costs from its ratepayers other than HAPU.

VIII. Request to Accrue AFUDC

PPE requests authority to accrue an Allowance for Funds Used During Construction (AFUDC) for funds used in the construction of the Facility. Carrara Direct 10.

AFUDC is an allowance for the return on the capital costs of construction financing. Instead of recovering that return from customers as it is incurred, the utility accrues it in an

Recommended Decision  
Case No. 15-00160-UT
account for future recovery. Future recovery occurs through inclusion of the capitalized cost in rate base as a component of plant in service, thereby earning a return and being recovered through depreciation allowances. Hahn & Abit. supra, § 4.04[1]. There is little debate over the propriety of including AFUDC as a component of construction costs along with materials, labor, overhead, and the like. Id.

Staff supports EPI’s request to accrue AFUDC. Carrara Direct 11. Therefore, EPI should be granted authority to accrue AFUDC, subject to EPI not recovering the AFUDC from its ratepayers other than HAFB.

IX. Findings of Fact and Conclusions of Law

1. All findings and conclusions contained in the Hearing Examiner’s Recommended Decision are incorporated by reference as findings of fact and conclusions of law of the Commission.

2. The Commission has jurisdiction over the parties and subject matter of this case.

3. Due and proper notice of this case and its subject matter has been given in accordance with the Public Utility Act.

4. It is in the public interest to grant EPI a CCN to construct, own and operate a 5 MW ground-mounted solar PV generating facility on land wholly within HAFB (the Project), subject to the conditions stated below in Decedral Paragraphs A and B.

5. EPI’s certificated estimated $12,1 million cost of the Project is accepted, subject to further PRC review in a future proceeding for review of EPI’s anticipated Replacement Contract with HAFB.
6. EPE's request to accue AFHDC for funds used during construction of the Project should be granted, subject to further PRC review in a future proceeding for review of EPE's anticipated Replacement Contract with HAB.

7. EPE's articles of incorporation are on file with the PRC.16

X. Decree Paragraphs

The Hearing Examiner recommends that the Commission ORDER as follows:

A. The Commission grants EPE a CCN to construct, own and operate a 5 MW ground-mounted solar PV generating facility on land wholly within HAB (the Project or Facility) subject to the following conditions:

1. The CCN shall be rescinded if EPE and HAB are not able to reach a satisfactory Replacement Contract (upon expiration of the Current Contract); and if EPE does not receive PRC approval to execute the Replacement Contract. The Replacement Contract shall include provisions whereby HAB shall pay for all revenue requirements associated with the Facility at least through 2046 or until such time as the Commission may determine.

2. EPE shall not seek to recover any revenue requirement associated with the Facility from New Mexico jurisdictional customers other than HAB without prior PRC approval.

3. EPE shall file copies of all construction permits received for the Facility and associated interconnection facilities in this docket within two weeks of receipt of the final permit required.

4. EPE shall file a notice of the dates that the Facility and the interconnection facilities are placed into service, no later than 45 days after the in-service date.

5. EPE shall file the actual costs, including the actual AFHDC amounts and how they were calculated, for the Facility and the interconnection facilities in this docket as soon as they become available after the Facility and the interconnection facilities are placed into service.

---

16 Carrera Dirr 4. Under § 68-6-6, issuance of a CCN is contingent on an applicant's filing of its articles of incorporation.
6. EPE shall make all RECs associated with the energy produced by the Facility available at no cost for application toward compliance with EPE's renewable energy portfolio standard. Cost of registration of the RECs shall be the responsibility of EPE and shall be recovered through EPE's RPS recovery mechanism.

B. EPE’s ratepayers shall be held harmless for the costs of the Project if HAFB ceases to receive service from EPE before it pays the costs of the Project.

C. Review of any and all ratemaking aspects of the Project are reserved for a future proceeding for review of EPE’s anticipated Replacement Contract with HAFB.

D. EPE’s anticipated filing of an application for approval of its Replacement Contract with HAFB, shall include, among all information required by law:

1. Proof that the proposed rates in the Replacement Contract would recover from HAFB all costs of the Facility;

2. Proof that the proposed rates in the Replacement Contract would recover at least the incremental cost of providing service to HAFB; and

3. If EPE seeks approval of the Replacement Contract to retain load, all information required to be filed with the PRC under EPE’s Rate No. 30 (Load Retention Rate).

E. To the extent required, EPE shall seek approval, when it files its 2016 Annual Procurement Plan, (i) of use of the RECs associated with energy generated by the Facility toward its RPS; and (ii) recovery of WREGIS costs associated with the RECs.

F. EPE may accrue APUDC for funds used during the construction of the Project, subject to further PRC review in a future proceeding for review of EPE’s Replacement Contract with HAFB.

G. This Order is effective immediately.
H. Copies of this Order shall be mailed to all persons listed on the Official Service List for this case.

1. This Docket is closed.

BEFORE THE NEW MEXICO PUBLIC REGULATION COMMISSION

IN THE MATTER OF EL PASO ELECTRIC COMPANY'S APPLICATION FOR A CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY FOR A 5MW SOLAR POWER GENERATION PROJECT AT Holloman Air Force Base

Case No. 15-00165-JIT

FINAL ORDER
ADOPTING RECOMMENDED DECISION WITH MODIFICATION

THIS MATTER comes before the New Mexico Public Regulation Commission (the "Commission") upon the September 30, 2015 Recommended Decision issued by Hearing Examiner Carolyn Glick on the Application of El Paso Electric Company ("EPE") for a Certificate of Public Convenience and Necessity ("CCN") for a 5MW Solar Generation Project at Holloman Air Force Base in Otero County, New Mexico (Project) in accordance with NMSA 1978, Sections 62-9-1 and 62-9-6. Having considered the pleadings, testimony and the Recommended Decision and being otherwise duly informed in the premises,

THE COMMISSION FINDS AND CONCLUDES:

1. The Commission has jurisdiction over the parties and the subject matter of this case.

2. No exceptions to the Recommended Decision have been filed by any of the parties to this proceeding.

3. The Recommended Decision, including the Statement of the Case, Discussion, Findings of Fact and Conclusions of Law, and Doctrinal Paragraphs recommended by the Hearing Examiner, is well taken and should be ADOPTED, APPROVED, and ACCEPTED as the Order
of the Commission with the exception of Declaral Paragraph A(2). The Commission notes that
because declaral paragraphs A(2) and B overlap, but potentially conflict, paragraph A(2) should
be removed. Because Paragraph B is broader and affords taxpayers greater protection from
potential unrecovered costs of the Project, it should control.

IT IS THEREFORE ORDERED:

A. The Recommended Decision, including the Statement of the Case, Discussion,
Findings of Fact and Conclusions of Law, and Declaral Paragraphs recommended by the Hearing
Examiner, as modified by the removal of paragraph A(2), is well taken and should be
ADOPTED, APPROVED, and ACCEPTED in its entirety as the Order of the Commission.

B. This Order is effective immediately.

C. Copies of this Order shall be provided to all persons listed on the attached
Certificate of Service, via e-mail to those whose e-mail addresses are known, and otherwise via
regular mail.

D. This Docket is closed.
