Re: Case No. 25-00082-UT
El Paso Electric Company's Application for Revision of its Retail Electric Rates Pursuant to Advice Notice No. 317

Dear Ms. Sandoval,

Pursuant to the requirements of 17.1.210.11(B) and 17.9.530.9 NMAC, El Paso Electric Company ("EPE") hereby submits its request for an increase in retail electric rates. Accompanying this letter is EPE's Application for Revision of its Retail Electric Rates, Advice Notice No. 317, proposed Rate Schedules, Rule 530 Schedules, EPE's Direct Testimony and Exhibits, EPE's work papers, and a Certificate of Service.

Advice Notice No. 317, which was filed separately, contains the appropriate base rate changes and includes language for EPE's base rate tariffs and Fuel and Purchased Power Cost Adjustment Clause, with updates to the voltage level multipliers, all as supported in the Application and Direct Testimony. EPE has filed Advice Notice 317 with an effective date of May 1, 2026, unless suspended pursuant to statute.

EPE's filing uses a twelve-month Base Period ending September 30, 2025, and a twelve-month Historical Test Year Period as adjusted pursuant to Rule 530. EPE is seeking a rate increase to cover a non-fuel base rate deficiency in revenue of $70.6 million, which is offset by a $0.240 million reduction in miscellaneous service revenue, for a net revenue increase of $70.4 million.

Notice of the proposed changes will be given as required by 17.1.2.10 NMAC and 17.9.530 NMAC. EPE is serving an electronic copy of this filing on the Attorney General, and all counsel of record and pro se parties in EPE's last electric rate case, which was Case No. 20-00104-UT, pursuant to the requirements of the New Mexico Public Regulation Commission's interim working rules for PRCe360.

SpencerFane

Thank you for your assistance in this matter.

Very truly yours,

/s/Jeffrey J. Wechsler

BEFORE THE NEW MEXICO PUBLIC REGULATION COMMISSION

IN THE MATTER OF THE APPLICATION OF EL PASO ELECTRIC COMPANY FOR REVISION OF ITS RETAIL ELECTRIC RATES PURSUANT TO ADVICE NOTICE NO. 317[1]

Case No. 25-00082-UT

EL PASO ELECTRIC COMPANY,
Applicant.

APPLICATION FOR REVISION OF RETAIL ELECTRIC RATES

El Paso Electric Company ("EPE" or "Company") hereby petitions the New Mexico Public Regulation Commission ("NMPRC" or "Commission") for authority to adjust its retail electric rates in New Mexico ("2026 Rate Case"). This 2026 Rate Case filing is made in accordance with the requirements of NMSA 1978, Section 62-8-7 of the Public Utility Act ("PUA") and NMPRC Rules 17.1.2.10 of the New Mexico Administrative Code ("NMAC"), and 17.9.530 NMAC ("Rule 530"), as modified by the Commission's Order Granting Variance (Dec. 18, 2025) and Order Granting Extension of Time (Feb. 19, 2026).

EPE's Advice Notice No. 317 is being filed concurrently with this Application and contains EPE's proposed rates supported by this Application. The term "Application" is used in this pleading to refer to the complete rate filing package, including this Application and the proposed notice to customers, testimony, exhibits, Rule 530 schedules, work papers, Rule 440 Amended Filings, Advice Notice No. 317 and accompanying rate schedules, and other supporting documents listed below, all of which are made a part of this Application by reference.

---

[1] On December 4, 2025, EPE filed a Notice Under Rule 17.9.530.11(A) and Verified Petition for Variance that commenced this proceeding. The caption for that Petition did not include the Advice Notice Number. As discussed below, EPE requests the caption be revised to include the correct Advice Notice No. 317.

I. EXECUTIVE SUMMARY

EPE's current base rates were approved by the Commission in Case No. 20-00104-UT based on a calendar-year 2019 historic Test Year Period ("2020 Rate Case").[2] Events and circumstances since the 2020 Rate Case have materially altered conditions that existed during the 2019 Test Year Period. EPE has made significant capital investments critical to the modernization and continued reliability of EPE's system to address complex challenges including load growth and electrification, transition to cleaner energy resources, grid modernization, reliability, resilience, and extreme weather. These investments, combined with inflationary pressures, are the primary drivers behind the increase in cost for EPE to dependably serve its customers.

These circumstances are the primary drivers for EPE's proposed base rate increase. EPE's cost of service demonstrates a $70.6 million non-fuel base rate revenue deficiency shown in the cost of service, reflecting a 50.4 percent non-fuel base rate increase. After deducting other operating revenues for miscellaneous services charges of $240,534, EPE is requesting a net revenue increase of $70.4 million. EPE is requesting a weighted average cost of capital of 8.35 percent. This non-fuel base rate increase is required to recover costs for EPE's investment of $2.4 billion on a total company basis and $408.44 million for New Mexico since EPE's 2020 Rate Case for new electric plant in service and used to serve EPE's customers. This includes approximately $197.34 million in distribution plant, $55.59 million in transmission plant, $28.86 million in nuclear production plant, $66.8 million for local generating plants and $59.85 million in general plant.

[2] EPE's current non-fuel base rates went into effect on January 1, 2024, pursuant to the Commission's Final Order on Remand in NMPRC Case No. 20-00104-UT (Nov. 30, 2023). These revised base rates replaced the initial base rates that went into effect on July 1, 2021, pursuant to the Commission's Order Adopting Recommended Decision with Modifications (June 23, 2021) ("Final Order") .

EPE is also proposing to include in base rates its Commission-approved advanced metering system ("AMS") Program Costs pursuant to the Final Order in Case No. 21-00269-UT, and the annual capacity costs associated with Commission-approved agreements for three battery energy storage facilities ("BESS") pursuant to the Final Orders in Case Nos. 19-00099-UT, 19-00348-UT and 22-00093-UT.

In furtherance of EPE's merger commitments, pursuant to the Final Order in Case No. 19-00234-UT, EPE has exceeded $1.2 million per year in charitable donations since its last general rate case (#11), and EPE has requested no amount of charitable donations in base rates. EPE's proposed base rates additionally include $4.75 million in costs related to its apprenticeship programs for technical and professional positions for students in local high schools and colleges (#14); $138.5 million in costs related to supplier diversity (#15); and less than $100,000 in costs related to entry-level training programs (#13).

EPE recognizes the significance of a $70.6 million base rate deficiency, representing a 50.4 percent increase in base rate revenues. To moderate the rate impact on certain customer classes, under a proposal to move all rate classes to full cost of service rates, EPE is voluntarily proposing to phase in recovery through a two-part implementation of base rates for Rate Nos. 01 (Residential), 05 (Irrigation), 10B (Military), 12 (Private Lighting), 25 (Outdoor Lighting), and 26 (State University). The first phase, expected to take effect on January 1, 2027, represents a system average increase of 26.8 percent for these rate classes; and the second phase, proposed to take effect on October 1, 2027, reflects an additional 18.6 percent increase relative to phase 1. EPE does not intend to seek recovery of the amount of revenue foregone between the two phases, estimated at $27 million.

II. DISCUSSION

In further support of its Application EPE states:

1. EPE is a public utility that provides retail electric service in New Mexico subject to the jurisdiction of the Commission.

2. EPE's current rates for electric service were authorized by the Commission in the 2020 Rate Case.[3]

3. Pursuant to 17.1.2.10.B NMAC, EPE is submitting the following documents as part of this Application:

a. A Proposed Form of Notice to be sent to customers;

b. Direct Testimonies and Exhibits of EPE witnesses James A. Schichtl, George Novela, Cynthia S. Prieto, Richard S. Gonzalez, Steven A. Sierra, Jennifer E. Nelson, Joseph S. Weiss, Julissa I, Reza, Lori A. Glander, John J. Spanos, Tamera L. Henderson, Victor Martinez, Jeffrey M. Hughes, Omar Gallegos, Enedina O. Soto, Adrian Hernandez, Rene F. Gonzalez, and Manuel Carrasco

c. Rule 530 Schedules A through Q along with accompanying work papers and the letter of transmittal required by 17.9.530.9 NMAC;

d. EPE's Rule 440 Amended Filings pursuant to 17.5.440.8.D(1)(b) NMAC; and

e. EPE's Advice Notice No. 317 and accompanying schedules.

4. As explained more fully in the accompanying testimony and schedules, EPE intends to demonstrate that:

[3] See Note 2 above.

a. EPE's currently authorized rates are no longer just and reasonable, will not adequately attract and encourage the investment of capital if left unchanged, and do not allow for a reasonable return on investment in public utility plant and property;

b. EPE's rates and authorized revenues as presently allocated do not adequately reflect the cost of service for the respective classes of electric customers; and

c. The rates proposed in Advice Notice No. 317 are just and reasonable and should be approved.

5. EPE's filing is based on a twelve-month Base Period ending September 30, 2025, as adjusted pursuant to Rule 530 for the Test Year Period consistent with the provisions of NMSA 1978, Section 62-6-14(D). The Test Year Period shows a non-fuel base rate revenue requirement of $70.6 million. After deducting other operating revenues for miscellaneous service charges of $240,534, EPE is requesting a net revenue increase of $70.4 million.

6. In accordance with the requirements of NMPRC Rule 530, EPE is providing information consisting of: (i) the Base Period, which is EPE's actual experience as reflected on its book balance of accounts for the twelve-month period ended September 30, 2025; and (ii) a Test Year Period for the twelve-month period ended September 30, 2025, as adjusted for annualizations, normalizations, estimates, and adjustments for known and measurable changes. The Test Year Period best reflects the expected conditions during the period when the proposed new rates take effect, consistent with NMSA 1978, Section 62-6-14(D). EPE is also providing a

fully allocated cost of service study pursuant to NMPRC Rule 530. The cost of service study is based on cost data from EPE's Base Period and Historical Test Year Period.

7. EPE is concurrently filing Advice Notice 317, with an effective date 30 days after filing, unless the Commission suspends the new rates for nine months pending notice and hearing, in accordance with NMSA 1978, Section 62-8-7(C). Although EPE seeks to implement new rates as soon as possible, EPE requests that its new rates go into effect no later than January 1, 2027.

8. In compliance with 17.1.210.11(C) NMAC, EPE states that anticipated changes in annual revenues resulting from the proposed changes to the rates as set forth in this Application, the number of customers in each rate class affected or likely to be affected, and the impact on customers at a class average of consumption within each class as nearly as may be calculated are concisely stated in the tables contained in the attached Notice to Customers.

9. EPE also is proposing a phased in implementation of new base rates for Rate Nos. 01 (Residential), 05 (Irrigation), 10B (Military), 12 (Private Lighting), 25 (Outdoor Lighting), and 26 (State University).

10. EPE is proposing several rate design changes to: (i) align recovery of demand, energy and customer costs with how those costs are incurred, thereby minimizing intra-class subsidization, (ii) provide customers with accurate price signals that convey cost differences between seasonal and non-seasonal time periods to encourage energy conservation and potentially reduce customer contribution to EPE's system peak, (iii) promote stability, and (iv) allow EPE the opportunity to recover the costs of providing safe and reliable service.

11. EPE does not recommend adopting an opt-out time of day ("TOD") rate design at this time to avoid interference with its ongoing Time Varying Rate Pilot Program ("TVRPP"), intended to inform the creation of permanent time-varying rates. If, contrary to EPE's recommendation, the Commission orders adoption of mandatory opt-out TOD rates, EPE presents its *opt-in* TOD rates as the *opt-out* TOD rates, pending implementation of time-varying rates informed by the TVRPP. EPE also requests authorization for an accounting order to defer and track any differences between approved revenues and actual collections under mandatory, opt-out TOD rates for consideration of recovery in a future proceeding.

12. Other notable customer rate options include: (i) a new Low-Income Rider for qualified customers in the Residential Service Rate; (ii) experimental off-peak and TOD demand rates designed to further incentivize shifting load from peak hours; (iii) opening Rate No. 29 Noticed Interruptible Service to new customers; (iv) two new Large Load tariff schedules designed to prevent subsidizing costs associated with serving large load customers; and (v) a new two-year Peak Time Rebate Pilot Program intended to incentivize customers to shift to off-peak usage times by providing pilot participants the opportunity to receive a bill credit for reducing energy consumption during peak periods following a notification from EPE. If the Peak Time Rebate Pilot Program is approved, EPE is also requesting authorization to establish an accounting order to defer EPE's administrative costs to implement this program for future recovery.

13. EPE is also proposing replacement of its Rule No. 8 Line Extension Policy and related revisions to its Rule 13 Increase or Decrease of Connected Load.

14. Since the 2019 Test Year Period in EPE's 2020 Rate Case, the renewable portfolio standard ("RPS") has increased from 15 percent to 40 percent of EPE's total retail sales to New Mexico customers. EPE is continuing to expand its renewable energy portfolio and

prioritizing the integration of flexible, dispatchable generation options, such as battery storage to meet these obligations. Consistent with the Commission Case Nos. 25-00038-UT and 19-00348-UT Final Orders, EPE is proposing to include the annual capacity charges incurred under Commission-approved agreements for the Carne BESS and Santa Teresa BESS (currently recovered through the RPS Cost Rider) and the Buena Vista 1 BESS, in its proposed base rates. EPE is also seeking to include in base rates the capacity costs already incurred under the Commission-approved Buena Vista 1 Power Purchase Agreement since that resource came online in 2023.

15. Pursuant to 17.l.2.10(B)(2)(c)(ii) NMAC, EPE witness Novela identifies the extraordinary events or circumstances, known or projected, which materially alter the utility's operating or financial condition from the conditions existing during the utility's test year period in its last rate case.

16. EPE requests all approvals and determinations necessary to implement the rates as set forth in this Application and the accompanying Advice Notice, including approval of cost of service studies, cost allocations, depreciation rates and tariffs for electric service.

17. Pursuant to 17.l.2.10.B(2)(a) and (b) NMAC, attached as Appendix A to this Application is EPE's proposed Notice to Customers, which includes a statement comparing the proposed new rates with the present rates for each customer class, and the anticipated bills to residential customers under the proposed rates at various usage levels. Appendix A is provided for informational purposes only and the level of authorized revenue and final rate design approved by the Commission may change the rates ultimately charged to each class and for each consumption level from those proposed by EPE.

18. In compliance with 17.1.210.11(B) NMAC, EPE will serve a copy of this Application, including the Advice Notice, on Utility Division Staff, the Attorney General, and all counsel of record and pro se parties in EPE's last rate case.

19. EPE's exact legal name, address and telephone number are:

El Paso Electric Company
100 N. Stanton Street
El Paso, Texas 79901
(915) 543-5711

20. The exact name, address, and telephone number of EPE's attorneys are:

Nancy B. Burns
El Paso Electric Company
300 Galisteo Street, Suite 206
Santa Fe, New Mexico 87501
(505) 982-7391

ATTORNEYS FOR EL PASO ELECTRIC COMPANY

BEFORE THE NEW MEXICO PUBLIC REGULATION COMMISSION

IN THE MATTER OF THE APPLICATION OF EL PASO ELECTRIC COMPANY FOR REVISION OF ITS RETAIL ELECTRIC RATES PURSUANT TO ADVICE NOTICE NO. 317

Case No. 25-00082-UT

EL PASO ELECTRIC COMPANY,
Applicant.

EL PASO ELECTRIC COMPANY'S PROPOSED
NOTICE TO CUSTOMERS

The New Mexico Public Regulation Commission ("Commission" or "NMPRC") hereby gives notice of the following:

1. On March 27, 2026, El Paso Electric Company ("EPE" or "Company") filed with the Commission an Application requesting approval of revised New Mexico retail electric service base rates. The Application and Advice Notice No. 317 are accessible online on EPE's website, www.epelectric.com/company/public-notices and at www.prc.nm.gov.

2. The Commission has issued an Order finding jurisdiction over this proceeding and finding that the proposed rates shall not go into effect without, at a minimum, the Commission first determining their justness and reasonableness, after due notice and a public hearing. The Commission has suspended EPE's proposed changes for a period of nine months beginning _____, 2026.

3. The Commission has assigned Case No. 25-00082-UT to this Application, and all inquiries and correspondence concerning this matter should refer to that case number.

4. The Commission's Rules of Practice and Procedure, 1.1.2 NMAC, apply to this case except as modified by Order. A copy of 1.2.2 NMAC may be obtained from the office of the Commission.

5. The Commission has set the schedule for hearing of this case as follows:

A. Deadline for motions to intervene to become a party to this case _____, 2026.

B. Deadline by which Commission Staff shall, and Intervenors may, file direct testimony regarding EPE's Application _____, 2026

C. Deadline to file Rebuttal Testimony, if any _____, 2026.

D. Public Evidentiary Hearing: _____, 2026 to _____, 2026.

6. EPE asserts that its rate case filing demonstrates a non-fuel revenue deficiency, and EPE proposes revisions to its general rates and tariffs.

7. The $70.6 million non-fuel base rate revenue deficiency shown in EPE's proposed cost of service demonstrates the need for a 50.4 percent base rate increase, which is offset by a $0.2 million reduction in miscellaneous service revenue, for a net operating revenue increase of $70.4 million in these New Mexico revenues.

8. The proposed rate changes will affect all retail classifications. Listed below are the proposed percentage changes in non-fuel rates by retail classification proposed by EPE. All dollar amounts presented are in thousands of dollars.

/

/

/

/

/

/

/

/

Rate No.	Rate Class	Test Period Revenue @ Present Rates	Full Cost Revenue Requirement *	Full Cost % Revenue Increase	Full Cost $ Revenue Increase
01	Residential Service	$73,122	$126,592	73.1%	$53,470**
03	Small General Service	21,053	22,636	7.5%	1,583
04	General Service	20,011	25,662	28.2%	5,651
05	Irrigation Service	3,356	5,268	57.0%	1,912**
07	City & County Service	4,438	6,255	40.9%	1,817
08	Water, Sewage, & Storm Sewage Pumping Service	2,082	2,600	24.9%	519
09	Large Power Service	7,591	9,587	26.3%	1,996
10A	Military Res. & Devel. Power Service – Option A	2,538	3,456	36.2%	919
10B	Military Res. & Devel. Power Service – Option B	1,529	2,750	79.9%	1,221**
11	Street Lighting Service	348	324	-6.8%	(24)
12	Private Area Lighting Service	916	1,457	59.0%	541**
19	Seasonal Agriculture Processing Service	1,115	999	-10.4%	(116)
25	Outdoor Recreational Lighting Service	59	108	81.7%	48**
26	State University Service	1,804	2,839	57.3%	1,034**
Total		$139,962	$210,534	50.4%	$70,572

* Net of $67 increase to Non-Firm Revenue from $133 to $199.
** Phasing applied.

9. EPE recognizes the significance of a $70.6 million base rate deficiency, representing a 50.4 percent increase in base rate revenues. To moderate the rate impact on certain customer classes under a proposal to move all rate classes to full cost of service rates, EPE is voluntarily proposing to phase in recovery through a two-part implementation of base rates for Rate Nos. 01 (Residential), 05 (Irrigation), 10B (Military), 12 (Private Lighting), 25 (Outdoor Lighting), and 26 (State University). The first phase, expected to take effect on January 1, 2027, represents a system average increase of 26.8 percent for these rate classes; and the second phase, proposed to take effect on October 1, 2027, reflects an additional 18.6 percent increase relative to Phase 1. EPE does not intend to seek recovery of the amount of revenue foregone between the two phases, estimated at $27 million.

10. EPE is proposing to implement notable customer rate options that include: (i) a new Low-Income Rider to qualified households in the Residential Service Rate the credits the customer charge dollar for dollar; (ii) experimental off-peak and time-of-day ("TOD") demand rates designed to further incentivize certain commercial customers to shift load from peak hours; (iii) and a new two-year Peak Time Rebate Pilot Program intended to incentivize Residential Service Rate customers to shift to off-peak usage times by providing pilot participants the opportunity to receive a bill credit for reducing energy consumption during peak periods following a notification from EPE.

11. The bill impact of the proposed base rate changes will be offset by an anticipated reduction in Renewable Portfolio Standard ("RPS") costs. For a residential customer using an average of 750 kWh during a summer month, the combined impact will be a bill increase of 22.5 percent in Phase 1 followed by an additional increase of 28.2 percent in Phase 2, effectively totaling 57.0 percent. EPE's proposed increase in non-fuel base rates represents an increase of $24.62 in Phase 1 followed by an additional increase of $30.38 per summer month in Phase 2, totaling $55.00. The combined impact of the proposed base rate changes and the RPS cost reduction for a residential customer using an average of 500 kWh during a winter month will be a bill increase of 14.5 percent in Phase 1 followed by an additional increase of 28.6 percent in Phase 2, effectively totaling 47.3 percent. EPE's proposed increase in non-fuel base rates represents an increase of $10.83 in Phase 1 followed by an additional increase of $17.13 per winter month in Phase 2, totaling $27.96.

The following tables show seasonal bill impacts resulting from the increase in the base rates in each phase and the anticipated reduction in RPS costs for the Residential Service Rate class for a range of consumption levels. These impacts are subject to change by the Commission based upon its findings in this case. The bills presented in the tables reflect only the base rates subject to change in this proceeding. The anticipated reduction in RPS is not a proposal in this proceeding. Additionally, the bills do not include any other applicable riders, gross receipts taxes, or franchise fees.

Current to Proposed Phase 1: Residential Typical Bill Comparison by kWh Level (Summer)

	Current Base & Fuel/RPS Rates			Proposed Base & Fuel/RPS Rates			Percent Impact		
kWh	Base	Fuel & RPS	Total	Base	Fuel & RPS	Total	Base	Fuel & RPS	Total
0	$ 10.82	$ -	$ 10.82	$ 14.36	$ -	$ 14.36	32.7%	0.0%	32.7%
100	$ 17.86	$ 2.47	$ 20.33	$ 24.01	$ 1.82	$ 25.83	34.4%	-26.3%	27.1%
250	$ 28.41	$ 6.18	$ 34.59	$ 38.48	$ 4.56	$ 43.04	35.4%	-26.3%	24.4%
500	$ 46.00	$ 12.36	$ 58.36	$ 62.61	$ 9.12	$ 71.73	36.1%	-26.3%	22.9%

12. Listed below is a comparison of present and proposed rates for each customer class under Advice Notice No. 317 proposed by EPE.

EL PASO ELECTRIC COMPANY
COMPARISON OF PRESENT AND PROPOSED BASE RATES
FOR THE TEST YEAR ENDED SEPTEMBER 30, 2025

Rate No.	Rate Description	Current Rate	Phase 1 Rate	Phase 2 Rate
Rate No. 1	**RESIDENTIAL SERVICE RATE -** STANDARD RATE			
	Customer Charge	$7.00	$14.36	$18.89
	Energy Charge ($/kWh) - First 600 kWh - Summer	$0.07035	$0.09649	$0.13045
	Energy Charge ($/kWh) - All Other kWh - Summer	$0.10876	$0.14469	$0.18118
	Energy Charge ($/kWh) – Non-Summer	$0.05816	$0.07273	$0.09793
	RESIDENTIAL SERVICE RATE - OPTIONAL TIME-OF-DAY RATE			
	Customer Charge	$7.00	$14.36	$18.89
	Time-Of-Day On-Peak Energy Charge - Summer ($/kWh)	$0.22108	$0.25799	$0.29318
	Time-Of-Day Off-Peak Energy Charge - Summer ($/kWh)	$0.05527	$0.08915	$0.12434
	Time-Of-Day Off-Peak Energy Charge - Non-Summer ($/kWh)	$0.05816	$0.07273	$0.09793
Rate No. 3	**SMALL GENERAL SERVICE RATE -** STANDARD RATE			
	Customer Charge	$14.00	$16.90	$16.90
	Demand ($/kW) - Summer	$18.74	$19.58	$19.58
	Energy ($/kWh) - Summer	$0.03969	$0.04960	$0.04960
	Demand Charge ($/kW) - Non-Summer	$14.01	$11.61	$11.61
	Energy Charge ($/kWh) - Non-Summer	$0.01158	$0.02416	$0.02416
	SMALL GENERAL SERVICE RATE - ALTERNATIVE RATE			
	Customer Charge	$14.00	$16.90	$16.90
	Energy ($/kWh) - Summer	$0.10983	$0.13097	$0.13097
	Energy Charge ($/kWh) - Non-Summer	$0.07483	$0.07507	$0.07507
	SMALL GENERAL SERVICE RATE - OPTIONAL TIME-OF-DAY STANDARD RATE			
	Customer Charge	$14.00	$16.90	$16.90
	Demand Charge ($/kW) Summer	$17.80	$19.58	$19.58
	Time-Of-Day On-Peak Energy Charge - Summer ($/kWh)	$0.19677	$0.16766	$0.16766
	Time-Of-Day Off-Peak Energy Charge - Summer ($/kWh)	$0.01243	$0.02416	$0.02416
	Demand Charge ($/kW) - Non-Summer	$13.31	$11.61	$11.61
	Time-Of-Day Off-Peak Energy Charge - Non-Summer ($/kWh)	$0.01351	$0.02416	$0.02416
	SMALL GENERAL SERVICE RATE - OPTIONAL TIME-OF-DAY ALTERNATIVE RATE			
	Customer Charge	$14.00	$16.90	$16.90
	Time-Of-Day On-Peak Energy Charge - Summer ($/kWh)	$0.32243	$0.26052	$0.26052
	Time-Of-Day Off-Peak Energy Charge - Summer ($/kWh)	$0.06885	$0.10552	$0.10552
	Time-Of-Day Off-Peak Energy Charge - Non-Summer ($/kWh)	$0.07483	$0.07507	$0.07507

13. These rate comparisons are for informational purposes only and the final rate design may vary the final rates ultimately charged to each class and for each consumption level.

14. For the Proposed Unit Rates, the Summer period indicated in a class are the months of June through September; all other months are considered as in the Non-Summer period. Similarly, the

On-Peak Period for the Time-Of-Day rates are Monday through Friday, 3:00 p.m. through 7:00 for all classes.

15. The Commission might order significant changes to Rate No. 29 to make it more effective in reducing peak demand.

PUBLIC HEARING

16. A public hearing will be held beginning at _____ a.m. on _____, 2026, and will continue through _____, 2026. The public hearing is where the Commission receives testimony, exhibits, and legal arguments about the Application. Members of the public can watch the hearing via a livestream on the Commission's YouTube channel and its website, https://www.prc.nm.gov/public-hearings/. Please contact the Commission for confirmation of the hearing because hearings are occasionally cancelled or rescheduled.

PUBLIC COMMENT

17. If you are interested in the case but do not wish to become a party, you may make oral and written comment as allowed by Rule 1.2.2.23(F) NMAC. The Commission will host a public comment session at which members of the public may make comments in person. The date, time, and place of the public comment session will be announced on the Commission's website.

18. Public comment can be provided at Commission open meetings. The open meetings schedule is available on the Commission website at www.prc.nm.gov/nmprc-open-meeting-agenda/.

19. Public comment will not be taken at the evidentiary hearing because comments are not evidence. You may send written comments before the Commission takes final action by sending the comment, which must specifically reference Case No. 25-00082-UT, to prc.records@prc.nm.gov, or Commission Records Management Bureau, P.O. Box 1269, Santa Fe NM 87504. The Commission may be reached by telephone at 1-888-427-5772.

20. IF YOU ARE AN INDIVIDUAL WITH A DISABILITY WHO IS IN NEED OF A READER, AMPLIFIER, QUALFIED SIGN LANGUAGE INTERPRETER, OR ANY OTHER FORM OF AUXILIARY AID OR SERVICE TO ATTEND OR PARTICIPATE IN THE HEARING OR FOR A SUMMARY OR OTHER TYPE OF ACCESSIBLE FORMAT OF PUBLIC DOCUMENTS, PLEASE CONTACT THE DIRECTOR OF ADMINISTRATIVE SERVICES OF THE COMMISSION AT (505) 827-8019 AS SOON AS POSSIBLE PRIOR TO THE HEARING.

21. Anyone needing more information about this case may contact the Commission by phone at (505) 827-4084 or 1-888-427-5772 or by email at Ryan.Jimenez@prc.nm.gov.

I S S U E D at Santa Fe, New Mexico this ____ day of _____, 2026.

NEW MEXICO PUBLIC REGULATION COMMISSION

_____

Hearing Examiner

BEFORE THE NEW MEXICO PUBLIC REGULATION COMMISSION

IN THE MATTER THE APPLICATION OF EL PASO ELECTRIC COMPANY FOR REVISION OF IT RETAIL ELECTRIC RATES

Case No. 25-00082-UT

EL PASO ELECTRIC COMPANY,

Applicant.

CERTIFICATE OF SERVICE

I HEREBY CERTIFY that on March 27, 2026, **Application for Revision of Retail Electric Rates** was emailed to each of the following, which includes the Attorney General and all counsel of record and pro se parties in EPE's last rate case:

Nancy Burns	nancy.burns@epelectric.com;
Leslie Padilla	leslie.padilla@epelectric.com;
Michelle Pedroza	michelle.pedroza@epelectric.com;
EPE Case Management	EPE_Reg_Mgmt@epelectric.com;
Jeffrey Wechsler	jwechsler@spencerfane.com;
Kari Olson	kaolson@spencerfane.com;
Angela Harris	aharris@spencerfane.com;
Eleanor D'Ambrosio	edambrosio@spencerfane.com;
Cody Faulk	cfaulk@spencerfane.com;
Teresa Pacheco	tpacheco@spencerfane.com;
Yolanda Sandoval	ysandoval@spencerfane.com;
Anastasia Stevens	astevens.law@gmail.com;
Brad Douglas	bdouglas@lascruces.gov;
NMDOJ	utilityfilings@nmdoj.gov;
Andrea Crane	ctcolumbia@aol.com;
Philip Simpson	philipbsimpson@comcast.net;
Keith Herrmann	kherrmann@stelznerlaw.com;
Rockney D. Bacchus	rockybacchus@gmail.com;
Kyle J. Smith	kyle.j.smith124.civ@army.mil;
Merrie Lee Soules	mlsoules@hotmail.com;
Joan E. Drake	jdrake@modrall.com;
Cydney Beadles	cydney.beadles@westernresources.org;
Cara Lynch	lynch.cara.nm@gmail.com;
John Bogatko	john.bogatko@prc.nm.gov;
Cholla Khoury	cholla.khoury@prc.nm.gov;

DATED March 27, 2026.

/s/ Jeffrey J. Wechsler

Exhibit JS-1 Residential Bill Comparison

EL PASO ELECTRIC COMPANY
DIRECT TESTIMONY OF
JAMES A. SCHICHTL

I. INTRODUCTIONS AND QUALIFICATIONS

Q1. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is James A. Schichtl. My business address is 100 N. Stanton Street, El Paso, Texas 79901.

Q2. HOW ARE YOU EMPLOYED?

A. I currently serve as the Vice President of Customer and Regulatory Solutions for El Paso Electric Company ("EPE" or "Company"). I have served as an EPE Vice President in charge of a range of responsibilities since June 2016.

Q3. PLEASE SUMMARIZE YOUR EDUCATIONAL BACKGROUND.

A. I graduated with a Bachelor of Science in Mechanical Engineering in 1987 from the University of Texas at El Paso, where I also studied graduate level finance, economics, and econometrics. Throughout my career at EPE, I have attended and presented material for numerous seminars and workshops related to cost of service, rate and program design, and regulation.

Q4. PLEASE SUMMARIZE YOUR PROFESSIONAL EXPERIENCE.

A. Prior to joining EPE in February 2012, I spent 18 years in various regulatory functions at Southern California Edison Company ("SCE"), 12 of those years in a managerial capacity. As Manager of Pricing Design and Research, I was

responsible for SCE's rates and tariffs during deregulation and changes required following the California power crisis in 2001. I was subsequently promoted to Manager of Tariffs and Advice Letters, with broad responsibility within regulatory for evaluating California statute, rules, and regulations and managing regulatory efforts at the California Public Utilities Commission ("CPUC").

I have been employed by EPE since February 2012. In June 2016, I was promoted from Director to Vice President of Regulatory Affairs. Prior to becoming Director, I was Manager of EPE's Economic & Rate Research group, responsible for EPE's jurisdictional cost of service, rate design analysis, and developing EPE's retail rate schedules and charges. Prior to that, I was a Senior Regulatory Case Manager, responsible for the production, filing, and execution of regulatory applications before both the New Mexico Public Regulation Commission ("Commission" or "NMPRC") and the Public Utility Commission of Texas ("PUCT").

Q5. PLEASE DESCRIBE YOUR CURRENT RESPONSIBILITIES WITH EPE.

A. As Vice President of Customer and Regulatory Solutions, I am responsible for the oversight and direction of EPE's Load Research & Data Analytics, Rate Research, and Regulatory Case Management groups. Load Research performs load research, data analysis and forecasting functions. Rate Research encompasses EPE's rate research function, jurisdictional and class cost of service studies, rate design

analysis, and the development of retail rate schedules and charges. The Regulatory Case Management group coordinates and oversees regulatory filings made by EPE with the PUCT, the NMPRC, and the Federal Energy Regulatory Commission ("FERC"), and local municipal regulators. My job duties require knowledge of the statutory and regulatory requirements of each jurisdiction. I was assigned responsibility for the Customer Care and Meter and Field Services groups in 2025. Customer Care includes EPE's billing, customer contact, and collections groups. The Meter and Field Services group handles AMI meter installations, other field services, and investigates energy diversion. Up until that time, I was also overseeing the Company's Market Development and Resource Management Department in 2024. In my role as Vice President of Customer and Regulatory Solutions, I continue to regularly coordinate with that department.

Q6. HAVE YOU PREVIOUSLY PRESENTED TESTIMONY BEFORE REGULATORY BODIES?

A. Yes, I have previously filed testimony with and testified before the NMPRC, PUCT, CPUC, and FERC.

Q7. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. My testimony provides an overview of EPE, its operations, and its strategic goals for a robust energy transition to achieve New Mexico's decarbonization mandates

while remaining firmly anchored to our foundational responsibilities of delivering safe, reliable, and affordable electricity. I also introduce EPE's rate filing application, including EPE's requested return on equity ("ROE") and capital structure. Finally, my testimony highlights the benefits to customers from EPE's continued investment in infrastructure upgrades, smart technology rollouts, and renewable resource integration.

II. MANAGEMENT AND COMPANY STRATEGY

Q8. PLEASE DESCRIBE EPE'S SENIOR MANAGEMENT.

A. Quality of management is an important objective for EPE. The Company has a strong executive team in place that is well equipped to manage the Company and handle the challenging issues that EPE is facing and will face in a rapidly evolving industry. In addition to myself, the management team consists of:

Kelly A. Tomblin is the Chief Executive Officer ("CEO") of EPE and has served in that position since September 2020. Ms. Tomblin brings more than 35 years of knowledge and experience in the energy industry, in both competitive and vertically integrated markets throughout the United States, the Caribbean, the United Kingdom, and Latin America. She has experience in the generation, transmission, and distribution sectors as well as renewable development, energy services, and sales. Before joining EPE, Ms. Tomblin, a winner of the S&P Platts Global CEO of the Year award, served as Chief Executive Officer of INTREN, L.L.C., a leading utility solutions provider with 14 regional offices throughout the United States. Ms. Tomblin has an MBA from New York University's Leonard Stern School of Business and a Juris Doctorate and Bachelor of Science in Journalism with a public relations concentration from West Virginia University.

David Rodriguez is EPE's Vice President of Energy Supply and Distribution Operations. Mr. Rodriguez oversees the Company's Power Generation and

Distribution functions. Mr. Rodriguez has been with EPE since 2003 and has had increasing levels of responsibility during his career at the Company. Mr. Rodriguez holds a Bachelor of Arts degree in Management and a Master of Business Administration with a concentration in Finance, both from the University of Texas at El Paso.

Robert Norris, Chief Financial Officer, oversees EPE's Financial Accounting, Regulatory Accounting, Tax, Cash Management, Financial Planning & Analysis, Claims & Risk, Internal Audit, and Human Resources departments. Prior to joining EPE, Mr. Norris served as CFO at multiple companies, including AMP, Legacy Reserves and VoltaGrid. He was also president at CapturePoint Solutions, a startup carbon capture and sequestration business. Mr. Norris holds a bachelor's degree in economics and a master's degree in business administration from the University of Texas at Austin.

Cynthia Henry, Vice President and General Counsel, has been with EPE since 2013. Ms. Henry oversees EPE's Legal, Regulatory and Government Affairs, Public Relations, and Supply Chain departments. Prior to joining EPE, Ms. Henry worked for Xcel Energy in Denver, Colorado, as the Manager of FERC Compliance. She holds a Bachelor of Arts degree from Brown University, a Juris Doctorate from the University of Texas at Austin, a Master of Law from the University of London, and an Executive MBA from IE and Brown University.

David C. Hawkins, Vice President of System Planning and Operations Support, has been with EPE since 2002. He oversees operation of El Paso Electric's electric grid; planning activities of the transmission system; the FERC interconnection process for generation and transmission projects to EPE's system; environmental compliance with all regulatory agencies; business improvement solutions on an enterprise level; activities related to the acquisition/disposal of land and land rights for construction of generation, substation, transmission, and distribution facilities. Mr. Hawkins holds a Master of Science degree and a Bachelor of Science degree in Electrical Engineering from New Mexico State University.

Cheryl Mele, Vice President, Chief Technology Officer, is responsible for leading the enterprise technology transformation to enhance business operations and customer service. Her team, which includes infrastructure, operations applications, enterprise architecture, business applications, data analytics, and cybersecurity, collaborates across the utility to develop digital, data, and technology strategies supporting enterprise objectives. Previously, Ms. Mele served as Vice President of Customer and Employee Services at El Paso Electric.

Her career in energy also includes Austin Energy, where she was the Deputy General Manager and Chief Operating Officer, and ERCOT, where she was Senior Vice President and Chief Operating Officer. Ms. Mele has a BS in Mechanical Engineering from Union College in Schenectady, New York, is a registered professional engineer, and completed the utility executive program at the University of Idaho.

Jessica Christianson, Vice President of Business Development, has been with EPE since 2013. The energy solutions and business development teams she manages oversee the planning, design, and delivery of strategic growth initiatives in the areas of clean and renewable energy development, emerging technology, and beneficial electrification. She holds a Master of Science degree in Environmental Engineering, Master and Bachelor of Science degrees in Crop and Soil Science, and a Graduate Certificate in Public Utility Regulation and Economics from New Mexico State University.

Omar A. Gallegos, Vice President of Energy Delivery, is responsible for Transmission & Distribution ("T&D") planning, engineering, construction, and maintenance. This includes long-term planning, and project management of infrastructure construction projections including the interconnection of energy resources. He is also responsible for customer service connections. Finally, he is responsible for the maintenance of T&D infrastructure and facilities to provide safe and reliable service for our customers and community. Mr. Gallegos has been with EPE since 2009, and holds a Bachelor of Science in Mechanical Engineering and a Master of Business Administration from the University of Texas at El Paso. He also obtained a Graduate Certificate in Public Utility Regulation and Economics from New Mexico State University and completed the Energy Executive Course from the University of Idaho in 2019.

Cynthia S. Prieto, Vice President-Controller, has been with EPE since 2006. Ms. Prieto leads the Company's accounting, tax and financial systems functions as the Company's Principal Accounting Officer. Prior to joining El Paso Electric, she served as the Controller of Continental National Bank and as a Senior Manager at KPMG LLP. Ms. Prieto holds a Bachelor of Business Administration Degree with a concentration in Accounting from the University of New Mexico.

The combination of experience and diverse backgrounds of the Company executives provides EPE with a strong management team well equipped to lead

EPE in both the fundamentals of providing safe, reliable, and affordable power, and with navigating the increasingly complex challenges facing the utility industry.

Q9. PLEASE DESCRIBE THE IMPACT ON EPE AND THE SERVICE TERRITORY OF THE ACQUISITION OF THE COMPANY BY IIF IN 2020.

A. On March 11, 2020, the Commission issued a Final Order in Case No. 19-00234-UT approving the acquisition of EPE by Sun Jupiter Holdings LLC, an indirect, wholly-owned subsidiary of IIF US Holding 2 LP, one of three limited partnerships that constitute the "Infrastructure Investments Fund" ("IIF"). IIF is a long-term private investment fund that invests capital provided predominantly by institutional investors (such as pension funds and insurance companies) in infrastructure companies in developed countries.

Access to the capital needed to maintain a safe reliable system in New Mexico and to enable growth has been enhanced by IIF equity infusions, which support IIF's focus on economic development in the region. IIF's focus on economic development in our region has also been critical, starting with the $20 million development fund IIF established in New Mexico with the acquisition of EPE.

Q10. WHAT ARE EPE'S KEY STRATEGIC GOALS?

A. EPE's mission and vision are to transform the energy landscape and power economic growth, innovation, and prosperity in our region. EPE has developed and evolved five strategic anchors over the last five years to support those goals.

Q11. PLEASE DISCUSS EPE'S ANCHORS AND INITIATIVES THAT UNDERLIE THE COMPANY'S STRATEGIC PLAN.

A. EPE's five strategic anchors focus on improving customer satisfaction, supporting growth, leveraging technology, advancing environmental goals, and fostering a culture of excellence.

Be a Trusted Partner

EPE will simplify customer processes and improve the overall customer experience. The Company aims to maintain high reliability, affordability, and transparency by improving construction management, outage scheduling, cybersecurity, and technology deployment. Affordability efforts include process streamlining, technology adoption, and fuel cost reduction. External partnerships will support economic growth and positive regulatory outcomes.

Serve Growth

EPE is focused on delivering solutions to serve large customers and to improve the customer mix to the benefit of the entire system. Strategic partnerships will drive growth by securing generation and grid resources, replacing retiring generation, and

optimizing transmission. Efforts will enhance load management, energy efficiency, and customer service. EPE recognizes the need to optimize regulatory mechanisms to balance the needs of all stakeholders.

Leveraging Technology

EPE transformative goals require that the Company adopt and integrate enterprise and support systems to boost efficiency, and to advance the adoption of artificial intelligence and innovation throughout the organization. Enabling systems and training to ensure cybersecurity has never been more important and is a critical Company imperative.

Advance a Cleaner Future

EPE will deploy programs and technologies to increase energy efficiency and mitigate peak demand growth. Investments will focus on renewable resources, electrification, environmental compliance, and demand response programs. Initiatives include customer education, integrated resource planning, solar and battery projects, and regulatory filings for grid expansion.

Drive a Culture of Excellence

EPE's people are the key to successfully accomplishing our mission. The Company commits to safety, wellness, and employee development through personal development plans, coaching, and leadership training. Engagement will be enhanced via clear communication and accountability.

III. STRATEGIC OVERVIEW

Q12. PLEASE DESCRIBE THE ISSUES AND DEMANDS CURRENTLY FACING ELECTRIC UTILITIES IN THE UNITED STATES.

A. The electric utility industry is experiencing generational structural change driven by electrification, decarbonization mandates, technology shifts, and new load growth. From an engineering and regulatory perspective, the sector faces simultaneous system expansion, operational complexity, and evolving regulatory frameworks. I would categorize the challenges as –

1. Rapid Load Growth and Electrification
2. Transmission Expansion and Interregional Coordination
3. Reliability, Resilience, and Extreme Weather
4. Financial and Capital Market Pressures
5. Distributed Energy Resources and Grid Modernization
6. Decarbonization and Resource Transition

Many of these challenges are familiar from the last decade, but the potential load growth attributable to extremely large load customers, primarily data centers, has changed the nature and urgency of the other issues. For example, rapid growth from large customers and the attendant economic benefits increase financial pressures and challenge decarbonization and resource transition initiatives. In addition, in the background for many of these challenges are near-term supply chain

issues constraining new generation and transmission capacity expansion. These challenges all may contribute to increased costs for the system.

Q13. HOW DO THOSE ISSUES AND DEMANDS IMPACT EPE'S OPERATIONS IN NEW MEXICO?

A. Over the last five years, the most critical concerns have been decarbonization and the transition to clean resources, electrification, distributed energy resources ("DER") and grid modernization, and transmission. The energy transition and renewable portfolio standards ("RPS") have dominated the conversation. Resource planning and procurement have been diverging between EPE's jurisdictions due to very different state policy objectives, and EPE has been successful in meeting RPS requirements and would expect to continue that for normal, historical growth. But the large load imperative of just the last two years upends the status quo.

Q14. WHY IS THAT?

A. EPE's peak demand in New Mexico is about 500 MW. Just one large load customer could double or triple EPE's jurisdictional peak and severely complicate RPS compliance (especially given the energy intensive nature of data center). Large loads in New Mexico represent generational economic development opportunities, but they require rapid resource development, transmission, and dispatchable (likely gas) resources. Serving those customers, which may require significant future

capital investment, also introduces new financial and regulatory issues. In this case, EPE is proposing new large load tariffs designed to recover the costs associated with serving these customers. Importantly, service under the new tariffs also requires an Energy Service Agreement designed to ensure other customers and EPE are protected from the severe financial implications that could result from service to customers requiring significant system investment.

Q15. IS EPE ON TRACK TO COMPLY WITH ITS NEAR AND LONG-TERM RPS OBLIGATIONS UNDER THE RENEWABLE ENERGY ACT?

A. Yes. EPE exceeded the 40 percent RPS requirement in 2025 and expects to continue to meet or exceed the renewable and clean energy requirements as they increase to 50 percent in 2030 and beyond. In 2016, EPE was the first, and so far only, New Mexico utility to exit coal generation, and the Company continues to add significant amounts of solar generation and battery storage. EPE is confident the Company will reach full compliance with New Mexico policy requirements while pursuing its own Company-wide sustainability goals.

The long-term picture is more complicated. Renewable resource additions, which just two years ago dominated generation capacity growth in the United States, have become more complicated and expensive with supply chain and tariff issues, as well as swings in federal policy. Renewable Energy Act compliance,

already challenging as the RPS increases, will be even more so in the event EPE's retail energy sales increase substantially with new large load customers.

Q16. WHAT IS EPE DOING TO MODERNIZE AND BUILD ITS GRID TO SUPPORT GROWTH, SYSTEM RELIABILITY AND RESILIENCE, AND TO INTEGRATE RENEWABLE RESOURCES?

A. EPE was the first utility in New Mexico to utilize the Grid Modernization statute to implement advanced metering. With completion of the project in 2025, EPE has significant technology at the customer end of the distribution system to enable new pricing options and demand response programs. EPE witness Omar Gallegos details the three components of the transmission and distribution plant investment included in this case – (1) organic, or normal, growth, (2) the interconnection of renewable energy resources, and (3) reliability investments. The last category includes wildfire mitigation investments as well as technology and grid enhancements with substations designed for improved outage mitigation and restoration.

Q17. DOES EPE'S TRANSITION STRATEGY INCLUDE DEMAND-SIDE TECHNOLOGIES TO DEFER OR REPLACE NEW SUPPLY-SIDE INFRASTRUCTURE PROJECTS?

A. Yes. EPE's recently accepted Integrated Resource Plan includes commitments to procure more demand-side resources. But that effort has become even more critical with the potential for rapidly increasing load amid supply-side resource limitations. Because new load may only be realized with accelerated resource procurement, a focus on demand-side options may be critical to realizing economic development opportunities.

IV. OVERVIEW OF EPE'S APPLICATION

Q18. WHEN WAS EPE'S LAST RATE CASE AND WHAT WAS THE RESULT?

A. Shortly after EPE's 2020 acquisition by IIF was approved by the Commission, EPE filed an application for revision of its retail rates in Docket No. 20-00104-UT. The timing of EPE's required filing was pursuant to a Commission order extending back to EPE's exit from the Four Corners Power Plant in 2016 in Docket No. 15-00109-UT. EPE requested a revenue increase of $7.354 million, 6.1 percent over existing base revenues, based on a requested ROE of 10.4 percent. In its order issued on June 23, 2021, the Commission adopted a decrease of $3.3 million with an ROE of 9 percent, which at the time was the among the lowest in the country. EPE appealed the order in the case and was ultimately granted relief on several issues.[1] The last time a base rate increase was authorized for EPE was by final

[1] While the 2019 rate case docket is closed, EPE continues to have an appeal pending at the NM Supreme Court.

order in the Company's 2015 case, and that rate increase was less than one million dollars.

Q19. WHY IS EPE FILING THIS RATE CASE AT THIS TIME?

A. The issuance of the final order in EPE's last rate case was a demarcation point for EPE. Completion of the acquisition of EPE occurred on July 20, 2020, and the Company began a transition of management and mission going forward under new ownership. One distinct difference in operations of the Company is the increased capital investment in facilities serving the EPE system and New Mexico. As explained in the testimony of EPE witness Richard Gonzalez, capital investment by EPE has increased over the last five years and is expected to continue and even increase over the next five years. These investments are critical to the modernization and continued reliability of EPE's system as well as expanding the Company's ability to continue supporting economic development in the region.

Q20. PLEASE PROVIDE AN OVERVIEW OF THE REVENUE REQUIREMENT REQUESTED IN THIS CASE.

A. EPE is requesting an annual revenue requirement increase of $ 70.6 million, which represents a 50.4 percent increase over current base revenues. The primary drivers for the requested increase are an increase in Net Plant in Service of $274.4 million, which contributes to the proposed rate base increase of $266.0 million.

Q21. ARE THERE OTHER FACTORS DRIVING THE INCREASED CAPITAL INVESTMENT?

A. Yes. Over the period corresponding to the time of EPE's last case to today – roughly 2020 through 2025, the cost of goods required in utility construction have increased 35 percent to 60 percent. The well-known drivers over that period are the COVID-19 epidemic, the war in Europe, and significant supply chain disruptions. Significant cost increases for many of the inputs necessary for construction and operation of utility plant magnify the total cost of EPE's investments and the resulting rate base. The stacked structural shocks across supply chains, energy markets, labor, and capital costs have driven the Producer Price Index higher over this period and many of these drivers are structural and persistent.

Q22. IS THE REQUESTED REVENUE REQUIREMENT NECESSARY FOR EPE TO PROVIDE SAFE AND RELIABLE SERVICE?

A. Yes. As EPE's testimony supports, the capital investments and expenses reflected in the proposed revenue requirement are prudent and essential for the safe and reliable operation of EPE's system. One notable example is the investment in transmission EPE has made to replace wood structures with steel in fire-prone areas of New Mexico in order to protect EPE's import capabilities. As EPE witness Gallegos testifies, this investment has already protected against fire exposure in 2025.

Q23. PLEASE DESCRIBE EPE'S REQUESTED CHANGES TO THE AUTHORIZED ROE AND CAPITAL STRUCTURE.

A. As explained by Company expert witness Jennifer Nelson, EPE is requesting an ROE of 10.7 percent. EPE is also proposing the Commission authorize an equity and debt capital structure, 55.5 percent and 44.5 percent, based on actual percentages as of the end of the Test Year Period.

Q24. WHAT IS THE SIGNIFICANCE OF THE REQUESTED ROE AND CAPITAL STRUCTURE ON EPE'S ABILITY TO MEET ITS STRATEGIC GOALS, INCLUDING THE CLEAN ENERGY TRANSITION AND GRID MODERNIZATION STRATEGIES??

A. A reasonable ROE and capital structure are essential to enable EPE to continue investing at the pace the Company deems necessary to meet its goals, but also to maintain healthy credit ratings, as EPE witness Richard Gonzalez explains.

V. AFFORDABILITY

Q25. WHAT IS THE ANTICIPATED IMPACT OF EPE'S PROPOSED NEW RATES ON LOCAL ECONOMIC DEVELOPMENT AND CUSTOMER AFFORDABILITY?

A. EPE's proposed increase represents a significant reorienting of rates in several ways. The most obvious is the system average increase required to move EPE to full cost recovery. This is primarily the result of incorporating the significant investments EPE has made to the New Mexico system over the last six years, and the industry and economic changes that have occurred over that time. EPE's past and planned investments will enable future economic growth, especially with potential large customer growth.

EPE's proposal to move to cost-based rates for all rate classes over two phases balances the need to remove subsidies by commercial customers with affordability concerns for residential customers.

Q26. WHAT FACTORS ARE DRIVING THE PROPOSED INCREASE TO THE RESIDENTIAL RATE CLASS?

A. The primary driver is the increase in total cost of service for EPE's New Mexico jurisdiction. Because a large portion of the net plant rate base increase is distribution, the Residential rate class is disproportionately impacted. Finally, the starting point for average New Mexico residential rates is significantly below cost, the result of the distribution of jurisdictional costs in prior cases. Historically, Residential rates have been subsidized by other rate classes, primarily commercial customers. In at least the last three cases, EPE has filed a class cost of service analysis indicating increases for the Residential rate class but then proposing

"gradualism" in revenue distribution. In this case, EPE is proposing that all classes pay the full cost for EPE to provide the class service. Starting from a subsidized position amplifies the Residential class increase.

Q27. DO EPE'S CURRENT RATES REFLECT THE COST TO SERVE EPE'S NEW MEXICO CUSTOMERS?

A. No, EPE's current rates are significantly below the cost of providing service, as evidenced by the calculated revenue deficiency and requested relief. While the current state is driven by the significant capital increases and rate of return requested, it is EPE's position that the increase requested in this case also reflects the low starting point established in the 2019 rate case.

Q28. EPE IS PROPOSING A SIGNIFICANT PERCENTAGE INCREASE IN RESIDENTIAL RATES SPREAD OVER TWO PERIODS. HOW WILL NEW MEXICO RESIDENTIAL BILLS COMPARE WITH RESIDENTIAL BILLS IN EPE'S OTHER JURISDICTION IF THE REQUESTED INCREASE IS APPROVED?

A. It is reasonable to expect that average residential rates would be comparable between EPE's two jurisdictions, even given differences in regulatory frameworks and state policy. Exhibit JS-1 includes two charts of average monthly Residential bills – for New Mexico and Texas. The top chart compares current monthly average

bills for New Mexico residential customers currently and after the full increase EPE is proposing in this case. The chart is taken from a larger analysis of impacts included with the testimony of EPE witness Manuel Carrasco. The bottom chart is the same analysis included in EPE's recent Texas rate case, which was recently concluded. The comparison is similar in both tables – residential average bills at current and proposed rates.

Q29. WHAT IS NOTABLE ABOUT THIS COMPARISON?

A. Several things. First, although average Residential consumption is slightly higher in EPE's New Mexico jurisdiction, "current" monthly bills are higher in Texas. The test years for the comparisons differ by a year, but each shows average bills under rates in effect at the time of the filed cases. Second, after the proposed increases in each jurisdiction, New Mexico average bills close the gap between jurisdictions and move slightly higher than Texas.

Q30. IS EPE PROPOSING MECHANISMS OR PROGRAMS TO ASSIST CUSTOMERS WITH THE PROPOSED INCREASES OVER THE NEXT SEVERAL YEARS?

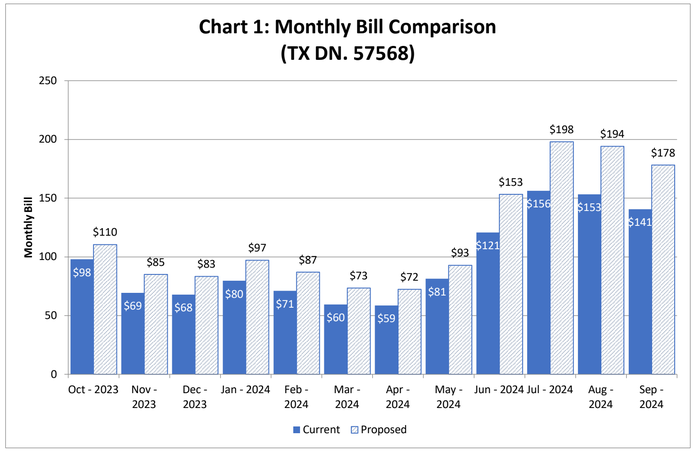
A. Yes. The first is of course EPE's proposal to spread the increase over two rate periods as described in Mr. Carrasco's testimony. EPE is also proposing a low-income rider, with the Residential monthly customer charge waived for

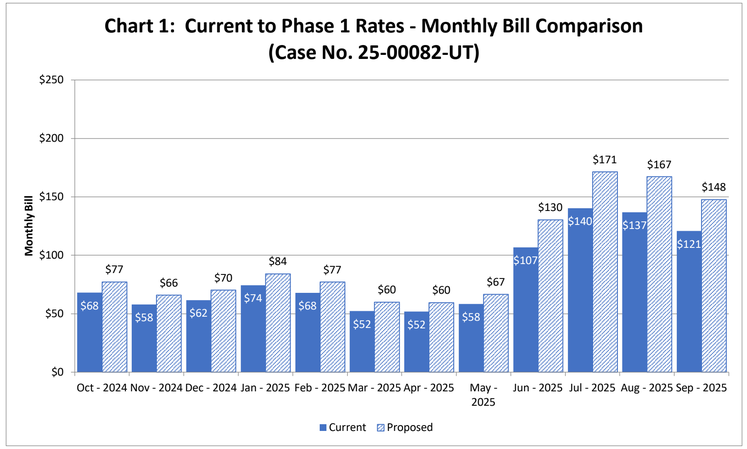
qualifying customers. Finally, EPE presents mandatory time-of-day ("TOD") rates, including for the Residential class, that would offer expanded opportunity for customers to proactively affect their monthly bills. This mandatory rate design proposal is required by prior Commission order, however, EPE recommends mandatory opt-out TOD rates for all applicable classes not be implemented until after EPE's ongoing Time Varying Rate pilot studying TOD rates is concluded. But ultimately, the change to mandatory TOD rates for all customers, enabled by the AMI project that was completed in 2025, provides the greatest flexibility possible for customers to control their bills.

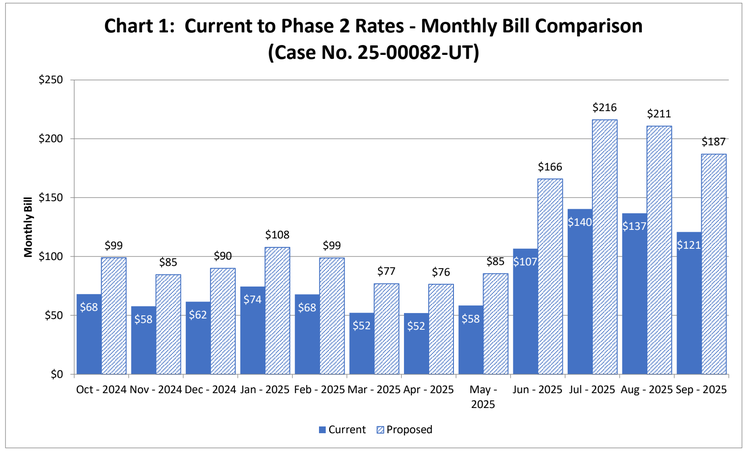
Q31. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes, it does.

EL PASO ELECTRIC COMPANY
2026 NEW MEXICO RATE CASE FILING
TEXAS AND NEW MEXICO RESIDENTIAL BILL COMPARISON







BEFORE THE NEW MEXICO PUBLIC REGULATION COMMISSION

IN THE MATTER OF THE APPLICATION OF EL PASO ELECTRIC COMPANY FOR REVISION OF ITS RETAIL ELECTRIC RATES PURSUANT TO ADVICE NOTICE NO. 317	)	**Case No. 25-00082-UT**
EL PASO ELECTRIC COMPANY, Applicant.	)	

DECLARATION OF JAMES A. SCHICHTL IN SUPPORT OF THE FOREGOING DIRECT TESTIMONY TO THE APPLICATION OF EL PASO ELECTRIC COMPANY FOR REVISION OF ITS RETAIL ELECTRIC RATES PURSUANT TO ADVICE NOTICE NO. 317

I, ***James A. Schichtl***, pursuant to Rule 1-011 NMRA, state as follows:

1. I affirm in writing under penalty of perjury under the laws of the State of New Mexico that the following statements are true and correct.

2. I am over 18 years of age and have personal knowledge of the facts stated herein. I am employed by El Paso Electric Company ("EPE" or "the Company") as the *Vice President – Customer and Regulatory Solutions.*

3. The foregoing Direct Testimony of James Schichtl, together with all exhibits sponsored therein and attached thereto, is true and accurate based on my knowledge and belief.

4. I submit this Declaration, based upon my personal knowledge and upon information and belief, in support of EPE's ***Application for Revision of Its Retail Electric Rates Pursuant to Advice Notice No. 317***

FURTHER, DECLARANT SAYETH NAUGHT.

I declare under penalty of perjury that the foregoing is true and correct.

Executed on March 27, 2026.

/s/ James A. Schichtl
JAMES A. SCHICHTL

BEFORE THE NEW MEXICO PUBLIC REGULATION COMMISSION

IN THE MATTER OF THE APPLICATION OF EL PASO ELECTRIC COMPANY FOR REVISION OF ITS RETAIL ELECTRIC RATES PURSUANT TO ADVICE NOTICE NO. 317	)	**Case No. 25-00082-UT**
EL PASO ELECTRIC COMPANY, Applicant.	)

EL PASO ELECTRIC COMPANY
DIRECT TESTIMONY OF
GEORGE NOVELA

I. INTRODUCTION AND QUALIFICATIONS

Q1. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is George Novela. My business address is 100 North Stanton Street, El Paso, Texas 79901.

Q2. HOW ARE YOU EMPLOYED?

A. I am employed by El Paso Electric Company ("EPE" or "Company") as Senior Director of Regulatory Policy and Rates.

Q3. PLEASE SUMMARIZE YOUR BUSINESS AND EDUCATIONAL BACKGROUND.

A. I graduated from The University of Texas at El Paso with a Bachelor of Business Administration in Economics in 2006, a Master of Science in Economics in 2008, and a Master of Business Administration in Finance in 2012. I received a Graduate Certificate in Public Utility Regulation & Economics from New Mexico State University in 2014.

Prior to working at EPE, I worked as the Research Coordinator for the City of El Paso's Department of Economic Development from 2007 to 2008. My duties included calculating incentive packages for new and expanding businesses, producing impact studies, and coordinating recruitment efforts with various public and private stakeholders.

In 2008, I began working for EPE as a Load Research Specialist, where I specialized in analyzing EPE's large customers. I was promoted to Senior Economist in 2011, where my responsibilities included the development of the long-term energy, demand, and customer forecasts that EPE uses for planning purposes. In 2014, I worked briefly for EPE's Energy Efficiency Department as a Program Coordinator, where I oversaw energy efficiency initiatives for residential customers in both Texas and New Mexico. In 2014, I was promoted to Manager of Economic Research, where I oversaw the Company's long-term forecasting and load research programs. I was promoted to Director of Economic and Rate Research in 2021, where I managed and directed the activities of both the Rates Department and Load Research and Data Analytics Department. As of 2024, I serve as Senior Director of Regulatory Policy and Rates, where I lead and represent the company, from a policy perspective, in various regulatory filings, while continuing to oversee previous responsibilities.

Alongside my work at EPE, I occasionally teach undergraduate courses in Macroeconomics and Microeconomics at El Paso Community College.

Q4. PLEASE DESCRIBE YOUR CURRENT RESPONSIBILITIES WITH EPE.

A. As the Senior Director of Regulatory Policy and Rates, I oversee and direct activities of EPE's Rate Research Department and Load Research and Data Analytics Department. The Rate Research Department responsibilities include

jurisdictional and class cost of service studies, rate design analysis, and the development of EPE's retail rate schedules and charges. Load Research and Data Analytics responsibilities include the preparation of long-term customer, energy, and load forecasts, rates functions, preparation of weather normalization, analysis of load research data, the preparation of load research studies and reports. As the Senior Director of Regulatory Policy and Rates, I also lead and have direct participation in several regulatory filings, including general base rate cases, made by EPE with the New Mexico Public Regulation Commission ("NMPRC" or "Commission") and the Public Utility Commission of Texas ("PUCT").

Q5. HAVE YOU PREVIOUSLY PRESENTED TESTIMONY BEFORE UTILITY REGULATORY BODIES?

A. Yes, I have testified before the NMPRC and the PUCT.

II. PURPOSE AND OVERVIEW OF TESTIMONY AND RECOMMENDATIONS

Q6. WHY IS EPE FILING THIS CASE AT THIS TIME?

A. EPE's current base rates were approved by the Commission in EPE's 2020 Rate Case in Docket 20-00104-UT based on a calendar-year 2019 historical Test Year Period. In the five plus years since that rate case, EPE has invested heavily in its system to maintain reliability while also responding to organic load growth from

its traditional customer base and electrification, extreme weather events, decarbonization mandates, grid modernization, and other complex challenges.

A key area of investment has been infrastructure upgrades, resiliency and hardening, and modernization of EPE's transmission and distribution system, described by EPE witness Omar Gallegos. To meet New Mexico's incremental clean energy goals under the Renewable Energy Act, EPE has interconnected approximately 545 MW of solar energy resources and 125 MW of battery energy storage to EPE's system with an additional 730 MW of solar and 665 MW of battery planned through 2029. EPE has also invested in key software packages, such as customer cloud service software, new enterprise resource planning software and integrated planning and forecasting software that are utilized by the Company to help provide reliable service to its customers; manage supply chain, human resources, accounting and budgeting information; and streamline the budgeting and forecasting process. These software investments are described in detail by EPE witness Cynthia S. Prieto.

These investments, combined with inflationary pressures, have substantially increased the cost for EPE to dependably serve its customers. As a result, EPE's currently-authorized rates are no longer just and reasonable. EPE is therefore asking for an increase in its non-fuel base rates to cover a base rate revenue deficiency of $70.6 million. I provide additional details on the

circumstances supporting the need for the requested base rate increase later in my testimony.

Q7. WHAT IS THE PURPOSE OF YOUR TESTIMONY AND HOW IS IT ORGANIZED?

A. My testimony supports EPE's 2026 Application for Revision of Retail Electric Rates Pursuant to Advice Notice No. 317 ("Application") and demonstrates that this filing is important to advance EPE's operations and strategic goals for the energy transition while continuing its commitment to the delivery of dependable, safe, clean, and affordable service to our New Mexico customers.

My testimony is divided into 10 sections. I first provide an overview of EPE's Application and the requested relief; demonstrate compliance with Rule 17.1.2.10; and introduce EPE's other witnesses presenting testimony in this proceeding.

The next section of my testimony provides an overview of EPE and addresses growth in EPE's New Mexico service territory since EPE's last rate case.

My testimony then summarizes key impacts to EPE's cost of providing electric service since EPE's last rate case that are driving the need for this rate filing.

The remaining sections of my testimony focus on rate design proposals to help EPE's low-income customers, expand pricing options and improve customer protection language, and revenue requirement distribution.

Q8. DO YOU SPONSOR SPECIFIC REQUESTS AND SCHEDULES IN THIS PROCEEDING?

A. Yes. I sponsor or co-sponsor filing requirements in Rule 17.1.2.10. I also sponsor Schedule Q2.

III. OVERVIEW OF EPE'S APPLICATION

Q9. PLEASE SUMMARIZE EPE'S REQUEST.

A. EPE's filing is based on a twelve-month Base Period ending September 30, 2025, and a twelve-month Historical Test Year Period, as adjusted pursuant to Rule 530. The cost of service to serve New Mexico for the Test Year Period demonstrates the need for jurisdictional non-fuel and purchased power base revenue of $210.7 million, which represents an increase in non-fuel base revenue of $70.6 million, or an approximate increase of 50.4 percent over current base revenues. Combined with a $0.241 million decrease in other operating revenues resulting from proposed reductions to miscellaneous service charges, EPE is requesting a net operating revenue increase of $70.4 million.

Notable components of this rate case filing include**:**

- A requested Return on Equity of 10.7 percent and a proposed capital structure of 44.5 percent debt and 55.5 percent equity;

- A two-part, phased-in increase in non-fuel base rates for certain, specified rate classes including the residential rate class to cover a base rate revenue deficiency of $70.6 million;
- The incorporation of EPE's capital investment since 2020 and EPE's O&M expenses;
- The incorporation of annual capacity costs associated with the Commission-approved Carne Energy Storage Agreement ("ESA") and the Santa Teresa ESA currently being recovered through EPE's Renewable Portfolio Standards ("RPS") Cost Rider and the Buena Vista 1 Long Term Purchased Power Agreement ("BV 1 PPA") in base rates;
- The incorporation of AMS Project costs being recovered pursuant to the AMS Rider into base rates including recovery of remaining investment in legacy meters installed prior to December 31, 2019, being recovered pursuant to the AMS Rider into base rates;
- The recovery of EPE's investment in legacy meters installed after December 31, 2019, and removed from service to implement the AMS Project; and
- An increase in nuclear decommissioning expense for PVGS Units 1 and 2.

In addition, the following highlights key rate structures and retail tariffs designed to provide expanded pricing options and promote efficient use of energy:

- A new rate option for a proposed low-income rider to Rate No. 01 – Residential Service rate;
- New rate options to incentivize shifting of load from the on-peak to the off-peak period, including experimental off-peak demand rates to Rate No. 03 Small General Service Rate, and TOD demand rate to Rate No. 04 General Service Rate;
- A new residential peak time rebate program, Rate No. 52 Peak Time Rebate Pilot;
- Opening EPE's Rate No. 29 interruptible program to new customers;
- Two new large load tariffs, Rate Nos. 50 and 51, designed to introduce cost-shifting protections from the advent of large load customers; and
- A replacement to Rule 8 - Line Extension Policy, which includes four substantive changes to protect EPE's existing New Mexico customers from potential costs of connecting large distribution customers and related changes to Rule 13 - Increase or Decrease of Connected Load.

Q10. WHAT ARE THE SIGNIFICANT FACTORS DRIVING EPE TO FILE A RATE CASE AT THIS TIME?

A. EPE's overall cost of providing service to New Mexico customers has increased significantly from the 2019 historical Test Year Period used for the 2020 Rate Case due to several contributing factors.

First, since January 1, 2020, EPE has made $408.4 million in capital investment to ensure safe and reliable service to its growing New Mexico customer load. EPE has experienced unprecedented extreme year-over-year spikes in retail load growth since its last rate case requiring significant investments in new and upgraded infrastructure to reliably serve that growth. In addition, expansion of electrification throughout EPE's New Mexico service territory and extreme hot weather events and trends are also contributing to retail load growth in New Mexico.

Second, EPE is seeking to update its authorized capital structure and return on equity to reflect current financial conditions and support investment-grade credit metrics.

Third, EPE is seeking to move Commission-approved AMS Program Costs out of the AMS Rider into base rate recovery, pursuant to the Commission's Order in Case No. 21-00269-UT. EPE is also seeking to include costs associated with the Santa Teresa, Carne and BV 1 battery energy storage systems that are or will be effective in the rate year (2027), which are substantially fixed under the terms of the Commission approved agreements.

Other significant factors contributing to filing this rate case include:

- EPE's wildfire mitigation efforts,
- issues from EPE's 2020 base rate case order, and
- inflationary pressures.

I discuss these factors later in my testimony.

Q11. DOES EPE'S APPLICATION MEET THE APPLICABLE REQUIREMENTS IN COMMISSION RULE 17.1.2.10(B)(2)?

A. Yes. EPE is including a proposed Notice to Customers. The notice addresses EPE's proposal to phase in recovery of base rates, for certain specified rate classes, and includes a statement comparing the proposed Phase 1 new rates with the present rates for each customer class and proposed Phase 2 new rates with Phase 1. It also provides the anticipated bills to residential customers under proposed Phase 1 and Phase 2 rates at various usage levels pursuant to Rule 17.1.2.10(B)(2)(a). The notice also states that the Commission might order significant changes to Rate No. 29 to make it more effective in reducing peak demand, in compliance with the Commission's Order in EPE's last rate case.

Pursuant to Rule 17.1.2.10(B)(2)(b), I identify "any extraordinary event or circumstances, known or projected, which materially alters [EPE's] operating or financial condition from the condition existing during the [EPE's] test period in its last rate case" in a later section of my testimony.

Q12. DOES EPE'S FILING INCLUDE COPIES OF AMENDED NOTICES FILED UNDER RULE 17.5.440(D) NMAC?

A. Yes. EPE has filed Rule 17.5.440 amended notices with the Commission for projects where the final amounts exceeded a +/- 20 percent variance from the original estimate. Pursuant to that rule, EPE has included copies of the Rule 440 Amended Filings for projects EPE seeks to recover in this case with the Application.

Q13. WHO ARE THE OTHER WITNESSES SUPPORTING EPE'S REQUESTS IN THIS CASE?

A. The other witnesses and their subject areas are as follows:

- **James Schichtl**, EPE's Vice President of Customer & Regulatory Solutions, provides an overview of EPE, its operations, and its strategic goals to achieve New Mexico's decarbonization mandates while remaining firmly anchored to our foundational responsibilities of delivering safe, reliable, and affordable electricity.

- **Cynthia S. Prieto**, EPE's Vice President and Controller, addresses EPE's plant in service and accumulated depreciation and amortization in rate base, together with related adjustments. She sponsors EPE's total Company rate base and discusses schedules and adjustments to other base rate items. In addition, she presents EPE's general capital additions, depreciation expense, and PVGS revaluation. She also addresses COVID-19 expenses, the uncollectible expense and provision for FERC rate refund revenue adjustments. Finally, she also discusses EPE's compliance with regulatory commitments resulting from EPE's merger with Sun Jupiter Holdings LLC ("Sun Jupiter"), an indirect subsidiary of IIF US Holding 2 LP ("IIF").

- **Richard S. Gonzalez**, EPE's Treasurer, discusses EPE's capital structure and cost of capital, financing plans, and the importance of maintaining EPE's bond ratings. Mr. Gonzalez also presents the funding necessary for EPE's Nuclear Decommissioning Trust ("NDT").

- **Steven A. Sierra**, EPE's Director of Financial Accounting, discusses accounting rules; summarizes EPE's total Company revenue requirement; and specifies the New Mexico rate increase. He sponsors and describes expense and revenue adjustments that EPE has made to the Base Period to derive the Test Year Period cost of service. Mr. Sierra also sponsors and supports schedules related to payroll, pensions and benefits, and accounting information. Mr. Sierra affirms that EPE's Rule 530 schedules have been prepared from EPE's books and records, which are audited by an independent accounting firm in accordance with the FERC Uniform System of Accounts.

- **Jennifer E. Nelson**, Assistant Vice President of Concentric Energy Advisors, Inc., presents and supports the Return on Equity ("ROE") rate necessary for EPE to provide a reasonable return to its equity investors. Ms. Nelson also assesses the reasonableness of EPE's capital structure. As Ms. Nelson testifies, the recommended ROE of 10.7 percent considers a variety of factors that affect the required return.

- **Joseph S. Weiss**, Assistant Vice President of Concentric Energy Advisors, Inc., presents and supports the lead-lag study used to determine the Company's cash working capital requirements.

- **Julissa I. Reza**, EPE's Manager of Regulatory Accounting, supports certain schedules and Test Year Period adjustments made to Base Period expenses and rate base, related to fuel and purchased power expense, regulatory commission expense, and regulatory assets and liabilities. In addition, she presents and supports the analysis of the 12-month rolling average component of EPE's fuel adjustment factor pursuant to the Final Order in EPE's last fuel reconciliation filing in NMPRC Case No. 23-00046-UT.

- **Lori A. Glander**, Vice President, Decommissioning Services at TLG Services, Inc., presents the most recent decommissioning cost analysis, which provides the estimated costs associated with the shutdown of PVGS beginning in 2045. Ms. Glander summarizes the result of the updated analysis and identifies major changes from the previous estimate.

- **John J. Spanos**, President with Gannett Fleming Valuation and Rate Consultants, LLC, presents and supports the depreciation study and depreciation rates for all of EPE's assets.

- **Tamera L. Henderson**, Director of Tax with EPE, addresses the federal and state income taxes included in EPE's requested cost of service and rate base. She also addresses taxes other than income taxes.

- **Victor Martinez**, EPE's Director of Energy Resources, supports PVGS O&M expenses and capital projects that have been placed in service since EPE's prior rate case through the Test Year Period in this proceeding. He also discusses the efficient capital cost management approach taken at Palo Verde. Mr. Martinez also addresses the capacity costs associated with the BV 1 PPA, Santa Teresa and Carne BESS facilities in support of EPE's proposal to move these costs into base rates. Finally, he also describes EPE's energy management system ("EMS") upgrade and other investments.

- **Jeffery M. Hughes**, EPE's Newman Power Plant Manager, describes EPE's local generation and supports recovery of the costs of new investments in that fleet and the costs to operate and maintain it. Mr. Hughes also addresses the reasonableness and prudence of the capital additions and improvements for the local generation fleet, as well as the O&M expenses and practices that EPE employs to manage its local generation resources.

- **Omar A. Gallegos**, Vice President of Energy Delivery, presents and explains EPE's transmission and distribution plant additions placed in service since the 2020 Rate Case through the Base Period, including test year period adjustments. He demonstrates that all costs related to EPE's transmission and distribution plant additions are reasonable, necessary, prudent, and used and useful for safe, reliable, and efficient service to New Mexico customers. He also sponsors O&M expenses for transmission and distribution, legacy meter plant installed after December 31, 2019, and EPE's replacement Line Extension Policy and Rule 8 of EPE's Rules and Regulations section of EPE's tariffs.

- **Enedina Soto**, Manager of EPE's Economic Research Department, provides EPE's historical and forecasted sales and demand data in support of EPE's rate request. She describes the load research function and its role in gathering the energy and demand data necessary for assigning costs to rate classes, including the development of allocation factors. Ms. Soto also supports EPE's system loss study and the proposed weather normalization adjustment.

- **Adrian Hernandez**, Supervisor of Revenue Requirements and Cost Analysis for EPE, describes EPE's cost of service model and presents the New Mexico jurisdictional cost of service and class cost of service studies that support EPE's

revenue requirement request and rate design proposals, including an illustrative cost of service study that includes a reopened Rate 07 rate class.

- **Rene Gonzalez**, Supervisor of Rates and Regulatory for EPE, addresses adjustments to base rate revenues for annualized billing determinants, including adjustments for weather and energy efficiency savings. Mr. Gonzalez also supports EPE's lamp lighting cost of service and rate design and discusses revisions to EPE's miscellaneous service charges.

- **Manuel Carrasco**, Manager of Rate Research for EPE, addresses EPE's rate design proposals that all classes move to full cost of service. He details the revenue distribution by rate class, including the Company's proposal for phased-in rate increases for certain rate classes. Mr. Carrasco also provides an evaluation of the impact of EPE's rate proposals on certain customers and discusses rate-related revisions to EPE's rate schedules. Finally, Mr. Carrasco provides an opt-out time of day rate design proposal, a peak time rebate tariff proposal, and presents the proposed large load tariffs.

IV. OVERVIEW OF EPE

Q14. PLEASE DESCRIBE EPE.

A. EPE is a vertically integrated utility providing bundled service to approximately 472,927 retail customers (approximately 111,000 in New Mexico) in a 10,000 square mile area of the upper Rio Grande valley in southern New Mexico and west Texas. Its service territory extends from Hatch, New Mexico, to Van Horn, Texas, and includes two interconnections to Ciudad Juárez, Mexico, and the Comisión Federal de Electricidad, Mexico's national electric utility. The Company also serves Rio Grande Electric Cooperative as a full requirements wholesale customer subject to FERC jurisdiction.

EPE provides service to customers in the following incorporated cities, towns and villages in New Mexico: Anthony, Las Cruces, Sunland Park, Mesilla and Hatch. Additionally, it serves customers in the unincorporated areas of Doña Ana County and portions of the unincorporated areas of Luna, Otero and Sierra Counties. Its retail customer mix in New Mexico, based on number of customers, is approximately 88.2 percent residential, 10.3 percent small commercial, less than 1.0 percent medium and large commercial/industrial, and 1.5 percent other public authorities. EPE also serves military installations, including Holloman Air Force Base, White Sands Missile Range, and Ft. Bliss Army base.

Q15. WHAT IS THE GROWTH TREND IN EPE'S NEW MEXICO SERVICE TERRITORY SINCE EPE'S LAST RATE CASE?

A. EPE's New Mexico service territory has experienced meaningful demographic and economic growth in recent years. U.S. Census Bureau data show that Doña Ana County's population has increased by approximately six percent over the past decade. U.S. Bureau of Economic Analysis data show that Doña Ana County's Gross Domestic Product has grown by approximately 63 percent since 2013.

Within EPE's New Mexico footprint, the Santa Teresa border and industrial corridor is a notable driver of regional growth, supported by increasing cross-border trade activity and continued investment in logistics and manufacturing. The Santa Teresa port of entry is the busiest land port on the New Mexico - Mexico

border. According to the U.S. Bureau of Transportation Statistics, it accounts for nearly 60 percent of New Mexico's personal vehicle crossings and just over 90 percent of the state's truck crossings. Santa Teresa's industrial base has been cited as accounting for nearly 70 percent of New Mexico's exports, and 2024 was described as a record year for the corridor amid rising commercial traffic. Santa Teresa is also a growing community, with approximately 6,000 residents and a median household income of approximately $60,759. I address the impact of this growth on EPE's rate case in a later section of my testimony.

V. FACTORS AFFECTING EPE'S COST OF SERVICE AND REVENUE REQUIREMENTS

Q16. WHAT TOPICS ARE YOU ADDRESSING IN THIS SECTION OF YOUR TESTIMONY?

A. This section of my testimony describes extraordinary events and circumstances which have materially altered EPE's operating or financial condition from the conditions existing during the 2019 Test Year Period used in EPE's last general rate case, pursuant to Rule 17.1.2.10(B)(2)(c)(ii). These events and circumstances have contributed to EPE's higher cost of service since 2019 and are driving the need for this rate case.

Q17. WHAT CIRCUMSTANCES HAVE MATERIALLY CHANGED IN EPE'S OPERATING AND FINANCIAL CONDITIONS SINCE THE COMPANY'S LAST RATE CASE?

A. As noted earlier in my testimony, EPE has experienced substantial demographic and economic growth in its New Mexico service territory resulting in the need for significant investments necessary for EPE to serve its New Mexico customers. EPE has also been impacted by legislative changes implemented since EPE's last rate case. As a result of the 2019 amendments to the Renewable Energy Act, EPE's RPS obligations have increased from 15 percent to 40 percent since the 2019 Base Period. EPE witness Victor Martinez addresses the changes to EPE's resource mix to meet those renewable energy obligations. As reported in EPE's last RPS Report (filed May 1, 2025), EPE's renewable energy portfolio supplied 20 percent of its retail energy sales to New Mexico customers in 2024, meeting the 20 percent RPS target for that year. Based on preliminary accounting data, EPE anticipates its renewable energy portfolio will also supply sufficient energy in 2025 to meet the 40 percent RPS target.

Pursuant to New Mexico's 2020 Grid Modernization legislation, EPE has replaced analog and digital retail electric meters (i.e., legacy meters) with an advanced metering system ("AMS"). Other state and federal legislation, notably Section 62-8-12 of the Public Utility Act (requiring utility plans to expand

transportation electrification) and the federal Inflation Reduction Act of 2022 ("IRA"), have materially changed EPE's operating and financial conditions.

Additionally, EPE joined the western Energy Imbalance Market ("EIM") on April 5, 2023.

Q18. ARE THERE OTHER FACTORS THAT ARE INCREASING EPE'S COST OF SERVICE?

A. As described above, the main factor that is driving costs is customer load growth. As customer load growth increases investments have to be made in EPE's overall system from generation to transmission and distribution ("T&D").

A. RETAIL LOAD GROWTH

Q19. PLEASE PROVIDE AN OVERVIEW OF SYSTEM LOAD GROWTH SINCE EPE'S LAST GENERAL RATE CASE?

A. EPE has recently faced historic levels of system peak load volatility and higher year-over-year native system peak growth. Please see Table GN-1 below for recent trends in native system load growth. It should be noted that before 2020, the highest year-over-year peak growth ever seen by EPE on its system was 98 MW. As can be seen from the table below, over the past several years, that previous year-over-year record has been surpassed three times (in 2020, 2022, and 2023) and almost doubling the previous record in 2020 and 2023.

Table GN-1

YEAR	MW	MW Growth	Percentage Growth
2020	2,173	188	9.5%
2021	2,051	-122	-5.6%
2022	2,201	150	7.3%
2023	2,384	183	8.3%
2024	2,316	-68	-2.9%
2025	2,325	9	0.4%

Q20. WHAT ARE THE PRIMARY CONTRIBUTORS TO THIS LOAD GROWTH?

A. Although EPE continues to provide and grow its programs and offerings that allow customers to shift their load from on-peak to off-peak periods, EPE's service territory is still seeing significant load growth. EPE has been witnessing strong customer count growth, higher customer energy usage (particularly in residential usage per customer), and warmer weather trends that have increased electricity usage from weather-sensitive customers. EPE expects to continue to see customer growth and growth in residential usage per customer as customers migrate from evaporative to refrigerated air cooling. Refrigerated air cooling uses much more energy and load than evaporative air units. It should be noted that EPE, like many parts of the country, has considerable interest from large data center customers in interconnecting to its system, and that load is not captured in the above table. The

above table highlights only EPE's existing customers and that does not yet include any large data center.

Q21. HOW HAS EPE MANAGED COSTS SINCE THE 2020 RATE CASE?

A. Since EPE's last general rate case in 2020, EPE's management has shepherded the Company through a period of needed high infrastructure growth while keeping Company non-fuel O&M expenses below inflation-adjusted amounts. Please see the direct testimony of EPE witness Steven Sierra for EPE's detailed O&M expense trend for the past several years.

Q22. IS EPE MAKING CAPITAL INVESTMENTS TO ACCOMMODATE THE LOAD INCREASE?

A. Yes. EPE has invested approximately $2.4 billion ($408.4 million on a New Mexico jurisdictional basis) in new electric plant to meet load growth and to maintain and improve its electric system. EPE witnesses Gallegos, Hughes and Martinez explain and support these investments in more detail in their direct testimony.

EPE witness Prieto includes a list of all plant additions that EPE made from January 1, 2020, through October 31, 2025. Total Company plant additions for this period were approximately $2.4 billion. The allocation of the net plant balance at the end of the Test Year Period to the New Mexico jurisdiction is discussed by EPE

witness Adrian Hernandez. EPE continues to see significant growth on its system coming from strong customer growth and increasing usage per customer from its residential customers. As discussed by EPE witnesses Sierra and Richard Gonzales and supported by EPE expert witness Jennifer E. Nelson, the growth in capital investment and the need for EPE to recover its investment and a fair return on its investment are driving the need for this case. As described above, while rate base has indeed grown since EPE's last general rate case, non-fuel O&M expenses have remained relatively flat under the guidance of EPE's executive leadership team.

B. RENEWABLE ENERGY TRANSITION

Q23. FOR CONTEXT CAN YOU PROVIDE A BRIEF OVERVIEW OF ADDITIONS TO EPE'S RENEWABLE ENERGY PORTFOLIO SINCE EPE'S LAST RATE CASE?

A. There have been several recent generation portfolio additions as well as planned resources in the near future that move EPE towards achieving New Mexico's clean energy goals. These additions are materially changing EPE's resource mix and allowing EPE to be compliant with the New Mexico RPS.

Highlights include the addition of the Buena Vista facilities that include the Buena Vista 1 100 MW solar and 50 MW battery storage facility, and the Buena Vista 2 20 MW solar facility that became operational on July 11, 2023. In addition, EPE anticipates the addition of two new renewable resources in 2026. The

Santa Teresa Project is a large-scale renewable energy facility comprised of 150 MW of solar photovoltaic generation paired with 150 MW of battery energy storage system ("BESS"). The Carne Project is a major renewable energy and storage initiative dedicated to serving EPE's New Mexico customers consisting of a 130 MW solar photovoltaic facility paired with a 65 MW BESS. EPE is also adding renewable resources for its Texas jurisdiction, highlighting the Company's commitment to renewable energy throughout its service territory. Please see the direct testimony of EPE witnesses Martinez and Hughes for additional details regarding EPE's energy portfolio.

Q24. WITH THESE ADDITIONS, IS EPE POSITIONED TO MEET NEAR TERM RPS TARGETS?

A. Yes. EPE met the 2024 RPS target to provide 20 percent of the retail energy sales to New Mexico customers with renewable resources in 2024 and met the 2025 RPS target to provide 40 percent of retail energy sales to New Mexico customers with renewable resources. The addition of the Carne and Santa Teresa projects positions EPE to continue meeting or exceeding the 40 percent RPS target through 2029.

Q25. PLEASE DESCRIBE EPE'S PROPOSAL TO INCLUDE CAPACITY COSTS ASSOCIATED WITH THE BV 1 PPA IN BASE RATES.

A. EPE is seeking to include the annual capacity costs associated with the BV 1 PPA, which was approved by the Commission in Docket No. 19-00348-UT, in base rates. Please see the direct testimony of EPE witness Martinez who addresses and supports the reasonableness of these capacity costs. EPE witness Julissa Reza supports recovery of the deferred capacity costs that EPE has already incurred since the facility began operations in 2023.

Q26. IS EPE'S PROPOSAL TO INCLUDE BV 1 PPA ANNUAL CAPACITY COSTS CONSISTENT WITH THE FINAL ORDER IN CASE NO. 19-00348-UT?

A. Yes. The Final Order approved the recommended decision in Case No. 19-00348 with regard to recovery of costs. The recommended decision stated the following: "*EPE should file to recover these capacity costs in its upcoming base rate case*." EPE's proposal to include these annual capacity costs in base rates is consistent with the above language in the final order approval.

Q27. IS EPE ALSO PROPOSING TO INCLUDE CAPACITY COSTS RELATED TO THE SANTA TERESA PROJECT ESA AND CARNE ESA IN BASE RATES?

A. Yes. The Final Order approving EPE's REA Plan for 2026 (Docket No. 25-00038-UT) ordered that "EPE shall address the cost recovery mechanism

used for the STP in EPE's next general rate case." EPE is proposing to move the annual capacity costs related to the Santa Teresa Project ESA into base rates, pursuant to that regulatory requirement. For consistency, EPE is requesting similar treatment for the capacity costs related to the Carne ESA. EPE witness Martinez supports the reasonableness of these costs in his direct testimony.

Q28. IS EPE PROPOSING A COST RECOVERY MECHANISM FOR ENERGY COSTS RELATED TO THE SANTA TERESA PROJECT PPA IN THIS CASE?

A. EPE proposes that the Commission wait to address energy costs related to the Santa Teresa Project PPA until EPE's upcoming REA Plan Filing. In that filing, EPE intends to seek Commission approval to move energy costs incurred under the Santa Teresa Project PPA and other RPS Procurements to EPE's fuel and purchased power cost adjustment clause ("FPPCAC").

C. ADVANCED METERING SYSTEM

Q29. PLEASE PROVIDE A BRIEF OVERVIEW OF EPE'S AMS PROGRAM.

A. EPE's AMS Project was approved by Commission Final Order in Docket No. 21-00269-UT as a grid modernization project to replace EPE's analog and digital retail electric meters ("legacy meters") with advanced meters that record more granular consumption data, enable two-way communication, and include

other functionality including remote turn-on and turn-off capability. The AMS Project also includes implementation of a secure and reliable communications network that supports two-way data flow and implementation of support systems, including a head-end system and meter data management system.

Q30. WHAT RATEMAKING PRINCIPLES AND TREATMENT RELATED TO THE AMS PROJECT WERE DETERMINED IN THE AMS PROCEEDING?

A. The Commission Final Order approved EPE's estimated AMS Project Cost for New Mexico of $35,425,986 (capital costs and customer education expenses) and estimated New Mexico ongoing O&M expenses of $323,898 in 2022 and $5.1 million over a 10-year period ($4.5 million of ongoing O&M and $0.6 million of customer education expenses).

The AMS Final Order also approved EPE's Rate No. 46 AMS Rider and NM AMS cost of service ratemaking methodology for recovery of the AMS Project estimated operating expenses and actual capital costs, subject to reconciliation and true up to actual costs. Additionally, with each new base rate case, EPE is obligated to incorporate all capital investment and O&M expenses and savings associated with the AMS Project being recovered pursuant to the AMS Rider into base rates.

Q31. DID THE COMMISSION'S FINAL ORDER IN THE AMS CASE ADDRESS RECOVERY OF STRANDED ASSETS?

A. Yes. The unanimous and unopposed stipulation adopted by the AMS Final Order authorizes EPE to recover the undepreciated investment in legacy meter plant installed prior to the end of the 2019 (which was the Historical Test Year Period for EPE's 2020 Rate Case) but not a return on that plant. To prevent double recovery of amounts already reflected in rates, the AMS Rider reflects a credit for the return component of and return on legacy meters removed from service as of the end of the prior calendar year, based on the Commission-approved cost of capital.

The AMS Final Order does not address EPE's investment in legacy plant installed after December 31, 2019. Rather, the AMS Final Order adopted the parties' agreement that any legacy meter investment made after December 31, 2019, would be addressed in a future general rate proceeding.

Q32. WHAT IS THE STATUS OF THE AMS IMPLEMENTATION?

A. EPE completed implementation of the AMS Project in July 2025, with system deployment and operational integration substantially complete across the New Mexico service territory. There was some remaining work after July 2025 limited to a small number of meter exchanges involving locations with complex access constraints, which required customer coordination to safely access the meter.

There was also limited work related to customers who opted out of an AMS meter, however, all of that work was completed by early December 2025.

Q33. WHAT APPROVALS IS EPE SEEKING IN THIS FILING REGARDING RATE TREATMENT OF AMS COSTS?

A. Consistent with the AMS Final Order, EPE is requesting approval to transition recovery of AMS project costs from the AMS Rider to base rates. These costs include total capital costs incurred, including AFUDC, through the September 30, 2025, Base Period, and Test Year Period O&M.

Q34. ARE ANY ADJUSTMENTS REQUIRED TO EFFECTUATE THE STIPULATED RATEMAKING TREATMENT FOR LEGACY METERS IN SERVICE AS OF 2019?

A. Yes. EPE is requesting that the associated recovery and crediting methodology currently being done in the AMS rider for the legacy meters installed before January 1, 2020, be replaced by moving the recovery of these costs into base rates. The Direct Testimony of EPE witness Prieto addresses EPE's proposed rate treatment of these costs whereby these costs will be recovered under the existing ongoing 10-year amortization schedule and will not be included in EPE's requested rate base, consistent with the stipulated rate treatment ordered in the AMS proceeding.

Q35. IS EPE PROPOSING THE SAME RATEMAKING TREATMENT FOR THE REMAINING UNDEPRECIATED INVESTMENT IN LEGACY METER PLANT FOR METERS INSTALLED AFTER DECEMBER 31, 2019?

A. Yes. EPE requests the same ratemaking treatment for undepreciated investment in legacy meter plant installed after January 1, 2020, that the Commission gave for legacy meters installed up to December 31, 2019. EPE witness Gallegos supports the reasonableness of EPE's investment in legacy meter plant from January 1, 2020, through December 31, 2023, and EPE witness Prieto supports the ratemaking requests.

Q36. WILL EPE CONTINUE USING THE AMS RIDER AFTER THIS CASE?

A. Yes. Pursuant to the Stipulation, EPE is only requesting recovery of AMS costs (capital and O&M) through the end of the September 2025 Test Year Period. EPE's most recently updated AMS rider, filed January 31, 2026, is expected to be effective in March 2026. This continues the normal process for annual updates to EPE's AMS rider.

EPE's next Revised AMS Rider is required to be filed by January 31, 2027, to update actual AMS project plant placed in service through December 2026, including AFUDC, and to reconcile actual project costs and revenues for 2026. If a Final Order is issued in this proceeding allowing new base rates to take effect prior

to the January 2027 AMS Rider update, EPE will also include additional adjustments for consistency with the Final Order issued in this proceeding. In a perfect regulatory world, the revised base rates from this proceeding and the 2027 AMS Rider update will be synchronized to be in effect at the same time.

Q37. IS EPE MAKING ANY OTHER PROPOSALS RELATED TO THE AMS IMPLEMENTATION IN THIS CASE?

A. No.

D. EXTREME WEATHER AND RESILIENCY

Q38. CAN YOU ELABORATE ON THE RECENT UNPRECEDENTED PERIODS OF EXTREME WEATHER YOU MENTIONED EARLIER?

A. Yes. Since EPE's last general rate case, EPE has served its customers during periods of extreme windstorms and extreme hot weather.

Figure GN-1 below shows the total cooling degree days during the period of 1950 through the end of September 2025 for EPE's New Mexico service territory. In recent years, the region experienced two consecutive years of extreme above-average temperatures. In 2023, a total of 2,614 cooling degree days ("CDDs") were recorded in Las Cruces, the fourth highest since 1950. This warming trend continued into 2024, with 2,639 CDDs, marking the second-highest during the same time period. 2025 saw cooler conditions, with 1,963 CDDs

recorded through September, compared with 2,496 in 2024 and a ten-year average of 2,161.

Figure GN- 1: Total Cooling Degree Days (CDDs)

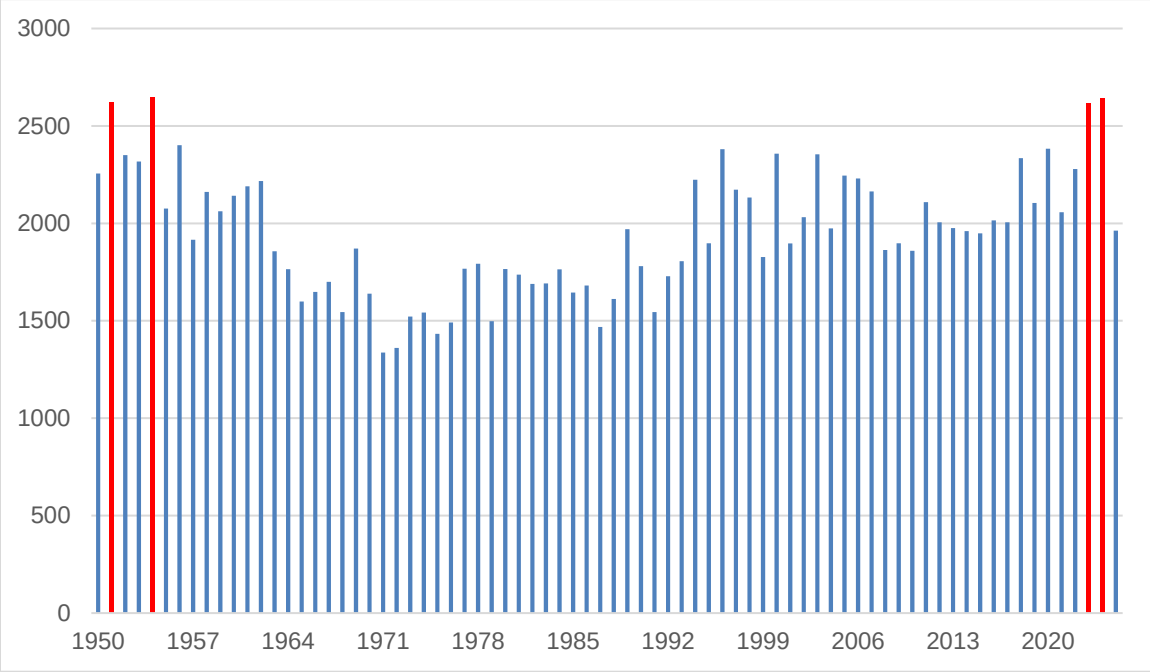

Figure GN-2 below illustrates the longest streak of consecutive days with temperatures at or above 100°F, covering the same period of 1950 to the end of September 2025. In 2023, there was a record-breaking streak of 34 consecutive days at or over 100°F, which was 18 days longer than the previous record of 16 consecutive days observed in 2020.

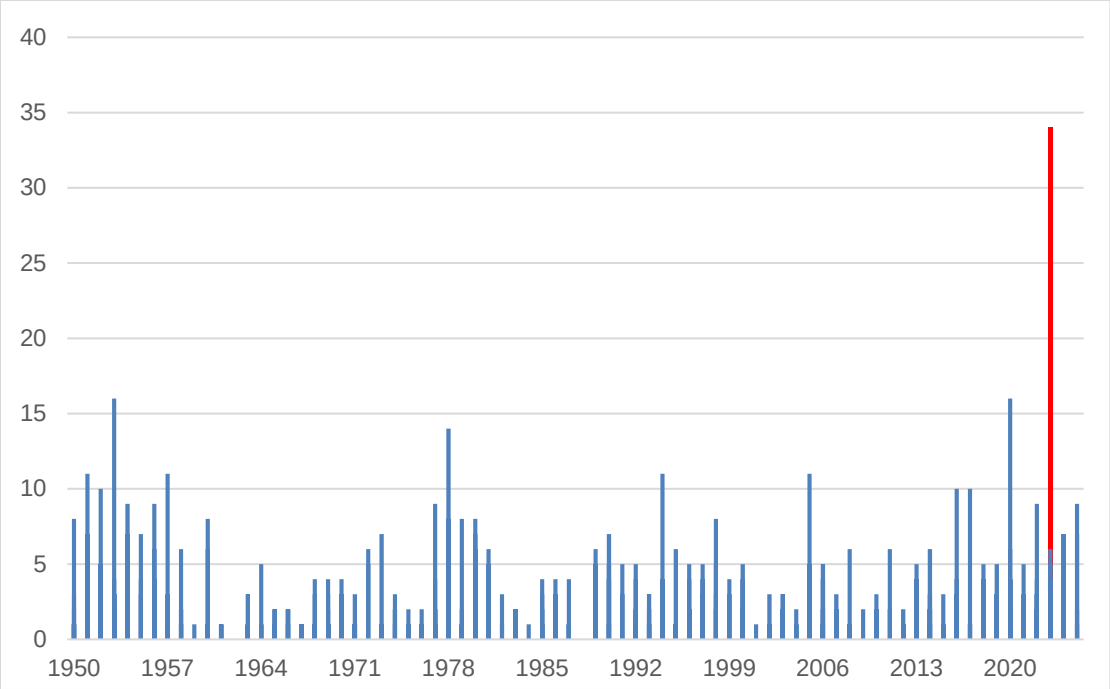
/

/

Figure GN-2: Consecutive Days at/or Over 100°F



Q39. HOW DID EPE'S LOCAL GENERATION PERFORM DURING THIS RECENT EXTREME WEATHER?

A. Local generation performed very well. EPE monitors the performance of these units using two key indicators: (1) net heat rate and (2) equivalent availability factor ("EAF"). Both net heat rate and EAF are industry-accepted measurements of generating unit performance. As an indicator of performance, EAF takes into account all events that affect availability, rather than focusing on a single type of event. EAF provides a clear indication of overall unit availability for a given period. Since EPE's last general rate case, EPE has continued to achieve consistently high

levels of availability during the summer peak periods (June through September), when availability matters the most to EPE's customers and when EPE sees the most extreme hot weather as well. For a detailed discussion on EAF as well as the associated EAF results, please see the Direct Testimony of EPE witness Hughes.

Q40. HOW HAS EPE'S GRID PERFORMED IN EXTREME CONDITIONS?

A. As a result of decisions leading to adequate investment and maintenance, EPE's distribution system has performed in an exemplary manner relative to other utilities in New Mexico. This includes very limited distribution-level power interruptions during the 2023 extreme hot weather described above. EPE regularly appears at the top of New Mexico utilities for the lowest outage duration and frequency, which EPE witness Gallegos discusses in his testimony.

EPE's distribution system has also dependably served its customers during major windstorms. EPE has witnessed storms where wind speeds surpassed hurricane levels. Mr. Gallegos provides more details on design and planning of EPE's system to withstand high wind events, weather-related events, and wildfire conditions.

This includes the AIP wood-to-steel structure hardening project, part of EPE's ongoing wildfire mitigation efforts that reduce the likelihood of prolonged outages and positions EPE to better serve its customers and respond to the evolving climate challenges.

E. EPE'S 2020 RATE CASE ORDER AND OTHER COMPLIANCE ISSUES

Q41. HOW DOES THE 2020 RATE CASE ORDER IMPACT THIS FILING?

A. Utility rates are adjusted through rate cases to recover the cost of service. Unfortunately, EPE's current base rates put in place by the 2020 Rate Case Final Order are under recovering EPE's revenue requirement. The under-recovery of costs has intensified since the end of the 2020 Rate Case Test Year Period in light of EPE's significant capital expenditures presented in this filing and adds to the reasons for the substantial revenue requirement deficiency presented in this case. EPE is proud to provide safe, reliable, and efficient service to New Mexico customers and to continue recent success in meeting obligations under the REA. However, the Commission's support, including authorization of just and reasonable rates that align with the statutory mandate to allow EPE to recover its costs and earn a reasonable return on equity, is essential for EPE to continue its high standard for service quality and to provide a solid financial foundation to move forward with the investments needed to achieve RPS targets.

The ROE approved in EPE's last rate case was one of the lowest ROEs in the country. EPE witnesses Nelson and Richard Gonzalez describe in detail how the Commission's decision with respect to ROE and capital structure significantly impact EPE's ability to meet its investment goals in the future. In turn, better support with respect to rate of return and capital structure investment from the

Commission can lead to better financial results to EPE's customers in the form of reduced debt costs that can result in lower rates. As a result of more positive support of its filed ROE and capital structure requests, rating agencies may assign higher ratings, which could allow EPE to secure improved financing options, rates, and terms. Ultimately, this helps EPE's customers by reducing debt costs.

Q42. PLEASE PROVIDE A BRIEF PROCEDURAL OVERVIEW OF EPE'S 2020 RATE CASE.

A. On May 29, 2020, EPE filed its Application for Revision of Retail Electric Rates with a request for an annual net increase in non-fuel base revenues of approximately $6.879 million. That net increase was later adjusted to a total operating revenue deficiency of $4.7 million. After hearing, the NMPRC Final Order on June 23, 2021, provided for: (i) an annual non-fuel rate decrease of approximately $3.3 million and (ii) a return on equity of nine percent, which at the time was the lowest authorized ROE in the country.

On appeal, the New Mexico Supreme Court vacated and annulled the Commission's Final Order. The Court's non-precedential order held that the Final Order violated EPE's due process rights on several legal grounds.

The Court remanded the matter back to the Commission for a new final order consistent with the Court's decision. The Commission issued a remand order that resulted in an approximate $500 thousand annual revenue increase. However,

the NMPRC order on remand implemented new rates only from the date of the remand order, not from the date of the unlawful 2020 Rate Case Final Order. The issue of whether those costs are recoverable is now pending a decision from the New Mexico Supreme Court in a second appeal. Depending on the outcome, that Appeal could result in additional base rate revenues of $1,064,273 that EPE would request in a future advice notice.

Q43. ARE THERE COMPLIANCE REQUIREMENTS FROM EPE'S LAST RATE CASE THAT ARE BEING ADDRESSED IN THIS CASE?

A. Yes. The 2020 Rate Case Final Order identifies several rate design items for EPE to address in its next general rate case. I have provided Exhibit GN-1 attached to my direct testimony, listing these compliance requirements and the EPE witness who addresses each requirement.

Q44. ARE THERE COMPLIANCE REQUIREMENTS FROM OTHER COMMISSION CASES THAT ARE BEING ADDRESSED IN THIS CASE?

A. Yes. My Exhibit GN-1 also lists compliance requirements from other Commission cases and the EPE witnesses who address each requirement.

Q45. HAS EPE ADDRESSED THE COMMISSION'S REQUEST IN THE ORDER DENYING EPE'S PETITION FOR VARIANCE IN CASE NO. 20-00104-UT?

A. Yes. Ordering Paragraph C of the Commission's Order Denying Petition for Variance, issued after the 2020 Rate Case Final Order, directs EPE to "*include a proposal for an opt-out TOD-rate design in EPE's next base rate case application filing. In the alternative, EPE may include such a proposal in a stand-alone application filing made before EPE's next base rate case application filing*."

EPE witness Carrasco has provided an opt-out TOD rate design consistent with that Order, but EPE is recommending it be adopted as an opt-in TOD rate to avoid interference with EPE's ongoing Time Varying Rate ("TVR") Pilot Program. EPE urges the Commission to allow EPE to complete the ongoing TVR Pilot Program and to defer consideration of mandatory opt-out TOD rates to a future proceeding. If the Commission orders mandatory opt-out TOD rates now, before EPE has completed the TVR Pilot Program, EPE requests authorization to establish an accounting order to record a potential shortfall in the recovery of the Commission-approved revenue requirement. Additional support for this request is presented in Mr. Carrasco's Direct Testimony.

Q46. WHY IS IT IMPORTANT FOR THE COMMISSION TO DEFER CONSIDERATION OF OPT-OUT TIME OF DAY RATES UNTIL THE TVRPP IS COMPLETE?

A. As part of the Commission-approved Stipulation in Docket No. 21-00269-UT, EPE worked with stakeholders following approval of EPE's AMS to develop a pilot rate program that enables customer use of AMS and present the pilot rate program. The TVRPP designed through that process was approved in Docket No. 24-00113 -UT in February of 2025 and is ongoing. The data gathered through the pilot will inform the creation of a successful company-wide rate design in the future that both helps EPE's residential and small commercial customers to have the opportunity to realize bill savings and allows EPE to defer or avoid generation, transmission and distribution capacity investments, saving costs for customers and leading to lower electric rates in the future than would otherwise be needed.

The AMS Stipulation, approved by the Commission, contemplates that EPE will present and seek approval to adopt permanent rate options after evaluation of the results to inform which of the piloted options were well accepted by the participants and will be effective in reducing usage or shifting usage to off-peak hours. Implementing a jurisdiction-wide mandatory opt-out rate option now would bypass the ongoing TVR pilot study, which will help inform and ensure proper rate design and customer price signals in order to maximize potential bill savings for

customers and allow EPE to defer or avoid generation, transmission and distribution capacity.

F. INFLATION

Q47. PLEASE DESCRIBE THE RECENT INFLATIONARY PRESSURES WITNESSED NATIONALLY AND AT THE STATE LEVEL AND EXPLAIN HOW EPE'S RATES COMPARE TO THEM.

A. Inflation has been a defining economic issue since 2020, shaped by a range of global and domestic factors. The pandemic's disruptions to supply chains, combined with fiscal stimulus measures and a surge in consumer demand, have created persistent upward pressure on prices. As the economy adjusted to these changes, inflationary pressures have impacted most sectors, driving up costs for consumers across goods and services. EPE and its management team, like other utilities and sectors, have experienced global supply chain issues such as longer lead times for material, parts, and equipment orders. These issues have driven up pricing globally, and EPE was not immune to these pricing pressures.

Prices for essential goods and services have risen significantly since 2020. Year-over-year growth in the U.S. Consumer Price Index ("CPI") peaked in June 2022, reflecting a 9.1 percent year-over-year increase, before gradually declining in the months that followed. The New Mexico CPI followed a similar pattern, peaking midway through 2022 with an increase of 10.2 percent year-over-year in

July. Currently, both the U.S. and New Mexico CPIs have stabilized, showing more moderate growth rates as inflationary pressures have eased, showing a 3.0 percent year-over-year increase nationally and 2.5 percent year-over-year increase regionally, as of September 2025.

Nationally, according to the U.S. Bureau of Labor Statistics, the U.S. CPI shows that prices rose by 25.9 percent between January 2020 and September 2025. Regionally, according to S&P Global, the New Mexico CPI shows that prices in New Mexico increased by 25.0 percent over the same period. In contrast, the base electricity prices for El Paso Electric's New Mexico customers experienced only moderate increases during this time. From 2020 to 2025 in September, the average base cents per kWh for all New Mexico customers increased by 2.7 percent, while the increase for residential customers was 5.4 percent.

G. OTHER FACTORS

Q48. HAS EPE MADE NOTEWORTHY SOFTWARE INVESTMENTS?

A. Yes. EPE witness Prieto describes in detail the Customer Cloud Service software project. This project was required to upgrade the Company's customer service software in 2020 for continued vendor product support. As a result of this required

upgrade, several customer-facing solutions were implemented, including a reporting database, a customer web self-service portal, and a product called Opower, which helps customers reduce energy usage through home energy reports, behavioral load shaping, proactive alerts, and digital self-service. These offerings will help provide EPE's customers with more data regarding their usage, in near real-time, that can, in turn, help them better manage their usage to save money on their bills.

In addition, the Company recently upgraded its Energy Management System ("EMS") directly benefiting its customers. The upgrade maintains the reliability of the El Paso Electric Bulk Electric System which ensures the continuous supply of electricity to our customers. The upgrade will allow EPE to utilize renewable resources such as solar, wind, and battery storage in real time. This is essential due to the volatility of these resources. This upgrade also seamlessly integrates the western Energy Imbalance Market ("EIM") behaviors into the EMS to maximize market benefits for customers. Please see the Direct Testimony of EPE witness Martinez for more detail regarding the customer benefits of the EMS upgrade.

Q49. CAN YOU BRIEFLY DISCUSS EPE'S PARTICIPATION IN EIM?

A. Yes. In response to the evolution of the market in the Western Interconnection, EPE joined the EIM on April 5, 2023. The market optimizes regulation of customer load

requirements and variable output from renewable resources by utilizing the most efficient regional generating resources, including renewables, made available for EIM dispatch. In doing so, the EIM facilitates greater integration of renewable resources and mitigates their curtailment by making these resources available for EIM entities to purchase. Many of EPE's trading partners in the Western Electricity Coordinating Council have joined the EIM and use it as their primary tool for making short-term purchases and sales. Joining the EIM has allowed EPE to continue to take advantage of the market in the west, which directly benefits EPE's customers in terms of reliability and cost. In Docket No. 21-00180-UT, EPE's application for an accounting order to recover EIM implementation costs, EPE described the proposed costs and benefit of EIM membership. It highlighted that participation in the EIM is expected to increase reliability and positively impact customers because 100 percent of the revenues on off-system sales into the EIM are credited to fuel costs. EPE witness Martinez further describes the benefits EPE's customers are seeing as a result of EPE joining the EIM.

VI. PROPOSED NEW RATE OFFERINGS

Q50. WHAT NEW RATE OFFERINGS IS EPE PROPOSING IN THIS PROCEEDING?

A. As I noted previously, EPE is proposing several rate structure changes and a new program offering in this filing that are intended to help its customers. EPE is

proposing rate design proposals that support low-income customers with a new proposed low-income rider; to minimize subsidization and with a phased in full cost-based allocation; to increase capacity by opening up its interruptible program and increase capacity by incentivizing the shifting of load from the on-peak to the off-peak period with a peak time rebate program; and finally, to protect its customers from the advent of large load customers with tariffs that highlight cost-shifting protections.

Q51. PLEASE DESCRIBE EPE'S PROPOSED PEAK TIME REBATE PILOT.

A. EPE is proposing to implement a Peak Time Rebate Pilot ("PTR") Program, which will provide pilot participants the opportunity to receive a bill credit for reducing energy consumption during a designated peak period following a notification from EPE. The pilot will allow EPE to gather data, assess customer awareness and participation, and refine the program structure in order to form a larger scale version of the program in the future. Now that customer interval data is available with the completion of the AMS rollout, EPE wants to test rate offerings like the PTR with the goal of having rates that can incentivize customers to move usage to off-peak periods. Please see the direct testimony of EPE witness Carrasco for more information on the proposed PTR pilot. EPE is also requesting authorization to establish an accounting order to defer EPE's administrative costs to implement this program for future recovery.

Q52. PLEASE DESCRIBE EPE'S PROPOSED LARGE LOAD TARIFF SCHEDULES.

A. EPE is requesting Commission approval of the Original Rate No. 50 – High Load Factor Service Rate ("Rate 50") and the Original Rate No. 51 – Large Load Service Rate ("Rate 51") (collectively, "Large Load") tariff schedules. The two proposed Large Load tariff schedules are described by EPE witness Carrasco and presented in exhibits to his testimony.

EPE is making this proposal because under existing Commission-approved tariff schedules, a large load customer would be served under Schedule No. 09 – Large Power Service. But the largest customer currently served under Large Power Service has a peak demand of less than 10 MW, while the average load factor for the rate class is approximately 60 percent. The rates applicable under Rate 09 are not reflective of the expected cost to the customers intended to be served under the Large Load tariff schedules, which are for customers over 10 MW.

At full operation, large load customers, like data centers, will be EPE's largest retail customers. With expected peak loads of greater than 30 MW and a load factor in excess of 85 percent, the assumed usage characteristics are unlike any existing EPE class load profiles reflected in existing rates and tariffs.

Q53. ARE THE CUSTOMERS THAT ARE TO BE SERVED UNDER THE PROPOSED LARGE LOAD SCHEDULES GOING TO RECEIVE DISCOUNTED RATES?

A. No. The proposed rates developed and presented by Mr. Carrasco in his testimony reflect a full cost of service and ratemaking analysis based on information from EPE's cost of service study. EPE has developed a hypothetical class load profiles based on assumed Customer's expected full load conditions under each proposed Large Load tariff schedule and incorporates the resulting allocation factors into EPE's jurisdictional cost of service model. While the resulting rates are lower than existing Schedule No. 09 levels, they are not discounted. They are cost-based and reflect the same jurisdictional costs and cost allocation principles underlying EPE's current retail rates for all other customers, as well as the unique (both high and low load factor) characteristics of large load customers.

Q54. WHAT ARE THE APPLICABILITY REQUIREMENTS FOR THE LARGE LOAD SCHEDULES, AND HOW DO CUSTOMERS MEET THOSE REQUIREMENTS?

A. The Large Load tariff schedules will be applicable for new customers in targeted business sectors with minimum monthly billing demand of at least 30 MW (for Rate 50) or 10 MW (for Rate 51), who would otherwise qualify for service under EPE's Schedule No. 09 (among other schedules for large customers). A customer

qualifies for these schedules as a large load under these requirements. As described by Mr. Carrasco in his testimony, EPE is providing an option for large load customers with either a high or a low load factor.

Q55. DO THE PROPOSED LARGE LOAD TARIFF SCHEDULES OFFER PROVISIONS TO ENSURE THAT OTHER CUSTOMERS WILL NOT BE SUBSIDIZING ANY COSTS ASSOCIATED WITH SERVING LARGE LOAD CUSTOMERS?

A. Yes. The proposed Large Load tariff schedules, presented by Mr. Carrasco, require a large load customer to execute an energy service agreement ("ESA") with EPE that must be filed with the Commission before taking service under the rate. I have included an example ESA as Exhibit GN-2 to my testimony. I note Section 10 of the sample agreement is a placeholder for any additional terms and conditions that may be necessary for or specific to a customer.

Q56. WHAT IS THE PURPOSE OF THE ESA?

A. The ESA ensures the large load customer's financial commitment to contribute toward the recovery of EPE's investment in the facilities necessary to provide them with service while contemporaneously protecting EPE's other customers. EPE's other customers are protected because the ESA helps to ensure fair cost allocation that prevents subsidies.

Q57. IS EPE REQUESTING THE COMMISSION OPEN A COMPLIANCE DOCKET FOR THE ESA FILINGS?

A. Yes. EPE requests that the Commission open a new Rate No. 50 and Rate No. 51 compliance docket for the purpose of filing executed ESAs. Within a reasonable time following execution, EPE will cause the ESA to be filed and served through PRC e360 on counsel of record and pro se parties to EPE's last general rate case.

Q58. DOES EPE HAVE EXISTING LARGE LOAD CUSTOMERS THAT WOULD BE SUBJECT TO THIS RATE?

A. No. However, EPE has a potential New Mexico customer requesting 80 MW of firm load, with the prospect of significantly larger MW commitments in the future. It is important for EPE to be prepared with an approved rate option that addresses issues with existing rates identified above before this or other potential large customers take service.

EPE has also seen an increase in manufacturing demand related to data center suppliers. Server and rack manufacturers are approaching EPE's region with load profiles similar to data centers because they test and, in some cases, commission equipment within their facilities. Commissioning of equipment and power demands of new generation processors is changing the expected demands of these operations monthly. These types of customers would qualify under Rate 51.

Q59. PLEASE DESCRIBE THE CHANGES EPE IS REQUESTING TO ITS INTERRUPTIBLE RATE NO. 29.

A. EPE is proposing to open Rate No. 29-Noticed Interruptible Service Rate for Large Power Service to new customers. This rate was closed to new customers through the Commission's Final Order in Case No. 09-00171-UT (the "2009 Rate Case"). With this proposed change EPE wants to increase available generation capacity at peak periods by increasing the amount of capacity subscribed to non-firm interruptible service to a system total of 100 MW. As described previously in my testimony, EPE has been witnessing strong peak demand growth. Introducing more demand-side resources like this proposal, in addition to other programs such as EPE's TVR pilot and the proposed peak time rebate program, should be used to help reduce peak native system loads. Please see the direct testimony of EPE witness Rene Gonzalez for more details regarding Rate No. 29-Noticed Interruptible Service Rate for Large Power Service.

Q60. PLEASE DESCRIBE THE PROPOSED LOW-INCOME RIDER.

A. EPE is proposing to introduce a Low-Income Rider in New Mexico that would provide a waiver of the monthly Customer Charge for qualifying customers. The New Mexico Legislature passed legislation in the 2025 session that gives utilities the ability to propose a low-income rate option. With customer affordability at top

of mind, EPE wants to make this proposal to support our low-income customers. Please see the Direct Testimony of EPE witnesses Rene Gonzalez and Manuel Carrasco for further explanation of the proposed rider.

Q61. PLEASE DESCRIBE THE PROPOSED EXPERIMENTAL OFF-PEAK DEMAND RATE UNDER RATE SCHEDULE NOS. 03 AND 04 AND THE TOD DEMAND RATE UNDER RATE SCHEDULE NO. 04.

A. The Experimental Off-Peak Demand Rate is proposed as an experimental rate option available to customers who qualify under Rate No. 03 and who have a low load factor. The Experimental Off-Peak Demand Rate is designed to provide a financial incentive to encourage maximum demand use during the off-peak period rather than the on-peak period. Customers that can do this will both lower their own electric bills and assist in lowering EPE's summer peak demand, which benefits all customers by reducing the demand that EPE must meet through generation. The Experimental TOD Demand Rate also intends to encourage loads during the off-peak period rather than on the on-peak period. Please see the Direct Testimony of EPE witness Carrasco for further explanation of these experimental rates.

Q62. IS EPE PROPOSING CHANGES TO RULES OR FORMS?

A. Yes, EPE is proposing a change to its current line extension policy, Rule No. 8. EPE is also proposing related changes to Rule No. 13.

Q63. WHAT IS THE PURPOSE OF THE REPLACEMENT LINE EXTENSION POLICY?

A. There are two primary purposes. The first objective is to align EPE's line extension policies across both jurisdictions. The second objective is to put in place policies to address large load requests. EPE, like many other utilities around the country, has, in the past year, experienced a significant increase in the number of service requests from or related to large loads (i.e., loads approaching or exceeding one megawatt and, in some instances, exceeding 10 megawatts) from new and existing customers. The Company must ensure that it has the distribution and transmission capacity to serve these new customer requests along with the Company's existing and projected customer load. EPE's replacement policy addresses four scenarios that the Company has been experiencing in this context. EPE witness Gallegos provides additional details on these scenarios and explains the proposed solutions reflected in the replacement policy.

VII. DISTRIBUTION OF PROPOSED REVENUE REQUIREMENT

Q64. FOR CONTEXT, CAN YOU BRIEFLY DESCRIBE EPE'S METHODOLOGY TO DEVELOP ITS JURISDICTIONAL COST OF SERVICE?

A. Yes. The bulk of EPE's application consists of the development of a total Company revenue requirement for the Test Year Period, and a related revenue requirement for EPE's New Mexico jurisdiction. EPE witness Hernandez describes the modeling and development of the New Mexico jurisdictional revenue requirement, based on total Company Test Year Period rate base and expenses adjusted for known and measurable changes. Comparison of this jurisdictional cost of service with annualized and adjusted New Mexico revenues provided by EPE witness Rene Gonzalez in his testimony demonstrates the revenue requirement deficiency that forms the basis for EPE's request in this rate case. EPE witness Hernandez then allocates this jurisdictional revenue requirement (after accounting for revenues produced by miscellaneous charges) to EPE's retail rate classes on a cost-of-service basis. This distribution of the requested revenue requirement provides full recovery of the system average rate of return ("ROR") equalized from each rate class.

Q65. WHAT IS THE COST-BASED DISTRIBUTION OF THE PROPOSED REVENUE REQUIREMENT BETWEEN RATE CLASSES?

A. Based on a cost-based distribution of the requested revenue requirement, EPE's rate classes would experience increases and decreases in moving to full cost of service, relative to revenues produced under current rates. Rate class base (non-fuel) revenues and revenue deficiencies are developed by EPE witness Hernandez and included in Schedule N-1. The class average base revenue and total revenue

impacts produced by EPE's full cost of service revenue distribution are summarized by witness Hernandez.

Based on the class cost of service analysis, 12 of EPE's 14 rate classes would see base revenue increases and two classes would see rate reductions in moving fully to cost of service. However, EPE recognizes that a 50.4% increase in base rate revenues in one step would place significant financial and affordability pressures on its customers, particularly residential customers, and thus is voluntarily proposing the phasing of the increase in two parts for certain, specified customer classes. Under the second phase revenue distribution, all rate groups would move to the full cost to EPE of providing service and an equalized rate of return component.

Q66. HAS EPE MODERATED THE MOVEMENT OF RATE CLASSES TO UNITY IN ITS PREVIOUS RATE CASES?

A. Yes. EPE proposed gradual increases for several classes in Docket No. 09-00171-UT, filed on May 2009. EPE proposed maximum base rate increases of two-times the system average increase for several rate groups in that case. Proposed revenue requirement for each class was designed to move all rate classes closer to the requested system rate of return while limiting the maximum amount of increase for any class to twice the system average base rate increase. This approach was designed to reduce inter-class subsidies, while moderating the effects

on the few rate classes that require greater rate increases to produce the system average rate of return.

In Docket No. 15-00127-UT, filed in May 2015, EPE proposed moving classes closer to cost of service. Non-fuel and purchased power base revenue increases for the Residential class were capped such that the total increase for the rate class, including base fuel, was limited to nine percent. A similar approach was used to limit total impact for the Irrigation and Seasonal Agricultural rate classes to 4.5 percent. Due to the magnitude of the non-fuel base revenue requirement increase that would be required to move several of the lighting rate classes to full cost, EPE proposed to limit the increase in non-fuel base revenues for the Street Lighting and Outdoor Recreational Lighting rate classes such that the total revenue impact was 20 percent.

In EPE's last proceeding, Docket No. 20-00104-UT, EPE proposed to modify the cost-based revenue requirements for the Residential, Military Research and Development (Option B), Street Lighting, Seasonal Agriculture Processing, and Outdoor Recreational Lighting rate groups. EPE initially capped the allocated revenue requirement increase to the Residential and Water Heating classes at two times the system average increase of 6.09 percent. That case ultimately adopted a modified revenue distribution with no increase for those classes.

Q67. WHY WAS IT APPROPRIATE TO MODERATE THE DISTRIBUTION OF REVENUES TO SOME CLASSES IN THE PAST RATHER THAN MOVE ALL CLASSES TO EQUALIZED RATES OF RETURN?

A. Movement to equaled rates of return by customer class reduces inter-class subsidies. However, promoting cost-based rates is only one of a number of frequently recognized goals of rate design. Consideration of the impact of the rate increase on customers is another important concern of EPE in the design of the proposed rates. The class cost of service study is employed as the basis to determine whether rates are above or below cost for each class of customers. Cost-based rates are achieved when the revenues from each class fully recover all associated costs and produce the requested system average ROR on rate base. The class revenue requirement at this "equalized" ROR represents the revenue level that supports the costs of providing electric service to that class.

The other consideration when moderating increases to some rate classes, which limits rate recovery below the actual cost of providing service, is that other rate classes must necessarily subsidize them. Gradualism limits increases and rate shock for some classes at the expense of others, which is another important consideration when considering moderation in revenue distribution at some level other than full cost.

Q68. IS EPE PROPOSING TO CONTINUE TO MODERATE THE DISTRIBUTION OF REVENUES TO CLASSES IN THIS CASE, RELATIVE TO COST-BASED RATES?

A. Yes. EPE is proposing to moderate the distribution of revenue in this rate case through a two-part implementation of base rates designed to gradually move certain, specified customer classes to full recovery of their respective cost of service. It has become clear based on the long history of moderation steps from past rate cases described above, that proposed revenue allocation by rate class at full cost is needed. In this rate case, EPE is requesting that each rate class contribute significantly more to the cost of serving it. In addition, EPE's low-income rider proposal helps limit the rate increase impact to its low-income New Mexico customers. EPE witness Carrasco presents the proposed phased-in revenue allocation by rate class, which serves as the basis for EPE's proposed rate design, in his direct testimony. During Phase 1 of this proposal, EPE will forgo an estimated $27 million in recovery of full cost rates in order to help relieve financial and affordability pressures on its customers. Additionally, the proposed October 1, 2027, implementation date for the second phase avoids implementation during the summer season (June through September), when energy rates are higher due to seasonal price differentials, thereby helping mitigate potential customer bill impacts.

VIII. RATE CASE EXPENSES

Q69. IS EPE REQUESTING RECOVERY OF RATE CASE EXPENSES IN THIS CASE?

A. Yes.

Q70. PLEASE DESCRIBE THE RATE CASE EXPENSES REQUESTED IN THIS PROCEEDING.

A. Workpaper A-3, Adjustment 10, at page 2, summarizes the rate case expenses requested by EPE in this proceeding, which total $2 million. This summary is also provided as my Exhibit GN-3. EPE is requesting recovery of these rate case expenses that are incremental to its normal operating costs. Rate case expenses are primarily for outside consultants, attorneys, and other external costs; they exclude Company payroll. EPE has obtained estimates of expenses from each outside consultant and its legal counsel to develop rate case expenses. To minimize rate case costs, EPE has conducted two competitive solicitations for legal services since its last rate case and relies on outside consultants who are already familiar with EPE's operations and regulatory requirements.

For example, EPE retained Ms. Nelson, with Concentric Energy Advisors, to prepare the Return on Equity rate necessary for EPE to provide a reasonable return to its equity investors for this case. She has provided similar work for EPE on its most recent rate cases. Similarly, EPE retained John J. Spanos with Gannett

Fleming Valuation and Rate Consultants, LLC to prepare the required depreciation study for this case and Joe Weiss with Concentric Energy Advisors, Inc., to prepare a Lead-Lag Study. Both outside consultants have prepared several prior, similar studies for EPE. Yannick Gagne, a Managing Director at the actuarial firm Willis Towers Watson, was retained to address pension and OPEB issues. He provided EPE expert testimony on these issues in the 2020 Rate Case. Costs for these consultants include studies, expert testimony preparation, schedule reviews, as well as discovery assistance and preparation for an appearance at hearing. The public interest is served by EPE's engagement of qualified industry experts who bring a broader industry perspective to the preparation and execution of a rate case. EPE closely manages rate case expenses through invoice reviews to ensure costs align with scope of engagement and budget estimates. EPE's legal counsel, Spencer Fane, has provided estimated legal expenses for this proceeding from preparation of the rate case application filing package through hearing and post-hearing papers. Finally, EPE has included an estimate of expenses for the cost of rate filing preparation, providing notice to customers and for travel and expenses associated with litigating the rate case. EPE witness Reza presents the adjustment for regulatory and rate case expenses and EPE witness Sierra supports EPE's litigation expenses.

Q71. ARE THE RATE CASE EXPENSES THAT EPE IS REQUESTING REASONABLE AND NECESSARY?

A. Yes, they are. The costs are reasonable and necessary expenses for this proceeding, for other required regulatory proceedings, and for EPE to continue to provide safe, efficient and reliable service to its customers while meeting regulatory obligations.

IX. CONCLUSION

Q72. PLEASE SUMMARIZE EPE'S REQUEST IN THIS CASE.

A. EPE is seeking approval to implement new rates that reflect our cost of providing reliable service. EPE's rate case filing demonstrates a $70.6 million non-fuel base rate revenue deficiency shown in the cost of service, representing a 50.4% increase in base rate revenues. After deducting other operating revenues for miscellaneous services charges of $240,534, EPE is requesting a net revenue increase of $70.4 million.

EPE recognizes the significance of a $70.6 million base rate deficiency and is voluntarily proposing a two-part implementation of base rates for Rate Nos. 01 (Residential), 05 (Irrigation), 10B (Military), 12 (Private Lighting), 25 (Outdoor Lighting), and 26 (State University) to moderate the impact of the rate change to those customers. EPE's proposed revised rates are designed to recover EPE's reasonable and necessary capital additions; EPE's reasonable and necessary operating expenses to serve New Mexico customers; EPE's capacity costs incurred

under Commission approved agreements for three BESS facilities; and EPE's Commission-approved AMS Project costs. EPE requests that the Commission approve EPE's proposed tariffs and rates, as reflected in Advice Notice No. 317, which are just and reasonable, not unreasonably preferential or discriminatory, and sufficient, equitable, and consistent.

Q73. DOES THIS CONCLUDE YOUR TESTIMONY?

A. Yes, it does.

RECOMMENDED DECISION - CASE NO. 20-00104-UT - APRIL 6, 2021				
XXII. DECRETAL PARAGRAPHS		**DUE DATE**	**WITNESS**	**NOTES**
M.	In its next base rate case, EPE shall use IBES as one source of its growth estimates in its DCF analysis or analyses	Next base rate case	**Jennifer E. Nelson**	Section II - Summary and Overview of Testimony
S.	In its next base rate case, EPE shall submit an alternative cost of service that assumes reopening Rate No. 7 to new customers	Next base rate case	**Adrian Hernandez**	Section VIII - Alternative Class Cost-of-Service Illustration for Rate No. 7
T.	In its next base rate case, EPE shall report on the results of the mediation and propose any modifications to Rate No. 29 agreed to in mediation.	Next base rate case	**Rene Gonzalez**	Section IV (M) - Noticed Interruptible Power Service Rate for Large Power Service
	The notice in the next base rate case shall give notice that the Commission might order significant changes to Rate No. 29 to make it more effective in reducing peak demand.	Next base rate case	**Notice**	
V.	In its next base rate case, EPE shall report on the following information:	Next base rate case		
	1. The number of customers receiving service under Rate No. 42 by rate class;	Next base rate case	**Rene Gonzalez**	Section IV (N) - Experimental Electric Vehicle Charging Rate
	2. The maximum number of customers that have received service under Rate No. 42 at any one time since the effective date of the rate;	Next base rate case	**Rene Gonzalez**	Section IV (N) - Experimental Electric Vehicle Charging Rate
	3. The average bill for Rate No. 42;	Next base rate case	**Rene Gonzalez**	Section IV (N) - Experimental Electric Vehicle Charging Rate
	4. Load data and the load profile of Rate No. 42 customers, including how the electric vehicle charging load coincides with EPE's system peak; and	Next base rate case	**Enedina Soto**	Section III (C) - Load Data and Load Profile for Electric Vehicle (EV) Charging Rate
	5. Available data to inform future programs and rates as well as to better understand the impact of electric vehicle charging on the electric grid	Next base rate case	**Enedina Soto**	Section III (C) - Load Data and Load Profile for Electric Vehicle (EV) Charging Rate
Z.	In all of its future base rate case filings, any reference made by EPE to a cost-of-service related dollar amount in testimony shall be stated on a New Mexico jurisdictional basis.	All future base rate case filings	**All Witnesses**	
	In all of its future base rate case filings, any reference made by EPE to a cost-of-service related dollar amount in exhibits to testimony, schedules and workpapers shall be stated on a total company and New Mexico jurisdictional basis. EPE shall construe this requirement broadly.	All future base rate case filings	**All Witnesses**	

ORDER ADOPTING RECOMMENDED DECISION WITH MODIFICATIONS - CASE NO. 20-00104-UT - JUNE 23, 2021				
ORDERING PARAGRAPHS		**DUE DATE**	**WITNESS**	**NOTES**
52	In EPE's next rate case application, EPE must provide a study of the impacts of seasonal charges upon both TOD rate structures and standard rate structures. The study must include an analysis as to whether raising the Winter seasonal charge to the level of the Summer seasonal charge could fund a more effective TOD rate structure, possibly including lower on-peak rates.	Next rate case application	**Manuel Carrasco**	Section IV (E) - Seasonal Analyis Between Standard Service and Alternative TOD Service Rates

CERTIFICATE OF STIPULATION - CASE NO. 19-00234-UT - FEBRUARY 10, 2020				
	COMMITMENT	**DUE DATE**	**WITNESS**	**STATUS**
Commitment #11	Joint Applicants will maintain EPE's annual amount of **charitable giving** following the closing of the Transaction at EPE's average annual charitable giving level for the three-year period ending December 31, 2018 (i.e., approximately $1.2 million per year throughout EPE's service territory). This commitment will remain regardless of the level allowed in rates. All Signatories reserve the right to challenge inclusion of these expenses in rates. To the extent EPE seeks to recover these costs in rates, the inclusion of such costs shall be described in the executive summary of the rate filing package.		**Application Cynthia S. Prieto**	Section IX - Compliance with Case No. 19-00234-UT
Commitment #13	Joint Applicants will create or enhance programs that provide entry-level training focused on engineering, management, and finance skills for the local labor force in collaboration with The University of Texas at El Paso, El Paso Community College and New Mexico State University and shall use commercially reasonable efforts to provide these programs to students or workers in New Mexico and Texas in an equitable manner. This commitment will remain regardless of the level allowed in EPE's rates. All Signatories reserve the right to challenge inclusion of these expenses in rates. To the extent EPE seeks to recover these costs in rates, The inclusion of such costs shall be described in the executive summary of the rate filing package. The Parties acknowledge that failure to use commercially reasonable efforts to provide these programs to students or workers in New Mexico and Texas in such an equitable manner may be a basis for a request for denial of recovery of some or all of the costs associated with such programs through rates set by the Commission.		**Application Cynthia S. Prieto**	Section IX - Compliance with Case No. 19-00234-UT
Commitment #14	Joint Applicants will create or enhance **apprenticeship programs** for technical and professional positions for students in local high schools and colleges and shall use commercially reasonable efforts to provide these programs to students or workers in New Mexico and Texas in an equitable manner. This commitment will remain regardless of the level allowed in rates. All Signatories reserve the right to challenge inclusion of these expenses in rates. To the extent EPE seeks to recover these costs in rates, the inclusion of such costs shall be described in the executive summary of the rate filing package. The Parties acknowledge that failure to use commercially reasonable efforts to provide these programs to local New Mexico high schools and colleges in such an equitable manner may be a basis for a request for the denial of recovery of some or all of the costs associated with such programs through rates set by the Commission		**Application Cynthia S. Prieto**	Section IX - Compliance with Case No. 19-00234-UT
Commitment #15	Joint Applicants will continue and enhance utility **supplier diversity** by promoting the inclusion of minority-, women-, LGBTQ-, and veteran-owned businesses into EPE's supply chain. This commitment will remain regardless of the level allowed in rates. All Signatories reserve the right to challenge inclusion of these expenses in rates. To the extent EPE seeks to recover these costs in rates, the inclusion of such costs shall be described in the executive summary of the rate filing package.		**Application Cynthia S. Prieto**	Section IX - Compliance with Case No. 19-00234-UT

ENERGY SERVICES AGREEMENT

[RATE NO. 50 – HIGH LOAD FACTOR POWER SERVICE RATE]

[or]

[RATE NO. 51 – FLEXIBLE LOAD POWER SERVICE RATE]

The parties to this Energy Services Agreement ("ESA") are El Paso Electric Company ("EPE" or the "Company), a Texas corporation that is a public utility that provides retail electric service in New Mexico subject to the jurisdiction of the New Mexico Public Regulation Commission ("Commission"), and [**customer name**] ("Customer") (each individually, a "Party;" together, the "Parties"). This ESA relates to the service provided by EPE to Customer at [**address**] ("Point(s) of Service") pursuant to [**Rate No. 50 – High Load Factor Power Service Rate OR Rate No. 51 – Flexible Load Power Service Rate**], as it may be amended from time to time (the "Rate Schedule") and other provisions of the EPE Tariff, as defined below. This ESA constitutes the ESA required under the Rate Schedule.

Section 1. Definitions.

(a) "Applicable Law" means any duly promulgated federal, state or local law, regulation, rule, ordinance, code, decree, judgment, directive or judicial or administrative order, permit or other duly authorized and valid action of any Governmental Authority, including any binding interpretation of any of the foregoing by any Governmental Authority, that is applicable to a person, its property or a transaction, including any mandatory reliability standard adopted by any electric reliability organization, regional transmission organization, reliability coordinator, or Governmental Authority having jurisdiction and approved by the Federal Energy Regulatory Commission ("FERC").

(b) "Business Day" means a day that is not a Saturday, Sunday, United States federal holiday, or New Mexico state holiday.

(c) "Commission" is as defined above.

(d) "Company" is as defined above.

(e) "Contract Capacity" means the monthly post-Load Ramp Period peak load specified in Section 4.

(f) "Damages" are as defined in Section 8.

(g) "Effective Date" means the date of the execution of this ESA by the Parties.

(h) "EPE" is as defined above.

(i) "EPE Tariff" means, collectively, EPE's Rates, Rules, and Forms on file with and

approved by the New Mexico Public Regulation Commission.

(j) "ESA" is as defined above.

(k) "Exhibit A" means "Exhibit A – Load Ramp Period, Load Ramp Contract Capacity, and Contract Capacity," attached hereto.

(l) "Exhibit B" means "Exhibit B – Additional Technical Requirements," attached hereto.

(m) "Exhibit C" means "Exhibit C – Facility Charge Calculation," attached hereto.

(n) "Facility Charge" is as specified in Exhibit C.

(o) "Facilities Component" is as defined in Exhibit C.

(p) "Good Utility Practice" means those practices, methods, and acts that are engaged in by a significant portion of the electric utility industry in the United States during the relevant time period, or any other practices, methods or acts that, in the exercise of reasonable judgment in light of the facts known at the time a decision is made, are expected to accomplish a desired result at a reasonable cost consistent with good business practices, reliability, safety and expedition. Good Utility Practice is not intended to be the optimum practice, method or act to the exclusion of others, but rather to be a spectrum of acceptable practices, methods or acts generally accepted in such electric transmission industry consistent with the standard set forth in the first sentence of this definition.

(q) "Governmental Authority" means any government or agency or other political subdivision thereof, including any state or municipality, or any other governmental, quasi-governmental, judicial, executive, legislative, administrative, regulatory, public or statutory instrumentality, authority, body, agency, commission, department, board, bureau or entity exercising judicial, executive, legislative, administrative or regulatory functions, any court or arbitrator with authority to bind a Party at law, and shall include, to the extent exercising powers delegated by any Governmental Authority acting under Applicable Law, any electric reliability organization or regional transmission organization.

(r) "Initial Term" is as defined in Section 3.

(s) "kW" means kilowatts.

(t) "Load Ramp Contract Capacity" means the monthly peak load requirements associated with the Load Ramp Period and set forth in Exhibit A.

(u) "Load Ramp Period" is defined in the Rate Schedule and as set forth in Exhibit A.

(v) “Monthly Minimum Charge” is as defined in the Rate Schedule.

(w) “O&M Component” is as defined in Exhibit C.

(x) “Parties” is as defined above.

(y) “Party” is as defined above.

(z) “Point of Service” is as defined above.

(aa) “Rate Schedule” is as defined above.

(bb) “Renewal Term” is as defined in Section 3.

(cc) “Service” is as defined in Section 4.

(dd) “Term” means the “Initial Term” or “Renewal Term,” as applicable, as defined in Section 3.

Section 2. Agreement. Subject to Applicable Law, EPE agrees to sell and deliver to Customer, and Customer agrees to purchase and take from EPE, all electric energy requirements for Customer's operations at the Point(s) of Service, according to the terms and conditions of this ESA and the EPE Tariff. This ESA shall be filed by EPE with the Commission promptly after the Effective Date. The provisions of this ESA, including but not limited to those related to the Facility Charge, the Security, and damages, shall continue to apply even if Customer begins to receive service under a rate schedule of the EPE Tariff other than the Rate Schedule.

Section 3. Initial Term; Renewal. The term of this ESA shall commence on the Effective Date and shall conclude twenty years after Service has commenced under this ESA ("Initial Term"). The ESA shall automatically renew at the end of the Initial Term for a term of one year (“Renewal Term”), and again from year-to-year thereafter (each, also a “Renewal Term”).

Section 4. Service. EPE shall deliver electrical energy to Customer and provide, maintain, and operate sufficient facilities to serve Customer’s load at the Point of Service in accordance with the Contract Capacity specified below and the Load Ramp Contract Capacity specified in Exhibit A, as applicable, subject to: (i) the requirements in (a) through (h), below; (ii) the terms of this ESA; (iii) the EPE Tariff; and (iv) other Applicable Law (collectively, “Service”). Service under this ESA shall not begin until the Customer has provided the Security required under Section 6 or, if Security is not required, then within ten days of the Effective Date. Any electric delivery prior to that time does not constitute Service.

(a) The Contract Capacity shall be as specified in Exhibit A.

(b) The Load Ramp Contract Capacity shall be as specified in Exhibit A and may, over the course of the Load Ramp Period, consist of different levels of capacity

applicable during different, defined phases as specified in Exhibit A. The Load Ramp Period shall not continue beyond the fourth anniversary of the commencement of Service.

(c) Customer shall not increase its connected load at the Point of Service above the Contract Capacity or the Load Ramp Contract Capacity, as applicable.

(d) Nothing in this ESA provides Customer a reservation of capacity or priority of service over other EPE customers.

(e) EPE will follow Good Utility Practice, but does not guarantee that the supply of electric energy to Customer will be free from interruptions or fluctuations. EPE shall not be liable to Customer for damages resulting from any interruptions or fluctuations, as provided in the EPE Tariff.

(f) Nothing in this ESA provides Customer with FERC-jurisdictional generation interconnection service or any other rights to interconnect any generation facility, or to transmit energy to EPE's transmission and distribution system or any other rights or service except as expressly provided herein or in the applicable provisions of the EPE Tariff.

(g) Customer shall not connect any electrical generating equipment to EPE's system unless otherwise agreed except in accordance with the Rate Schedule, EPE Tariff, and any Applicable Law (with it being agreed and understood between the Parties that installation of a microgrid by the Customer in accordance with New Mexico Session Laws 2025, Ch. 93, Sec. 6, pursuant to a separate energy services agreement between Customer and EPE that is entered into in accordance with the terms of Ch. 93, Sec. 6, would not violate this clause; for the avoidance of ambiguity, this ESA does not constitute the requisite energy services agreements under the terms of Ch. 93, Sec. 6).

(h) Customer will use all electricity delivered pursuant to this ESA for Customer's sole consumption and the consumption of its tenants, provided that Customer shall not sell or resell any of the electricity delivered pursuant to this ESA, including to Customer's tenants (it being agreed and understood that by including electricity charges as an element of rent or otherwise, Customer may recover the cost of the electricity delivered from its tenants, and that shall not constitute a sale or resale for purposes of this ESA).

Section 5. Termination. Notwithstanding any other provision of the EPE Tariff or this ESA, this ESA is subject to termination as follows:

(a) This ESA shall automatically terminate if the Commission disapproves of this ESA.

(b) EPE may terminate this ESA, or suspend Service, upon a material breach of this ESA by Customer, following notice and a reasonable opportunity to cure. Suspension of Service does not preclude subsequent termination.

(c) This ESA may be terminated by order of the Commission or FERC in accordance with Applicable Law.

(d) If Customer fails to provide the applicable Security, if any, or provide it timely, as required by this ESA.

Section 6. Security. Customer shall, if applicable, provide EPE with a security of its obligations under the Rate Schedule, the EPE Tariff, and this ESA in accordance with this Section and the Rate Schedule ("Security").

(a) The Security shall initially be in an amount equal to (i) $[●] per megawatt of the requested maximum Contract Capacity and (ii) 100% of the Facility Charge over the full term of the ESA. The Security shall be subject to adjustment under this Section and the Rate Schedule.

(b) Customer shall provide EPE with the initial Security within ten days of the Effective Date.

(c) Not more frequently than annually beginning after the completion of the first year of Service, EPE will recalculate the amount of the required Security under subsection (a) of this Section and adjust the amount of the Security obligation accordingly. If the amount of the obligation decreases, then Customer may decrease the Security accordingly at its discretion. If the amount of the obligation increases, then Customer shall provide any required additional Security amount within ten days of such notice.

(d) EPE has discretion to recalculate the amount of the required Security under subsection (a) of this Section and adjust the amount of Customer's Security obligation at any time. EPE shall provide Customer with notice of any increase in the Security. Customer shall provide any required additional Security amount within ten days of such notice.

(e) Security does not constitute a limitation of Customer's liability to EPE.

Section 7. Facility Charge. Customer shall pay the Facility Charge as set forth in Exhibit C. This payment shall remain an obligation of Customer even if Customer no longer receives service under Rate 50 or Rate 51 (or a successor rate) or if the ESA is terminated pursuant to Section 5, subject to the requirements of Section 5 and Section 8.

Section 8. Damages for Default. If this ESA is terminated pursuant to Sections 5(b) through 5(d) after Service commences but prior to the completion of the Initial Term, then Customer shall pay EPE damages equal to the then-applicable Monthly Minimum Charge times the number of months remaining until the end of the Term. Customer acknowledges that forfeiture of security is reasonable to compensate EPE for the harm and loss to EPE (and its other customers) from the unanticipated loss of Customer's contribution to system costs and the impact on system planning, and does not constitute a penalty.

Section 9. **Technical Requirements.** Customer shall at all times comply with the following Technical Requirements:

(a) Customer shall provide and maintain protective equipment compatible with EPE's protective equipment.

(b) Customer will provide and maintain protective equipment to protect Customer's equipment from damage which could be caused by low or unbalanced voltage.

(c) Customer shall curtail its load, as directed by EPE, for any contingency that could impact the reliability of EPE's Bulk Electric System, as defined under the Critical Infrastructure Protection Standards or other standards promulgated by the North American Electric Reliability Corporation ("NERC"), if it is determined that such curtailment will mitigate system conditions or as required by any Applicable Law or mandated NERC standard. EPE agrees that it will not apply curtailment to Customer in a discriminatory fashion, subject to Customer's compliance with the terms of this ESA.

(d) Such additional requirements as are specified in Exhibit B hereto.

[Section 10. Additional Terms. Additional terms and conditions applicable to this ESA are:

(a)

(b) **]**

Section 11. Installation. Customer shall provide a suitable place on and access to Customer's property for EPE to install all equipment necessary for EPE to perform its obligations under this ESA, as provided in the EPE Tariff. Customer shall use reasonable diligence to protect all EPE equipment located on Customer's property. Customer will furnish EPE with rights-of-way acceptable to EPE for the installation, maintenance, operation, repair, replacement, and removal of its equipment necessary to comply with its obligations under this ESA.

Section 12. Changes in Law; Amendments. This ESA may be modified or amended to comply with a change in Applicable Law (including, as applicable, the EPE Tariff). For the avoidance of ambiguity, a change in Applicable Law that conflicts with this ESA controls over any conflicting provision(s) of this ESA, regardless of whether the ESA has been amended to conform to the change in Applicable Law. Otherwise, this ESA may be changed or modified only by an instrument in writing duly executed by each of the Parties.

Section 13. Due Organization; Power and Authority. Customer warrants and represents that it is a natural person or a legal entity duly organized with valid corporate

or partnership existence and good standing, and has no outstanding obligations, litigation, or other proceedings that would affect its ability to enter into and perform its obligations under this ESA.

Section 14. Entire Agreement. This ESA and the EPE Tariff constitute the entire agreement of the Parties with respect to the matters covered by this ESA.

Section 15. Captions. The captions preceding the text of each Section of this ESA are included only for convenience of reference and shall be disregarded in the construction of this ESA.

Section 16. Relationship of the Parties. This ESA shall not be interpreted or construed to create an association, joint venture, agency relationship, or partnership between the Parties or to impose any partnership obligation or partnership liability upon any Party. Neither Party shall have any right, power or authority, to enter into any agreement or undertaking for, or act on behalf of, or to act as or be an agent or representative of, or to otherwise bind, the other Party pursuant to this ESA.

Section 17. Counterparts. This ESA may be executed in any number of counterparts with the same effect as if each of the Parties had signed the same document. All counterparts shall be construed together and shall constitute one instrument.

Section 18. Waiver. No (a) failure or delay on the part of a Party in exercising any of its rights under this ESA or in insisting upon strict performance of provisions of this ESA, (b) partial exercise by any Party of any of its rights under this ESA or (c) course of dealing among the Parties shall constitute a waiver of the rights of any Party under this ESA. Any waiver shall be effective only by a written instrument signed by the Party granting such waiver, and such instrument shall not operate as a waiver of, or estoppel with respect to, any subsequent failure to comply therewith.

Section 19. Calculation of Time. Whenever a notice, request, demand, waiver, consent, other communication, or Security is to be provided under this ESA, if the date on which it is due is not calculated to fall on a Business Day, then it shall be due on the first Business Day following the day on which it is otherwise calculated to be due.

Section 20. Notices. All notices, requests, demands, waivers, consents and other communications under this ESA shall be in writing and shall be deemed duly given (x) when delivered personally or by prepaid overnight courier, with a record of receipt, (y) on the fourth (4th) day after mailing, if mailed by certified mail, return receipt requested or (z) on the day of transmission, if sent by electronic means during regular business hours, or on the next Business Day after transmission, if sent after regular business hours (with a copy promptly sent by prepaid overnight courier with record of receipt or by certified mail, return receipt requested), to the Parties at the following addresses or telecopy numbers (or to such other address or telecopy number as a Party may have specified by notice given to the other Party pursuant to this provision):

(a) If to EPE:

EXHIBIT A - LOAD RAMP PERIOD, LOAD RAMP CONTRACT CAPACITY, AND CONTRACT CAPACITY

	LOAD RAMP CONTRACT CAPACITY and CONTRACT CAPACITY		
	Load Ramp Period - Phase 1	**Load Ramp Period - Phase 2**	**Contract Capacity**
Commencement Date			
Monthly Peak Load (kW)			

EXHIBIT B – ADDITIONAL TECHNICAL REQUIREMENTS

[To the extent items in the below would apply to all customers under this rate schedule, we should incorporate those into the "Technical Requirements" provision in the main body of the ESA. This should be reserved for anything Customer-specific.]

TECHNICAL REQUIREMENTS

The maximum load ramp up ratio shall be _____.

The Customer will be required to curtail its load, as directed by EPE, for any contingency that could impact the loading of EPE's transmission lines, if it is determined that such curtailment will relieve the overloading on the impacted transmission lines or as required by any applicable law.

The Customer must comply with the following technical requirements:

- maintain a minimum ± 0.95 power factor;
- do not inject harmonics into the transmission system;
- do not cause voltage and current harmonics on the transmission system that exceed the limits specified in IEEE 519;
- mitigate voltage excursions that could impact other customers, e.g., voltage flicker, voltage sag, and voltage swell;
- maintain its voltage schedule as required by EPE; and
- adhere to all NERC standards applicable to this type of load facility.

If it is determined that the Customer's connection is: (i) the source of voltage excursions, or (ii) the source of harmonic voltage and currents that affect third-party customers, or (iii) exceeds EPE operational standards, the necessary equipment to control the harmonic voltage and currents to the limits identified in IEEE 519 is the responsibility of the Customer. The point of measurement is the point of interconnection (POI).

If the Customer's equipment or facility causes undue interference with EPE's service to third-party customers, the Customer must correct the identified problem, at its own expense, until the power quality is corrected to EPE's satisfaction.

EXHIBIT C - FACILITY CHARGE

(a) The Facility Charge shall consist of the sum of the Facilities Component and the O&M Component set forth in subsections (b) and (c) of this Section.

(b) The initial Facility Charge is initially set to be $_____ per month, of which $____ is a Facilities Component (defined below) and $_____ is an O&M Component (defined below).

(b) A facilities component shall be calculated as the monthly return of and return on EPE's investment in facilities dedicated to serving customer, with return on calculated at EPE's then-applicable Commission-approved weighted average cost of capital, as amortized on a straight-line basis through conclusion of the Initial Term ("Facilities Component"). The Facilities Component shall be recalculated in the event that EPE makes additional investment in facilities dedicated to serving Customer. If Customer provides 24-months' notice under Section 5(d), then EPE shall recalculate the Facilities Component to fully amortize the remaining undepreciated balance of the Facilities Component over the course of the period that remains until the termination date of this ESA.

(c) An operations and maintenance costs component shall be calculated as one-twelfth of the total of the costs EPE incurs annually to operate and maintain facilities dedicated to serving customer, as determined by EPE based on EPE's evaluation of its actual costs ("O&M Component"). The O&M Component may be recalculated at the discretion of EPE annually.

(d) EPE shall recalculate the Facility Charge annually.

Rate Case Expenses

Line No.	(a) Description	(b) Amount
	2026 New Mexico Rate Case Expense Estimate	
1	Outside Legal Services	$ 1,293,000
2	Outside Consulting	618,000
3	Other	104,800
4	Total Rate Case Expenses	2,015,800

This amount does not include payroll costs.

Amounts may not add or tie due to rounding.

DECLARATION OF GEORGE NOVELA IN SUPPORT OF THE FOREGOING DIRECT TESTIMONY TO THE APPLICATION OF EL PASO ELECTRIC COMPANY FOR REVISION OF ITS RETAIL ELECTRIC RATES PURSUANT TO ADVICE NOTICE NO. 317

I, ***George Novela***, pursuant to Rule 1-011 NMRA, state as follows:

1. I affirm in writing under penalty of perjury under the laws of the State of New Mexico that the following statements are true and correct.

2. I am over 18 years of age and have personal knowledge of the facts stated herein. I am employed by El Paso Electric Company ("EPE" or "the Company") as the *Senior Director of Regulatory Policy and Rates.*

3. The foregoing Direct Testimony of George Novela, together with all exhibits sponsored therein and attached thereto, is true and accurate based on my knowledge and belief.

4. I submit this Declaration, based upon my personal knowledge and upon information and belief, in support of EPE's ***Application for Revision of Its Retail Electric Rates Pursuant to Advice Notice No. 317.***

FURTHER, DECLARANT SAYETH NAUGHT.

I declare under penalty of perjury that the foregoing is true and correct.

Executed on March 27, 2026.

/s/ George Novela

EL PASO ELECTRIC COMPANY
DIRECT TESTIMONY OF
CYNTHIA S. PRIETO

I. INTRODUCTION AND QUALIFICATIONS

Q1. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Cynthia S. Prieto. My business address is 100 N. Stanton Street, El Paso, Texas 79901.

Q2. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by El Paso Electric Company ("EPE" or the "Company") as Vice President and Controller.

Q3. DESCRIBE BRIEFLY YOUR EDUCATIONAL BACKGROUND AND PROFESSIONAL EXPERIENCE.

A. I earned a Bachelor of Business Administration Degree with a concentration in Accounting from the University of New Mexico in 1985. I was employed by Ernst & Young in the Audit section from 1985 to 1992 where I was assigned to various clients, including oil and gas companies. I was employed as an Audit Senior Manager by KPMG LLP from 1993 to 1996 where I was assigned to various clients. I accepted a position with the Company in 2006 as a financial accountant where I worked until I was transferred to the Tax department in 2007. Since that time, I have held various positions until I was promoted to my current position in September 2020.

Q4. WHAT ARE YOUR PRINCIPAL AREAS OF RESPONSIBILITY?

A. I serve under the general direction of the Chief Financial Officer, and I direct the establishment and maintenance of the Company's accounting principles, practices, and procedures for the maintenance of its fiscal records and the preparation of its financial reports. I also oversee the activities of the Financial and Regulatory Accounting, Financial Reporting, Tax, Plant Accounting, Revenue and Energy Accounting, and Payroll Departments and am responsible for appraising operating results in terms of costs, budgets, operating policies, and trends.

Q5. HAVE YOU PREVIOUSLY FILED TESTIMONY OR TESTIFIED BEFORE ANY REGULATORY AUTHORITIES?

A. Yes. I have filed testimony before the Federal Energy Regulatory Commission ("FERC") and have filed testimony and testified before the New Mexico Public Regulation Commission ("NMPRC" or "Commission") and the Public Utility Commission of Texas ("PUCT").

II. PURPOSE OF TESTIMONY

Q6. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. My direct testimony addresses a number of topics. I sponsor the overall rate base and describe the Test Year Period adjustments that EPE has made to its September 30, 2025 Base Period rate base amounts. I also sponsor certain identified schedules

and support the necessity and reasonableness of the identified adjustments to the Base Period cost of service, and amounts contained therein. I specifically discuss:

- Capital additions to Plant in Service;
- Accumulated Depreciation and Amortization;
- Other adjustments to Rate Base;
- COVID-19 Expenses;
- Depreciation Expense;
- Certain adjustments to Cost of Service; and
- Compliance with certain items in Docket No. 19-00234-UT.

Q7. WHAT RULE 530 SCHEDULES DO YOU SPONSOR OR CO-SPONSOR IN THIS PROCEEDING?

A. The schedules that I sponsor or co-sponsor are listed below. These schedules comply with Rule 17.9.530 of the New Mexico Administrative Code ("Rule 530"), which I review in my role at the Company. I am sponsoring or co-sponsoring the following Rule 530 schedules:

- Schedule A-4: Summary of Rate Base (Adrian Hernandez sponsors the New Mexico jurisdictional information);
- all B schedules (except B-7): Original Cost of Plant in Service, Construction Work in Progress ("CWIP"), Allowance for Funds Used During Construction

("AFUDC"), and Plant Held for Future Use;

- Schedule C-1: Accumulated Provision for Depreciation and Amortization by Functional Classification and Detailed Plant Account
- Schedule C-2: Depreciation Rate Study (John J. Spanos is the Sponsor)
- Schedule C-3: Depreciation and Amortization Methods
- Schedule E-1: Cash Working Capital Allowances;
- Schedule E-2: Materials and Supplies, Prepayments and Deferred Charges;
- Schedule E-4: Amounts of Working Capital Items Charged to Operating and Maintenance Expense
- Schedule F-1: Other Property and Investments;
- Schedule H-7: Depreciation and Amortization Expense;
- Schedule J-1: Construction Program (Richard S. Gonzalez is a Co-sponsor);
- Schedule P-2: Plant in Service. (Richard S. Gonzalez and Adrian Hernandez are Co-sponsors);
- Schedule P-3: Property Retirements and Property Investment Information (Richard S. Gonzalez and Adrian Hernandez are Co-sponsors); and
- Schedule Q-6: Opinion of Independent Public Accountants.

Q8. WERE THESE RULE 530 SCHEDULES PREPARED BY YOU OR UNDER YOUR DIRECT SUPERVISION?

A. Yes, they were. A summary description of the schedules I sponsor or co-sponsor in this case is included in Section III below.

Q9. WHAT TEST YEAR PERIOD ADJUSTMENTS DO YOU SPONSOR?

A. As addressed in the direct testimony of EPE witness Steven A. Sierra, I sponsor the following adjustments listed on Rule 530 Schedule A-3, which are related to plant in service, accumulated depreciation, depreciation and amortization expense, and other rate base and cost of service items:

- Adjustment No. 1 – Revenues and Uncollectibles, co-sponsored with EPE witness Rene Gonzalez;
- Adjustment No. 13 – Regulatory Assets and Liability Amortization (This adjustment is sponsored by witness Julissa Reza and I co-sponsor certain items);
- Adjustment No. 15 – Depreciation Expense;
- Adjustment No. 28 – Plant in Service;
- Adjustment No. 29 – Accumulated Depreciation;
- Adjustment No. 30 – CWIP;
- Adjustment No. 31 – Non-Cash Working Capital;
- Adjustment No. 33 – Regulatory Assets and Liabilities (This adjustment is sponsored by witness Reza and I co-sponsor certain items); and

- Adjustment No. 36 – Working Cash.

Q10. WHY ARE YOU THE APPROPRIATE PERSON TO SPONSOR THESE TOPICS?

A. As I stated above, in my role as Vice President and Controller for EPE, I oversee the Plant Accounting department which is responsible for the capitalization of CWIP and plant in service and the calculation of depreciation expense and recording of accumulated depreciation. I also oversee other accounting departments which calculate and record other rate base and cost of service items including materials and supplies and prepayment balances, other current assets, uncollectible expense and regulatory assets and liabilities. Last, I direct the establishment and maintenance of the Company's accounting principles, practices, and procedures for the maintenance of its fiscal records and the preparation of its financial reports and interactions with the Company’s external auditors.

Q11. WHAT IS THE REGULATORY STANDARD FOR ACCOUNTING DATA IN THIS PROCEEDING?

A. Rule 17.3.510 of the New Mexico Administrative Code ("Rule 510") governs the recording of accounting data in this proceeding. The Base Period data for the twelve months ended September 30, 2025, is derived from EPE's regulatory books

and records. In accordance with Rule 510, EPE's books and records are maintained in compliance with the FERC Uniform System of Accounts, as revised from time to time by the FERC and have been audited by the accounting firm PricewaterhouseCoopers LLP ("PwC"), in connection with its annual audit of the Company's FERC Form 1 for the year ended December 31, 2024.

Q12. PLEASE DESCRIBE THE TEST YEAR PERIOD UTILIZED IN THE RATE FILING.

A. The Company is using a Historic Test Year Period with the Base Period of October 1, 2024, through September 30, 2025. EPE adjusts the Base Period amounts to reflect the effects of annualizations, normalizations, and known and measurable changes to arrive at Test Year Period amounts.

III. SUMMARY OF SCHEDULES SPONSORED

A. SCHEDULE A-4 (SUMMARY OF RATE BASE)

Q13. WHAT DOES SCHEDULE A-4 ADDRESS?

A. Schedule A-4 summarizes rate base at the end of the Base Period (column b) along with adjustments (column c) to arrive at adjusted rate base (column d). It then adds/subtracts adjustments to reflect Rate Relief (column e) to arrive at the Test Year Period requested amount of rate base (column f). I sponsor the Total Company information on page 1 and the New Mexico jurisdictional information on

page 2 is sponsored by EPE witness Hernandez.

B. B SCHEDULES (ORIGINAL COST OF PLANT)

Q14. WHAT ARE THE B SCHEDULES?

A. The B Schedules (which extend through Schedule B-7) contain original cost of plant in service, construction work in progress ("CWIP"), allowance for funds used during construction ("AFUDC") transferred to plant in service, plant held for future use and nuclear fuel in process information. I sponsor Schedules B-1 through B-6, which are related to plant in service, CWIP, AFUDC, and plant held for future use, and Schedule B-7 is sponsored by EPE witness Julissa I. Reza.

Q15. WHAT DOES SCHEDULE B-1 (ORIGINAL COST OF UTILITY PLANT BY PRIMARY ACCOUNT) ADDRESS?

A. This schedule reflects the amounts of utility plant classified by major FERC account as of the beginning of the Base Period (column b). It then adds/subtracts the additions (column c), retirements (column d), transfers (column e) to arrive at the amounts at the end of the Base Period. Adjustments to the Base Period amounts are added in column g to arrive at the requested amount of plant in service at the end of the Test Year Period (column h). I explain all plant in service-related adjustments later in my testimony. All amounts in this schedule are provided on a total Company basis.

Q16. WHAT DOES SCHEDULE B-2 (ORIGINAL COST OF PLANT IN SERVICE BY DETAIL ACCOUNT) ADDRESS?

A. This schedule presents the details by FERC Primary ("300") account of the plant in service amounts presented by major plant accounts in Schedule B-1 for the Base Period (columns b to f). Schedule B-2 also includes adjustment to Base Period amounts (column g) to arrive at the requested amount of plant in service at the end of the Test Year Period (column h). All amounts in this schedule are provided on a total Company basis.

Q17. WHAT DOES SCHEDULE B-3 (ORIGINAL COST OF PLANT IN SERVICE BY MONTHLY BALANCES) ADDRESS?

A. Schedule B-3 includes the monthly book balance of plant in service by FERC 300 account for each month of the Base Period on a total Company basis. Adjustments by FERC 300 account and the Test Year Period balances are provided in Schedule B-2 and not duplicated in this schedule.

Q18. WHAT DOES SCHEDULE B-4 (CWIP) ADDRESS?

A. Schedule B-4 includes the book balance at the end of the Base Period for CWIP on a total Company basis. EPE is not requesting the inclusion of CWIP in the Company's requested rate base in this filing.

Q19. WHAT DOES SCHEDULE B-5 (AFUDC GENERATED AND TRANSFERRED TO PLANT IN SERVICE) ADDRESS?

A. Schedule B-5 addresses AFUDC generated and transferred to plant in service during the Base Period and for the four years prior to the Base Period. This schedule states the methods, procedures, and calculations EPE follows in capitalizing AFUDC. It also includes a list of the AFUDC rates for calendar years 2021 through 2024 and the Base Period, and the amounts generated and transferred to plant in service in each of those periods.

Q20. HAS EPE COMPLIED WITH THE COMMISSION'S ORDER IN CASE NO. 15-00127-UT ("2015 RATE CASE") REGARDING THE INCLUSION OF SHORT-TERM DEBT IN ITS CALCULATION OF THE AFUDC RATE?

A. Yes, it did. In 2015, EPE began including short-term debt components (both balance and rate) in its calculation of the AFUDC rate used to accrue AFUDC on all applicable construction projects. This methodology has continued for all periods through September 30, 2025.

Q21. IS EPE'S AFUDC CALCULATION CONSISTENT WITH THE METHOD USED BY FERC TO CALCULATE AFUDC?

A. Yes. In addition to complying with the Commission's Final Order in the 2015 Rate

Case, the method EPE uses to calculate its AFUDC balances, illustrated on Rule 530 Schedule B-5, is also consistent with the method that FERC requires.

Q22. DO THE ADDITIONS TO RATE BASE SHOWN IN EXHIBIT CSP-1 INCLUDE AFUDC?

A. Yes, they do. The costs for most of the plant additions reflected on Exhibit CSP-1 contain an amount for AFUDC.

Q23. WHAT DOES SCHEDULE B-6 (PLANT HELD FOR FUTURE USE) ADDRESS?

A. Schedule B-6 lists plant held for future use at the end of the Base Period which is recorded in FERC Account 105. The list includes the description and purpose of each property, date purchased, estimated in-service date, and the book balance for each property over $10,000 at the end of the Base Period. There are no adjustments to the Base Period amounts therefore the Test Year Period amount is the same as the Base Period amount. The Company has a definite plan for these assets to be placed into service within ten years.

C. SCHEDULES C-1 AND C-3 (ACCUMULATED PROVISION FOR DEPRECIATION AND AMORTIZATION)

Q24. WHAT ARE THE C SCHEDULES?

A. The C Schedules (which extend through Schedule C-3) contain depreciation information, as described below.

Q25. WHAT DOES SCHEDULE C-1 (ACCUMULATED PROVISION FOR DEPRECIATION AND AMORTIZATION BY FUNCTIONAL CLASSIFICATION AND DETAILED PLANT ACCOUNT) ADDRESS?

A. Schedule C-1 provides accumulated provisions for depreciation detailed by functional classification (e.g., steam production, transmission) at the beginning of the Base Period (column b). It then adds/subtracts Base Period accruals (depreciation expense-column c), retirements (column d), and adjustments (salvage, cost of removal, etc. – column e) to the beginning balance amounts to arrive at the amount of accumulated depreciation at the end of the Base Period (column f). Adjustments to Base Period amounts are included in column (g) and column (h) represents the requested amount of accumulated depreciation for the Test Year Period. I explain and support all accumulated depreciation related adjustments later in my testimony. All amounts on this schedule are on a total Company basis.

Q26. WHAT DOES SCHEDULE C-3 (DEPRECIATION AND AMORTIZATION METHODS) ADDRESS?

A. Schedule C-3 describes the methods and procedures followed in calculating

depreciation and amortization of plant, retirements, and abandonments.

Q27. HAS EPE COMPLIED WITH THE COMMISSION'S ORDER IN THE 2015 RATE CASE REGARDING THE TREATMENT OF THE GAINS ON THE SALE OF VEHICLES?

A. Yes. Beginning in 2016, the Company began treating all gains on the sale of vehicles as salvage by crediting FERC Account 108, Accumulated Provision for Depreciation.

Q28. DOES TREATING THESE GAINS AS SALVAGE RESULT IN A BENEFIT TO RATEPAYERS?

A. Yes. Salvage is recorded as a credit to FERC Account 108, Accumulated Provision for Depreciation. This results in an increase to Accumulated Depreciation, which results in a reduction to rate base.

D. E-SCHEDULES (WORKING CAPITAL ALLOWANCE)

Q29. WHAT DOES SCHEDULE E-1 (CASH WORKING CAPITAL ALLOWANCE) ADDRESS?

A. Schedule E-1 calculates the cash working capital allowance as the lesser of one-eighth of the Test Year Period balances of total Operation and Maintenance Expense ("O&M") less fuel expense, purchase power, materials and supplies, and

prepayments or the amount as calculated in the lead lag study. The amounts in this Schedule are provided on a total Company basis. I explain and support all adjustments later in my testimony. The working cash allowance is calculated based on the lead-lag study sponsored by EPE witness Joseph S. Weiss.

Q30. WHAT DOES SCHEDULE E-2 (MATERIALS AND SUPPLIES, PREPAYMENTS, AND DEFERRED CHARGES) ADDRESS?

A. Schedule E-2 details the monthly balances of the prepayment, materials and supplies, and deferred charges during the Base Period. A 13-month average is calculated and adjustments to Base Period amounts are recorded to arrive at the Test Year Period 13-month average. I explain and support the related adjustments later in my testimony. All amounts in this schedule are on a total Company basis.

Q31. WHAT DOES SCHEDULE E-4 (AMOUNTS OF WORKING CAPITAL ITEMS CHARGED TO OPERATING AND MAINTENANCE EXPENSES) ADDRESS?

A. Schedule E-4 details the monthly balances of the working capital items that were charged to O&M accounts during the Base Period. Adjustments to Base Period amounts are recorded to arrive at the Test Year Period balance. I explain and the support related adjustments later in my testimony. All amounts in this schedule are on a total Company basis.

E. SCHEDULE F-1 (OTHER PROPERTY AND INVESTMENTS)

Q32. WHAT DOES SCHEDULE F-1 ADDRESS?

A. Schedule F-1 contains information on non-utility property the Company records in FERC Account 121. Base Period beginning and ending balances are provided on a total Company basis. No amounts in this schedule are requested in the Company's rate base in this filing.

F. SCHEDULE H-7 (DEPRECIATION AND AMORTIZATION EXPENSE)

Q33. WHAT DOES H-7 SCHEDULE ADDRESS?

A. Schedule H-7 provides depreciable plant by functional classification in column (b) at the end of the Base Period. It then multiples the depreciable amount by the current depreciation rate to arrive at the Base Period depreciation expense. Proposed depreciation rates are included in column (f) and are multiplied by the adjusted depreciable plant at the end of the Test Year Period in column (e) to arrive at the amount of requested depreciation expense at the end of the Test Year Period (column g). The Test Year Period Adjustments are included in column (h) and all amounts in this schedule are provided on a total Company basis. I explain and support the related adjustments later in my testimony.

The depreciation rates requested by EPE in this filing are discussed in the direct testimony of EPE witness John J. Spanos.

G. SCHEDULE J-1 (CONSTRUCTION PROGRAM)

Q34. WHAT DOES SCHEDULE J-1 ADDRESS?

A. Schedule J-1 provides expenditures for EPE's construction program detailed by function classification for the Base Period including AFUDC. The second page provides forecasted construction program expenditures for the calendar years 2026 and 2027 and is supported by EPE witness Richard Gonzalez.

H. P SCHEDULES (PLANT IN SERVICE)

Q35. WHAT ARE THE P SCHEDULES?

A. The P Schedules (which extend through Schedule P-12) contain plant in service, property retirements and property investment information, and O&M expense information. I sponsor portions of Schedules P-2 and P-3 as described below.

Q36. WHAT DOES SCHEDULE P-2 (PLANT IN SERVICE) ADDRESS?

A. Page 1 of Schedule P-2 provides plant in service and accumulated provision for depreciation and amortization on a total Company basis for the Base Period by month and detailed by functional group. It then subtracts Base Period accumulated provisions for depreciation and amortization from plant in service to arrive at the amount of net plant in service on a monthly basis for the Base Period. Page 1 provides the information required in subparts (a), (c) and (e) of Rule 530 for

Schedule P-2. Page 2 of Schedule P-2 provides the New Mexico jurisdictional amount of plant in service and accumulated provision for depreciation and amortization, as required by subpart (b) of Rule 530 for this schedule, and is sponsored by EPE witness Hernandez.

Q37. WHAT ADDITIONAL INFORMATION DO YOU SPONSOR ON SCHEDULE P-2?

A. I also sponsor the plant in service, accumulated provision for depreciation and amortization and net plant in service balances on a total Company basis for the four calendar years prior to the Base Period detailed by functional group (e.g., production, transmission), which is provided on page 3. Page 4 provides the New Mexico jurisdictional amounts for the same information provided on page 3 and is supported by the direct testimony of EPE witness Hernandez. Pages 3 and 4 provide the information required by subpart (d) of Rule 530 for this schedule. Last, page 5 provides a 5-year forecast of plant in service, accumulated provision for depreciation and amortization, and net plant in services balances, as required by subpart (f) of Rule 530 for this schedule, and is sponsored by EPE witness Richard Gonzalez.

Q38. WHAT DOES SCHEDULE P-3 (PROPERTY RETIREMENTS AND PROPERTY INVESTMENT INFORMATION) ADDRESS?

A. Page 1 of Schedule P-3 provides total Company plant in service additions, retirements and additions to CWIP by month and detailed by functional group (e.g., production, transmission) for Base Period, as required by subparts (a), (c) and (e) of Rule 530 for this schedule. Page 2 provides the New Mexico jurisdictional amounts for the information on Page 1, as required by subpart (b) of Rule 530 for this schedule, and is supported by the direct testimony of EPE witness Hernandez.

Q39. WHAT ADDITIONAL INFORMATION DO YOU SPONSOR ON SCHEDULE P-3?

A. I also sponsor the total Company plant in service additions, retirements and additions to CWIP for the four years prior to the Base Period detailed by functional group (e.g., production, transmission). The New Mexico jurisdictional amounts are identified in the direct testimony of EPE witness Hernandez. Both of these sections are required by subpart (d) of Rule 530 for this schedule. Subpart (f) of Rule 530 for this schedule also requires plant in service additions, retirements and additions to CWIP for the five years after the Test Year Period, which is provided on Page 5 of this schedule and is sponsored by EPE witness Richard S. Gonzalez.

Q40. DOES THE INFORMATION IN SCHEDULE P-3 INCLUDE PROPERTY UNDER CAPITAL LEASE?

A. Yes.

I. SCHEDULE Q-6 (OPINION OF INDEPENDENT PUBLIC ACCOUNTANTS)

Q41. WHAT DOES SCHEDULE Q-6 ADDRESS?

A. Schedule Q-6 provides the audit opinion of EPE's independent certified public accountant stating that an independent examination of the book amounts and accounting adjustments of the Company's books and records have been made for the year ended December 31, 2024. In accordance with the Commission order initiating this case, in Case No. 25-00082-UT, the Commission approved EPE's Application for Order Granting Variance permitting EPE to file its audit report for the calendar year 2024 with the application and to file the Company's audit report for calendar year 2025 when it becomes available around mid-April 2026. The requested variance was sought and granted because the Base Period for the application spans two calendar years.

IV. OVERALL RATE BASE

Q42. WHERE IS THE DETAIL OF THE TOTAL COMPANY RATE BASE LOCATED?

A. Schedule A-4 provides the detail of the Company's rate base in the Base Period, the adjustments to these balances, and the requested Test Year Period rate base amounts.

Q43. PLEASE IDENTIFY THE ITEMS INCLUDED IN THE COMPANY'S RATE BASE AT THE END OF THE BASE PERIOD AND TEST YEAR PERIOD AND THE WITNESS WHO SPONSORS EACH ITEM.

A. Below is a detail of rate base items and the Company witness who sponsors each item:

- Plant in Service – I sponsor this item which is described above in my testimony in Section III item B in Schedules B-1 through B-3, and below in my testimony in section V – Plant Additions;
- Accumulated Depreciation and Amortization – I sponsor this item which is described above in my testimony in Section III item C in Schedules C-1 and C-3.
- Plant Held for Future Use – I sponsor this item which is described above in my testimony in Section III item B in Schedule B-6;
- CWIP – I sponsor this item which is described above in my testimony in Section III item B in Schedule B-4;
- Working Cash - I co-sponsor this item with EPE witness Joseph S. Weiss, which is described above in my testimony in Section III item D – Schedule E-1;
- Fuel Inventory - sponsored by EPE witness Julissa I. Reza;
- Nuclear Fuel - sponsored by EPE witness Reza;

- Materials and Supplies – I sponsor this item which is described above in my testimony in Section III item D – Schedule E-2;
- Prepayments - I sponsor this item which is described above in my testimony in Section III item D – Schedule E-2;
- Coal Reclamation Asset – sponsored by EPE witness Reza;
- Regulatory Assets – I co-sponsor this item with EPE witnesses Reza, Adrian Hernandez and Sierra. The items I sponsor are described below in my testimony in section VI item D Regulatory Assets and Liabilities Adjustments;
- Accumulated Deferred Income Taxes – sponsored by EPE witness Tamera L. Henderson;
- Tax Regulatory Assets - sponsored by EPE witness Henderson;
- Miscellaneous Deferred Debits – sponsored by EPE witness Reza;
- Unrecovered Plant and Regulatory Study Costs – I sponsor this item which is discussed below in my testimony in Section VI item D – Regulatory Assets and Liabilities Adjustments;
- Customer Deposits – I sponsor this item which has no Test Year Period adjustments;
- Regulatory Liabilities – I co-sponsor this item with EPE witnesses Reza, Hernandez and Sierra. The items I sponsor are described below in my

testimony in Section VI item D – Regulatory Assets and Liabilities Adjustments;

- Tax Regulatory Liabilities – sponsored by EPE witness Henderson;
- Customer Advances – Construction – sponsored by EPE witness Reza; and
- Accumulated Deferred Income Taxes – sponsored by EPE witness Henderson.

Q44. WHERE IS THE DETAIL OF THE ADJUSTMENTS TO TOTAL COMPANY RATE BASE LOCATED?

A. Schedule A-3 lists adjustments to total Company rate base and details are provided in Workpaper A-3, which are also described below in Section VI of my testimony.

Q45. WERE THE AMOUNTS IN RATE BASE PRUDENTLY INCURRED AND REASONABLE IN AMOUNT?

A. Yes, amounts in rate base were prudently incurred and are reasonable in amount.

A. FERC ORDER NO. 898 IMPACTS

Q46. WHAT DOES THIS SECTION OF YOUR TESTIMONY ADDRESS?

A. In this section of my testimony, I address FERC Order No. 898 as it relates to rate base.

Q47. WHAT IS FERC ORDER NO. 898?

A. FERC Order No. 898, issued on June 29, 2023, and effective on January 1, 2025, is a final rule that amends the FERC's Uniform System of Accounts for public utilities to:

- create new accounts for wind, solar, and other renewable generating assets;
- create a new functional class for energy storage accounts;
- codify the accounting treatment of renewable energy credits, now called Environmental Credits; and
- create new accounts within existing functions for computer hardware, software, and communication equipment.

The relevant FERC forms were also amended to accommodate these changes. The rule's goal is to improve the transparency of regulatory reporting for electric utilities.

Q48. HOW DID FERC ORDER NO. 898 IMPACT THE COMPANY'S REQUESTED RATE BASE IN THIS FILING?

A. EPE implemented FERC Order No. 898 on January 1, 2025, and the presentation of amounts in this case are in compliance with the FERC Uniform System of Accounts in effect at the end of the Base Period. There are no impacts to the Company's request in this case resulting from FERC Order No. 898. Transfers

between FERC detail accounts required by FERC Order No. 898 are included on Schedule B-2 – Original Cost of Plant in Service by Detail Account in column (e) – Transfers and Schedule C-1 – Accumulated Provision for Depreciation and Amortization by Functional Classification and Detailed Plant Account in column (e) – Other Changes.

V. PLANT ADDITIONS

Q49. WHAT IS THE AMOUNT OF TOTAL COMPANY PLANT ADDITIONS TO RATE BASE SINCE THE FINAL ORDER IN CASE NO. 20-00104-UT ("2020 RATE CASE")?

A. Company plant additions since the 2020 Rate Case, not yet included in rate base, total approximately $2.417 billion as shown on Exhibit CSP-1. In this proceeding, EPE seeks to include the New Mexico jurisdictional portion of these plant additions ($408.441 million) in its New Mexico jurisdictional rate base as discussed by EPE witness Hernandez.

Q50. PLEASE DESCRIBE EXHIBIT CSP-1?

A. Exhibit CSP-1 lists the amounts added to plant in service by function between the end of the Base Period for the 2020 Rate Case and the end of the Base Period in this request (column d less column e), which is from January 1, 2020 to September 30, 2025, a total of $2.284 billion on a total Company basis. Additions to plant in

service are listed by function and project (column b) and include a description of each project over $100,000 (column c). Column (e) removes the items approved in the 2020 Rate Case of $18.575 million for plant placed in service between January 1, 2020 through March 31, 2022, and column (f) lists the Test Year Period Adjustment to add projects which total $132.944 million that were placed into service between October 1 and October 31, 2025 which is described below in my testimony. This results in Test Year Period plant in service additions of $2.417 billion on a total Company basis (New Mexico jurisdictional request of $408.441 million). Exhibit CSP-1 also indicates the EPE witness who is sponsoring the project under each function and will be discussing the items in their direct testimony (column j), the date projects were placed in service (column k) and a general description of capital projects with a cost greater than $5 million (column l). EPE witness Omar Gallegos sponsors the information regarding transmission and distribution plant additions; EPE witness Victor Martinez sponsors the information regarding nuclear production plant additions and the implementation of the Energy Imbalance Market projects; EPE witness Jeffery M. Hughes sponsors the information regarding steam and other production plant additions; and I sponsor the information about general plant additions, except for those items specifically noted in the exhibit as being sponsored by other witnesses. For the general plant additions that I sponsor, the discussion is below in my testimony.

Q51. DO THE AMOUNTS ON EXHIBIT CSP-1 INCLUDE COSTS THAT WERE PREVIOUSLY INCLUDED IN RATE BASE AS TEST YEAR PERIOD ADJUSTMENTS IN THE COMPANY'S LAST NEW MEXICO RATE CASE?

A. No, they do not. Column (e) of Exhibit CSP-1 removes all additions reflected in the Test Year Period in the 2020 Rate Case Final Order that were placed into service after the end of the Base Period in that case, a total of $18.575 million in projects on a total Company basis.

Q52. IS EPE REQUESTING ADDITIONAL ADJUSTMENTS TO THE RATE BASE FOR PLANT IN SERVICE?

A. Yes, those requested adjustments are described in Section VI of my testimony.

A. GENERAL PLANT ADDITIONS

Q53. WHAT ARE THE ADDITIONS INCLUDED IN GENERAL PLANT?

A. The Company is requesting general plant additions of $280.289 million on a total Company basis ($59.847 million on a New Mexico jurisdictional basis) for projects placed in service between January 1, 2020, and October 31, 2025, as indicated in the Table CSP-1 below. New Mexico jurisdictional amount for each project discussed below can be found on Exhibit CSP-1. The costs consist of the following projects:

/

TABLE CSP-1

MAJOR PROJECT	TOTAL COMPANY COST
Customer Care and Billing Software (SS243 and SS112)	$37,891,892
ERP Implementation and PowerPlan Upgrade (SS287)	33,978,905
Transportation Capital Blanket (SS005)	32,242,277
IT Corporate and Operations Blankets (SS040 and ST040)	19,378,164
Integrated Planning and Forecasting Software (SS286)	18,019,648
ESOC Operations & Safety Training Center (SS236)	14,100,411
Energy Imbalance Market Implementation (SS272)	12,596,538
Shared Services Facility Services Blanket (SF007)	9,038,278
Generation Operations CMMS (SS224)	8,367,335
Energy Market System Upgrade (ST107)	8,096,644
Distribution General Plant (DT030)	6,363,834
Other Projects (less than $5 million)	80,215,567
TOTAL	$280,289,495

Q54. FOR EASE OF PRESENTATION, HAVE YOU DISTINGUISHED BETWEEN MAJOR CAPITAL PROJECTS AND OTHER PROJECTS?

A. Yes. Capital projects designated as "major" are those costing $5 million or more on a total Company basis, and those designated as "minor" capital projects are those

costing less than $5 million on a total Company basis. Minor capital projects are identified as "Other Projects" in my testimony.

Q55. DOES EPE HAVE PROCESSES AND PROCEDURES IN PLACE TO ENSURE THAT COSTS ASSOCIATED WITH GENERAL PLANT CAPITAL PROJECTS ARE REASONABLE?

A. Yes. The Company uses an established process to ensure that general plant additions are acquired in the most efficient and cost-effective manner. While the cost of general plant is important, ensuring that the acquisitions meet the Company's needs is equally, or more, important. The process starts with defining the requirements for each addition/acquisition. Once the requirements are developed, the Company routinely uses competitive bidding processes to identify the vendors that best meet the Company's requirements in the most cost-effective manner. The Company's general plant acquisition process seeks to meet the Company's needs at the lowest cost over the life of the plant.

Q56. HOW DOES EPE ENSURE THAT CAPITAL PROJECTS ARE APPROPRIATELY BUDGETED?

A. The Company has procedures in place for the creation and approval of capital projects. Projects costing over $100,000 to $200,000 (depending on the functional area) go through a specific budget review and approval process and are ultimately

approved by the Executive Leadership Team ("ELT"). The ELT is composed of the executive leadership of the Company, which includes the Chief Executive Officer and all officers that report directly to her. The ELT reviews each project for business need and to ensure that they integrate with other systems and meet the Company's long-term systems development requirements.

Q57. WHAT IS A "BLANKET" PROJECT?

A. For general plant costs, blanket projects are primarily used for routine annual acquisitions. For internal tracking and management purposes, the Company organizes projects from a specific functional area or for a specific Company location into a blanket project. For example, the Shared Services Facility Services Improvements Blanket allows EPE to track and manage all capital improvements that occur on a regular basis at its various facilities throughout its service territory.

Q58. CAN YOU DESCRIBE THE PURPOSE AND USE OF THE CUSTOMER CLOUD SERVICE ("CCS") SOFTWARE PROJECT (SS243)?

A. The Company was required to upgrade its customer service software in 2020 for continued vendor product support. Although this project originally began as an upgrade of the Customer Care and Billing ("CC&B") software, during the negotiation of the contract, EPE was presented with a new cloud-based version of the software, CCS, offered by the same vendor. This cloud-based software was

ultimately chosen to replace the former customer service software for several reasons: (1) elimination of on-site servers and technical support, (2) routine updates which eliminate time-consuming and expensive upgrades, and (3) the fact that cloud-based software would support the Company's Advanced Metering Infrastructure ("AMI"), which is also cloud-based. The implementation of the CCS software also included adding a reporting database, implementing a customer web self-service portal, and implementing a product called Opower, which helps customers reduce energy usage through home energy reports, behavioral load shaping, proactive alerts, and digital self-service solutions. This software was placed into service in March 2023 and has allowed EPE to provide more efficient and responsive customer service.

Q59. WHAT IS THE TOTAL COST OF THE CCS SOFTWARE?

A. The cost of the CCS Software Project was approximately $37.892 million ($8.091 million New Mexico jurisdictional).

Q60. CAN YOU DESCRIBE THE PURPOSE AND USE OF THE ENTERPRISE RESOURCE PLANNING ("ERP") IMPLEMENTATION AND POWERPLAN UPGRADE PROJECT (SS287)?

A. The Company implemented Oracle Fusion Applications ("Fusion") to replace its legacy ERP, Supply Chain Management and Human Capital Management systems

previously managed through Oracle E-Business Suite ("EBS") and UKG UltiPro. As part of this transformation, the Company also upgraded PowerPlan, its system of record for managing the plant in service subledger. The Fusion implementation involved significant business process redesign, integration with multiple enterprise platforms, and comprehensive testing cycles leading up to the go-live on September 22, 2025. To support ongoing compliance and financial reporting, the project included a redesign of the chart of accounts and related code block and the migration of historical EBS data into an archival solution to ensure continued audit access following EBS decommissioning. The implementation of the cloud-based Fusion software allowed the Company to streamline many processes, automate work previously done manually, and eliminate several systems previously utilized by the Company providing more efficiency.

Q61. WHAT IS THE TOTAL COST OF THE ERP PROJECT?

A. The cost of the ERP Project was approximately $33.979 million ($7.255 million New Mexico jurisdictional).

Q62. WHAT CAPITAL ADDITIONS ARE INCLUDED IN THE TRANSPORTATION CAPITAL BLANKET – SHARED SERVICES PROJECT (SS005)?

A. The Transportation Capital Blanket – Shared Services, or "Fleet" project, consists

primarily of costs for vehicles and other transportation equipment such as trailers. These vehicles and equipment are utilized throughout the Company's service territory and directly support the Company's effort to provide safe, secure, and reliable electric service to its customers. Purchase of new vehicles and transportation equipment is performed in accordance with the Company's purchasing policies and procedures.

Q63. WHAT IS THE MAKE-UP OF EPE'S TRANSPORTATION FLEET?

A. The Company's vehicle fleet is made up of transportation and vocational vehicles, trailers, and trailered equipment. Transportation vehicles include sedans, pickup trucks, and SUVs used during the normal course of performing Company business to transport employees and material to and from job sites. Vocational vehicles include heavy-duty work trucks, bucket trucks, boom trucks, cranes, elevators, digger derricks, and other similar vehicles used in the normal course of Company business to transport employees, material, and equipment to and from job sites and to perform work at job sites in a safe and cost-effective manner. Trailers and trailered equipment include pull trailers and motorized equipment such as wire pulling and tensioning equipment, backyard machines, portable transformers, and construction equipment. All vehicles, trailers, and trailered equipment are used to perform the work needed to construct, operate, and maintain the Company's electrical facilities and associated infrastructure and to support the Company's

effort to provide safe, secure, and reliable service to its customers. Transportation equipment is purchased under a blanket work order and added to plant in service as the equipment is placed in service.

Q64. DOES THE COMPANY HAVE ELECTRIC VEHICLES IN ITS FLEET?

A. Yes. The Company has purchased several electric vehicles including cars, light-duty trucks, and heavy-duty work trucks for use in its fleet services. Overall, these vehicles are cost-efficient when combining original cost, cost of fuel, and maintenance and repair costs.

Q65. IN WHAT FERC ACCOUNT IS TRANSPORTATION EQUIPMENT INCLUDED?

A. Vehicles and trailers are included in FERC Account 392, Transportation Equipment, while trailered equipment is included in FERC Account 396, Power Operated Equipment.

Q66. WHAT IS THE TOTAL COST OF THE TRANSPORTATION CAPITAL BLANKET PROJECT (SS005) ADDED FROM JANUARY 1, 2020, TO SEPTEMBER 30, 2025?

A. The cost of the transportation equipment charged to the Transportation Capital Blanket project added to plant in service after EPE's last base rate case was $32.242

million ($6.884 million New Mexico jurisdictional).

Q67. WHAT CAPITAL ADDITIONS ARE INCLUDED IN THE INFORMATION TECHNOLOGY ("IT") CORPORATE AND OPERATIONS BLANKET PROJECTS (SS040 and ST040)?

A. The IT Corporate and Operations Blanket projects consist primarily of the costs of IT hardware for infrastructure purchases necessary to support work performed during the normal course of business. Hardware costs include amounts for servers, routers, switches, network storage, cyber security, and corporate telephone systems. These costs also include other items such as replacement and purchase of new personal computers (desktops and laptops), departmental printers, peripherals, and monitors. All these items are critical to the Company's provision of electric service to its customers.

Q68. WHAT IS THE TOTAL COST CHARGED TO THE IT CORPORATE AND OPERATIONS BLANKET PROJECTS FROM JANUARY 1, 2020, TO SEPTEMBER 30, 2025?

A. The cost of the IT Corporate Blanket and the IT Operations Blanket added to plant in service was $19.378 million ($4.138 million New Mexico jurisdictional).

Q69. CAN YOU DESCRIBE THE PURPOSE AND USE OF THE INTEGRATED PLANNING & FORECASTING ("UI") SOFTWARE PROJECT (SS286)?

A. The Company implemented the Utilities International Solutions Group ("UI") software to streamline the budgeting and forecasting process and to enhance regulatory filings and revenue analytics. Phase 1 of the installation of the UI software, which costs are included in project SS286, included the planning and forecasting modules which provided enhanced forecasting of O&M and capital projects. The UI software integrates with PowerPlan (EPE's general ledger) and other data streams to provide a unified view of performance metrics and a systematic way of managing data. The UI software allows EPE to assess impacts on operations and finance by enabling data-driven decision making as well as advanced modeling and scenario comparisons.

Q70. WHAT IS THE ESOC OPERATIONS AND SAFETY TRAINING CENTER ("OSTC") (SS236)?

A. The OSTC is a building which consolidates EPE's training programs and includes an equipment training yard. EPE determined the need to establish and maintain dedicated facilities to administer and support safety and technical training efforts for its various departments, to include training for collective bargaining unit employees such as linemen, substation electricians, and relay technicians, and training for salaried employees such as engineers, analysts, and project managers.

Although the transmission, distribution and safety departments identified the need for this facility, this facility provides a centralized training location for all employees throughout the organization.

Q71. WHAT WAS THE TIMELINE OF THE OSTC AND THE FINAL COST?

A. The OSTC project was completed in three phases: (1) Programming and Conceptual Design; (2) Design; and (3) Construction. Phase 1 began in January 2020 and was completed in February 2021. Phase 2 began in February 2021 and was completed in August 2021 when Phase 3 began. Phase 3 was completed in January 2023, and the project was placed in service at that time. The cost for the OSTC was approximately $14.1 million ($3.011 million New Mexico jurisdictional).

Q72. WHICH COMPANY WITNESSES DESCRIBE THE PURPOSE AND USE OF THE ENERGY IMBALANCE MARKET ("EIM") SOFTWARE, GENERATION OPERATIONS CMMS SOFTWARE, ENERGY MANAGEMENT SYSTEM ("EMS") UPGRADE, AND THE DISTRIBUTION GENERAL PLANT IN TESTIMONY?

A. The direct testimony of EPE witness Martinez supports the Company's investment in the EIM and EMS Software, EPE witness Hughes supports the Generation CMMS

Software, and the treatment for the Distribution General Plant can be found in the direct testimony of EPE witness Gallegos.

Q73. WHAT CAPITAL ADDITIONS ARE INCLUDED IN THE SHARED SERVICES FACILITY SERVICES BLANKET PROJECT (SF007)?

A. The Shared Services Facility Services Blanket project is made up of capital improvement projects completed primarily in the Stanton Tower, which serves as EPE's corporate headquarters. It is an 18-story building constructed in 1979 and purchased by EPE in February 2008. The facility houses corporate functions such as accounting, finance, budgeting, legal, compliance, risk management, billing, revenue collections, information technology, customer service, and other corporate level departments, all of which are critical to the Company's provision of electric service to its customers. Over the last several years, EPE has completed multiple projects within the facility to address aging infrastructure, safety and security enhancement, obsolescence, and space utilization. As part of the Shared Services Facility Services Blanket, the Company renovated multiple areas and replaced equipment throughout the building (e.g., sprinkler/fire system and generator/automatic transfer switches). EPE also completed various smaller capital improvement projects. These projects included office and cubicle buildouts, equipment replacements (e.g., HVAC, electrical, lighting, plumbing, etc.), and furniture purchases for new offices, cubicles, and conference rooms.

Q74. WHAT IS THE TOTAL COST OF THE SHARED SERVICES FACILITY SERVICES BLANKET?

A. The cost of the Shared Services Facility Services Blanket added to plant in service was approximately $9.038 million ($1.930 million New Mexico jurisdictional).

Q75. WHAT CAPITAL ADDITIONS ARE INCLUDED IN THE CATEGORY DESIGNATED AS "OTHER PROJECTS"?

A. Other Projects represent capital projects costing less than $5 million, including materials, tools, and equipment for distribution line maintenance, operational technology network buildouts at various EPE facilities, including the Stanton Tower, and the Eastside Operations Center, energy management systems hardware for System Operations, the general acquisition blanket for security and protection systems at low impact sites, and miscellaneous IT communications equipment. These projects represent routine capital expenditures made during the normal course of business that are necessary and reasonable for the continued provision of safe and reliable service.

Q76. WHAT IS THE TOTAL COST OF OTHER PROJECTS?

A. The total cost of Other Projects added to plant in service was approximately $80.216 million ($17.127 million New Mexico jurisdictional).

Q77. WHAT IS THE TOTAL COST FOR GENERAL PLANT ADDITIONS THE COMPANY IS SEEKING IN RATE BASE?

A. EPE is requesting $280.289 million ($59.847 million New Mexico jurisdictional) in rate base for general plant capital additions listed in Table CSP-1 above.

Q78. ARE THE COSTS OF THE CAPITAL ADDITIONS TO GENERAL PLANT NECESSARY, REASONABLE, AND PRUDENT?

A. Yes. The Customer Cloud Service Software, ERP and Integrated Planning and Forecasting Software are utilized by the Company to help provide reliable service to its customers and manage supply chain, human resources, accounting and budgeting information.

Transportation Equipment/Fleet Acquisition costs were incurred for the purchase of new and replacement vehicles, as well as for equipment required to provide safe and reliable service to customers and to address changes in operational requirements. Vehicle and equipment options were evaluated from a best-value perspective, and when applicable, different technologies such as electric vehicles were considered. In addition, the development of specifications for vehicles and equipment was performed through interdepartmental collaboration to ensure work requirements were effectively met.

The OTSC was built to establish dedicated facilities to support safety,

technical, and other training required to maintain the Company's on-going commitment to provide safe, reliable service.

The IT Corporate and Operations Blankets project costs were incurred to replace equipment that the Company no longer uses, to address changes in operational requirements, and to allow EPE to leverage improvements in technology for the benefit of the Company's customers.

The costs in the Shared Services Facility Services Improvement Blanket project were incurred to upgrade and renovate aging infrastructure and equipment and to address safety, security, and maintenance issues related to the Company's facilities. Lastly, capital project costs included in Other Projects represent routine capital expenditures made during the normal course of business that are necessary for the provision of safe and reliable service.

Q79. HOW DID THE COMPANY ENSURE THAT THE COSTS INCURRED FOR THESE PROJECTS WERE REASONABLE?

A. Projects are undertaken in accordance with the Company's purchasing policies and procedures. This may include use of a competitive bidding process, with the successful bidder identified as the vendor providing the best value option. In addition, options are evaluated from both initial acquisition cost and ongoing maintenance perspectives and, when feasible and appropriate, different

technologies are considered. As a result, all these costs are reasonable, necessary, and prudent.

VI. RATE BASE ADJUSTMENTS

A. PLANT IN SERVICE ADJUSTMENTS

Q80. HAVE YOU MADE ANY ADJUSTMENTS TO THE BASE PERIOD PLANT IN SERVICE AMOUNTS IN THIS FILING?

A. Yes, the Company has adjusted plant in service for the following items in this filing:

- Palo Verde Revaluation;
- Rio Grande Unit 6;
- Capitalized Incentive Compensation ("CIC"); and
- Additions for plant in service used and useful between October 1 and October 31, 2025.

Q81. WHAT RATE CASE SCHEDULE SHOWS THE ADJUSTMENTS TO PLANT IN SERVICE?

A. Workpaper A-3, Adjustment No. 28, reflects the Company's adjustments to plant in service in rate base. I explain and support each item in Adjustment No. 28 below.

1. PALO VERDE REVALUATION

Q82. PLEASE DISCUSS THE ADJUSTMENT TO PALO VERDE GENERATING STATION ("PVGS" OR "PALO VERDE").

A. The book value of Palo Verde is original cost as typically required by the Commission. An adjustment to the original cost was made based on the fresh-start values as determined upon EPE's emergence from bankruptcy in 1996 (post-bankruptcy fresh-start value), which is the method approved in NMPRC Case No. 2722 in 1998 (the "1998 Rate Case") and used in every base-rate case since that case. EPE's customers benefit from this adjustment to Palo Verde's original cost because the adjustment reduces EPE's New Mexico jurisdictional rate base, providing benefits to New Mexico customers in past and future revenue requirements. The values adopted in the 1998 Rate Case have been carried forward in subsequent rate cases and are reflected in EPE's current New Mexico rates.

Q83. DO EPE'S NET PLANT BALANCES CALCULATED FOR THE CURRENT TEST YEAR PERIOD REFLECT THE 1998 RATE CASE VALUATIONS?

A. Yes. As I indicated, EPE's cost of service for New Mexico continues to reflect the revaluation and write-down of Palo Verde. Exhibit CSP-2, page 1, shows the total Company and New Mexico jurisdictional amounts of net plant for PVGS at September 30, 2025. Pages 2 through 4 of Exhibit CSP-2 illustrate plant in service values for each Unit at Palo Verde based upon the revalued amounts. Beginning

with the adopted plant values, additions and retirements are added or subtracted from the beginning balance to calculate a gross plant balance at September 30, 2025, for each unit. Accumulated depreciation was calculated on Pages 5 to 7 of Exhibit CSP-2 in a similar fashion by adding annual depreciation expense amounts, subtracting retirements and cost of removal, and adding salvage to determine the ending balance. Annual depreciation expense was developed on Pages 8 through 19 of Exhibit CSP-2 by depreciating the revalued basis and net additions each year over the remaining life of the plant based upon the year of the addition.

Following the resolution of NMPRC Case No. 06-00258-UT (the "2006 Rate Case"), the remaining life for both PVGS Units 1 and 2 was extended by 10 years for the purposes of calculating depreciation in the New Mexico jurisdiction. EPE also recognized an additional 10-year extension in its 2015 Rate Case by reducing depreciation expense (effective January 2010). On April 21, 2011, the U.S. Nuclear Regulatory Commission ("NRC") approved PVGS' license renewal, which extended the operating license of all three Palo Verde units for 20 years beyond the original 40-year licenses. The renewed licenses for PVGS Units 1, 2, and 3 now expire in 2045, 2046, and 2047, respectively. Page 1 of Exhibit CSP-2 summarizes the revalued balances of gross plant, accumulated depreciation, and net plant for each unit and shows the New Mexico jurisdictional amounts, based upon the demand allocator developed by EPE witness Hernandez in this case.

Q84. DID THE COMPANY ALSO REMOVE THE COSTS OF PALO VERDE UNIT 3 FROM NEW MEXICO JURISDICTIONAL RATE BASE?

A. Yes. The costs associated with Palo Verde Unit 3 were directly assigned to other jurisdictions in the jurisdictional allocation as discussed by EPE witness Hernandez.

2. RIO GRANDE UNIT 6

Q85. PLEASE DISCUSS THE RIO GRANDE UNIT 6 ADJUSTMENT.

A. EPE removed $10 million of book cost related to the retirement of Rio Grande Unit 6. EPE agreed to remove Rio Grande Unit 6 from rate base in the 2015 Rate Case. EPE filed a notice of abandonment of Rio Grande Unit 6 on December 17, 2025 in Case No. 20-00194-UT.

3. CAPITALIZED INCENTIVE COMPENSATION ("CIC")

Q86. PLEASE DISCUSS THE ADJUSTMENT TO REMOVE THE CIC RELATED TO FINANCIAL METRICS.

A. Incentive compensation based upon financial metrics capitalized to plant in service was excluded from requested rate base in this filing consistent with the Commission's 2015 Rate Case Final Order.

Q87. WHY DID EPE MAKE THIS ADJUSTMENT?

A. Utilities in New Mexico have been required to remove capitalized financial-based CIC from requested rate base in their filings. As a result, EPE has made an adjustment to its requested plant in service to remove CIC based upon financial metrics from costs capitalized to plant.

Q88. WHAT PERIODS WERE INCLUDED IN THE ADJUSTED AMOUNTS?

A. The adjustment includes incentive compensation that has been capitalized since June 2009, which was the first month in which incentive compensation was capitalized.

4. TEST YEAR PERIOD PLANT ADDITIONS

Q89. HAVE YOU INCLUDED ANY PLANT ADDITIONS WHICH WERE COMPLETED AFTER THE END OF THE BASE PERIOD?

A. Yes. As I described above, EPE is requesting $2.417 billion of plant additions since the 2020 Rate Case through the Base Period ending September 30, 2025, on a total Company basis ($408.441 million on a New Mexico jurisdictional basis), as adjusted for the Test Year Period. The Test Year Period adjustment amount includes $132.944 million of plant additions between October 1, 2025, and October 31, 2025, on a total Company basis ($10.9 million on a New Mexico jurisdictional basis). The New Mexico jurisdictional amounts are supported in the

direct testimony of EPE witness Hernandez. See Exhibit CSP-1 for a listing of the projects placed in service in October 2025, which includes a list of the EPE witnesses that support these plant additions as necessary and used and useful in providing electric service at a just and reasonable cost.

Q94. HAS THE COMPANY COMPLIED WITH THE FINAL ORDER IN THE 2020 RATE CASE REGARDING THE INCLUSION OF POST TEST YEAR ADDITIONS TO PLANT IN SERVICE?

A. Yes. As directed in the 2020 Rate Case, the Company has synchronized plant in service, accumulated depreciation, depreciation expense and accumulated deferred income tax ("ADIT") balances related to plant items in the test period adjustments. The synchronized adjustments to plant in service, accumulated depreciation, and depreciation expense are supported by me below in my testimony, and the synchronized adjustments to ADIT are discussed in the testimony of EPE witness Henderson.

5. NEWMAN UNIT 6

Q90. DID THE COMPANY REMOVE THE COST OF NEWMAN UNIT 6 FROM NEW MEXICO JURISDICTIONAL RATE BASE?

A. Yes. The costs associated with Newman Unit 6 were directly assigned to other jurisdictions in the jurisdictional allocation as discussed by EPE witness

Hernandez.

B. ACCUMULATED DEPRECIATION ADJUSTMENTS

Q91. HAVE YOU MADE ANY ADJUSTMENTS TO THE BASE PERIOD ACCUMULATED DEPRECIATION AMOUNTS IN THIS FILING?

A. Yes, the Company has adjusted accumulated depreciation for the following items in this filing:

- Palo Verde Revaluation;
- Rio Grande Unit 6;
- FERC Audit;
- CIC; and
- Adjustment to Accumulated Depreciation for Plant Additions placed in service in October 2025.

Q92. WHAT RATE CASE SCHEDULE SHOWS THE ADJUSTMENTS TO REQUESTED ACCUMULATED DEPRECIATION?

A. Workpaper A-3, Adjustment No. 29, reflects the Company's adjustments to the Base Period accumulated depreciation requested in the Test Year Period rate base. Below, I explain and support each item in Adjustment No. 29.

Q93. PLEASE EXPLAIN THE ADJUSTMENTS TO ACCUMULATED DEPRECIATION.

A. The adjustments to accumulated depreciation primarily relate to the adjustments made to plant in service as previously discussed.

1. PALO VERDE REVALUATION

Q94. PLEASE DISCUSS THE ADJUSTMENT RELATED TO PALO VERDE ACCUMULATED DEPRECIATION.

A. In accordance with the Palo Verde revaluation adjustment to plant in service discussed earlier, EPE adjusted accumulated depreciation to conform to the calculation of the Palo Verde revalued amounts and their depreciable lives as approved in the 1998 Rate Case. The revalued amounts are supported by Exhibit CSP-2.

Q95. DID THE COMPANY MAKE AN ADJUSTMENT TO REMOVE PALO VERDE UNIT 3?

A. Yes. As discussed above, accumulated depreciation and other amounts related to Palo Verde Unit 3 were allocated to other in the New Mexico jurisdictional rate base as discussed by EPE witness Hernandez.

2. RIO GRANDE UNIT 6

Q96. PLEASE DISCUSS THE RIO GRANDE UNIT 6 ADJUSTMENT.

A. As discussed previously, Rio Grande Unit 6 has been retired by the Company and therefore it is necessary to remove the accumulated depreciation related to this plant.

3. FERC AUDIT

Q97. PLEASE EXPLAIN THE FERC AUDIT ADJUSTMENT RELATED TO ACCUMULATED DEPRECIATION.

A. Consistent with past rate cases, the Company has removed $5.6 million from accumulated depreciation related to plant depreciation in the FERC jurisdiction. This amount is the result of an adjustment arising from an audit conducted by the FERC in the 1980s and is specific to the FERC jurisdiction. Consequently, it is removed from rate base because it is not applicable to the New Mexico retail jurisdiction.

4. CAPITALIZED INCENTIVE COMPENSATION

Q98. PLEASE DISCUSS THE ADJUSTMENT TO REMOVE THE ACCUMULATED DEPRECIATION RELATED TO THE FINANCIAL-BASED CIC.

A. The financial-based CIC capitalized to plant in service was removed from requested

plant in service in this request; therefore, it is necessary to remove the related accumulated depreciation.

Q99. HOW DID EPE CALCULATE THE ADJUSTMENT FOR ACCUMULATED DEPRECIATION ON THE FINANCIAL-BASED CIC?

A. The Company first determined the amounts capitalized to plant in service for the financial-based CIC by year since June 2009. Next, EPE calculated the annual depreciation expense using the functional composite rates in effect each year, related to the plant amounts which received CIC. The resulting accumulated depreciation was then used as the basis for the adjustment related to CIC.

5. TEST PERIOD ADJUSTMENT TO ACCUMULATED DEPRECIATION FOR PLANT IN SERVICE ADDITIONS IN OCTOBER 2025

Q100. DID THE COMPANY RECORD AN ADJUSTMENT TO SYNCHRONIZE ACCUMULATED DEPRECIATION FOR OCTOBER 2025 PLANT ADDITIONS?

A. Yes. An adjustment was made to add an additional month of depreciation and record retirements from October 1, 2025 to October 31, 2025, in order to synchronize accumulated depreciation with the EPE's Test Year Period adjustment for plant additions placed in service in October 2025. As I discussed earlier, synchronization is required by the 2020 Rate Case Final Order.

C. CWIP ADJUSTMENT

Q101. PLEASE DISCUSS THE CWIP ADJUSTMENT.

A. The adjustment to CWIP is included in Workpaper A-3, Adjustment No. 30 – CWIP. The adjustment removes the entire balance of CWIP at the end of the Base Period because the Company is not requesting CWIP in rate base.

D. REGULATORY ASSETS AND LIABILITIES ADJUSTMENTS

Q102. WHERE IS THE WORKPAPER FOR THE REGULATORY ASSETS AND LIABILITIES ADJUSTMENTS LOCATED?

A. The adjustments to Regulatory Assets and Liabilities are located at Workpaper A-3, Adjustment No. 33 – Regulatory Assets and Liabilities and Other Additions/Deletions. I co-sponsor this adjustment with EPE witnesses Reza, Sierra and Hernandez.

Q103. WHICH BALANCES IN THE REGULATORY ASSETS AND LIABILITIES ADJUSTMENTS WORKPAPER DO YOU SPONSOR?

A. I sponsor three balances in the Regulatory Assets and Liabilities Adjustments: (1) the Unrecovered Plant and Regulatory Study Costs in FERC Account 182.2 on line 38 of WP A-3, Adjustment No. 33, (2) the New Mexico COVID-related Regulatory Asset and Liability in FERC Accounts 182.3 and 254.3 which are netted in the

balance on line 14 of WP A-3, Adjustment No. 33, and (3) the New Mexico Other Regulatory Assets in FERC Account 182.3 which is on line 15 of WP A-3, Adjustment No. 33. These balances are discussed below.

1. UNRECOVERED PLANT AND REGULATORY STUDY COSTS

Q104. IS THE COMPANY REQUESTING THE NET BOOK VALUE OF THE LEGACY METERS IN RATE BASE IN THIS CASE?

A. No. The balance in FERC Account 182.2 represents the net book value of non-advanced ("legacy") meters which were replaced by advanced meters. The net book value of the legacy meters was transferred to FERC Account 182.2 as the legacy meters were replaced by advanced meters.

In Adjustment No. 33 on Workpaper A-3, the Company removed the net book value of the legacy meters directly assigned to the New Mexico jurisdiction from rate base consistent with the Stipulation approved by the Commission in NMPRC Case No. 21-00269-UT ("AMS Rider"). The remaining balance in this account is directly assigned to the Texas jurisdiction in the jurisdictional allocation sponsored by EPE witness Hernandez. The result is that there is no amount included in rate base in the New Mexico jurisdiction, as can be seen on line 38 in column (f).

2. DEFERRED COVID-19 EXPENSES

Q105. WAS THE COMPANY IMPACTED BY THE COVID-19 PANDEMIC?

A. Yes. The government-imposed COVID-19 restrictions in 2020 and the accompanying business changes had a significant impact on the Company, its employees, and its customers.

Q106. HOW WAS THE COMPANY IMPACTED BY THE COVID-19 PANDEMIC?

A. The Company was impacted in many ways by the COVID-19 pandemic. Like many other companies, our employees had to adjust to remote work routines, new safety protocols, and the stresses of a national health emergency all while continuing to provide reliable service to customers. The COVID-19 pandemic also substantially increased costs associated with the provision of electric service to customers in two major ways: (1) increased uncollectible expenses; and (2) other COVID-19 specific costs. The detail of additional costs incurred by the Company as a result of COVID-19 are detailed in Exhibit CSP-3 on page 1.

Q107. HOW DID THE COMPANY ACCOUNT FOR COSTS ATTRIBUTED TO THE COVID-19 PANDEMIC?

A. On May 6, 2020, the Commission issued an order in Case No. 20-00069-UT that allowed regulated utility companies to use an accounting mechanism to identify

and defer COVID-19 related expenses for recovery. In compliance with this Commission order, the Company recorded a regulatory asset that captures its expenses resulting from the COVID-19 pandemic. Additionally, the Company filed a Joint Motion, *El Paso Electric Company's Response to Order*, as requested by the Commission in Case No. 20-00069-UT to address additional issues.

Q108. WHAT ADDITIONAL ISSUES DID THE COMPANY ADDRESS ATTRIBUTED TO THE COVID-19 PANDEMIC?

A. The Company stated in the Joint Motion that EPE will track and record any federal or state subsidies, or similar government subsidized relief received resulting from the COVID-19 outbreak. EPE did track and record any cost savings resulting directly from the COVID-19 outbreak and emergency conditions, consistent with the original emergency rule and Joint Motion. The cost savings to the Company that resulted from COVID-19 are detailed on Exhibit CSP-3, page 2.

Q109. HOW DID THE COVID-19 PANDEMIC AFFECT THE COMPANY'S UNCOLLECTIBLE EXPENSE?

A. For the period from March 2020 to May 2023 the uncollectible expense attributed to the COVID-19 pandemic was $18,219,215 on a total Company basis ($3,952,713 on a New Mexico jurisdictional basis). For the period from June to November 2023, the Company decreased the uncollectible expense attributed to the COVID-

19 pandemic by $4,646,000, through collection efforts. This results in a net of $13,573,215 on a total Company basis ($2,944,750 on a New Mexico jurisdictional basis), which is reflected on Exhibit CSP-3, page 1, line 7.

Q110. HOW DID THE COMPANY CALCULATE THE AMOUNT OF UNCOLLECTIBLE EXPENSE ATTRIBUTABLE TO THE IMPACT OF THE COVID-19 PANDEMIC?

A. The Company has historically calculated its uncollectible risk rate on a three-year average. The Company experienced an increase in the uncollectible risk rate beginning in March 2020 due to the pandemic. The increase in the uncollectible risk rate continued through the remainder of the COVID-19 pandemic in May 2023. The Company calculated the difference between the increased uncollectible risk rate and the three-year average uncollectible risk rate ("the pandemic uncollectible risk rate") and applied that pandemic uncollectible risk rate to the Company's aged accounts receivable to calculate the pandemic uncollectible expense.

Q111. WHAT OTHER COSTS DID THE COMPANY INCUR AS A RESULT OF THE COVID-19 PANDEMIC?

A. In compliance with federal, state, and local government public health orders, the Company had to reset its operations to accommodate remote access, virtual business interactions, and expanded technological infrastructure. These increased

costs were necessary for the Company to continue providing reliable electric service to customers while its employees were ordered to stay home. Moreover, the COVID-19 pandemic increased administrative and other operational costs primarily related to additional cleaning services, supplies, and increased medical costs for testing, treatment, and consulting.

Q112. DID THE COMPANY INCUR ANY REDUCTION IN COSTS RELATING TO THE COVID-19 PANDEMIC?

A. Yes. For the period from March 2020 to May 2023, cost reductions related to the COVID-19 pandemic were $3,623,028 on a total Company basis and $687,424 on a New Mexico jurisdictional basis which are reflected on Exhibit CSP-3, page 2. The cost reductions were realized in office supplies, Palo Verde outage costs, and training and travel expenses.

Q113. WERE THE COMPANY'S COVID-19 RELATED COSTS REASONABLE AND NECESSARY TO PROVIDE RELIABLE ELECTRIC SERVICE TO CUSTOMERS?

A. Yes. The Company incurred the costs as a direct result of state and local government public health orders. The Company had to comply with these orders in order to continue providing reliable electric service to its customers.

Q114. HOW DOES THE COMPANY PROPOSE TO RECOVER ITS TOTAL COVID-19 RELATED EXPENSES IN THIS PROCEEDING?

A. The Company proposes recovery of COVID-19 related costs, net of savings, through base rates. This would allow the Company to recover actual COVID-19 expenses (both additional COVID-19 related bad-debt costs and other costs) over a two-year period. The total Company annual costs proposed to be recovered are included in Workpaper A-3, Adjustment No. 13.

Q115. IS THE COMPANY'S PROPOSAL TO RECOVER REASONABLE AND NECESSARY COVID-19-RELATED EXPENSES REASONABLE?

A. Yes. The Company's proposal to recover reasonable and necessary COVID-19-related expenses is reasonable and complies with the Commission's May 6, 2020, order in Case No. 20-00069-UT.

Q116. WAS THE COMPANY IMPACTED BY THE COVID-19 PANDEMIC DURING THE TEST YEAR PERIOD?

A. No. In May 2023, the public health emergency related to the COVID-19 pandemic was ended by the Biden Administration. Although the impacts of the COVID-19 pandemic continued through the end of the Test Year Period in the form of higher inflation, supply chain difficulties, and a changed workforce, the Company ceased recording expenses related to the pandemic in May 2023 (except for the reduction

in uncollectible expense as discussed previously), prior to the start of the Test Year Period on September 1, 2024.

3. NEW MEXICO OTHER REGULATORY ASSET

Q117. PLEASE DESCRIBE THE NEW MEXICO OTHER REGULATORY ASSET.

A. The New Mexico Other Regulatory Asset is listed on Workpaper A-03, Adjustment No. 33 on line 15. This balance was created in 2010 as required in Case No. 09-00171-UT ("2009 Rate Case") and is based upon the extension of the depreciable life of Palo Verde for an additional 20 years in the New Mexico jurisdiction. In the 2009 Rate Case, the Commission ordered that the life of Palo Verde be extended for 20 years, effective in rates for New Mexico customers beginning on January 1, 2010. However, the life of Palo Verde was not extended by the Nuclear Regulatory Commission until April 2011. The reduction in depreciation expense due to the life extension of Palo Verde for the period January 1, 2010 to April 2011 in the New Mexico jurisdiction was established as a regulatory asset in accordance with the 2009 Rate Case and is being amortized over the remaining life of Palo Verde.

E. OTHER RATE BASE ADJUSTMENTS

Q118. WHAT OTHER ADJUSTMENTS HAS THE COMPANY MADE TO RATE BASE?

A. There are five additional adjustments to rate base which are included in Workpaper A-3. The adjustment number, sponsor, and description are as follows:

- Adjustment No. 31 –Non-Cash Working Capital, which I sponsor;
- Adjustment No. 32 – Nuclear Fuel, sponsored by EPE witness Reza;
- Adjustment No. 33 – Regulatory Assets and Liabilities, co-sponsored by me and EPE witnesses Reza, Sierra and Hernandez (for additional adjustments not sponsored by me);
- Adjustment No. 34 – Tax Regulatory Assets and Liabilities, sponsored by EPE witness Henderson;
- Adjustment No. 35 – Accumulated Deferred Income Taxes, sponsored by EPE witness Henderson; and
- Adjustment No. 36 – Working Cash, which I sponsor.

1. NON-CASH WORKING CAPITAL ADJUSTMENT

Q119. PLEASE DESCRIBE THE ADJUSTMENT TO NON-CASH WORKING CAPITAL?

A. This adjustment presents the Company's proposed non-cash components of working capital. Base Period working capital was adjusted to reflect the 13-month average balances for fuel inventory, materials and supplies, and prepayments.

This adjustment results in a decrease to rate base of $5.859 million on a total Company basis ($185,589 on a New Mexico jurisdictional basis). This increase is shown on both a total Company and a New Mexico jurisdictional basis on Workpaper A-3, Adjustment No. 31.

2. WORKING CASH ADJUSTMENT

Q120. PLEASE DESCRIBE THE ADJUSTMENT TO WORKING CASH.

A. This adjustment presents the Company's proposed cash working capital allowance based on the cash working capital study described in EPE witness Weiss's testimony.

Q121. WHO PERFORMED THE LEAD-LAG STUDY FOR THIS RATE CASE?

A. EPE retained Concentric Energy Advisors, Inc. ("Concentric") to prepare the Lead-Lag Study. Concentric prepared the Lead-Lag Study approved by the Commission in the 2020 Rate Case. The Lead-Lag Study is supported by EPE witness Weiss.

Q122. ARE THE RESULTS OF THE LEAD-LAG STUDY INCORPORATED IN EPE'S PROPOSED RATE BASE?

A. Yes, the results of the Lead-Lag Study are incorporated in Adjustment 36 on Workpaper A-3. Based on the study, EPE has increased rate base by $250,870 (a

decrease of $505,818 on a New Mexico jurisdictional basis) for the cash working capital allowance.

VII. COST OF SERVICE

Q123. WHERE IS THE DETAIL OF THE TOTAL COMPANY COST OF SERVICE LOCATED?

A. Schedule A-3 provides the detail of the Company's cost of service in the Base Period, the adjustments to these balances, and the requested Test Year Period cost of service amounts. This schedule is sponsored by EPE witness Sierra.

Q124. WHAT ITEMS IN THE COMPANY'S COST OF SERVICE FOR THE BASE PERIOD AND TEST YEAR PERIOD DO YOU SPONSOR?

A. I sponsor the following items in the Company's cost of service:

- Provision for Rate Refund (discussed below in Section VIII part B of my testimony);
- Customer Accounts Expense; and
- Depreciation and Amortization Expense (discussed above in Section III part F – Schedule H-7 and below in Section VIII part 3 of my testimony).

Q125. WHAT COMPRISES CUSTOMER ACCOUNT EXPENSES?

A. Customer account expenses, also referred to as customer care costs, are comprised of expenses related to maintaining and supporting a team of employees dedicated to serving EPE customers. Customer care functions include (i) maintaining a customer contact center; (ii) meter reading, billing, payment processing, and collection activities; and (iii) the establishment of new service. To support customer care employees and these functions, EPE uses several software applications and third-party vendors. The main software application is EPE's CCS, which includes EPE's customer database. Third-party vendors provide services such as bill printing and mailing, payment processing, collections, and additional call center staffing.

Q126. HOW HAS THE CCS SYSTEM IMPROVED CUSTOMER CARE?

A. CCS has allowed the Company to provide more information to customers regarding their electric usage and provides customer service representatives with more information to respond to customers' inquiries. Customers continue to benefit from self-service options for billing, payment, outage, and other inquiries whether online, phone or via the EPE mobile app. In order for EPE to be able to deploy smart meters and allow customers to take advantage of all of the benefits from the new meters such as automated meter reading and remote reconnect command, a meter data management system ("MDMS") was needed. The CCS software

provided MDMS along with more accurate estimated meter reads to increase bill quality. Customer communication preferences are stored in CCS, which allows EPE to provide the content the customer needs, in the channel they prefer. Preferences can be set for billing, payment, and outage alerts. Customers with smart meters are also provided weekly energy updates and proactive high-bill alert emails to help them manage their bills.

Q127. HAS THE COMPANY TAKE STEPS TO CONTROL CUSTOMER CARE COSTS?

A. Yes, it has. The Company has been mindful of the size of its customer care staff while still improving the customer experience. In 2023, EPE closed the remaining walk-in customer service branch offices to eliminate the cost of rent, staff, security, and other costs. These branches were utilized by less than 5% of our customers. At the same time, EPE deployed additional convenient payment kiosks throughout its service territory. EPE also provides frequently asked questions and other payment information on its website, as well as self-service options online, over the phone, and via its mobile app.

Q128. WHAT OTHER EXPENSES ARE INCLUDED IN CUSTOMER ACCOUNTS EXPENSE?

A. Uncollectible Accounts Expense is recorded in FERC Account 904 and is included in the Customer Accounts Expenses on Schedule A-3.

Q129. HOW DOES THE COMPANY CALCULATE UNCOLLECTIBLE EXPENSE?

A. As I previously discussed above in section VI, part D, subpart 2 – Deferred COVID-19 Expenses, the Company calculates an uncollectible risk rate for each accounts receivable aging category (i.e., 0-30 days, 31-60 days, 61-90 days, and over 90 days) on a three-year average basis. The uncollectible risk rate is applied monthly to the Company's aged accounts receivable to determine the balance required in FERC Account 144 – Accumulated Provision for Uncollectible Accounts. Write-offs of accounts receivable balances net of recoveries are recorded in the Accumulated Provision for Uncollectible Accounts on a monthly basis, and this adjusted balance is compared to the calculated balance and the difference is recorded monthly as uncollectible expense.

Q130. DID THE COMPANY EXPERIENCE AN INCREASE IN UNCOLLECTIBLE EXPENSE RELATED TO COVID-19?

A. Yes. As I have discussed previously in my testimony, the Company's uncollectible expense was higher due to the COVID-19 pandemic in the period from March 2020 to December 2023.

Q131. DID THE COMPANY MAKE ANY ADJUSTMENTS TO ITS CALCULATION OF UNCOLLECTIBLE EXPENSE REQUESTED FOR THE TEST YEAR PERIOD?

A. Yes. The Company generally calculates the uncollectible expense requested in rate cases as the percentage of net uncollectible expense to base revenues, which I will call the net uncollectible expense ratio. I have included an analysis of the net uncollectible expense ratio for the calendar years 2017 to 2024 and for the Base Period in Exhibit CSP-4. As can be seen on Exhibit CSP-4, the net uncollectible expense ratio is higher for the three-year average from 2023 through the Base Period (.38687%) than for the three-year average from 2017 to 2019 (.34644%). The Company attributes a portion of this increase in both 2023 and 2024 to a delay in billings to a small percentage of its customers associated with the installation in April 2023 of new customer billing software I have described above and a related reduction in collection efforts. Because the Company cannot calculate the exact impact of these issues on its Test Year Period net uncollectible expense ratio, it has elected to use a three-year average net uncollectible expense ratio from 2017 to 2019 of 0.3464% to eliminate any increases due to both COVID-19 and the billing software. The calculation of this net uncollectible expense ratio is included on line 4 of Exhibit CSP-4 and is utilized to reduce the Company's requested uncollectible

expense for the Test Year Period in Workpaper A-3, Adjustment No. 1 – Revenues and Uncollectibles.

Q132. WHY IS THE UNCOLLECTIBLE EXPENSE RATIO FOR THE BASE PERIOD LOWER THAN THE THREE-YEAR AVERAGE PROPOSED BY THE COMPANY IN THIS FILING?

A. As illustrated in Exhibit CSP-4, the uncollectible expense ratio for the Base Period was significantly lower than all other years. In October 2024, at the start of the Base Period, the Company increased its collection efforts in order to reduce the level of arrearages that the Company continued to experience after the end of the COVID-19 pandemic. As part of the increased collection efforts, the Company extended the collection period for accounts in arrears from six months to one year. The significance of this change is that the Company typically does not write-off accounts until after the collection period has expired. As a result of this change, write-offs during the period October 2024 to October 2025 were significantly reduced due to the extension of the collection period. Thus, the uncollectible expense ratio for the Base Period is not reflective of a normal 12-month period. For example, the evidence of the decrease in write-offs is seen in the reduction of the write-offs in the calendar year 2024 of $4,134,561 (column g, line 8) compared to the amount of write-offs in the Base Period of $1,726,398 (column g, line 9). Because write-offs directly impact the amount of uncollectible expense, the

Company also experienced a decrease in uncollectible expense in the Base Period compared to all other periods from 2017 to 2024 as shown in column (f) on Exhibit CSP-4.

Because this lower level of write-offs and resulting uncollectible expense does not reflect the uncollectible expense that EPE will experience when the rates are in effect, EPE did not use the Base Period uncollectible expense ratio in the calculation of the uncollectible expense for this filing. Rather, EPE adjusted the uncollectible expense for the Base Period to reflect the three-year average from 2017 to 2019 discussed above.

Q133. CAN YOU PLEASE SUMMARIZE YOUR TESTIMONY WITH RESPECT TO THE COMPANY'S REQUESTED LEVEL OF CUSTOMER CARE COSTS?

A. The Company's requested level of customer care costs is essential for the Company to provide the level of service its customers expect and deserve. The amounts are reasonable and necessary and should be allowed by the Commission. The uncollectible expenses requested in this filing are also reasonable given the level of write-offs and uncollectible expense experienced by the Company prior to the COVID-19 pandemic.

VIII. COST OF SERVICE ADJUSTMENTS

Q134. WHAT COST OF SERVICE ADJUSTMENTS DO YOU SPONSOR IN THIS FILING?

A. I sponsor or co-sponsor the following adjustments, located in Workpaper A-3:

- Adjustment No. 1 – Revenues and Uncollectibles, co-sponsored with EPE witness Rene Gonzalez;
- Adjustment No. 13 – Regulatory Asset and Liability Amortization, co-sponsored with EPE witnesses Reza and Hernandez; and
- Adjustment No. 15 - Depreciation and Amortization Expense.

A. ADJUSTMENTS TO REVENUES AND UNCOLLECTIBLES

Q135. WHAT PORTIONS OF THE ADJUSTMENT TO REVENUES AND UNCOLLECTIBLES DO YOU SPONSOR?

A. I sponsor the following items in Workpaper A-3, Adjustment No. 1 – Revenues and Uncollectibles:

- Provision for Rate Refund; and
- Uncollectible Expense.

Q136. WHAT IS IN THE PROVISION FOR RATE REFUND?

A. The Company filed for a Transmission Formula Rate with the Federal Energy

Regulatory Commission, which approved new interim rates effective January 1, 2022. The Provision for Rate Refund was established to record the difference between the interim rates and the final rates approved by the FERC in 2024. The difference between the interim and final rates is mainly due to temporary credits for short-term and long-term firm purchases from 2022 to 2026. These credits will not continue after the end of 2026.

Q137. IS THE PROVISION FOR RATE REFUND INCLUDED IN THE COMPANY'S REQUEST?

A. No. The Provision for Rate Refund is not allocated to New Mexico in the jurisdictional allocation. The Company will not issue any credits for short-term and long-term firm purchases in 2026, and, therefore, the Company is not including these amounts in its request.

Q138. HOW WAS THE ADJUSTMENT TO UNCOLLECTIBLE EXPENSE CALCULATED?

A. As I discussed above in Section VII, the adjustment to uncollectible expense is calculated as a percentage of requested revenues. The calculation of the net uncollectible expense ratio is in Exhibit CSP-4 and is calculated as a three-year average of the net uncollectible expense as a percentage of billed revenues for the years 2017 to 2019. As explained previously in my testimony, this three-year

period was chosen to exclude the impacts of the COVID-19 pandemic and the implementation of new billing software.

B. REGULATORY ASSET AND LIABILITY AMORTIZATION

Q139. WHAT PORTIONS OF THE ADJUSTMENT TO REGULATORY ASSET AND LIABILITY AMORTIZATION DO YOU SPONSOR?

A. The Regulatory Assets and Liability Amortization adjustment is located at Workpaper A-3, Adjustment No. 13 and I sponsor the following items that are detailed on the bottom of page 1:

- New Mexico COVID-related Regulatory Asset; and
- Unrecovered Plant and Regulatory Study Costs.

Q140. PLEASE DESCRIBE THE NEW MEXICO COVID-RELATED REGULATORY ASSET ADJUSTMENT.

A. As I previously discussed, EPE established a regulatory asset of $4,762,983 on a New Mexico jurisdictional basis for costs related to the COVID-19 pandemic (see page 1 of Exhibit CSP-3). This regulatory asset was offset by the $687,424 (NM jurisdictional basis) in savings realized by the Company, for a net New Mexico regulatory asset of $4,075,559. As I discussed previously, the Company is requesting a two-year amortization period for this regulatory asset, and therefore

an adjustment to the regulatory asset amortization of $2,037,780 was included in Workpaper A-3, Adjustment No. 13.

Q141. PLEASE DESCRIBE THE ADJUSTMENT TO THE UNRECOVERED PLANT AND REGULATORY STUDY COSTS?

A. As I discussed previously, in accordance with the AMS Rider approved in Case No 21-00269-UT, the Company recorded the net book value of legacy meters in FERC Account 182.2. Although the Company is not requesting the balance of the legacy meters in rate base, the Company is allowed to recover the amortization of the legacy meters over 10 years. The adjustment for the amortization of legacy meters was calculated by taking the net book value of the legacy meters for the New Mexico jurisdiction that were transferred to FERC account 182.2 and subtracting the amortization that has been recovered on the legacy meters through the AMS rider to determine the net amount unrecovered in the New Mexico jurisdiction. This amount was divided by the remaining amortization period agreed to in the AMS Rider, which is six years (ten years less the four years of amortization from 2023 to 2026). The result is the annual amortization requested in the New Mexico jurisdiction, which is on Workpaper A-3, Adjustment No. 13.

C. DEPRECIATION EXPENSE ADJUSTMENTS

Q142. HAVE YOU MADE ANY ADJUSTMENTS TO THE BASE PERIOD DEPRECIATION EXPENSE IN THIS FILING?

A. Yes, the Company has adjusted the per-book depreciation expense for the following items:

- Palo Verde Revaluation;
- Rio Grande Unit 6;
- New Depreciation Rates;
- CIC; and
- Plant in Service additions in October 2025.

Q143. WHAT RATE-CASE SCHEDULE SHOWS THE ADJUSTMENTS TO THE REQUESTED DEPRECIATION EXPENSE?

A. Workpaper A-3, Adjustment No. 15, reflects the Company's adjustments to the requested depreciation expense included in the requested cost of service. I explain and support each item in Adjustment No. 15.

Q144. PLEASE EXPLAIN THE ADJUSTMENTS TO DEPRECIATION EXPENSE AND HOW THEY ARE CATEGORIZED IN THIS FILING.

A. The adjustments to depreciation expense can be categorized in one of the following

groups:

- adjustments made to plant in service as previously discussed;
- additional depreciation expense for new plant added in October 2025;
- changes in depreciation due to proposed new plant depreciation rates resulting from the 2025 Gannett Fleming Depreciation Study supported by EPE witness Spanos; or
- adjustments to Test Year Period end depreciable/amortizable plant.

1. PALO VERDE REVALUATION

Q145. PLEASE DISCUSS THE ADJUSTMENT RELATED TO THE REVALUED PALO VERDE PLANT IN SERVICE.

A. The per-book depreciation expense has been adjusted to reflect the revaluation of Palo Verde, as discussed above. Depreciation expense was calculated on the revalued plant amounts using the remaining operating lives of each Palo Verde unit by vintage year as shown in Exhibit CSP-2, as approved in the 1998 Rate Case. This adjustment is included in Workpaper A-3, Adjustment No. 15 – Depreciation Expense, page 3, column (b).

2. RIO GRANDE UNIT 6

Q146. PLEASE DISCUSS THE ADJUSTMENT TO REMOVE THE DEPRECIATION EXPENSE RELATED TO RIO GRANDE UNIT 6.

A. Since the net book value of Rio Grande Unit 6 was excluded from requested plant in service in this filing, as I previously discussed, it is also necessary to remove the related depreciation expense from the Company's requested depreciation expense amount. This adjustment is included in Workpaper A-3, Adjustment No. 15 – Depreciation Expense, page 3, column (c).

3. PLANT ADDITIONS

Q147. PLEASE DISCUSS THE ADJUSTMENT TO DEPRECIATION EXPENSE FOR PLANT ADDED TO PLANT IN SERVICE DURING THE TEST YEAR PERIOD.

A. EPE has included an adjustment to the Test Year Period depreciation expense to annualize depreciation expense for utility plant added during the Test Year Period. This adjustment is included in Workpaper A-3, Adjustment No. 15 – Depreciation Expense, page 3, column (d).

Q148. WHY WAS IT NECESSARY TO ANNUALIZE DEPRECIATION ON UTILITY PLANT ADDED TO PLANT IN SERVICE DURING THE TEST YEAR PERIOD?

A. The Test Year Period end depreciable plant balances include amounts closed to plant in service throughout the Test Year Period. Because additions to plant in service were added well into or at the end of the Test Year Period, there was only a fraction or minimal depreciation expense included in the Test Year Period ended September 30, 2025. It is therefore appropriate to annualize the depreciation expense related to these additions to include depreciation expense that reflects a complete Test Year Period amount.

Q149. HOW IS THE ANNUALIZED DEPRECIATION EXPENSE CALCULATED?

A. The depreciation rates presented in the depreciation study prepared by EPE witness Spanos and included in Schedule C-2 are applied to the Test Year Period end depreciable plant balances (which include these additions) to arrive at an annual amount of depreciation expense. The resulting expense is the amount being requested in this case and can be seen on Schedule H-7.

4. NEW DEPRECIATION RATES

Q150. EXPLAIN THE ADJUSTMENT TO DEPRECIATION EXPENSE FOR THE PROPOSED NEW DEPRECIATION RATES YOU IDENTIFIED ABOVE.

A. The Test Year Period end per-book depreciation expense reflects expense amounts that were calculated based on the rates resulting from the depreciation study

prepared by Gannett Fleming and supported by EPE witness Spanos. This adjustment is included in Workpaper A-3, Adjustment No. 15 – Depreciation Expense, page 3, column (d).

Q151. HOW ARE THE PROPOSED NEW DEPRECIATION RATES FOR THESE ITEMS REFLECTED IN EPE'S REQUESTED DEPRECIATION EXPENSE?

A. As previously discussed, Schedule C-2 includes adjusted Test Year Period end depreciable plant. EPE applied the proposed new depreciation rates from the depreciation study to the adjusted Test Year Period end depreciable plant accounts in Schedule H-7 to arrive at its requested depreciation expense. The per-book amount is subtracted from the resulting expense to arrive at the adjustment to depreciation expense included in our request.

5. CAPITALIZED INCENTIVE COMPENSATION

Q152. PLEASE DISCUSS THE ADJUSTMENT TO REMOVE THE DEPRECIATION EXPENSE RELATED TO THE FINANCIAL-BASED CIC.

A. Since the financial-based CIC was excluded from requested plant in service in this filing, it is also necessary to remove the related depreciation expense from the Company's requested depreciation expense amount. This adjustment is included in

Workpaper A-3, Adjustment No. 15 – Depreciation Expense, page 3, column (e).

Q153. HOW DID EPE CALCULATE THE ADJUSTMENT FOR DEPRECIATION ON THE FINANCIAL-BASED CIC?

A. As discussed previously, EPE calculated the annual depreciation expense using the functional composite rates in effect each year related to the plant amounts which received financial-based CIC. The resulting depreciation expense for the twelve months ending September 30, 2025, was then removed from EPE's requested depreciation expense in this filing.

6. PLANT ADDITIONS IN OCTOBER 2025

Q154. PLEASE DISCUSS THE ADJUSTMENT TO DEPRECIATION EXPENSE FOR PLANT ADDED TO PLANT IN SERVICE IN OCTOBER 2025.

A. EPE has included an adjustment to the Test Year Period depreciation expense to annualize depreciation expense for utility plant added in October 2025. This adjustment is included in Workpaper A-3, Adjustment No. 15 – Depreciation Expense, page 3, column (f).

IX. COMPLIANCE WITH CASE NO. 19-00234-UT

Q155. WHAT DOES THIS SECTION OF YOUR TESTIMONY ADDRESS?

A. In this section of my testimony, I address EPE's compliance from a cost perspective with several Company commitments included in the settlement agreement and final order in Case No. 19-00234-UT, *Joint Application of El Paso Electric Company, Sun Jupiter Holdings LLC, and IIF US Holding 2 LP for Approval of Class II Transaction and General Diversification Plan.* EPE witnesses Gallegos and George Novela also address EPE's compliance with other commitments.

Q156. WHAT IS THE FIRST COMMITMENT YOU ADDRESS?

A. The first item is EPE' s commitment to maintain its annual amount of charitable giving following the closing of the transaction at EPE's average annual charitable giving level for the three-year period ended December 31, 2018 (i.e., approximately $1.2 million per year throughout EPE's service territory). (Commitment #11).

Q157. HAS EPE COMPLIED WITH THIS COMMITMENT?

A. Yes. Table CSP-3 below presents the amount of charitable donations made by EPE for the calendar years ended December 31, 2020, through 2024 and the amount for the Base Period, all of which exceed $1.2 million, showing that EPE has complied with this commitment. The charitable donations are included in non-operating expenses and deductions, FERC Account 426.1. The Company did not include charitable donations in its requested cost of service in this filing.

TABLE CSP-3

Period	Amount
2020	$1,328,200
2021	1,290,906
2022	1,215,063
2023	1,524,382
2024	1,613,125
TYE 9/30/2025	1,709,965

Q158. WHAT IS THE NEXT COMMITMENT THAT YOU ADDRESS?

A. The next commitment is the commitment to create or enhance programs that provide entry-level training focused on engineering, management, and finance skills for the local labor force in collaboration with The University of Texas at El Paso ("UTEP"), El Paso Community College, and New Mexico State University ("NMSU"). (Commitment #13).

Q159. DOES EPE HAVE AN ENTRY-LEVEL TRAINING PROGRAM?

A. Yes. EPE hosts a summer internship program generally on an annual basis. The summer internship program recruit's students from UTEP, NMSU, and other colleges and universities across the country. To be eligible for the college summer internship program, students must have a tie to El Paso (e.g., went to high school in El Paso). College students participate in a 10-week internship program that provides overall industry knowledge (Electricity 101 course), on-the-job training

in many EPE departments (accounting, engineering, human resources, public relations, safety and others), involvement in a community service project, and interaction with EPE employees, customers, and vendors. The cost for this program is less than $100,000 annually and is included in EPE's requested revenue requirement in this proceeding.

Q160. WHAT IS THE NEXT COMMITMENT THAT YOU ADDRESS?

A. The next commitment is the commitment to create or enhance apprenticeship programs for technical and professional positions for students in local high schools and colleges (Commitment #14).

Q161. DID EPE INCUR COSTS FOR APPRENTICE PROGRAMS DURING THE BASE PERIOD?

A. Yes. The Company invests in programs such as the Doña Ana Community College ("DACC") Line Worker Certification Program and engages in internship and training programs with educational partners such as the UTEP, NMSU, and the El Paso Community College. In 2024, the Company began a second Line Worker Certification Program at Western Technical College. The Line Worker Certification Program is a partnership with local colleges to promote, train, support, and develop individuals who are interested in a career in various skilled positions within the electric utility industry. The program, which has been in place for ten

consecutive years, includes two semesters of course work and a 10-week internship with an electric utility. Most of the students who have completed the program have been hired by EPE.

In addition to the Line Worker Certification Program, the Company has a GRID internship program that hires interns from NMSU and UTEP on a part-time basis throughout the year. The GRID internship hires students during both their undergraduate and post-graduate work in areas such as engineering, accounting, and finance. EPE also provides entry-level training to many employees, including operator training and apprenticeships in substations, overhead construction, metering, and other operational areas. Wages incurred in the Base Period were $186,240 for GRID interns, $4.5 million for apprentices, $20,000 for the Western Tech Line Worker Certification program, and $48,334 for the Doña Ana Community College Line Worker Certification Program, all of which are included in EPE's requested revenue requirement in this proceeding.

Q162. WHAT IS THE NEXT COMMITMENT THAT YOU ADDRESS?

A. EPE, along with the other applicants, committed that they "will continue and enhance utility-supplier diversity by promoting the inclusion of minority-, women, LGBTQ-, and veteran-owned businesses into EPE's supply chain." (Commitment #15).

Q163. HOW HAS EPE COMPLIED WITH THIS COMMITMENT?

A. EPE is committed to enhancing its supplier diversity program by performing outreach and attending industry tradeshows and diversity conferences that promote and create awareness about opportunities that result in minority, women, and veteran-owned businesses being awarded commercial contracts to do business with EPE. EPE's suppliers include vendors classified as small businesses, women-owned, veteran-owned, and minority-owned, and EPE spent $117.5 million with these vendors in the Base Period. Total costs incurred in the Base Period for the supplier diversity program were less than $21,000, which is included in the costs requested in this case.

X. CONCLUSION

Q164. PLEASE STATE YOUR CONCLUSIONS

A. Since the 2020 Rate Case, EPE has completed major capital projects totaling more than $2.417 billion on a total Company basis ($408.441 million on a New Mexico jurisdictional basis). Projects placed into service in the general function total over $280.289 million on a total Company basis ($59.847 million on a New Mexico jurisdictional basis), and include software implementations to support customer service, accounting, finance, supply chain and human resources. The costs for these projects were prudently incurred and directly benefit customers through improved customer service and increased efficiency and integration of administrative

software and processes. Additions to transportation equipment and IT infrastructure were also prudently incurred and benefit our customers by maintaining and increasing reliability and enhancing customer service interactions. Additions and improvements to EPE's facilities help support all teams across EPE including operations and administrative teams which benefits customers.

I sponsor and co-sponsor several schedules required by Rule 530, which detail rate base, the original cost of plant, accumulated depreciation, working capital, other investments, and depreciation expense. My testimony addresses the adjustments made to rate base for the Test Year Period, including plant in service, accumulated depreciation and amortization, CWIP, regulatory assets and liabilities, working cash and non-cash working capital. I address several adjustments to cost-of-service including adjustments to revenues (provision for refund and uncollectible expense), depreciation expense, and amortization of regulatory assets. I address the significant impact of the COVID-19 pandemic and the Company's request for the recovery of these costs. EPE faced increased costs in major areas such as uncollectible expenses and other COVID-19 specific costs. In addition, EPE incurred other costs related to COVID-19, such as increased cleaning, supplies, and medical costs for testing and treatment. Last, I outline our compliance with commitments from the merger, such as maintaining charitable giving, supporting training and apprenticeship programs, and promoting supplier diversity within our operations. The Company's requests for rate base in this proceeding are

reasonable, and necessary to provide safe, clean, reliable and affordable energy to EPE customers.

Q165. DOES THIS CONCLUDE YOUR TESTIMONY?

A. Yes, it does.

Work included replacing all 17 compressor rows with new coated blades, overhauling the combustion section with new baskets and cross-flame tubes, installing new R1 and R2 turbine blades with significant vane and blade repairs, repairing extensive cracks in the exhaust casing, replacing the thermal baffle, repairing lube oil lines, and overhauling the overspeed trip device. These actions ensure OEM compliance, improve reliability, and prevent forced outages.

It features climate controlled storage for electronics and tools, office and ancillary spaces, and tilt up precast concrete exterior walls. The building also includes a shop equipped with dual cranes for handling heavy MPS equipment, a new and used oil storage room, and a covered canopy area for non climate sensitive materials. Site improvements include extending an access road for large vehicle circulation and relocating the existing MPS parking area to the east side of the building. The facility will allow onsite storage and maintenance of plant components and tools, improving operational efficiency.

At the time, existing turbine blades for GT1 and GT2 were a mix of EPE-owned and used blades, with most EPE-owned blades near or beyond their useful life. To ensure continued safe and efficient operation, new blades needed to be manufactured, which required a lead time of over 52 weeks. Procuring new blades was essential to increase reliability, reduce the risk of unit outages caused by blade failure, and support long-term operational performance in alignment with OEM standards.
301		GN301	NEWMAN UNIT 2 DISTRIBUTIVE CONTROL SYSTEM UPGRA	6,846,629			6,846,629	20.4547%	1,400,457	JEFF HUGHES	6/8/2024	Project to replace the distributive control system for Newman Unit 2.

416	TL302	AIP WOOD TO STEEL STRUCTURES PHASE ONE	41,349,329			41,349,329	23.2303%	9,605,573	OMAR GALLEGOS	12/15/2023	Replacement of 299 wood structures with steel structures due to asset condition and criticality of this 345kV transmission line. Project increases transmission system resilience and reliability.
417	TL245	SEABECK TO SAN FELIPE 115 KV TRANSMISSION LINE	23,858,242		237,710	24,095,953	23.2303%	5,597,562	OMAR GALLEGOS	6/13/2025	The purpose of this project is to construct a new 115kV transmission line from Seabeck Substation to San Felipe Substation, approximately 18.34-miles, of single circuit with a minimum normal and emergency capacity of 380 MVA. This project has been identified in EPE 2024-2033 System Expansion Plan and is part of the East Side Loop Expansion Project and will address projected overload conditions on the EPE system under certain N-1 contingencies.
418	TL295	OTERO 345KV NEW SUBSTATION & TRANSMISSION LINE A	19,657,560			19,657,560	23.2303%	4,566,510	OMAR GALLEGOS	10/19/2023	Project part of a group of network upgrades required under a large generator interconnection agreement for 120MW of solar power and 50MW of Battery Storage between EPE and Buena Vista/Nextera.
419	TS142	EDDY WINDFARM INTERCONNECTION SUBSTATION	15,909,819			15,909,819	23.2303%	3,695,899	OMAR GALLEGOS	6/20/2020	Project part of a group of network upgrades required under the Service Agreement for Conditional Firm Point-To-Point Transmission Service for 250MW of solar power between EPE and Tucson Electric.
420	TL119	JORNADA - MOONGATE 115KV TRANSMISSION LINE	13,615,691			13,615,691	23.2303%	3,162,966	OMAR GALLEGOS	6/1/2023	This project was needed to connect a new substation, Moongate, to the 115kV transmission system (currently radial), but is part of a larger 115kV loop system currently planned for completion in 2028.
421	TS179	FELINA INTERCONNECTION	12,164,429			12,164,429	0.0000%	-	N/A - TEXAS	8/29/2025	Texas Business Solar. Project part of required network upgrades required under a large generator interconnection agreement for 150MW of solar power.
422	TS148	ROBERTS NEW 115kV INTERCONNECTION SUBSTATION	10,398,636			10,398,636	23.2303%	2,415,634	OMAR GALLEGOS	12/27/2023	This project was required to as part of the generation expansion plan. It included a new breaker and a half substation that received three 115kV transmission lines and the connection to the Newman #6 GSU.
423	TS125	PICANTE 345kV SUBSTATION MODIFICATIONS	9,542,696			9,542,696	23.2303%	2,216,797	OMAR GALLEGOS	10/27/2022	This project was identified as part of EPE's Transmission Expansion Plan to connect Picante substation to one of the Caliente-Amrad 345kV transmission line. This project reconfigured this line to be the Amrad-Picante and Picante-Caliente 345kV transmission lines. This configuration will increase flexibility to do maintenance on these lines, which increases reliability in this area on the 345kV system.

This includes steel channel additions, timber replacements, structure replacements resulting from inspections, and other capital investments related to transmission lines or corridors.
426		TS065	RELAY UPGRADES IN TRANSMISSION SUBSTATIONS	5,827,425			5,827,425	23.2303%	1,353,728	OMAR GALLEGOS	Multi-Year	This blanket project is for the replacement and upgrade of protection control equipment in transmission substations. This equipment provides real time data and responses to system conditions, which is improves system reliability.
427		TE100	EMERGENCY TRANSMISSION STRUCTURE REPLACEMENT	5,544,304			5,544,304	23.2303%	1,287,958	OMAR GALLEGOS	Multi-Year	Blanket project to record the emergency replacement of transmission structures due to damage by the public, weather events, and aging infrastructure.
428		TP101	SPRINGERVILLE CIRCUIT BREAKER REPLACEMENT	5,394,983			5,394,983	23.2303%	1,253,271	OMAR GALLEGOS	9/25/2023	This project increased system reliability on a critical import path from Springerville to Macho Springs 345kV line. The project was managed and executed by Tucson Electric and EPE's paid its participant cost share for the upgrade of 18 circuit breakers, 29 disconnect switches, 5 line switches, and related equipment at Springerville substation.
429		TL312	CLINT TO VALLEY LINE UPGRADE	5,218,346			5,218,346	23.2303%	1,212,237	OMAR GALLEGOS	5/24/2024	Per EPE's Transmission System Expansion planning document, reconductor and structure upgrades were needed to meet a normal capacity rating of 111.3 MVA and minimum emergency capacity rating of 148.4 MVA. Project is required to mitigate potential overload conditions under certain planning event contingencies.

(a) Total requested gross additions to plant in service including, 1) gross additions for the period January 1, 2020 through September 30, 2025 (Base Period) excluding amounts included in the Test Year Period plant in service in the 2020 Rate Case and 2) major additions from October 1, 2025 to October 31, 2025 requested as adjustments to Test Year Period rate base.

(b) The EPE witness listed in this column is for projects with a Test Year Period Adjusted Total Company Gross Addition (column g) amount of $5 million or over. Projects under $5 million are generally sponsored by Jeff Hughes for generation, Omar Gallegos for transmission and distribution projects, and Cynthia Prieto for general projects.

Notes:

(1) O&M charges from Arizona Public Service Company identified as related to the COVID-19 pandemic.
(2) Security, medical consulting, food and accommodations (i.e. beds, freezers, washers, dryers, televisions) required due to the COIVID-19 pandemic.
(3) Additional personal protective equipment, janitorial services, and disinfectants required due to the COVID-19 pandemic.
(4) Mailings and other notices sent to customers related to the COVID-19 pandemic.
(5) Medical claims and testing costs identified related to the COVID-19 pandemic.
(6) Additional third party support, software (webex and cell service), and computer peripherals (headsets, printers, cables) required due to the COVID-19 pandemic.
(7) Additional bad debt expense related to the COVID-19 pandemic calculated using the increase in the arrears risk rate over the 2017-2019 average rate.
(8) Labor costs relate to regular time and overtime for COVID-19 pandemic related activities.
(9) NM Allocators from 2020 NM Rate Case.

(A) Adjustment due to decrease in bad debt expense attributed to COVID-19 recorded by EPE from June to November 2023, outside of the time period requested by New Mexico Commission.

10	Total	$ 1,803,625	$ 1,465,612	$ 282,441	$ 71,350	$ 3,623,028		$ 687,424

Notes:

(1) EPE took advantage of the CARES Act by deferring the payment of certain payroll taxes from March 2020 through December 2020. This deferral was repaid in two payments in December 2021 and December 2022 and therefore did not resulted in permanent savings. EPE was not eligible for any federal or state subsidies related to the COVID-19 pandemic.

(2) EPE calculated potential cost savings for office supplies by comparing costs incurred in the same periods in 2019 to costs incurred in the COVID-19 pandemic period.
(3) EPE did not furloughed any of its employees during the COVID-19 pandemic period.
(4) EPE did not incur savings related to reduced activity at utility offices, payment centers and other facilities. Facilities were closed to walk-in customers in April 2021 and May 2021, but drive through and drop box services continued and EPE did not reduce staff at these facilities. In February 2023, EPE closed the offices permanently to walk-in customers, including drive through and drop box services. However, EPE did not reduce staff at these facilities as the staff was reassigned to work from home to assist customers through phone, email, and chat.

(5) EPE did not identify savings due to reduced fuel and maintenance costs associated with reduced activity of line personnel; but rather believes there was an increase in such costs.

(6) Potential savings related to deferral of spring outage support costs at Palo Verde Generating Station due to the COVID-19 pandemic in April and May 2020. EPE's share of site travel savings for 2020 and 2021 identified by Arizona Public Service Company. Arizona Public Service Company has not identified any costs or savings related to Covid-19 in 2022 or 2023.

(7) EPE calculated potential cost savings for travel and training by comparing costs incurred in the same periods in 2019 to costs incurred in the COVID-19 pandemic period.
(8) EPE did not incur any other miscellaneous costs savings beyond those documented in this exhibit.
(9) NM Allocators from 2020 NM Rate Case.

DECLARATION OF CYNTHIA S. PRIETO IN SUPPORT OF THE FOREGOING DIRECT TESTIMONY TO THE APPLICATION OF EL PASO ELECTRIC COMPANY FOR REVISION OF ITS RETAIL ELECTRIC RATES PURSUANT TO ADVICE NOTICE NO. 317

I, ***Cynthia S. Prieto***, pursuant to Rule 1-011 NMRA, state as follows:

1. I affirm in writing under penalty of perjury under the laws of the State of New Mexico that the following statements are true and correct.

2. I am over 18 years of age and have personal knowledge of the facts stated herein. I am employed by El Paso Electric Company ("EPE" or "the Company") as the *Vice President and Controller*.

3. The foregoing Direct Testimony of Cynthia S. Prieto, together with all exhibits sponsored therein and attached thereto, is true and accurate based on my knowledge and belief.

4. I submit this Declaration, based upon my personal knowledge and upon information and belief, in support of EPE's ***Application for Revision of Its Retail Electric Rates Pursuant to Advice Notice No. 317.***

FURTHER, DECLARANT SAYETH NAUGHT.

I declare under penalty of perjury that the foregoing is true and correct.

Executed on March 27, 2026.

EL PASO ELECTRIC COMPANY
DIRECT TESTIMONY OF
RICHARD S. GONZALEZ

I. INTRODUCTION AND QUALIFICATIONS

Q1. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Richard S. Gonzalez. My business address is 100 N. Stanton Street, El Paso, Texas 79901.

Q2. HOW ARE YOU EMPLOYED?

A. I am employed by El Paso Electric Company ("EPE" or "Company") in the position of Treasurer.

Q3. PLEASE SUMMARIZE YOUR EDUCATIONAL AND BUSINESS BACKGROUND.

A. I hold a Bachelor of Business Administration in Economics and a Master of Business Administration from the University of Texas at El Paso. I have been employed by EPE since July 2002. In February 2024, I was appointed Treasurer of EPE. Prior to becoming Treasurer, I held various positions within the Company as Manager of Financial Planning & Analysis, Manager of Cash Management and Investor Relations, Supervisor of Investor Relations, Financial Analyst, and Load Forecaster.

Q4. WHAT ARE YOUR PRINCIPAL RESPONSIBILITIES WITH EPE?

A. I have responsibility for the treasury, financial planning & analysis, and claims &

risk functions at EPE. I also have oversight of trust investments and administration.

Q5. HAVE YOU PREVIOUSLY PRESENTED TESTIMONY BEFORE ANY REGULATORY AGENCY?

A. Yes. I have filed testimony before the New Mexico Public Regulation Commission ("NMPRC").

II. PURPOSE OF TESTIMONY

Q6. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. I provide testimony on four general subjects. First, I address the capital needed for EPE to fund its anticipated construction program. As part of that testimony, I discuss the capital required to satisfy the Company's obligation to serve while meeting the increasing demands placed on the system by the continued load growth in EPE's service territory.

Second, I address the requested capital structure, cost of debt, and the weighted average cost of capital, which reflects the Company's requested return on equity ("ROE"). EPE expert witness Jennifer E. Nelson uses that information to support the requested ROE.

Third, I discuss the Company's credit ratings and the need to maintain investment grade credit ratings to prevent EPE and its customers from paying increased borrowing costs.

Finally, my testimony supports EPE's proposal regarding the Palo Verde Generating Station ("Palo Verde" or "PVGS") decommissioning trust funds. I provide support that demonstrates EPE's compliance with Nuclear Regulatory Commission ("NRC") guidelines governing nuclear decommissioning funds. I discuss EPE's request to fund its remaining decommissioning obligation on a straight-line basis over the plant life of Palo Verde as reflected in the 2023 decommissioning study conducted by EPE expert witness Lori A. Glander of TLG Services, Inc. My testimony supports the projected annual escalation rates for decommissioning costs and EPE's calculation of the weighted average return on the fund investments. I also explain the Company's proposal for its decommissioning funding request.

Q7. WHAT RULE 530 SCHEDULES DO YOU SPONSOR OR CO-SPONSOR?

A. The schedules I sponsor, and co-sponsor are listed below in Table RSG-1.

/

Table RSG 1

Schedule	Description
A-5	Summary of Total Capitalization and the Weighted Average Cost of Capital
G-1	Capitalization, The Cost of Capital, and the Overall Rate of Return in Conformance with an Original Cost Rate Base
G-3	Embedded Cost of Borrowed Capital with Term of Maturity in Excess of One Year From Date of Issue
G-4	Cost of Short Term Borrowed Capital Including Revolving Credit Agreement and Other Notes Payable
G-5	Embedded Cost of Preferred Stock Capital
G-6	Ratio of Earning to Fixed Charges
G-7	Issuance Restrictions on Borrowed and Preferred Stock Capital
G-8	Common Stock Equity Capital
G-9	Historical Activity in Common Stock, Paid-in Capital and Retained Earnings
J-1	Construction Program
J-2	Sources of Construction Funds
P-2	Plant in Service
P-3	Property Retirements and Property Investments Information
P-4	Operation and Maintenance Expense Information
Q-3	Annual Report to Stockholders

Q8. WHAT TEST YEAR PERIOD ADJUSTMENT DO YOU SPONSOR?

A. I sponsor Adjustment No. 14 – Decommissioning, which is listed on Rule 530 Schedule A-3.

III. CAPITAL REQUIREMENTS AND FINANCING PLAN

Q9. HOW DOES EPE PLAN ITS CAPITAL EXPENDITURES?

A. EPE has a regular process to review and approve all capital expenditures. Each

capital project is evaluated internally by our executive leadership team to ensure that projects are reviewed for necessity, cost, and timing. Once projects are reviewed and approved internally, a recommendation is provided to the Company's Board of Directors for review and approval as part of EPE's overall annual budget.

Q10. IS EPE PLANNING TO MAKE SIGNIFICANT CAPITAL EXPENDITURES IN THE NEXT FIVE YEARS?

A. Yes, as Table RSG-2 below shows, EPE is currently projecting to spend approximately $5.7 billion over the next five years. As can be seen in Table RSG-2, cash construction expenditures are anticipated to be in excess of $802 million each year through year 2030.

Table RSG-2

Cash Capital Expenditures ($ in millions) Calendar Year Basis				
Forecasted Expenditures				
2026	2027	2028	2029	2030
$1,375	$1,453	$1,137	$902	$802

(The amounts shown in this table do not include Allowance for Funds Used During Construction)

The anticipated cash capital expenditures for the years 2026 through 2030 include the capital necessary to complete the construction of additional solar generation and battery capacity. EPE's peak load continues to grow as does the need for additional generating resources. In addition, EPE expects to make

significant capital investments in transmission and distribution plant to upgrade and replace aging equipment, expand its system to meet customer growth, and for additional infrastructure to add and improve customer service options through advanced metering. PVGS also requires capital investments to sustain its operations.

Q11. WHY ARE THESE CAPITAL EXPENDITURES NEEDED?

A. These investments will help EPE meet its obligation to serve, which includes satisfying growing customer demand and providing reliable service.

Q12. WHAT ARE THE EXPECTED SOURCES OF CAPITAL FOR EPE TO MEET ITS CONSTRUCTION NEEDS OVER THE NEXT SEVERAL YEARS?

A. EPE uses its revolving credit facility ("RCF") and term loans as short-term bridge loans as needed to finance utility operations and ongoing utility construction projects necessary to provide service to its customers. From time to time, such short-term debt is repaid through the issuance of long-term debt in order to maintain appropriate levels of liquidity and the Company's long-term capital structure.

The Company's sources of permanent capital include long-term debt issuances in the capital markets and equity infusions from EPE's parent, Sun Jupiter Holdings LLC ("Sun Jupiter" or "Parent"), to finance its construction requirements.

The Company's exact percentage mix of equity and long-term debt may periodically vary in the short run due primarily to the timing of long-term debt issuances and equity infusions. All things being equal, equity ratios decrease as debt is issued or dividends are distributed. On the other hand, equity ratios increase as debt matures and is not refinanced or equity infusions are received.

Q13. DID EPE HAVE ANY SHORT-TERM BORROWINGS OUTSTANDING AT THE END OF THE BASE PERIOD?

A. Yes. EPE maintains a RCF for working capital and general corporate purposes, and for bridge financing nuclear fuel through the Rio Grande Resources Trust II ("RGRT").

EPE had a total of $256.0 million of short-term borrowings outstanding at the end of the Base Period, September 30, 2025. Of this amount, $236.0 million was for working capital or general corporate purposes, including the financing of a portion of its $593.3 million year-end construction work in progress balance. In addition, EPE had $20.0 million of outstanding borrowings made by the RGRT for nuclear fuel at the end of the Base Period. EPE also had a $150 million term loan outstanding at the end of the Base Period. However, this term-loan was repaid on its maturity date of January 15, 2026. None of the assets funded by the RCF or term loan are in the Company's rate base request in this case because the short-term borrowings on the Company’s RCF and term loan are used to fund fuel and

construction work in progress.

Q14. HAS EPE AMENDED ITS RCF SINCE THE 2020 RATE CASE?

A. Yes. On May 5, 2023, EPE amended and restated its RCF to (i) change the rate provisions from LIBO/Eurodollar to Term SOFR, (ii) extend the initial maturity date to May 5, 2028, and (iii) increase the commitment to $450 million. On January 19, 2024, the Company exercised one of its options to increase the size of its $450 million RCF by $50 million to a total of $500 million. On July 26, 2024, EPE exercised its last remaining option to increase the size of its $500 million RCF by $50 million to a total of $550 million. EPE has two remaining options to extend the initial maturity date of the facility by one additional year, subject to approval by the lenders and upon the satisfaction of certain conditions.

Q15. DOES THE COST OF LONG-TERM DEBT IN THIS RATE FILING INCLUDE RIO GRANDE RESOURCES TRUST DEBT?

A. No. EPE has excluded the financial obligations of the RGRT from the debt component of the capital structure. Nuclear fuel is financed through the RGRT and is not included in rate base. The RGRT's only purpose is to finance nuclear fuel with 100% debt. Financing nuclear fuel with 100% debt rather than including nuclear fuel in rate base, which is effectively financed at the weighted average cost of capital, reduces costs to customers. The cost of nuclear fuel, along with the

RGRT financing costs, is recovered through EPE's fuel and purchased power cost adjustment clause.

Q16. WHY ARE BORROWINGS UNDER THE RCF EXCLUDED FROM THE COST OF DEBT?

A. The RCF is excluded from the cost of debt because it is used to fund EPE's (1) nuclear fuel financing obligations through the RGRT and (2) construction work in progress, both of which are excluded from rate base.

Q17. HAVE THERE BEEN ANY REFINANCINGS OR ISSUANCES OF LONG-TERM DEBT SINCE THE 2020 RATE CASE (CASE NO. 20-00104-UT)?

A. Yes. There have been a number of long-term debt transactions since Case No. 20-00104-UT.

- On September 22, 2021, the RGRT completed the sale of $45 million aggregate principal amount of 2.35% Senior Guaranteed Notes due September 22, 2031.
- On July 30, 2025, the RGRT completed the sale of $65 million aggregate principal amount of 5.18% Senior Guaranteed Notes due July 30, 2030. Although the RGRT debt does not impact the Company's cost of debt in this case, the Company does guarantee the payment of principal and interest on the

RGRT Senior Guaranteed Notes.

- On February 15, 2022, EPE issued $150 million aggregate principal amount of 2.91% Senior Notes, Series A, due September 1, 2032, and $200 million aggregate principal amount of 3.54% Senior Notes, Series B, due February 15, 2052. The 3.54% Senior Notes were funded on February 15, 2022, and the 2.91% Senior Notes were funded on September 1, 2022, due to the utilization of a delay draw feature.
- On February 15, 2024, EPE issued $180 million aggregate principal amount of 6.02% Senior Notes, due February 15, 2054.
- On July 30, 2025, EPE issued $100 million aggregate principal amount of 5.95% Senior Notes, due July 30, 2040.
- On July 30, 2025, EPE issued $100 million aggregate principal amount of 6.41% Senior Notes, Series A, due July 30, 2055.
- On October 15, 2025, EPE issued $173 million aggregate principal amount of 6.41% Senior Notes, Series B, due October 15, 2055.

Q18. HAVE ANY OF THE RGRT'S OR EPE'S LONG-TERM DEBT MATURED SINCE THE 2020 RATE CASE?

A. Yes. It is the Company's practice to maintain at least $100 million of available borrowing capability on the RCF and from time to time, the Company will issue

long-term notes to repay the short-term borrowings on the RCF. On September 15, 2022, the Company's $150 million 3.30% Senior Notes matured and were paid utilizing funds borrowed under the RCF. On August 15, 2025, the RGRT's $65 million 4.07% Senior Guaranteed Notes matured and were paid utilizing the proceeds from the RGRT's $65 million 5.18% Senior Guaranteed Notes issued in July 2025.

Q19. HAS EPE RECEIVED ANY EQUITY INFUSIONS FROM ITS PARENT SINCE THE 2020 RATE CASE (CASE NO. 20-00104-UT)?

A. Yes. EPE has received $975 million of equity infusions from Sun Jupiter since the 2020 Rate Case. Please refer to Table RSG-3 below for amount and timing of equity infusions.

Table RSG-3

Equity Infusions by Year ($ in millions)				
2022	2023	2024	2025	Total
$70	$167	$353	$385	$975

Q20. DOES EPE HAVE A PLAN FOR FUTURE DEBT ISSUANCES OR EQUITY INFUSIONS?

A. Yes. EPE has several financings on the horizon to fund its obligation to serve

customers, including the following.

- EPE's $59.2 million 4.50% 2012 Maricopa Series A PCBs, due 2042, have been redeemable at par (i.e., stated or face value) since August 2022. EPE is not required to take action on these PCBs. However, depending on market conditions, EPE may seek to re-finance the PCBs.
- EPE plans to continue to balance its capital structure and maintain its investment grade credit ratings through equity contributions when needed.

The need for additional future debt issuances and equity infusions is dependent upon a variety of factors; therefore, additional transactions not listed here may be necessary. EPE will seek regulatory approval as required.

IV. REQUESTED CAPITAL STRUCTURE AND COST OF CAPITAL

Q21. WHAT WAS THE COMPANY'S CAPITAL STRUCTURE AS OF SEPTEMBER 30, 2025, THE END OF THE BASE PERIOD?

A. As of the end of the Base Period, September 30, 2025, the Company's capital structure was comprised of 57.04% equity and 42.96% long-term debt. The Company has excluded the financial obligations of the RGRT from the debt component of the capital structure because nuclear fuel financed by the RGRT is excluded from rate base and as discussed earlier, financing nuclear fuel with the RGRT reduces costs to customers.

Q22. HAS THE COMPANY ADJUSTED THE CAPITAL STRUCTURE AS OF SEPTEMBER 30, 2025, IN THIS CASE?

A. Yes, EPE recommends making an adjustment to the Company's capital structure to reflect a dividend payment to, and an equity infusion from, Sun Jupiter Holdings LLC ("Sun Jupiter"). The dividend payment in the amount of $101.6 million was paid to Sun Jupiter in October 2025 and an equity infusion in the amount of $170 million was also received in October 2025. EPE also made an adjustment to long-term debt to reflect an additional debt issuance that closed and funded in October 2025. On October 15, 2025, EPE issued $173 million in Senior Unsecured Notes. The dividend payment and the equity and debt financing amounts are not reflected in the Base Period capital structure. The effect of the dividend payment and the October debt and equity financing amounts resulted in a revised capital structure comprised of 55.5% equity and 44.5% debt. This adjusted capital structure is reflected in the Company's requested weighted average cost of capital in Table RSG-4.

Q23. DOES EPE REGULARLY REVIEW ITS COST OF DEBT?

A. Yes, EPE continues to review its debt and the capital markets to make sure costs are reduced when possible.

Q24. WHAT IS THE COST OF LONG-TERM DEBT INCLUDED IN THIS RATE FILING?

A. The cost of long-term debt shown on Schedule G-3 as of the end of the Base Period was 5.333%. This reflects EPE's actual outstanding long-term debt as of September 30, 2025. The weighted cost of debt reflects the average yield to maturity for EPE's long-term debt required by the Commission's rate filing package. However, given recent debt financing activity that occurred on October 15, 2025, EPE is requesting a cost of debt of 5.426% in this case.

Q25. WHAT IS THE COST OF EQUITY INCLUDED IN THIS RATE FILING?

A. As supported in the direct testimony of EPE's expert witness Nelson, the Company is requesting a 10.7% return on equity in this filing.

Q26. WHAT IS THE COST OF CAPITAL (REQUESTED RATE OF RETURN) INCLUDED IN THIS RATE FILING?

A. The Company's cost of capital (requested rate of return) is 8.354%. The calculation used to obtain the cost of capital is contained in Schedule G-1 and reflects the 10.7% return on equity recommended by EPE expert witness Nelson and the requested capital structure of 55.5% equity and 44.5% long-term debt. The weighted cost of capital is illustrated in Table RSG-4.

Table RSG-4

AS REQUESTED:

DESCRIPTION	BALANCE AS OF THE TEST YEAR END DATE	PERCENT OF TOTAL	COST OF CAPITAL	WEIGHTED AVERAGE COST OF CAPITAL
Long-Term Debt	2,027,489,483	44.476%	5.426%	2.413%
Common Stockholder's Equity	2,531,079,053	55.524%	10.700%	5.941%
Total	4,558,568,536	100.000%		8.354%

Q27. ARE THE COMPANY'S REQUESTED CAPITAL STRUCTURE AND COST OF CAPITAL REASONABLE?

A. Yes. The requested capital structure will allow the Company to attract debt investors at reasonable costs and provide a reasonable return to its equity investor. In addition, the requested capital structure will allow the Company to obtain capital required to satisfy its obligation to serve and to fund its construction program at a reasonable price. This will also help support the Company's financial credit metrics, which will allow the Company to maintain its investment-grade credit ratings. The overall cost of capital, which includes both the cost of equity and the weighted cost of debt, is reasonable. EPE expert witness Nelson provides additional support for the reasonableness of EPE's capital structure and the cost of equity.

V. RATING AGENCIES AND THE IMPORTANCE OF CREDIT RATINGS

Q28. WHAT IS THE SIGNIFICANCE OF CREDIT RATINGS?

A. Credit ratings are a measure of the creditworthiness of the Company's debt. The Company's creditworthiness, as reflected in its credit ratings, will directly affect the Company's ability to attract capital and the resulting cost of that capital. Financial institutions and fixed income- and equity investors evaluate and utilize the Company's credit ratings to determine its access to capital and the acceptable rate of return on its invested capital. The lower the credit rating, the higher the associated cost of debt. Customers ultimately bear the costs of higher priced debt. Rating agencies, in the assignment of their credit ratings to the Company, evaluate the Company's ability to pay the interest on outstanding borrowings and ultimately the principal of the borrowings when due.

Q29. WHAT ROLE DO CREDIT RATING AGENCIES AND THEIR RATINGS PLAY IN THE FINANCIAL MARKET?

A. Investors in long-term utility bonds are typically sophisticated entities such as pension funds, insurers, and mutual funds. For all fixed-income investors, credit ratings function as a framework for comparing the returns available on both long-term and short-term instruments along the credit risk spectrum. Many institutional investors have portfolio limits or regulations that limit the aggregate amount of their

portfolio that they can purchase or hold at specific rating levels, with high limits for instruments of the highest rating tiers and progressively lower limits for successively lower rating tiers. To attract investors to purchase bonds or notes of lower relative credit quality, issuers must offer higher interest rates and/or shorten the maturity of the instruments they issue. Institutional investors frequently perform in-house research to supplement the research published by nationally recognized credit rating agencies.

In addition, commercial bankers use credit ratings as the basis for automatic pricing adjustments in their credit agreements and to calculate the amount of capital reserves they must keep against loans and commitments to borrowers of different credit quality. Higher credit limits are available at lower cost for higher rated credits. Credit ratings are also widely used by vendors, energy suppliers, and lessors to decide upon credit terms and pricing.

Q30. WHO RATES THE COMPANY'S DEBT?

A. The Company's outstanding debt is currently rated by Moody's Investors Service, Inc. ("Moody's") and Fitch Ratings, Inc. ("Fitch") (together, the "credit rating agencies"). The determination of the assigned credit rating of the Company by the credit rating agencies is premised on several metrics that include, among other things, the evaluation of the amount of leverage the Company has and its cash flow metrics.

Q31. WHAT ARE EPE'S CURRENT CREDIT RATINGS?

A. The credit ratings of EPE are outlined in Table RSG-5:

Table RSG-5

	Moody's[3]	Fitch[4]
Credit Rating	Baa2	BBB
Outlook	Stable	Stable

Because these current credit ratings are investment grade, they allow the Company to access the capital markets at reasonable rates. However, the ratings are near the bottom of the range of investment grade credit ratings as shown in Table RSG-6:

/

/

/

/

/

/

/

/

/

Table RSG-6

	Moody's[1]	Fitch[2]
Investment Grade	Aaa	AAA
	Aa1	AA+
	Aa2	AA
	Aa3	AA-
	A1	A+
	A2	A
	A3	A-
	Baa1	BBB+
	Baa2	**BBB**
	Baa3	BBB-
Non-Investment Grade	Ba1	BB+
	Ba2	BB
	Ba3	BB-
	Caa1	CCC+
	Caa2	CCC
	Caa3	CCC-

[1] Moody's, https://www.moodys.com/ratings-process/Ratings-Definitions/002002 (last visited December 22, 2025).
[2] Fitch Ratings, https://www.fitchratings.com/products/rating-definitions#ratings-scales (last visited December 22, 2025).

Maintaining investment grade credit ratings is important because many institutional investors are not permitted to purchase non-investment grade securities (less than Baa3 for Moody's and BBB- for Fitch). Institutional investors include banks, insurance companies, pension funds, endowments, and mutual funds that invest money on behalf of individuals or other institutions. These investors are critically important to the market and to the Company. Institutional investors own substantially all of EPE's outstanding bonds, and it is critical for EPE and its customers that institutional investors be allowed to own its debt instruments to maximize access to capital at reasonable rates. In times of capital restrictions, companies with less than investment grade ratings may not have access to capital at any cost.

Q32. WHAT FACTORS DO THE CREDIT RATING AGENCIES CONSIDER IN ORDER TO ESTABLISH CREDIT RATINGS?

A. The rating agencies base credit ratings upon a number of factors. One of the primary factors is their assessment of a company's ability to pay interest and principal on its outstanding debt when they are due. The credit rating agencies' analyses include the amount of debt in a company's capital structure; specific credit metrics, or coverage ratios, that indicate the ability of a company to pay interest and principal on outstanding debt when they are due; and a company's liquidity (i.e., the ability to obtain cash when needed). In establishing the credit ratings of a

regulated utility, credit rating agencies also consider the regulatory structure in which a company operates and whether regulatory commissions authorize rates that support a utility's credit ratings.

In conducting their analyses, the credit rating agencies make various adjustments to the debt component of a company's balance sheet, resulting in changes in the percentage of debt and equity in the capital structure for credit rating purposes. As discussed earlier, EPE finances its nuclear fuel through the RGRT. The debt of the RGRT does not appear in EPE's capital structure used to finance rate base because it is recovered through fuel clauses in both New Mexico and Texas for regulatory purposes. However, for purposes of evaluating credit quality, the credit rating agencies consider the RGRT debt as EPE debt as it is guaranteed by EPE. Additionally, the credit rating agencies will also include all outstanding short-term borrowings on the RCF in their calculation of the Company's total debt even though those borrowings are excluded from the Company's regulatory capital structure. As a result, it is important that EPE maintain adequate equity in its capital structure and adequate coverage ratios to support investment grade credit ratings.

Q33. HAVE THE CREDIT RATING AGENCIES ISSUED RECENT REPORTS IDENTIFYING POTENTIAL NEGATIVE IMPACTS TO THE COMPANY'S CASH FLOWS?

A. Yes, the latest credit opinions on EPE issued by the rating agencies contain factors

that may result in credit rating downgrades. In the Moody's credit opinion published on January 22, 2026, Moody's indicated that if EPE's cash coverage ratio (Cash Flow from Operations pre-working capital to Debt) falls below 15% on a sustained basis, if a more contentious political or regulatory environment emerges in Texas or New Mexico that creates material uncertainty over cost or investment recovery, or if financial policies implemented by Infrastructure Investments Fund are detrimental to the credit quality of EPE, it could result in a downgrade in credit ratings. Additionally, in the credit opinion issued by Fitch on May 1, 2025, Fitch similarly concluded that if EPE was subjected to materially unfavorable regulatory developments or if its coverage ratio (Funds from Operations leverage) exceeded 5.3x on a sustained basis, it could result in a downgrade in credit ratings.

Q34. DO EQUITY INFUSIONS HELP SUPPORT THE COMPANY'S CREDIT RATINGS?

A. Yes. EPE has sought additional capital in the form of equity infusions from Sun Jupiter, which can be accessed more efficiently and economically with less risk. EPE received $975 million of equity infusions from Sun Jupiter since the Company’s previous general rate case and anticipates additional contributions in the future. In this case, the Company is requesting a capital structure with 55.5% equity and 44.5% long-term debt. This requested equity ratio is necessary to help maintain the Company's current investment-grade credit metrics. A higher equity

layer in the Company's capital structure helps signal to potential debt investors that the Company has a lower default risk, which can lead to tighter credit spreads and better borrowing terms. The Company's equity ratio is anticipated to be maintained through the Company's long-term debt issuances, and dividend distributions to and equity contributions from Sun Jupiter. In addition to providing adequate rate relief for the balance of EPE's Cost of Service, approval of the Company's requested capital structure and return on equity should allow the Company to maintain investment grade credit ratings while also meeting the growing energy demands in our service territory and maintaining reliable service.

VI. DECOMMISSIONING EXPENSE/FUNDING

Q35. HAS THE COMPANY PRESENTED INFORMATION IN THIS CASE ON THE ESTIMATED COST TO DECOMMISSION PALO VERDE?

A. Yes, it has. TLG Services, Inc. ("TLG Services"), a firm that offers decommissioning and engineering services to nuclear power plants, routinely prepares an estimate for the PVGS participants. The most recent decommissioning cost estimate, used in this filing, was prepared in 2023 on behalf of all of the participants in the PVGS (the "2023 TLG Study"). EPE expert witness Glander of TLG Services presents that estimate in her testimony.

Q36. PLEASE PROVIDE SOME BACKGROUND ON THE NUCLEAR DECOMMISSIONING PROCESS AND EXPENSE?

A. The Nuclear Regulatory Commission ("NRC") defines decommissioning as the process by which nuclear power plants are retired from service. To address safety and environmental impact concerns, the NRC established regulations and associated guidance outlining the requirements and the process companies must follow.

The decommissioning process involves decontaminating the facility to reduce residual radioactivity, dismantling the structures, removing contaminated materials to appropriate disposal facilities, and releasing the property for other uses. The owner remains accountable to the NRC until decommissioning has been completed and the NRC has terminated each unit's license.

To prepare for eventual decommissioning, the NRC requires the companies that operate nuclear power plants to put aside funds throughout the plant's operating lifetime. Companies work with federal and state regulators to ensure that enough money will be available. Decommissioning funds are not under the direct control of the companies, and those funds cannot be used for any purpose other than decommissioning expenses.

Q37. DOES EPE HAVE AN OBLIGATION TO PAY FOR COSTS OF DECOMMISSIONING?

A. Yes. Federal regulations require holders of nuclear licenses to pay for the costs of decommissioning. Pursuant to the Palo Verde Generating Station Participation Agreement ("PVGS-PA"), EPE must fund its share (15.8 percent) of these costs in advance through annual deposits to an irrevocable decommissioning trust fund for each PVGS unit, with each fund held by an independent trustee.

Q38. HAS THE COMMISSION PREVIOUSLY AUTHORIZED DECOMMISSIONING COST RECOVERY IN EPE'S RATES?

A. Yes. The Commission has consistently authorized EPE to recover amounts necessary to fund its decommissioning obligation for PVGS Units 1 and 2. The Company has been authorized to recover decommissioning expenses related to PVGS since March 1986 for PVGS Unit 1 in NMPRC Case No. 1833, and in subsequent NMPRC Case Nos. 2092, 2162, 2279, 2722, 03-00302-UT, 06-00258-UT, 0900171UT, and 20-00104-UT. EPE fully funds its decommissioning obligations related to PVGS Unit 3; however, because PVGS Unit 3 is not included in EPE's New Mexico rate base, no amounts related to funding the decommissioning obligation for that unit have been included in EPE's New Mexico rates.

Q39. ARE THERE SPECIFIC FEDERAL GUIDELINES FOR ESTABLISHING AND FUNDING THE DECOMMISSIONING TRUSTS RELATED TO

NUCLEAR POWER PLANTS SUCH AS PALO VERDE?

A. Yes. To ensure the adequacy of funds for the safe dismantling, decontamination, and disposal of the generating units at the end of their useful lives, the NRC established guidelines that apply to both the amounts of fund contributions and the methods for funding the ultimate decommissioning of the units.

Q40. PLEASE SUMMARIZE THE GUIDELINES FROM THE NRC REGARDING FUNDING OF NUCLEAR DECOMMISSIONING TRUSTS.

A. As detailed in 10 Code of Federal Regulations (C.F.R.) § 50.75, the NRC requirements are intended to ensure that adequate funds will be available for the decommissioning process. The NRC regulations specify a minimum amount to be accumulated in the decommissioning fund, depending on the size and type of nuclear reactor. The regulations further require each licensee of a nuclear power plant to prepare a biennial certification of assurance demonstrating that the licensee has accumulated the minimum required amount of decommissioning funds. Arizona Public Service Company, as the operator of Palo Verde, files this report on behalf of all of the Palo Verde participants.

Q41. WHAT FINANCING METHODS DOES THE NRC ALLOW?

A. NRC regulations allow for several methods to provide financial assurance of decommissioning, the least costly of which is an external sinking fund. The sinking

fund method is the method that EPE has used since Palo Verde began commercial operation in 1986.

Q42. WHAT ARE THE NRC'S REQUIREMENTS FOR AN EXTERNAL SINKING FUND?

A. The NRC requires that the sinking fund be in an account segregated from the licensee's assets and outside the licensee's administrative control.

Q43. HAS THE COMPANY FOLLOWED THE REQUIREMENTS ADOPTED BY THE NRC?

A. Yes, the Company has followed all guidelines prescribed by the NRC. The Palo Verde licensee is the Arizona Nuclear Power Project, which is composed of all the Palo Verde participants.

Q44. WHO CURRENTLY SERVES AS THE TRUSTEE OF THE NUCLEAR DECOMMISSIONING TRUSTS?

A. State Street Global Advisors Trust Company currently serves as trustee for each of the Company's decommissioning trusts. The Company has a qualified and a non-qualified trust fund for each of the three PVGS units, so there are six decommissioning trust funds in total.

Q45. WHO ARE THE CURRENT INVESTMENT MANAGERS FOR THE NUCLEAR DECOMMISSIONING TRUST FUND INVESTMENTS?

A. State Street Global Advisors Trust Company currently serves as the investment manager for each of the Company's decommissioning funds.

Q46. HOW DOES THE COMPANY ASSIST THE INVESTMENT MANAGERS AND TRUSTEE TO COMPLY WITH ALL NRC RULES?

A. The Company provides each investment manager and trustee with an Investment Policy Statement ("IPS") that outlines the responsibilities of each party involved with the trust funds' investments. The IPS provides guidelines, objectives, and administrative and review procedures set forth by the Company. The IPS also provides the specific asset allocation of the portfolio selected by the Company and a list of permissible securities for investment by the decommissioning trust funds.

Q47. HOW DOES THE COMPANY ESTABLISH THE INVESTMENT POLICY STATEMENT AND MONITOR THE INVESTMENT MANAGERS AND TRUSTEE?

A. The IPS is created and approved by the Company's Nuclear Decommissioning Trust Committee ("NDT Committee"). Currently, the NDT Committee is comprised of nine EPE employees who are appointed by the Audit Committee of the Company's Board of Directors. The NDT Committee meets quarterly to

evaluate the performance of the investment managers and trustee and to determine if they are operating in compliance with the IPS and all applicable rules.

Q48. WHAT FUNDING METHOD IS THE COMPANY PROPOSING IN THIS FILING?

A. The Company proposes to continue the external, irrevocable trust fund method it has used since the establishment of the fund. This method requires periodic irrevocable deposits to an external trust to fund the future decommissioning of the facility. The Company will make monthly contributions to the external, irrevocable qualified trust funds established in 1986, 1986, and 1987 for PVNGS Units 1, 2, and 3, respectively. As explained further below, although the Company is not proposing to change the method for funding decommissioning, it is proposing new contributions be made to meet decommissioning requirements.

Q49. IN ADDITION TO THE NRC REGULATIONS THAT REQUIRE DECOMMISSIONING, DOES EPE HAVE A CONTRACTUAL OBLIGATION TO PAY FOR COSTS OF DECOMMISSIONING?

A. Yes. Pursuant to the PVGS-PA, which is discussed in the direct testimony of EPE witness Victor Martinez, EPE must fund its share of decommissioning costs (15.8 percent) in advance through periodic deposits to an irrevocable decommissioning trust fund for each Palo Verde Unit, with each fund held by an independent trustee.

This contractual requirement is met through the external, irrevocable decommissioning funds required by the NRC. If EPE or any other participant fails to provide its independent trustee with sufficient funds to meet its decommissioning obligations, they can be held in default under the PVGS-PA. If the default is not cured in accordance with the PVGS-PA, the defaulting participant loses its output from the plant and receives no compensation for the loss until the default is cured.

Q50. PLEASE PROVIDE SOME ADDITIONAL DETAILS ON THE REQUIREMENTS IN THE PVGS-PA FOR EPE'S DECOMMISSIONING OBLIGATIONS.

A. Amendment 13 of the PVGS-PA established a Termination Funding Committee ("TFC") whose responsibility is to oversee the performance and completion of the decommissioning plan at Palo Verde, including the financial and funding elements of such plan and any changes thereto. Amendment 13 also created the TFC Manual which established minimum and target funding levels by year and allowable investments. Each participant is required to submit an annual status report to the TFC, which presents the current status of its decommissioning fund. The primary purpose of this report is to compare the actual fund balances to the minimum requirements. In order to remain above the minimum funding level, EPE must ensure that it has the right combination of funding and earnings during the life of Palo Verde to ensure that adequate funds are available to decommission the plant.

Q51. PLEASE EXPLAIN THE BASIS FOR THE COMPANY'S PROPOSAL TO RECOMMEND NEW FUNDING CONTRIBUTIONS SUBJECT TO FUTURE ADJUSTMENTS.

A. The PVGS-PA provides that participants can adjust their deposits to the decommissioning funds as needed as long as the required accumulations are achieved. As I explain in more detail below, current fund balances and expected earnings on the funds are not sufficient to meet funding obligations.

Q52. WHAT IS MEANT BY LIQUIDITY AND WHY IS IT NEEDED IN THE DECOMMISSIONING PORTFOLIO?

A. Liquidity is the term used to describe the amount of cash held in the decommissioning trust portfolio. There must always be some cash in the portfolio to pay fees and expenses. Cash holdings may also exist temporarily due to Company contributions to the trust, the sale of securities, and the receipt of dividend and interest payments. Once decommissioning commences, the securities held in the investment portfolio will be liquidated over time, and the resulting cash will be used to pay decommissioning costs.

Q53. WHAT WAS THE ASSET ALLOCATION OF THE DECOMMISSIONING FUND AS OF THE END OF THE SEPTEMBER 30, 2025 BASE PERIOD?

A. As of September 30, 2025, the asset allocation of the decommissioning fund was 55 percent in equities, 45 percent in fixed income.

Q54. WHAT IS THE BASIS FOR THE COSTS OF DECOMMISSIONING PVNGS CONTAINED IN THIS FILING?

A. In this filing, the basis for the costs is the 2023 TLG Study, as discussed by EPE witness Glander in her testimony.

Q55. IS THERE A COST CATEGORY INCLUDED IN THE TLG STUDY FOR WHICH THE COMPANY DOES NOT REQUEST FUNDING AT THIS TIME?

A. Yes. One of the decommissioning cost categories included in the TLG study is for the Independent Spent Fuel Storage Installation (ISFSI) facility. As explained in the direct testimony of Ms. Glander, the ISFSI is a facility designed and constructed for the interim storage of spent nuclear fuel and associated radioactive materials. Because there is an expectation that these costs will be covered by the United States Department of Energy, the Company is not including these costs in its decommissioning cost funding request at this time.

Q56. HOW ARE THE COST ELEMENTS OF THE DECOMMISSIONING STUDY DERIVED?

A. The decommissioning cost estimates are based on the current costs, in 2023 dollars, to decommission PVGS Units 1, 2, and 3 regardless of the year the costs are expected to occur. The 2023 TLG Study provides yearly expenditures over the expected duration of the decommissioning program in 2023 dollars, without accounting for cost escalations that would occur in the projected future periods during which any given decommissioning activity is undertaken. Thus, the cost estimates are prepared reflecting current information and technologies but without attempting to estimate inflationary impacts on decommissioning components over the remaining plant life.

Q57. HAS EPE APPLIED ESTIMATED INFLATION TO THESE COSTS?

A. Yes. EPE applied estimated inflation to those costs to more accurately estimate the yearly costs that must be set aside for decommissioning. EPE's estimated annual escalation rate is 3.94 percent, reference Exhibit RSG-1.

Q58. DOES EPE INCORPORATE PAST COLLECTION OF DECOMMISSIONING COSTS FOR PVGS UNITS 1 AND 2 IN THIS CASE?

A. Yes. EPE has been collecting decommissioning costs in rates since March 1986, and, therefore, incorporates past collection of decommissioning costs by deriving a beginning balance of all costs contributed thus far. This beginning balance was derived by calculating the collections from New Mexico customers from the point

at which rates first reflected decommissioning expenses for each PVGS unit through September 30, 2025. Actual fund earnings through September 30, 2025, were allocated to New Mexico customers based on cumulative jurisdictional contributions. Because EPE's decommissioning cost study represents total Company expenditures, it is necessary to "gross-up" the New Mexico jurisdictional accumulation (collections and earnings), to a total Company representation using a Commission-approved demand allocator. The various Commission cases approving collections for decommissioning costs also established related demand allocators that are used for this purpose.

Q59. WHY DOES EPE USE THE DEMAND ALLOCATOR TO "GROSS-UP THE NEW MEXICO JURISDICTIONAL ACCUMULATIONS?

A. EPE applies the demand allocator because decommissioning is solely related to generating plant costs. Application of the demand allocator results in a balance that represents the contributions attributable to all jurisdictions if the New Mexico regulatory treatment had been applied on a Company-wide basis. This "total Company" balance can then be used as the beginning balance for future New Mexico jurisdictional collections for each of the PVGS units. These beginning balances are detailed and incorporated into the annual funding schedule and the decommissioning funding calculation provided in Exhibit RSG-2 and Exhibit RSG-4, respectively.

Q60. PLEASE EXPLAIN THE DEVELOPMENT OF THE PAYMENTS REQUIRED TO FUND THE DECOMMISSIONING COSTS IN THEIR RESPECTIVE YEARS OF EXPENDITURE.

A. Exhibit RSG-4 details the annual payments necessary to fund decommissioning of PVGS Units 1 and 2 based on an earnings rate for EPE's decommissioning trust funds (after tax) of 4.57 percent. The calculation of the weighted average return on nuclear decommissioning trust investments is made on Exhibit RSG-5. As shown on Exhibit RSG-4, based upon the expected inflation in decommissioning costs and earnings on the decommissioning trust funds, funding is required for PVGS Units 1 and 2. The total Company amount of decommissioning funding required for units 1 and 2 is $3.5 million annually for PVGS decommissioning costs. Changes in assumptions in the future could increase the funding obligation or eliminate future funding requirements. As a result, EPE is requesting $3.5 million on a total Company basis to fund the decommissioning of Palo Verde for this case as presented on Adjustment No. 14 – Decommissioning. EPE will address adjustments to future funding levels in future rate case proceedings.

Q61. IS THIS EARNINGS RATE REASONABLE?

A. Yes. The 4.57 percent earnings rate was developed by State Street Global Advisors Trust Company, the trust investment manager, and is based on the weighted average

expected earnings on the decommissioning trust funds as of September 30, 2025. EPE's decommissioning trust funds for PVGS were invested 55 percent in Global equity and 45 percent in U.S. fixed income securities and cash equivalents as of September 30, 2025. The decommissioning trust funds are invested into a Global Equity fund and a Core Fixed Income fund. The Global Equity fund is weighted 65% domestic equities and 35% emerging market equities. The average return on the US common stock equities is based upon the expected earnings of the broad stock market, as measured by the Russell 3000 Index. The average return on the emerging market equities is based upon the expected earnings of the developed international stock markets, as measured by the MSCI EAFE IMI Net Index. The average return on the US fixed income securities is based upon the expected income and appreciation for taxable and non-taxable long-term bonds in the trust funds.

Q62. WHAT LEVEL OF FUNDING IS THE COMPANY PROPOSING FOR THE TEST YEAR PERIOD?

A. The proposed annual funding is $1,985,664 for Unit 1 and $1,505,624 for Unit 2 on a total Company basis and $406,162 for Unit 1 and $307,971 for Unit 2, on a New Mexico jurisdictional basis. That information is presented in Exhibit RSG-4. The funding schedule for each unit reflects funding over the life of the current operating license as required by the NRC.

VII. CONCLUSION

Q63. DOES THIS CONCLUDE YOUR TESTIMONY?

A. Yes, it does.

DECLARATION OF RICHARD S. GONZALEZ IN SUPPORT OF THE FOREGOING DIRECT TESTIMONY TO THE APPLICATION OF EL PASO ELECTRIC COMPANY FOR REVISION OF ITS RETAIL ELECTRIC RATES PURSUANT TO ADVICE NOTICE NO. 317

I, ***Richard S. Gonzalez***, pursuant to Rule 1-011 NMRA, state as follows:

1. I affirm in writing under penalty of perjury under the laws of the State of New Mexico that the following statements are true and correct.

2. I am over 18 years of age and have personal knowledge of the facts stated herein. I am employed by El Paso Electric Company ("EPE" or "the Company") as the *Treasurer*.

3. The foregoing Direct Testimony of Richard S. Gonzalez, together with all exhibits sponsored therein and attached thereto, is true and accurate based on my knowledge and belief.

4. I submit this Declaration, based upon my personal knowledge and upon information and belief, in support of EPE's ***Application for Revision of Its Retail Electric Rates Pursuant to Advice Notice No. 317.***

FURTHER, DECLARANT SAYETH NAUGHT.

I declare under penalty of perjury that the foregoing is true and correct.

Executed on March 27, 2026.

EL PASO ELECTRIC COMPANY
DIRECT TESTIMONY OF
STEVEN A. SIERRA

I. INTRODUCTION AND QUALIFICATIONS

Q1. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Steven A. Sierra. My business address is 100 N. Stanton Street, El Paso, Texas 79901.

Q2. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by El Paso Electric Company ("EPE" or the "Company") as Director of Financial Accounting.

Q3. PLEASE SUMMARIZE YOUR EDUCATIONAL BACKGROUND AND PROFESSIONAL EXPERIENCE.

A. I graduated from The University of Texas at El Paso with a Bachelor of Business Administration in Accounting, and a Master of Accountancy. I am a Certified Public Accountant in the State of Texas and a member of the Texas Society of Certified Public Accountants and the American Institute of Certified Public Accountants. In addition, I received a graduate certificate from New Mexico State University in Public Utility Regulation & Economics and have attended professional development seminars sponsored by the American Gas Association and Edison Electric Institute.

Upon graduation, I was employed in El Paso as a staff accountant at Desert View Homes from 2010-2011, and at Hunt Companies, Inc. from 2011-2012, where

my primary responsibilities included the preparation of internal financial statements. I joined El Paso Electric Company in 2012 and have held various positions in the Energy Accounting, Financial Accounting and Financial Planning & Analysis departments. My responsibilities in the various roles at EPE have included the preparation and analysis of internal and external financial statements, the preparation of financial statements for the Company's benefit plans and overseeing the Company's annual budget and forecasting processes. In March 2022, I accepted my current position of Director-Financial Accounting.

Q4. WHAT ARE YOUR PRINCIPAL AREAS OF RESPONSIBILITY?

A. I serve under the general direction of the Vice President-Controller and I oversee the Company's financial accounting and financial reporting departments. I support the establishment and maintenance of the Company's accounting principles, practices, and procedures for the maintenance of its fiscal records and the preparation of its financial reports.

Q5. HAVE YOU PREVIOUSLY TESTIFIED BEFORE UTILITY REGULATORY BODIES?

A. Yes. I have testified before the Public Utility Commission of Texas ("PUCT").

II. PURPOSE OF TESTIMONY

Q6. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY?

A. The purpose of my direct testimony is to summarize EPE's cost of service and revenue requirements, explain the New Mexico revenue deficiency, and specify the requested New Mexico rate increase.

I also describe the Test Year Period cost of service adjustments to Base Period amounts reflected in this proceeding. Each of these adjustments is described later in my direct testimony and is supported by the various EPE witnesses as indicated below, including those adjustments which I specifically sponsor. A complete listing of all Test Year Period adjustments to Base Period amounts is included in Schedule A-3 and its related workpapers, and in Exhibit SAS-1. Each of these adjustments is appropriate and reasonable and calculated in compliance with Rule 17.9.530 of the New Mexico Administrative Code ("Rule 530").

Further, my testimony demonstrates that the Test Year Period costs for employee compensation and benefits requested in this case are consistent with a recent market study, are in compliance with recent New Mexico Public Regulation Commission ("NMPRC" or "Commission") orders, and are just and reasonable, including a rate base adjustment for EPE's pension and OPEB plans.

Last, I support the reasonableness of Administrative and General ("A&G") expenses and summarize the Rule 530 Schedules that I sponsor or co-sponsor.

Q7. WHY ARE YOU THE APPROPRIATE PERSON TO SPONSOR THESE TOPICS?

A. In my role as Director of Financial Accounting, I am required to understand the Company's financial and accounting records, including the expenses it incurs to provide service to customers. My job duties and responsibilities as Director of Financial Accounting also qualify me to provide testimony regarding the Company's overall cost of service.

Q8. WHAT RULE 530 SCHEDULES DO YOU SPONSOR OR CO-SPONSOR IN THIS PROCEEDING?

A. The schedules that I sponsor or co-sponsor are listed below.

- Schedule A Summary of The Total Company Cost of Service (Adrian Hernandez is a Co-sponsor)
- Schedule A-3 Summary of The Cost of Service Adjustments by Functional Classification (Adrian Hernandez is a Co-sponsor)
- Schedule H-1 Operation and Maintenance Expenses
- Schedule H-4 Payroll Distribution and Associated Payroll Taxes
- Schedule H-5 Expenses Associated with Advertising, Contributions, Donations, Lobbying & Political Activities, Memberships & Outside Services

- Schedule H-6 Other Administrative and General Expenses
- Schedule H-14 Expenses Associated with Affiliated Interests
- Schedule H-15 Expenses Associated with Non-Utility Services
- Schedule H-16 Explanation of the Adjustments to Expenses of Operations
- Schedule I-1 Balance Sheet
- Schedule I-2 Income Statement
- Schedule I-3 Statement of Changes in Financial Position
- Schedule P-4 Operation and Maintenance Expense Information
- Schedule Q-4 Reports to the Securities and Exchange Commission
- Schedule Q-5 Form 1 Reports

Q9. HOW WAS THE RATE FILING PACKAGE PREPARED IN THIS PROCEEDING?

A. The schedules were prepared using the books and records of the Company, and they are accurate summaries of the business records upon which they are based.

Q10. PLEASE DESCRIBE THE TEST YEAR PERIOD UTILIZED IN THE RATE FILING.

A. The Company is using a Historic Test Year Period with the Base Period of October 1, 2024, through September 30, 2025. EPE has proposed adjustments to the total

Company Base Period book balance amounts to reflect the effects of annualizations, normalizations, and known and measurable changes to arrive at Historical Test Year Period amounts.

III. COST OF SERVICE

Q11. PLEASE SUMMARIZE EPE'S COST OF SERVICE FOR THE TEST YEAR PERIOD.

A. EPE witness Adrian Hernandez developed the total Company cost of service amounts for the Base Period and Test Year Period and allocated those amounts to the New Mexico jurisdiction to develop the New Mexico revenue deficiency. EPE is proposing to increase the New Mexico non-fuel base revenue requirements by $70.6 million, or 50.4 percent, based on a Test Year Period ended September 30, 2025. With a proposed reduction in miscellaneous service revenues of $0.2 million, the resulting net increase in total operating revenues in this application is $70.4 million.

Q12. PLEASE SUMMARIZE THE TOTAL COMPANY AND NEW MEXICO BASE RATE REVENUES, COST OF SERVICE, RATE BASE, AND RETURN AMOUNTS THAT EPE IS REQUESTING IN THIS PROCEEDING.

A. The following table, SAS-1, summarizes EPE's revenue requirements and the increase in base rates on a total Company basis and on a New Mexico jurisdictional basis:

TABLE SAS-1

	Description	Total Company Revenue Requirement	New Mexico Jurisdictional Revenue Requirement
1	Total Rate Base	$4,107,020,771	$732,783,516
2	Weighted Average Cost of Capital	8.35%	8.35%
3	Return on Rate Base (line 1 x line 2)	343,118,718	61,219,993
4	Fuel and Purchased Power	280,294,429	94,343,724
5	Operation & Maintenance (O&M)	355,020,952	68,166,298
6	Regulatory Debits and Credits	5,548,955	3,135,744
7	Depreciation & Amortization	246,998,669	47,063,658
8	Decommissioning and Accretion	3,665,189	749,740
9	Amortization of Unrecovered Plant	1,672,773	1,672,773
10	Taxes other Than Income	94,909,759	9,494,814
11	Federal Income Taxes	56,672,171	9,747,518
12	State Income Taxes	7,351,730	1,391,828
13	Total Cost of Service (total lines 3 through 12)	1,395,253,344	296,986,090
14	Less: Other Operating Revenues	103,037,487	9,575,092
15	Less: Fuel Revenues and Sales for Resale	260,022,863	76,678,062
16	Adjusted Base Rate Revenue Requirement	1,032,192,994	210,732,936
17	Less: As Adjusted Base Revenues	803,680,321	140,094,381
18	Base Rate Revenue Deficiency	228,512,673	70,638,555
19	Percent Increase (line 18/line 17)	28.43%	50.42%
20	Revenue Requirement Deficiency	228,272,139	70,398,021
21	Add back proposed reduction in Misc. Service Revenues	240,534	240,534
22	Base Rate Revenue Deficiency	$228,512,673	$70,638,555

EPE witnesses Cynthia S. Prieto and Hernandez discuss total rate base and the allocation of total Company revenue requirements to the New Mexico jurisdiction, respectively, in their testimonies.

Q13. IS EPE'S PROPOSED NEW MEXICO REVENUE REQUIREMENT REASONABLE AND NECESSARY?

A. Yes. The costs are reasonable and necessary to provide safe, clean, reliable, and affordable energy to EPE's customers.

IV. NEED FOR RATE CHANGE

Q14. WHEN WERE BASE RATES LAST ESTABLISHED FOR EPE?

A. EPE's current base rates were established by the Commission in Docket No. 20-00104-UT ("2020 Rate Case") using a Historical Test Year Period ending December 31, 2019. Since the 2020 Rate Case, EPE's rate base and operating costs have changed.

Q15. CAN YOU DESCRIBE THE SIGNIFICANT CHANGES IN NON-FUEL COST OF SERVICE EXPENSES YOU REFERENCED ABOVE?

A. Yes. As discussed in the direct testimonies of EPE witnesses Prieto and George Novela, since the 2020 Rate Case, EPE has incurred $2.4 billion (New Mexico jurisdictional amount of $408.4 million) in construction expenditures to maintain its local generating units and to maintain the Palo Verde Generating Station ("PVGS"), as well as other general and intangible plant additions. EPE has also made improvements in its transmission and distribution system to serve load

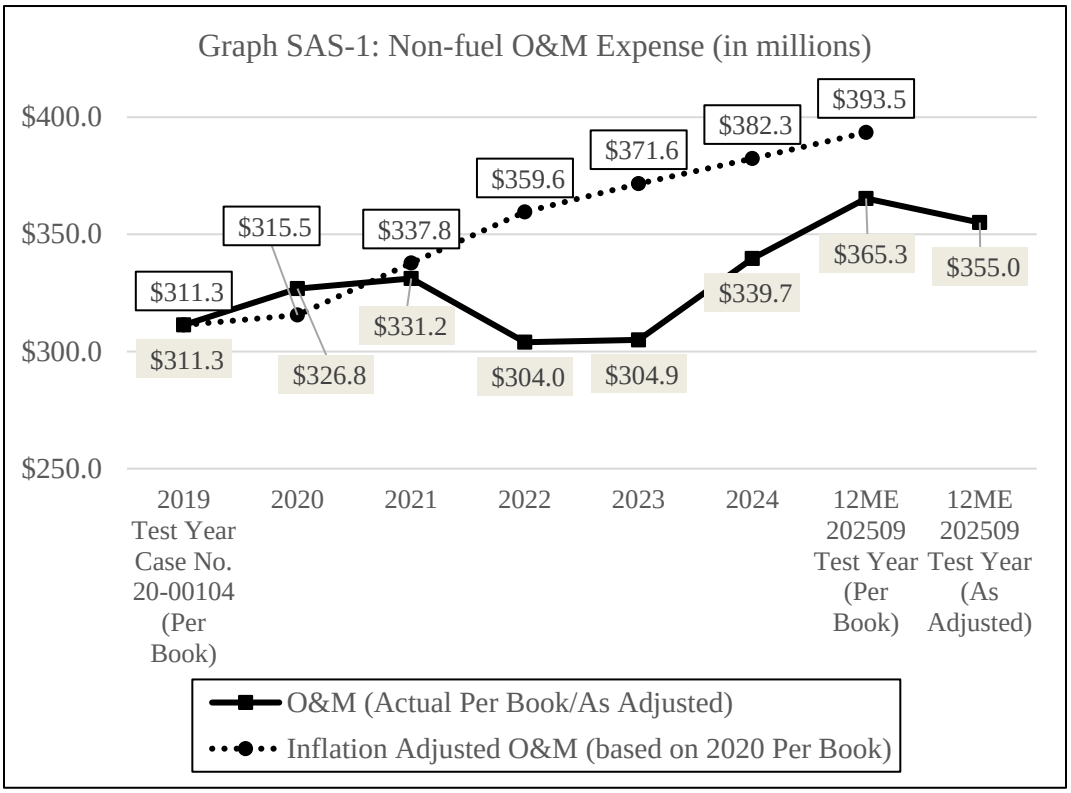
growth to meet the growing demands of its customers and to improve the resiliency and reliability of its system since the 2020 Rate Case as discussed in the direct testimony of EPE witness Omar A. Gallegos. EPE witnesses Jeffery M. Hughes and Victor Martinez discuss EPE's generation plant additions in their direct testimonies, and EPE witness Prieto discusses EPE's general and intangible plant additions in her direct testimony.

Since the 2020 Rate Case, the Company has also experienced increases in operation and maintenance ("O&M") expenses to operate its PVGS and local generating facilities, as well as to operate and maintain its transmission and distribution assets. These cost increases served the growth in customers and the need to maintain existing plant. The Company is also requesting new depreciation rates based on the 2025 Depreciation Study as discussed by EPE witness John J. Spanos.

Q16. HOW DOES THE INCREASED O&M EXPENSE THAT EPE HAS EXPERIENCED SINCE THE 2020 RATE CASE COMPARE TO INFLATION OVER THE SAME PERIOD?

A. While rate base has certainly grown since EPE's last general rate case, it is worth noting that total Company non-fuel O&M expenses have generally remained below inflation-adjusted amounts, since the Base Period in the 2020 Rate Case. See Graph SAS-1 below for a summary of total Company non-fuel O&M costs over this

period.[1] Please refer to the direct testimony of EPE witness Novela for a discussion on the need for rate relief, and EPE witness Richard Gonzalez for additional discussion including growth in rate base and the need for EPE to recover a return on and a return of its investment in new plant.



/

/

[1] 2019 Per Book, 2020, 2021, 2022, 2023 and 2024 data in Graph SAS-1 ties to FERC Form 1 Page 323, excluding fuel and purchased power accounts 501, 509, 518, 547, 555 and 555.3. Inflation-adjusted data is based on the US Consumer Price Index (1982-84 = 100) from the US Bureau of Labor Statistics.

V. ACCOUNTING ADJUSTMENTS

Q17. WHAT IS THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY?

A. The purpose of this section of my testimony is to list and describe the Company's adjustments to the cost of service. EPE witness Prieto sponsors the Company's rate base and describes the adjustments to rate base in her direct testimony, including Adjustment No. 33, which I co-sponsor.

Q18. WHAT SORTS OF ADJUSTMENTS TO BASE PERIOD DATA IS AUTHORIZED BY RULE 530 AND WHAT COMPANY SCHEDULE LISTS THESE ADJUSTMENTS?

A. According to Rule 530, an "Adjustment" is a calculation made with reasonable accuracy to the book balance of accounts to reflect an annualization, a known and measurable change, or an estimate based on projection for the full twelve-month period of the Test Year Period. The Company's Test Year Period adjustments on Schedule A-3 encompasses "Adjustments" under Rule 530.

Q19. WHAT ADJUSTMENTS DID EPE MAKE TO THE BASE PERIOD TO DEVELOP THE TEST YEAR PERIOD?

A. EPE made numerous adjustments to the total Company Base Period book balance amounts to arrive at the Test Year Period amounts. The adjustments include annualizations and known and measurable changes to O&M expenses and plant in

service and other rate-based components. The adjustments to the Base Period O&M amounts and respective sponsors of each cost-of-service adjustment are listed on Exhibit SAS-1. Schedule A-3 summarizes the adjustments by functional classification and provides New Mexico jurisdictional amounts. I discuss the cost of service adjustments in numerical order in my testimony. See Workpaper A-3 for backup and calculations for each adjustment to the Base Period. EPE witness Hernandez addresses allocation to the New Mexico jurisdiction, including direct assignment to a jurisdiction if appropriate, which enables the proper allocation of the adjustments to the New Mexico jurisdiction.

A. ADJUSTMENTS TO THE COST OF SERVICE

Q20. CAN YOU GENERALLY DESCRIBE THE ADJUSTMENTS INCLUDED IN SCHEDULE A-3?

A. Yes. Generally, the Test Year Period cost of service adjustments are revisions to the Base Period revenues and expenses for known and measurable changes at the time of filing. These changes are expected to occur either before or shortly after the time that any final rates will be ordered into effect.

The resulting adjusted revenues and expenses are those that, if used as the basis for setting rates for the prospective period following the ordering of final rates in effect, will give the Company a reasonable opportunity to recover its reasonable and necessary expenses.

Q21. HOW DID YOU DETERMINE THE KNOWN AND MEASURABLE CHANGES THAT SHOULD BE TAKEN INTO ACCOUNT IN THIS PROCEEDING?

A. I reviewed the Company's financial records and determined other adjustments based on my general knowledge of Company operations. Additionally, employees from other departments who have subject matter knowledge about their respective areas provided support for known and measurable changes to Base Period cost of service data.

Q22. IS EPE PROPOSING TO MOVE THE RECOVERY OF THE COSTS OF ANY ITEM FROM BASE RATES TO FUEL?

A. No.

Q23. WHO IS SPONSORING THE COST OF SERVICE ADJUSTMENTS INCLUDED IN SCHEDULE A-3?

A. I summarize each of the cost of service adjustments below. The sponsors for each of the cost of service adjustments discussed are noted below, including those adjustments that I sponsor. EPE witness Hernandez co-sponsors the jurisdictional amounts related to each adjustment described below. All cost of service

adjustments and their sponsors are listed in Exhibit SAS-1 and can be found on Schedule A-3 and corresponding workpapers to Schedule A-3.

1. REVENUES AND UNCOLLECTIBLES (ADJUSTMENT NO. 1)

Q24. WHAT ADJUSTMENTS WERE MADE TO DETERMINE THE TEST YEAR PERIOD REVENUES AND UNCOLLECTIBLE EXPENSE?

A. Base Period actual revenues were adjusted for known and measurable changes in customers and sales to reflect conditions at the end of the Base Period. EPE witness Rene Gonzalez sponsors the calculation of annualized revenues at current rates presented in the adjustment, while EPE witness Enedina Soto supports the weather adjustment to kilowatt-hour ("kWh") sales in her direct testimony. EPE witness Prieto sponsors the uncollectible accounts expense which is based on a calculated uncollectible accounts expense rate applied to the adjusted retail operating revenues. Proposed Revenues are the requested revenue requirement as shown in Schedule A. EPE witness Hernandez sponsors the jurisdictional amounts of this adjustment.

2. FUEL AND PURCHASED POWER EXPENSE (ADJUSTMENT NO. 2)

Q25. WHAT ADJUSTMENTS WERE MADE FOR FUEL AND PURCHASED POWER EXPENSES?

A. Even though fuel and purchased power is not recovered through base rates, it is necessary for the cost of service to reflect these amounts in order to calculate the proper amount of the Company's Test Year Period revenue-related taxes and uncollectible accounts expense, as discussed in the direct testimonies of EPE witnesses Tamera Henderson and Prieto, respectively. The Base Period fuel expenses were adjusted to reflect adjusted kWh sales for out-of-period adjustments and other adjustments to comply with prior Commission orders. These adjustments result in a net increase to Base Period fuel and purchased power expense by $10,257,703 on a total Company basis (New Mexico jurisdictional increase of $17,920,930) as presented on Schedule A-3 and related workpapers. These adjustments are co-sponsored by EPE witnesses Julissa I. Reza and Hernandez.

3. SALARIES AND WAGES (ADJUSTMENT NO. 3)

Q26. WHAT ADJUSTMENTS WERE MADE FOR SALARIES AND WAGES FOR EPE EMPLOYEES?

A. This adjustment, which I co-sponsor with EPE witness Hernandez, is to reflect the level of salaries and wages for the Test Year Period with adjustments to reflect known and measurable changes that results in a net total Company increase of $4,190,622 to Base Period salaries and wages expense (New Mexico jurisdictional increase of $1,013,909).

As discussed further below in Section V of my testimony, Base Period salaries and wages were annualized using the annual base pay of employees as of the end of the Base Period in this case, September 30, 2025. EPE is also adjusting its request for salaries and wages to reflect the 4.0% contractual union wage increase effective March 3, 2026, and a 4.0% increase for non-union wages effective in February 2026. The 4.0% adjustment requested in this case for the February 2026 non-union wage increase is based on the lower of a simple average of the increases received by non-union EPE employees for the prior three years, and the budgeted non-union wage increase. The following table, SAS-2, summarizes EPE's non-union merit increases for the merit base years 2022-2024, including the budgeted increase for the 2025 merit base year, and includes the contractual increases for union employees for the base years 2021-2026.

\

\

\

\

\

\

\

\

\

Table SAS-2

Non-Union			
Base Year	**Avg. Merit Increase %**	**Budgeted Merit Increase %**	**Effective Date**
2022 Merit	4.4%	3.0%	January 2023
2023 Merit	3.9%	3.0%	February 2024
2024 Merit	4.0%	4.0%	February 2025
3-year Avg.	4.1%		
2025 Merit		**4.0%**	**February 2026**

Union		
Base Year	**Contractual Wage Increase %**	**Contractual Effective Date**
2021	3.2%	September 3, 2022
2022	8.0%	March 3, 2023
2023	5.0%	March 3, 2024
2024	4.0%	March 3, 2025
2025	**4.0%**	**March 3, 2026**
2026	3.0%	March 3, 2027 (not included in cost of service)

In addition to the adjustments described above, the requested salaries and wages expense in this case also includes adjustments to remove the financially-based incentives from the Company's requested short-term incentive plan ("STIP") costs, the application of appropriate expense ratios for payroll and the STIP, and the removal of payroll costs requested by EPE in other cases before the

Commission[2]. These adjustments are described in further detail below in Section V of my testimony and are shown on both a total Company and a New Mexico jurisdictional basis on Schedule A-3 and related workpapers.

4. PENSIONS AND BENEFITS (ADJUSTMENT NO. 4)

Q27. WHAT ADJUSTMENTS WERE MADE FOR PENSIONS AND BENEFITS?

A. This adjustment, which I co-sponsor with EPE witness Hernandez, adjusts Base Period pension and benefits expense to reflect known and measurable changes, including the removal of the Company's financially-based long-term incentive plan ("LTIP") and the removal of one-half of costs of the Excess Benefit Plan, both in accordance with the Commission's rate treatment in Case No. 15-00127-UT ("2015 Rate Case"). Additionally, this adjustment includes the annualization of the most current actuarial estimates of expenses for the pension and other postemployment benefits ("OPEB") plans in accordance with generally accepted accounting principles ("GAAP").

This adjustment decreases Base Period pension and benefits expense by the net amount of $5,151,789 on a total Company basis (New Mexico jurisdictional decrease of $1,105,324). The Company's requested Test Year Period amount of pension and benefit expense is shown on both a total Company and a New Mexico

[2] Per Commission order in Case No. 23-00071-UT (New Mexico Community Solar costs) and Commission order in Case No. 23-00231-UT (Transportation Electrification Plan costs).

jurisdictional basis on Schedule A-3 and related workpapers. These adjustments are described in further detail below in Section V of my testimony.

5. PVGS O&M (ADJUSTMENT NO. 5)

Q28. WHAT ADJUSTMENTS WERE MADE FOR PVGS O&M?

A. EPE witness Martinez discusses the reasonableness of PVGS O&M costs included in the requested cost of service. The purpose of this adjustment to PVGS O&M expenses, which I co-sponsor with EPE witness Hernandez, is to reflect the rate making treatment of those expenses consistent with prior orders of the Commission. It adjusts Base Period O&M expenses for the following items:

1. PVGS costs have been adjusted to reflect the 2026 amounts for PVGS for Property Insurance and Injuries and Damages provided by Arizona Public Service Company ("APS"), the plant operator of PVGS;
2. Removal of the out-of-period January 2024 through September 2024 portion of the 2024 PVGS A&G true-up provided by APS and recorded in the Base Period. Each year, the owners of PVGS are billed by APS, based, in part, on estimates of certain costs. When actual costs are known, they are compared to the costs billed and the difference is either charged or refunded to the owners as a true-up in the following calendar year;
3. Normalization of Base Period PVGS refueling outage costs; and

4. Removal of financially based incentive compensation consistent with the Commission's rate treatment in the 2015 Rate Case and followed in the Company's request in the 2020 Rate Case.

These adjustments result in a net decrease to Base Period PVGS O&M expense of $5,339,158 on a total Company basis (New Mexico jurisdictional decrease of $1,197,296). The Company's requested Test Year Period amount for PVGS O&M expense is shown on both a total Company and a New Mexico jurisdictional basis on Schedule A-3 and related workpapers.

Additionally, EPE witness Hernandez addresses the exclusion of expenses related to PVGS Unit 3 and 1/3 Common Facilities through the jurisdictional allocation process, consistent with the Final Order in NMPRC Case No. 2722 ("1998 Rate Case"), wherein PVGS Unit 3 was decertified and abandoned for New Mexico regulatory purposes.

Q29. CAN YOU PLEASE EXPLAIN THE ADJUSTMENT TO NORMALIZE PVGS MAINTENANCE EXPENSE FOR REFUELING OUTAGES LISTED IN BULLET 3 ABOVE?

A. Yes. EPE's Base Period refueling maintenance expense for PVGS reflects the actual cost of PVGS Unit 1 and Unit 2 refueling outages that occurred during the Base Period. Because PVGS Unit 3 is deregulated and is excluded from rate base in New Mexico, PVGS Unit 3 O&M costs are removed from cost of service. This

results in an overstatement of the refueling outage costs in the Base Period, reflecting two (2) complete refueling outage costs for PVGS. The normal refueling outage cycle is 18 months for each PVGS unit, or on average 1.33 outages per year for PVGS Units 1 and 2 combined. Therefore, the refueling maintenance expense during the Base Period was multiplied by 0.66 to reflect average refueling outage expense for PVGS Units 1 and 2. This is consistent with the adjustment to normalize refueling outage expense to 1.33 average outages per year for PVGS Units 1 and 2, as reflected in the 2015 Rate Case Final Order and followed in the Company's request in the 2020 Rate Case.

6. PROPERTY INSURANCE (ADJUSTMENT NO. 6)

Q30. DID EPE MAKE AN ADJUSTMENT FOR PROPERTY INSURANCE EXPENSE?

A. Yes. The purpose of this adjustment, which I co-sponsor with EPE witness Hernandez, restates local property insurance expense to reflect premium costs at the time this adjustment was calculated. This results in a decrease to Base Period expense of $304,622 on a total Company basis (New Mexico jurisdictional decrease of $65,357), as presented on Schedule A-3 and related workpapers.

7. INJURIES AND DAMAGES (ADJUSTMENT NO. 7)

Q31. DID EPE MAKE AN ADJUSTMENT FOR INJURIES AND DAMAGES?

A. Yes. The purpose of this adjustment, which I co-sponsor with EPE witness Hernandez, is to adjust insurance coverage for workers' compensation, general liability, directors' and officers' ("D&O") liability, and fiduciary liability to reflect premium costs at the time this adjustment was calculated. Base Period amounts for losses not covered by insurance, fees and expenses of claim investigators, and related supplies and expenses were then added to the updated premium costs. Additionally, settlement and workers' compensation costs were adjusted to reflect a five-year average due to the year-to-year fluctuations in these costs, including the removal of a specific one-time litigation accrual recorded during the Base Period before the calculation of the five-year average for settlement costs. The gross adjusted workers' compensation costs were multiplied by the payroll expense ratio to arrive at the expense requested because the major component of workers' compensation is labor-related.

The Company also made an adjustment to exclude one-half of D&O liability insurance from cost of service in New Mexico, consistent with the Commission's rate treatment in the 2020 Rate Case. EPE also has a "tail" D&O policy to maintain the same terms and conditions and limits as the D&O policy effective prior to the acquisition of EPE by Sun Jupiter for six years, with a total premium of $1,471,565, or a $245,261 annual cost. EPE is not including the cost of the D&O tail policy in the requested cost of service.

These adjustments result in a decrease to Base Period expense of $4,595,020 on a total Company basis (New Mexico jurisdictional decrease of $985,868), as presented on Schedule A-3 and related workpapers.

8. ADVERTISING (ADJUSTMENT NO. 8)

Q32. DID EPE MAKE AN ADJUSTMENT FOR ADVERTISING

A. Yes. I co-sponsor this adjustment with EPE witness Hernandez, which results in a decrease of $1,570,145 to EPE's request in advertising expense on a total Company basis (New Mexico jurisdictional decrease of $371,756), which represents reasonable allowable costs in accordance with Rule 17.3.350 of the New Mexico Administrative Code ("Rule 350"). EPE has maintained records of each related advertisement and these records, including copies of all advertising materials. These advertising materials are included in this filing as required by Rule 350.9(E), in Workpaper A-3, Adjustment No. 8. The requested advertising expense of $164,260 includes New Mexico specific advertisements including: (1) $24,626 for bill inserts and other media used for customer education on billing practices, services, and rates; (2) $5,819 for safety; and (3) $133,815 for information on general energy conservation. The energy conservation expenses are for general informational purposes and are not program specific.

The Company's requested Test Year Period amount of advertising expense is shown on both a total Company and a New Mexico jurisdictional basis on Schedule A-3 and related workpapers.

Q33. IS EPE REQUESTING RECOVERY OF ANY CONTRIBUTIONS?

A. No.

9. MISCELLANEOUS GENERAL AND OTHER (ADJUSTMENT NO. 9)

Q34. DID EPE MAKE AN ADJUSTMENT FOR MISCELLANEOUS GENERAL AND OTHER EXPENSES?

A. Yes. Miscellaneous General and Other Expenses have been reduced by $768,081 on a total Company basis (New Mexico jurisdictional decrease of $164,793) as presented on Schedule A-3 and related workpapers. This adjustment, which I co-sponsor with EPE witness Hernandez, removes one-half of the normalized Board of Directors' compensation and removes lobbying expenses misclassified in O&M expense.

As noted in the Commission's Final Order in the 2020 Rate Case, EPE's Board of Directors' compensation is based on the new composition of the Board of Directors resulting from Sun Jupiter's acquisition of EPE on July 29, 2020. EPE's Board of Directors is comprised of ten Directors, but only seven Directors are compensated for their service. The three Directors who are not compensated for

their service are the two IIF US 2-level representatives and EPE's Chief Executive Officer ("CEO"). The requested amount is not equally allocated among the seven compensated Directors. Each Director's compensation depends on when they joined the board, the number of board committees on which the Director serves and the Director's role. Consistent with the Commission's decision in the 2020 Rate Case, one-half of the normalized costs for Board of Directors' compensation were excluded from EPE's request in this case.

10. REGULATORY COMMISSION EXPENSE (ADJUSTMENT NO. 10)

Q35. DID EPE MAKE AN ADJUSTMENT FOR REGULATORY COMMISSION EXPENSE?

A. Yes. EPE witnesses Reza, Novela, and Hernandez co-sponsor EPE's proposal for the recovery of costs to prepare, file, and litigate cases filed with the Commission. The adjustment results in a decrease of $748,137 to the Company's Base Period amount of Regulatory Commission expense on a total Company basis (New Mexico jurisdictional decrease of $142,056), as presented on Schedule A-3 and related workpapers.

11. MEMBERSHIP DUES (ADJUSTMENT NO. 11)

Q36. DID EPE MAKE AN ADJUSTMENT FOR MEMBERSHIP DUES?

A. Yes. This adjustment, which I co-sponsor with EPE witness Hernandez, removes membership dues related to lobbying activities, social and recreational organizations, political organizations, and misclassified sponsorships from the Company's requested cost of service consistent with Rule 530. The calculation of the amounts removed is located on Workpaper A-3, Adjustment No. 11, pages 3-7, and lists the Federal Energy Regulatory Commission ("FERC") Account to which the amounts were charged. These adjustments result in a decrease to Base Period expense of $89,942 on a total Company basis (New Mexico jurisdictional decrease of $20,035), as presented on Schedule A-3 and related workpapers.

12. MISCELLANEOUS GENERATION O&M (ADJUSTMENT NO. 12)

Q37. DID EPE MAKE AN ADJUSTMENT FOR MISCELLANEOUS GENERATION O&M?

A. Yes. This adjustment, which I co-sponsor with EPE witness Hernandez, eliminates non-labor O&M expenses for Rio Grande Unit 6 from the Base Period. Rio Grande Unit 6 has been excluded from rates since the 2015 Rate Case. This adjustment results in a decrease to Base Period Miscellaneous Generation O&M expenses of $349,818 on a total Company basis (New Mexico jurisdictional decrease of $84,621), as presented on Schedule A-3 and related workpapers.

13. REGULATORY ASSET AND LIABILITY AMORTIZATION

(ADJUSTMENT NO. 13)

Q38. DID EPE MAKE AN ADJUSTMENT FOR REGULATORY ASSET AND LIABILITY AMORTIZATION?

A. Yes. EPE witnesses Reza and Prieto sponsor and discuss Adjustment No. 13 in their direct testimonies, which EPE witness Hernandez also co-sponsors. This adjustment results in an increase of $583,317 to EPE's Base Period amortization for regulatory assets and liabilities on a total Company basis (New Mexico jurisdictional increase of $1,691,481), as presented on Schedule A-3 and related workpapers.

14. DECOMMISSIONING (ADJUSTMENT NO. 14)

Q39. DID EPE MAKE AN ADJUSTMENT FOR DECOMMISSIONING?

A. Yes. EPE witness Richard Gonzalez sponsors and discusses Adjustment No. 14 in his direct testimony, which EPE witness Hernandez also co-sponsors. This adjustment restates the Base Period PVGS decommissioning based on the results of the most recent PVGS decommissioning study. No amounts related to PVGS Unit 3, and its related 1/3 Common Facilities costs have been requested in this case. This adjustment also includes amounts for Base Period local plant accretion expense. These adjustments result in a decrease to Base Period decommissioning

expense of $11,617,630 on a total Company basis (New Mexico jurisdictional decrease of $1,460,357), as presented on Schedule A-3 and related workpapers.

15. DEPRECIATION AND AMORTIZATION (ADJUSTMENT NO. 15)

Q40. DID EPE MAKE AN ADJUSTMENT FOR DEPRECIATION AND AMORTIZATION?

A. Yes. EPE witness Prieto sponsors and discusses Adjustment No. 15 in her direct testimony, which EPE witness Hernandez also co-sponsors. This adjustment results in an increase of $51,800,171 to Base Period depreciation and amortization expenses on a total Company basis (New Mexico jurisdictional increase of $9,906,620), as presented on Schedule A-3 and related workpapers.

16. PROPERTY TAXES (ADJUSTMENT NO. 16)

Q41. DID EPE MAKE AN ADJUSTMENT FOR PROPERTY TAXES?

A. Yes. EPE witness Henderson sponsors and discusses this adjustment in her direct testimony, which EPE witness Hernandez also co-sponsors. This adjustment presents property taxes adjusted to reflect the requested plant balances. The Company's requested Test Year Period Property Tax expense is shown on both a total Company and a New Mexico jurisdictional basis on Schedule A-3 and related workpapers.

17. PAYROLL TAXES (ADJUSTMENT NO. 17)

Q42. DID EPE MAKE AN ADJUSTMENT FOR PAYROLL TAXES?

A. Yes. EPE witness Henderson sponsors and discusses this adjustment in her direct testimony, which EPE witness Hernandez also co-sponsors. Payroll taxes have been adjusted to reflect taxes related to Test Year Period salaries and wages. The Company's requested Test Year Period Payroll Taxes is shown on both a total Company and a New Mexico jurisdictional basis on Schedule A-3 and related workpapers.

18-22. REVENUE-RELATED TAXES (ADJUSTMENT NOS. 18-22)

Q43. DID EPE MAKE ADJUSTMENTS FOR REVENUE-RELATED TAXES?

A. Yes. EPE witness Henderson sponsors and discusses these adjustments in her direct testimony, which EPE witness Hernandez also co-sponsors. These adjustments include the Company's directly incurred local franchise fees, sales, use and gross receipts taxes and other miscellaneous taxes including state regulatory assessments. The Company's requested Test Year Period revenue-related tax expenses are shown on both a total Company and a New Mexico jurisdictional basis on Schedule A-3 and related workpapers.

23-25. STATE INCOME TAXES (ADJUSTMENT NOS. 23-25)

Q44. DID EPE MAKE ADJUSTMENTS FOR STATE INCOME TAXES?

A. Yes. EPE witness Henderson sponsors and discusses these adjustments in her direct testimony, which EPE witness Hernandez also co-sponsors. These adjustments show the changes in New Mexico, Arizona, and Texas state income taxes. The Company's requested Test Year Period state income tax expenses are shown on both a total Company and a New Mexico jurisdictional basis on Schedule A-3 and related workpapers.

26. FEDERAL INCOME TAXES (ADJUSTMENT NO. 26)

Q45. DID EPE MAKE AN ADJUSTMENT FOR FEDERAL INCOME TAXES?

A. Yes. EPE witness Henderson sponsors and discusses this adjustment in her direct testimony, which EPE witness Hernandez also co-sponsors. This adjustment reflects the change in federal income taxes as a result of the various adjustments made to the requested cost of service and the requested return on rate base. The Company's requested Test Year Period federal income tax expense is shown on both a total Company and a New Mexico jurisdictional basis on Schedule A-3 and related workpapers.

27. INTEREST ON CUSTOMER DEPOSITS (ADJUSTMENT NO. 27)

Q46. DID EPE MAKE AN ADJUSTMENT FOR INTEREST ON CUSTOMER DEPOSITS?

A. Yes. The Company has included customer deposits as a reduction to rate base (see Workpaper A-3, Adjustment No. 33 – Regulatory Assets and Liabilities and Other Additions/Reductions, line 48. Based on this reduction to rate base, the Company has included interest expense on these deposits in cost of service. The calculation for the cost-of-service adjustment of interest expense, which I co-sponsor with EPE witness Hernandez, is located on Workpaper A-3, Adjustment No. 27, and includes the balance of customer deposits at the end of the Base Period for each jurisdiction multiplied by the interest rate required by each jurisdiction as of September 2025. The total Company interest expense is included, and the portions related to other jurisdictions are removed from the Company's request in the jurisdictional allocation. This adjustment results in an increase to Base Period expense of $562,958 on a total Company basis (New Mexico jurisdictional increase of $81,791), as presented on Schedule A-3 and related workpapers.

VI. EMPLOYEE COMPENSATION AND BENEFITS

Q47. WHAT IS THE PURPOSE OF THIS PORTION OF YOUR TESTIMONY?

A. In this portion of my testimony I describe and support the amount of employee compensation and benefits cost the Company is seeking to include in its cost of service. I also describe and support the various adjustments the Company made to Base Period amounts of employee compensation and benefits costs, and associated payroll taxes, to obtain the final Test Year Period amounts included in the cost of

service. Finally, I describe and support a rate base adjustment for EPE's pension and OPEB plans that is consistent with the rate treatment in the 2020 Rate Case.

Q48. IS THE COMPANY SEEKING RECOVERY OF COSTS RELATING TO EMPLOYEE COMPENSATION AND BENEFITS?

A. Yes. The Company is seeking recovery of the employee compensation and benefit costs included in Schedules H-1 and H-4. In addition, I sponsor the salary and wage and benefit adjustments which are included in Workpaper A-3, Adjustment No. 3 – Salaries and Wages, and Adjustment No. 4 – Pensions and Benefits.

Q49. WHAT ARE THE COSTS RELATING TO EMPLOYEE COMPENSATION AND BENEFITS THE COMPANY IS SEEKING TO RECOVER?

A. The Company is seeking to recover the employee compensation and benefit costs reflected on Schedules H-1 and H-4. The salary and wage adjustments made to Base Period amounts to obtain the final Test Year Period amounts are reflected on Workpaper A-3, Adjustment No. 3 – Salaries and Wages. Workpaper A-3, Adjustment No. 4 – Pensions and Benefits, reflects the adjustments made to Base Period benefit costs.

Q50. IS THE OVERALL LEVEL OF COMPENSATION AND BENEFIT EXPENSES THE COMPANY IS REQUESTING IN THIS PROCEEDING REASONABLE AND NECESSARY?

A. Yes. EPE's overall combined compensation and benefit costs are reasonable and necessary. The total amount of compensation and benefits is market driven and EPE's overall level of compensation is reasonable when compared to other businesses with which EPE must compete to attract and retain required personnel. EPE administers its compensation and benefit plans in a cost-effective and efficient manner. The Company provides compensation and benefits for employees at a reasonable cost, and EPE negotiates with vendors for competitive rates for both the Company and the employees.

Q51. HAS THE COMPANY OBTAINED A RECENT MARKET COMPENSATION STUDY FOR ITS CURRENT EMPLOYEE COMPENSATION?

A. Yes. The Company hired Mercer, the world's largest and most comprehensive employee compensation resource, to perform a market compensation study, which was issued on December 30, 2024.

Q52. WHAT WERE THE FINDINGS OF THE MERCER MARKET COMPENSATION STUDY?

A. Mercer performed a comprehensive analysis and market pricing study encompassing 530 exempt non-union employees. The study benchmarked positions within the Company against the utility industry and the general industry market, as appropriate, and employed advanced statistical techniques for its compensation review. The study concluded that total cash compensation (i.e., base salary and incentive compensation) for EPE employees is most closely aligned with the 25th percentile of market. That is, EPE's overall total cash compensation is commensurate with the lowest quarter percentile of comparable companies.

Q53. BASED ON THE MERCER MARKET COMPENSATION STUDY, ARE THE COMPANY'S TOTAL CASH COMPENSATION LEVELS REASONABLE AND NECESSARY?

A. Yes. The Mercer Market Compensation Study shows that the Company's current total cash compensation costs for non-union employees are well below the market average for similarly situated jobs both in the electric utility industry and the job market as a whole.

Q54. IS IT IMPORTANT THAT THE COMPANY'S OVERALL COMPENSATION PACKAGES BE COMPETITIVE WITH ITS PEERS IN THE UTILITY INDUSTRY AND A BROADER MARKET?

A. Yes, it is. The utility business requires EPE to be able to attract, develop, and retain

highly qualified talent with good professional skills. The nature of the Company's work is highly technical and requires a workforce rich in engineering, finance, and other professional and technical skills. Most of the Company's positions require not only a sound educational background, but also a number of years of training and development to become fully proficient in the work required. Therefore, the Company invests in programs such as the Doña Ana Community College Line Worker Certification Program and a new Line Worker Certification program with Western Technical College. It further engages in internship and training programs with educational partners such as The University of Texas – El Paso, New Mexico State University, and El Paso Community College.

Our compensation and benefit plans are market based. We routinely compare total compensation for equivalent positions or levels of skill and responsibility to a defined comparator universe. This comparator universe is composed of companies based on the relevant labor market from which applicants are or could be recruited. Our comparators vary from those of a company specific group to those companies in our industry whose compensation data is reported in aggregate by third-party surveys. The Company remains current with its classification and compensation study of its workforce with the guidance of Mercer and Willis Towers Watson ("WTW"). As discussed below, the compensation levels from this analysis are routinely updated. The objectives include updating a relevant and market competitive classification and compensation program that allows for

the attraction and retention of qualified individuals and opportunities for growth and development within a competitive salary structure framework.

EPE's overall compensation is certainly reasonable when compared to its peers. EPE's customers benefit from a unified strategy and approach to total compensation that helps to ensure it is attracting and retaining the talent the Company needs in a complex operational and service delivery business model. The Company's programs are designed to motivate and reward employees to achieve benefits for customers through reliability and customer service that are consistent with EPE's public service mandate to provide reliable and cost-effective electrical service.

Q55. HOW IS EMPLOYEE COMPENSATION DETERMINED?

A. The Company develops compensation for non-union employees by benchmarking jobs to comparable positions in EPE's service territory and within the utility industry through salary surveys, online salary comparison tools and other sources of information on compensation. For officers, the Company consults with WTW and utilizes its surveys and consultants to analyze and recommend officers' compensation. Officers' compensation is generally established at or near 50% of the market range in relation to comparable companies. This methodology results in reasonable compensation levels for officers of the Company.

The Company reviews benchmarking data from multiple sources such as Mercer, WTW, and other utility peers for compensation of exempt and non-exempt non-union employees. While there are a number of positions for which the Company competes for universal skill sets that are normally found at a local level (such as customer service representatives and field service representatives), the Company does compete with other utilities for many positions that require specialized experience or training in the electric utility industry (such as electrical engineers, power system engineers, and power plant managers). The Company seeks to establish salary ranges that are comparable to jobs in the electric utility industry for similarly sized utilities. The Company's salary structure is designed to ensure that the Company can hire, reward, and retain competent employees for each position in the Company.

Compensation for union employees, including contracted changes in compensation, is negotiated in a collective bargaining agreement ("CBA"). The current CBA became effective on March 3, 2023, and expires on March 3, 2028. In negotiating union wage levels, the Company follows a similar process of reviewing wages for similar jobs in El Paso and in the electric utility industry. The union contract provides for future wage increases for bargaining unit employees of 8.0% on March 3, 2023, 5.0% on March 3, 2024, 4.0% on March 3, 2025, and 2026, and 3.0% on March 3, 2027.

The Company adjusted salaries and wages to reflect the salary level as of

September 30, 2025, for all employees. Salary levels at this date reflect the latest salaries for all EPE employees including union, non-union, and officers' salary increases that became effective in March 2025. Additionally, EPE is adjusting its request for salaries and wages to reflect the 4.0% contractual union wage increase effective March 3, 2026, and a 4.0% increase for non-union wages effective in February 2026. The non-union wage increase is based on the lower of a simple three-year average of the wage increases received by non-union EPE employees each of the last three years and the budgeted non-union wage increase that effective February 2026 (the actual non-union increases effective January 2023, February 2024, and February 2025 were 4.4%, 3.9%, and 4.0%, respectively). Both union and non-union wage increases included in the requested cost of service will occur before the effective date of rates established in this proceeding. See Workpaper A-3, Adjustment No. 3 for these calculations.

Q56. WHAT IS EPE'S OVERALL APPROACH TO THE COMPENSATION PROGRAMS AND BENEFIT PLANS IT PROVIDES TO EXECUTIVE OFFICERS AND THE COSTS OF THOSE PROGRAMS AND PLANS?

A. EPE has designed compensation and supplemental benefits programs to be competitive with other similarly sized utilities to attract and retain qualified executive officers. These programs include base salary, short-term incentive pay, long-term incentives, and a supplemental pension restoration program. In total,

EPE's programs are targeted at the 50th percentile of the market to be competitive with similar utilities, and they comply with industry best practices and are heavily performance-based. EPE's total package of direct compensation and supplemental benefits for executive officers in the aggregate is comparable in both design and cost to programs offered by comparable companies within the utility industry.

The Company's overall executive compensation and benefits are reasonable and necessary, consistent with market and commercial standards, and are designed to ensure that the Company can hire, reward, and retain competent executive officers.

Q57. HOW IS THE COMPENSATION OF EPE'S EXECUTIVE OFFICERS DETERMINED?

A. The Board of Directors' People and Remuneration Committee ("PARCO") reviews and approves compensation for all executive officers. All members of the Board of Directors attend the PARCO meetings. The PARCO reviews the performance of EPE's CEO at least annually. The CEO reviews other executive officers' performance and reports their evaluations to the PARCO. EPE's CEO also recommends to, and discusses with, the PARCO compensation elements for executive officers, although the PARCO approves actual compensation awarded.

Q58. HAS THE COMPANY INCLUDED ANY SHORT-TERM OR LONG-TERM INCENTIVE COMPENSATION FOR EXECUTIVES IN THE REQUESTED COMPENSATION EXPENSE?

A. Yes. The only executive incentive compensation that EPE has included in its requested cost of service in this case is the non-financial incentive compensation paid through the STIP, which includes compensation that is based upon operational metrics including customer service and satisfaction, and reliability.

Q59. IS THE COMPANY SEEKING RECOVERY OF ANY FINANCIALLY BASED INCENTIVE COMPENSATION AMOUNTS PAID THROUGH THE COMPANY'S STIP?

A. No. Only the non-financially based portion of the Company's STIP for all employees is included in the requested salaries and wages. The total Company and New Mexico jurisdictional amount of the non-financially based annual bonus expense included in this filing can be found in Schedule A-3, Adjustment No. 3, page 2, column (e), line 12, and is based on a three-year historical average, consistent with the Commission's Final Order in the 2015 Rate Case.

Q60. HAS THE COMPANY INCLUDED ANY AMOUNTS IN ITS REQUESTED COST OF SERVICE FOR LONG-TERM INCENTIVES FOR ANY EMPLOYEES?

A. No. The Company has removed the entire cost of its LTIP from its requested cost of service consistent with the Commission's decision in the 2015 Rate Case. The total Company amount of this adjustment can be found in the Pension and Benefits adjustment on Schedule A-3, Adjustment No. 4, page 2, column (c), line 8.

Q61. HAS THE COMPANY MADE ANY ADJUSTMENTS TO ITS BASE PERIOD PAYROLL AMOUNT?

A. Yes. As discussed above, salaries and wages requested in cost of service were annualized based on payroll data as of September 2025 and were adjusted to reflect the 4.0% contractual union wage increase effective March 3, 2025, and a 4.0% increase for non-union wages which represents the lower of a simple 3-year average increase and the budgeted non-union wage increase effective in February 2026. In addition, and as previously noted, the portion of the annual bonus (or STIP) related to financially based metrics was removed from the requested cost of service. Both the annualized salaries and wages and the requested amounts of three-year historical average of the non-financial STIP were then multiplied by the respective three-year actual expense ratio of payroll and bonus costs. The salaries and wages adjustment is reflected on Schedule A-3 and is calculated in Workpaper A-3, Adjustment No. 3.

A three-year historical average of the portion of the STIP related to non-financial incentives was included in the requested payroll expense (Schedule A-3,

Adjustment No. 3, page 2, column (e), line 12). Inclusion of the STIP using a three-year historical average of payouts that are not based on financial performance was approved by the Commission in the 2015 Rate Case. The non-financial STIP amount was allocated to expense using a three-year historical bonus expense ratio average of 61.53 percent (Schedule A-3, Adjustment No. 3, page 2, column (e), line 11), consistent with the Commission's Final Order in the 2015 Rate Case. The use of a three-year historical average of non-financial incentives and a three-year historical average of bonus plan expense ratio was also followed in the Company's request in the 2020 Rate Case.

The total calculated payroll expense was then subtracted from the Base Period payroll expense to obtain the amount of the adjustment. The total Company payroll adjustment amount is reflected on Schedule H-4 and is calculated in Schedule A-3, Adjustment No. 3.

Q62. WHAT IS THE PURPOSE OF APPLYING A PAYROLL O&M EXPENSE RATIO TO THE ADJUSTED ANNUALIZED SALARIES AND WAGES?

A. The payroll O&M expense ratio is applied to total Company payroll to calculate the payroll dollars which are expected to be expensed to utility operations and maintenance accounts. In addition to payroll that should be expensed to utility operations and maintenance, total payroll includes amounts that should be expensed to other income and expenses and amounts that are capitalized, as well as payroll

amounts that are requested by EPE in other cases before the Commission.[3] By applying the ratio to total gross annualized payroll, the annualized amounts that are unrelated to O&M expenses are excluded from the Company's request for O&M expense. This methodology is consistent with the treatment approved by the Commission in prior cases, starting with the 2015 Rate Case.

Q63. WHAT IS THE PURPOSE OF APPLYING A NON-FINANCIAL STIP O&M EXPENSE RATIO TO THE ADJUSTED ANNUALIZED NON-FINANCIAL STIP COMPENSATION?

A. The non-financial STIP O&M expense ratio is applied to total Company non-financial annualized STIP compensation to calculate the payroll dollars which are expected to be expensed to utility operations and maintenance accounts. In addition to non-financial STIP costs that should be expensed to utility operations and maintenance, total non-financial STIP cost includes amounts that should be expensed to other income and expenses as well as amounts that are capitalized. By applying the ratio to total gross annualized non-financial STIP, the annualized amounts that are unrelated to O&M expenses are excluded from the Company's request for O&M expense. This methodology is consistent with the treatment approved by the Commission in prior cases, starting with the 2015 Rate Case.

[3] Per Commission order in Case No. 23-00071-UT (New Mexico Community Solar costs) and Commission order in Case No. 23-00231-UT (Transportation Electrification Plan costs)

Q64. HOW DID YOU DERIVE THE PAYROLL AND NON-FINANCIAL STIP O&M EXPENSE RATIOS FOR THIS CASE?

A. The O&M payroll expense ratio was derived by comparing payroll expensed to O&M to total payroll for the three years ended September 30, 2025. Similarly, the non-financial STIP O&M expense ratio was derived by comparing non-financial STIP costs expensed to O&M to total non-financial STIP costs for the three years ended September 30, 2025. Both of these calculations are included in Schedule A-3, Adjustment No. 3, page 3.

Q65. WERE THE STIP COSTS REMOVED FROM TOTAL PAYROLL EXPENSE BEFORE THE PAYROLL O&M EXPENSE RATIO WAS CALCULATED?

A. Yes. The STIP amounts were removed from total payroll expense prior to the calculation of the O&M payroll expense ratios for the three-year expense ratios which are included in Schedule A-3, Adjustment No. 3, page 3, lines 9 to 12. This is consistent with the 2020 Rate Case.

Q66. WHAT BENEFIT PLANS ARE OFFERED TO EMPLOYEES?

A. The Company offers a competitive package of benefits to employees. Providing employees with a comprehensive benefit package, which includes medical, dental,

vision, life and disability insurance, is an important component of employee compensation. The Company provides the same benefits to both union and non-union employees. In December 2024, Arthur J. Gallagher & Co. ("Gallagher") a leading insurance brokerage, risk management, and HR & benefits consulting company, evaluated the Company's benefit plans and concluded that EPE's comprehensive benefits package is reasonable and necessary, consistent with market standards, and is provided to ensure that the Company can hire, reward, and retain competent employees for each position in the Company. Gallagher also concluded that the Company's costs associated with these benefit plans are generally in line with benchmark standards when compared against industry standards and similar organizations.

Q67. HAS EPE CHANGED ITS BENEFIT PLANS TO MANAGE COSTS?

A. Yes. EPE has continued to modify its benefit plans by implementing changes to help manage the Company's overall benefit expense. Since the 2020 Rate Case, additional changes have been made to the retiree medical plan that have reduced OPEB expenses. To continue its management of overall medical plan costs, EPE closed retiree health benefits to new employees hired or re-hired on or after January 1, 2023, and eliminated the $1,000 deductible option for retirees effective January 1, 2024. The amount requested in cost of service related to OPEB expense continues to be a credit to customers. Of the $6.6 million customer cost reduction

for the Test Year Period associated with OPEB, $3.2 million is directly attributable to plan changes EPE made to reduce costs. The plan amendment implementing the change to close retiree health benefits to new employees has been provided as Workpaper WP/H-4.3.

Q68. WHAT COSTS ARE INCLUDED IN COST OF SERVICE FOR PENSION AND OTHER POST-EMPLOYMENT BENEFITS?

A. WTW, the Company's actuary, has prepared actuarial estimates of expenses for 2025 for the pension and OPEB plans in accordance with GAAP that are annualized and reflected in the adjustments in Workpaper A-3, Adjustment No. 4. The actuarial reports are based upon the funded status of the plans at December 31, 2024, which allows WTW to compute the 2025 expenses for each plan. The expense summary reports for fiscal year 2025 prepared by WTW, which are the most recent actuarial valuation reports, are included in Workpapers H-4.9 and H-4.10, for the pension and OPEB plans, respectively. The Company consults with WTW for services related to its pension, medical, and retiree benefit plans and WTW prepares actuarial reports to determine the annual expense for pension and OPEB for financial reporting under GAAP and reporting under the Employment Retirement Income Security Act of 1974.

Q69. WHAT SUPPLEMENTAL PENSION BENEFITS ARE OFFERED TO EPE'S EXECUTIVE OFFICERS?

A. Two types of supplemental pension benefits are offered to EPE's executive officers: (i) the Supplemental Executive Retirement Plan ("SERP"), which is a consolidation of the Supplemental Retirement and Survivor Income Plan, Executive Retirement Agreements, and Directors' Retirement Plan, that were offered to executive officers and directors prior to and during EPE's emergence from bankruptcy in February 1996 and (ii) the Excess Benefit Plan, adopted in 2004, which provides supplemental pension benefits to EPE's executive officers, whose benefits in the Company's Retirement Income Plan ("RIP") are limited because of the benefit limitations imposed by the Internal Revenue Service ("IRS").

Q70. COULD YOU PLEASE DESCRIBE THE COMPANY'S SERP?

A. The Company's SERP, a non-funded defined benefit plan, covers certain former employees and directors of the Company. The pension cost for the SERP is based on substantially the same actuarial methods and economic assumptions as those used for the RIP that covers all EPE employees. The Company closed the SERP to new participants in 1996, after the plan's costs were approved by the bankruptcy court in conjunction with the reorganization plan and the Company's emergence from bankruptcy. The approval of the SERP benefit plans upon emergence from bankruptcy allowed for a smooth management transition and, as part of the

Company's plan of reorganization, helped customers to benefit from the revaluation of EPE's generating assets as discussed by EPE witness Prieto. A copy of the final 2025 plan expense for the SERP is part of the 2024 year-end benefit plan disclosure report prepared by WTW and is included in Workpaper H-4.11.

Q71. COULD YOU PLEASE DESCRIBE THE COMPANY'S EXCESS BENEFIT PLAN?

A. The Company's Excess Benefit Plan was adopted in 2004 and covers certain active and former employees. The Excess Benefit Plan seeks to supplement executive officers' pension benefits that are restricted due to IRS limitations, so as to provide benefits comparable to what other employees receive through the RIP. Pension cost for the Excess Benefit Plan is based on substantially the same actuarial methods and economic assumptions as those used for EPE's RIP.

Q72. IS IT COMMON FOR UTILITIES LIKE EPE TO OFFER PLANS LIKE EPE'S EXCESS BENEFIT PLAN?

A. Yes. Virtually all investor-owned public utilities offer "restorative" plans such as the Excess Benefit Plan offered by the Company. As previously discussed, EPE has designed compensation and supplemental benefits programs to be competitive with other similarly sized utilities in order to attract and retain qualified executive officers. Due to earnings limits imposed by the IRS on the Company's RIP, these

supplemental pension benefit plans allow the participants to earn a benefit proportional to their overall compensation. A copy of the actuarial report prepared by WTW for the Excess Benefit Plan is included in Workpaper H-4.12.

Q73. WHY IS IT IMPORTANT FOR THE COMPANY TO OFFER AN EXECUTIVE RETIREMENT PACKAGE COMMENSURATE WITH THOSE OFFERED BY SIMILAR COMPANIES?

A. These supplemental pension benefit plans are just one component of our overall compensation and benefit plan. Our overall compensation and benefit program must be competitive in order for EPE to compete for the talent and personnel necessary to effectively operate our business. Absent the Excess Benefit Plan, EPE's executive officers would not be competitively compensated with regard to their retirement benefits.

Q74. HAS THE COMPANY MADE ANY ADJUSTMENTS TO ITS BASE PERIOD PENSION AND BENEFIT EXPENSE AMOUNTS IN THIS FILING?

A. Yes. The Company's pension and benefit adjustment calculation is included in Workpaper A-3, Adjustment No. 4. This adjustment reduces Base Period pension and benefits expense to reflect known and measurable costs as follows (line numbers referenced below refer to page 2 of Adjustment No. 4):

1. Costs for the OPEB, Pension, Excess and SERP Plans were adjusted to reflect the annualized 2025 actuarial expense as prepared by WTW (lines 1, 3, 4 and 5).
2. One-half of costs of the Excess Benefit Plan were also removed from EPE's request, consistent with the Commission's rate treatment in the 2015 and 2020 Rate Cases (line 4).
3. The 401(k) costs were adjusted to reflect the Company's current contribution levels (line 2).
4. Costs of the Company's long-term incentive program were removed from Base Period costs (line 8) consistent with the Commission's rate treatment in the 2015 and 2020 Rate Cases.
5. Medical expenses were adjusted to reflect medical expense rebates received during the Base Period (line 9).
6. Other employee benefits were adjusted to remove the PTO accrual and PTO sell-back amounts (line 11) since these amounts are included in salaries and wages in Adjustment No. 3.
7. Costs for employee separation agreements were removed from Base Period costs (line 12).

Q75. ARE EPE'S COMPENSATION AND BENEFIT PLAN EXPENSES REASONABLE?

A. Yes. EPE administers its compensation and benefit plans in a cost-effective and efficient manner. The Company provides compensation and benefits for employees at a reasonable cost, and EPE negotiates with vendors for competitive rates for both the Company and its employees.

Q76. HAS THE COMPANY MADE ANY RATE BASE ADJUSTMENTS ASSOCIATED WITH PENSION AND BENEFIT PLAN COSTS?

A. Yes. Consistent with the Commission's Final Order in the 2020 Rate Case, the Company has made an adjustment to rate base for the cumulative difference, since 1998, between the amount of pension and OPEB costs the Company has requested from customers and the amount it has contributed to its pension and OPEB plans.

Q77. WHERE IS THAT ADJUSTMENT REFLECTED IN THE RATE SCHEDULES?

A. The adjustment, which represents a $12.5 million rate base increase on a total Company basis (New Mexico jurisdictional increase of $2.7 million), may be found on Workpaper A-3, Adjustment No. 33, page 1.

Q78. HOW WAS THE AMOUNT OF THE ADJUSTMENT DETERMINED?

A. In the 2020 Rate Case, the Commission approved a rate base adjustment, based on the cumulative difference since 1998 between amounts contributed by the

Company and amounts collected from customers for each of the four applicable plans (RIP, Excess Plan, SERP, and OPEB). On a cumulative basis, contributions funded by EPE in excess of amounts collected from customers are added to rate base, while under-contributions are deducted from rate base.

In consultation with the Company's actuarial consultants, WTW, I updated the detailed analysis prepared for the 2020 Rate Case[4] to add the relevant data through September 30, 2025.

I also updated the calculations of capitalized amounts for 2018 through September 2025 to reflect the update in EPE's benefits capitalization policy in accordance with the implementation of Accounting Standards Update ("ASU") 2017-07, whereby only the service cost portion of net periodic benefit cost is subject to capitalization. This adjustment results in a $5.6 million reduction to rate base for 2018 and 2019. The calculation of the cumulative rate base adjustment for EPE's pension and OPEB may be found on Workpaper A-3, Adjustment No. 33, pages 3-8, and is summarized below.

Rate base adjustment reconciliation

Rate base adjustment at 12/31/2019	($0.172 million)
2018-2019 capitalization adjustment	($5.579 million)

[4]Exhibits YG-8 and YG-9 filed with the direct testimony of EPE witness Yannick Gagne in the 2020 Rate Case.

From 1/1/2020 to 9/30/2025:

EPE contributions (net of capitalization)	$25.230 million
Requested from customers (net of capitalization)	($6.936 million)
Rate base adjustment at 9/30/2025	**$12.543 million**

VII. ADMINISTRATIVE AND OTHER GENERAL EXPENSES

Q79. IS THE COMPANY SEEKING RECOVERY OF COSTS RELATING TO ADMINISTRATIVE AND GENERAL ("A&G") EXPENSES?

A. Yes. The Company is seeking recovery of the A&G costs described below and summarized on Schedules H-1 and H-5.

Q80. WHAT A&G EXPENSES ARE INCURRED BY THE COMPANY?

A. In addition to salaries and wages and employee benefits, the Company incurs A&G expenses for office supplies and expenses, outside services, insurance (including workers' compensation, liability insurance, and property insurance), advertising, rents, regulatory commission expenses, and miscellaneous general expenses. These expenses are necessary for the Company to support its operations. Office supplies and expenses include not only the cost of paper, printing, and other office supplies, but also work-related travel, training and other employee expenses. The Company must maintain insurance against property losses and for liability protection. Advertising educates customers about safety, billing practices, and energy

efficiency. Regulatory commission expenses are necessary to comply with the requirements of the PUCT, NMPRC, and FERC. Miscellaneous general expenses include costs not recognized in other FERC accounts and reflect necessary costs for the Board of Directors, memberships in industry and professional organizations, and other costs of operating the Company.

Q81. HOW DOES THE COMPANY ENSURE THAT A&G EXPENSES ARE REASONABLE?

A. EPE works to ensure that administrative expenses are reasonable by using competitive bidding for many services, including insurance and office supplies. Other costs are negotiated. Some costs, such as industry and professional dues, are set on a statewide or nationwide basis. EPE also seeks to only use services necessary to operate its business.

Q82. DOES THE COMPANY EMPLOY OUTSIDE SERVICES TO PERFORM OR SUPPORT VARIOUS A&G COMPANY ACTIVITIES?

A. Yes, the Company employs outside legal and other services to perform activities required by the Company. Outside services to perform administrative activities are primarily obtained in the following areas:

- Accounting and tax,

- Legal, and
- Information technology.

Q83. PLEASE SUMMARIZE THE OUTSIDE ACCOUNTING AND RELATED SERVICES THAT THE COMPANY EMPLOYS.

A. The Company employs an independent accounting firm to audit its GAAP financial statements each year in accordance with the requirements of Company debt holders and its regulatory financial statements as required by the FERC's Uniform System of Accounts. The Audit Committee of the Company's Board of Directors reviews the activities performed by the Company's independent accounting firm on an annual basis and approves all costs for the financial statement audits. The Company also uses outside accounting resources to obtain expertise on tax and other issues as needed.

Q84. PLEASE SUMMARIZE THE OUTSIDE LEGAL SERVICES THAT THE COMPANY EMPLOYS.

A. The Company must address legal issues in several technical areas. The Company employs outside law firms to obtain specific expertise, such as Texas and New Mexico regulatory or litigation counsel and to address legal issues that require resources outside of the Company's in-house legal resources. Often, the same law

firms are used to provide services to maintain continuity and to leverage familiarity with Company issues. The Company issues requests for proposals for legal services and negotiates with these firms to obtain competitive rates for their services.

Q85. WHAT INFORMATION IS CONTAINED IN EXHIBIT SAS-2?

A. Exhibit SAS-2 shows the outside litigation services that were employed by EPE that EPE is requesting to recover as part of this case for costs recorded in FERC Accounts 923 and 928.

Q86. WHAT IS FERC ACCOUNT 923?

A. Account 923 – Outside Services Employed, is an A&G expense account used to record the cost of outside professional and technical services that are not performed by utility employees. Typical charges that are appropriate for Account 923 include expenses for outside services, including legal services, provided those services are non-regulatory.

Q87. WHAT IS FERC ACCOUNT 928?

A. Account 928 – Regulatory Commission Expenses is an A&G expense account used to record the costs incurred in matters before regulatory commissions having jurisdiction over the utility.

Q88. WHAT AMOUNT IS EPE REQUESTING FOR LITIGATION EXPENSES IN THIS CASE?

A. As reflected on Exhibit SAS-2, EPE is requesting a total Company amount of $543,320 (New Mexico jurisdictional amount of $387,038) in litigation expense in this case.

Q89. HOW DID YOU IDENTIFY THE LITIGATION EXPENSES IDENTIFIED ON EXHIBIT SAS-2?

A. EPE tracks litigation expenses that have been incurred and recorded on its general ledger in Accounts 923 and 928. Exhibit SAS-2 shows those amounts and includes a brief description of the matters and the general category of litigation for legal expenses recorded in Account 923 and 928.

Q90. HOW DOES THE AMOUNT THAT EPE IS REQUESTING FOR LITIGATION EXPENSE COMPARE TO OTHER ELECTRIC UTILITIES?

A. The amount requested by EPE is generally in line with the litigation expenses incurred by other electric utilities in New Mexico, if not a little lower.

Q91. WERE THE LITIGATION EXPENSES REFLECTED ON EXHIBIT SAS-2 NECESSARY AND REASONABLY INCURRED?

A. Yes, they were.

Q92. PLEASE SUMMARIZE THE INFORMATION TECHNOLOGY SERVICES EMPLOYED BY EPE.

A. The Company outsources certain aspects of its information technology functions, which include data warehouse design and support, customer information system application support, financial system application support, and some cloud maintenance. The Company's remaining information technology staff manages and coordinates the activities of the outsourced service provider and also provides information technology support in key areas such as cyber security, on-site and cloud infrastructure maintenance and support, project management, application development and support, data analytics, and networking and telecommunications.

The Company uses other outside services on an as needed basis to obtain specific expertise or additional resources. The Company seeks to competitively bid these activities or negotiate competitive rates.

Q93. WHAT OTHER A&G EXPENSES ARE INCURRED BY EPE?

A. Other A&G expenses incurred by the Company include advertising and membership dues, which are presented on Schedule H-5. Payments for lobbying, penalties and fines, and donations are not included in the requested cost of service, as they are recorded below the line in non-operating expenses, except for an immaterial amount of misclassified base period lobbying expense which was

adjusted in Adjustment No. 9 – Miscellaneous General and Other, as noted in Section IV above.

Q94. DO THE A&G EXPENSES YOU ARE SPONSORING INCLUDE THE BOARD OF DIRECTOR'S FEES?

A. Yes. The Board of Directors' fees are the compensation paid to board members for their service on the board and are included as an A&G expense.

Q95. ARE THE BOARD OF DIRECTOR FEES REQUESTED IN THIS CASE REASONABLE?

A. Yes. Board of Directors' fees have declined significantly since 2020. The normalized costs for Board of Directors' compensation described above in Section IV of my testimony were approximately half of what they were in 2020, and consistent with the Commission's decision in the 2020 Rate Case, one-half of those normalized costs for Board of Directors' compensation were excluded from EPE's request in this case.

Q96. ARE EPE'S A&G EXPENSES REASONABLE AND NECESSARY TO PROVIDE SERVICE TO ITS CUSTOMERS?

A. Yes. EPE conducts its A&G functions in a cost effective and efficient manner. It has outsourced information technology and other activities where third parties

could provide these services in a more cost-effective manner. Advertising expenses are a reasonable and necessary part of providing service to customers and consist primarily of costs to provide information and/or instructions to customers. Additionally, advertising expenses included in Test Year Period cost of service have been limited to only those amounts allowed by Rule 350 as discussed above.

VIII. SUMMARY OF SCHEDULES SPONSORED

A. THE A SCHEDULES (COST OF SERVICE SUMMARY)

Q97. WHAT DOES SCHEDULE A, OVERALL COST OF SERVICE, ADDRESS?

A. Schedule A, which I co-sponsor, presents EPE's overall, system-wide cost of service, including items such as O&M expense, depreciation expense, taxes other than income taxes, income taxes, adjustments, and return on rate base. It also includes fuel and purchased power information for the Base Period. This information is presented on a system-wide (total utility) basis, as EPE serves three jurisdictions (retail in Texas and New Mexico and wholesale under the FERC jurisdiction).

Q98. WHAT DOES SCHEDULE A-3, ADJUSTMENTS TO TEST YEAR PERIOD, ADDRESS?

A. Schedule A-3 summarizes EPE's Test Year Period adjustments, by FERC account. Workpaper A-3 includes support and calculations for each adjustment to the Base

Period. Each of these adjustments is discussed above in more detail.

B. THE H SCHEDULES (ACCOUNTING INFORMATION)

Q99. WHAT DO THE H SCHEDULES ADDRESS?

A. The H Schedules that I sponsor address accounting information and expenses relating to employee compensation and benefits, and other administrative and business expenses. I sponsor the following schedules:

Schedule	Description
Schedule H-1	Operation and Maintenance (O&M) Expenses
Schedule H-4	Payroll Distribution and Associated Payroll Taxes
Schedule H-5	Expenses Associated with Advertising, Contributions, Donations, Lobbying, and Political Activities, Memberships, and Outside Services
Schedule H-6	Other Administrative and General (A&G) Expenses

1. SCHEDULE H-1: OPERATION AND MAINTENANCE EXPENSE

Q100. WHAT INFORMATION IS IN SCHEDULE H-1, O&M EXPENSES?

A. Schedule H-1 includes EPE's expenses for each O&M account in the Uniform System of Accounts, with:

- expense by month, as booked for the Base Period, and the total;
- adjustments to the Base Period amounts; and
- total adjusted O&M expense.

2. SCHEDULE H-4: PAYROLL AND BENEFITS INFORMATION

Q101. WHAT INFORMATION IS IN SCHEDULE H-4?

A. Schedule H-4 includes the Base Period payroll expense and associated payroll taxes included in cost of service by FERC account. This schedule is prepared on a total Company basis and also includes the adjustment to payroll expense by FERC account to arrive at the Test Year Period payroll expense and associated payroll taxes the Company is requesting in its cost of service for this case.

3. SCHEDULE H-5: EXPENSES ASSOCIATED WITH ADVERTISING, CONTRIBUTIONS, DONATIONS, LOBBYING AND POLITICAL ACTIVITIES, MEMBERSHIPS AND OUTSIDE SERVICES

Q102. WHAT INFORMATION IS IN SCHEDULE H-5?

A. Schedule H-5 summarizes Base Period advertising, contributions, and donations, lobbying and political activities, memberships and outside services expenses by FERC account and also includes adjustments to Base Period amounts to arrive at the Test Year Period request for these expenses.

4. SCHEDULE H-6: OTHER A&G EXPENSES

Q103. WHAT INFORMATION IS REQUESTED IN SCHEDULE H-6, OTHER A&G EXPENSES?

A. Schedule H-6 requests other A&G expenses including transfers, credits, regulatory commission expenses, and other miscellaneous general expenses not shown elsewhere. In addition to salaries and wages and employee benefits, the Company incurs administrative and general expenses including office supplies and expenses, outside services, insurance, including workers' compensation liability insurance, and property insurance, advertising, rents, regulatory commission expenses, and other miscellaneous general expenses, including directors' fees. EPE is not filing Schedule H-6 with this case because these expenses are summarized and presented by FERC account on Schedule H-1.

C. THE I SCHEDULES (FINANCIAL STATEMENTS)

Q104. WHAT DO THE I SCHEDULES PROVIDE?

A. I schedules contain financial statement information for the Company.

Q105. PLEASE DESCRIBE SCHEDULE I-1 THROUGH I-3.

A. Schedule I-1 contains EPE's Balance Sheet, schedule I-2 contains EPE's Income Statement, and schedule I-3 contains EPE's Statement of Cash flows. The I schedules provide the Base Period and Test Year Period ended September 30, 2025, amounts. All amounts in the I schedules are provided on a total Company basis.

D. THE P SCHEDULES (O&M EXPENSE INFORMATION)

Q106. WHAT INFORMATION IS IN SCHEDULE P-4?

A. Schedule P-4 provides total Company O&M expenses by month and detailed by functional group (i.e., production, transmission, distribution, customer accounts and services, and A&G) for Base and Test Year Periods by month, as well as annual data for four (4) years prior to the Test Year Period and for five (5) years beyond the Test Year Period. The forecasted data is sponsored by EPE witness Richard Gonzalez, and the New Mexico jurisdictional data is sponsored by EPE witness Hernandez.

E. THE Q SCHEDULES (REQUIRED REPORTS)

1. SCHEDULE Q-4: REPORTS TO THE SECURITIES AND EXCHANGE COMMISSION

Q107. WHAT INFORMATION IS PROVIDED IN SCHEDULE Q-4?

A. Schedule Q-4 requests copies of the Company's latest Reports to the Securities and Exchange Commission ("SEC"). This schedule is not applicable to EPE because the Company is not registered with the SEC.

2. SCHEDULE Q-5: FORM 1 REPORTS

Q108. WHAT INFORMATION IS PROVIDED IN SCHEDULE Q-5?

A. Schedule Q-5 provides a copy of EPE's latest FERC Form 1, for the period ending December 31, 2024.

IX. CONCLUSION

Q109. PLEASE STATE YOUR CONCLUSIONS.

A. Since the 2020 Rate Case, the Company's non-fuel O&M expenses have generally remained below inflation-adjusted amounts, including overall combined compensation and benefit costs, which remain reasonable and necessary. The total amount of EPE's requested compensation and benefits is market driven, consistent with other similarly situated businesses, administered in a cost-effective manner, is consistent with the Company's recent market study and is just and reasonable in accordance with Rule 530. Additionally, the Company's other O&M and A&G expenses presented or summarized in the adjustments above follow prior Commission orders and are reasonable and necessary for the Company to support its operations, and the rate base adjustment for EPE's pension and OPEB plans that I discussed is appropriate and consistent with the rate treatment in the 2020 Rate Case.

Q110. DOES THIS CONCLUDE YOUR TESTIMONY?

A. Yes, it does.

LIST OF ADJUSTMENTS TO COST OF SERVICE

Adjustment Nos.	Description	Sponsors

DECLARATION OF STEVEN A. SIERRA IN SUPPORT OF THE FOREGOING DIRECT TESTIMONY TO THE APPLICATION OF EL PASO ELECTRIC COMPANY FOR REVISION OF ITS RETAIL ELECTRIC RATES PURSUANT TO ADVICE NOTICE NO. 317

I, ***Steven S. Sierra***, pursuant to Rule 1-011 NMRA, state as follows:

1. I affirm in writing under penalty of perjury under the laws of the State of New Mexico that the following statements are true and correct.

2. I am over 18 years of age and have personal knowledge of the facts stated herein. I am employed by El Paso Electric Company ("EPE" or "the Company") as the *Director-Financial Accounting.*

3. The foregoing Direct Testimony of Steven A. Sierra, together with all exhibits sponsored therein and attached thereto, is true and accurate based on my knowledge and belief.

4. I submit this Declaration, based upon my personal knowledge and upon information and belief, in support of EPE's ***Application for Revision of Its Retail Electric Rates Pursuant to Advice Notice No. 317.***

FURTHER, DECLARANT SAYETH NAUGHT.

I declare under penalty of perjury that the foregoing is true and correct.

Executed on March 27, 2026.

/s/ Steven A. Sierra

EL PASO ELECTRIC COMPANY
DIRECT TESTIMONY OF
JENNIFER E. NELSON

I. INTRODUCTION AND PURPOSE

Q1. PLEASE STATE YOUR NAME, AFFILIATION, AND BUSINESS ADDRESS.

A. My name is Jennifer E. Nelson. I am a Vice President at Concentric Energy Advisors. Concentric is a management consulting and economic advisory firm that specializes in the North American energy and water industries. Based in Marlborough, Massachusetts; Washington, D.C.; and Calgary, Alberta, Concentric specializes in regulatory and litigation support, financial advisory services, energy market strategies, market assessments, energy commodity contracting and procurement, economic feasibility studies, and capital market analyses. My business address is 293 Boston Post Road West, Suite 500, Marlborough, Massachusetts, 01742.

Q2. ON WHOSE BEHALF ARE YOU SUBMITTING THIS TESTIMONY?

A. I am submitting this direct testimony ("Direct Testimony") before the New Mexico Public Regulation Commission ("Commission") on behalf of El Paso Electric Company ("EPE" or the "Company").

Q3. PLEASE DESCRIBE YOUR EDUCATIONAL BACKGROUND AND EXPERIENCE IN THE ENERGY AND UTILITY INDUSTRIES.

A. I have more than fifteen years of experience in the energy industry, having served

as a consultant and energy/regulatory economist for state government agencies. Since 2013, I have provided consulting services to clients on a range of financial and regulatory issues including cost of capital, ratemaking policy, and regulatory strategy issues. Prior to consulting, I was a staff economist at the Massachusetts Department of Public Utilities, and a petroleum economist for the State of Alaska. I completed utility regulatory training offered by New Mexico State University's Center for Public Utilities and have earned the Certified Rate of Return Analyst designation from the Society of Utility and Regulatory Financial Analysts based on my experience and successful completion of an examination. I hold a Bachelor's degree in Business Economics from Bentley University and a Master's degree in Resource and Applied Economics from the University of Alaska. A summary of my professional and educational background, including a list of my testimony filed before regulatory commissions, is included as Exhibit JEN-1.

Q4. HAVE YOU PREVIOUSLY SUBMITTED TESTIMONY BEFORE THE COMMISSION?

A. Yes, I have. I submitted testimony regarding the cost of capital on behalf of the Company in Case No. 20-00104-UT. Additionally, I have previously filed testimony before more than 20 state regulatory commissions as detailed in Exhibit JEN-1. During my time as a consultant, I have supported the development of expert witness testimony and analyses regarding the cost of capital (i.e., Return on Equity

("ROE") and capital structure) in more than 100 proceedings filed before numerous U.S. state regulatory commissions and the Federal Energy Regulatory Commission.

Q5. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY?

A. The purpose of my Direct Testimony is to present evidence and provide the Commission with a recommendation regarding EPE's ROE[1] to be used for ratemaking purposes, and to assess the reasonableness of the Company's requested capital structure. My conclusions are supported by the data presented in Exhibit JEN-2 through JEN-10.

Q6. WERE EXHIBITS JEN-2 THROUGH JEN-10 PREPARED BY YOU OR UNDER YOUR DIRECT SUPERVISION AND CONTROL?

A. Yes.

II. SUMMARY AND OVERVIEW OF TESTIMONY

Q7. WHAT ARE YOUR CONCLUSIONS REGARDING THE APPROPRIATE COST OF EQUITY AND CAPITAL STRUCTURE FOR EPE?

A. Based on my analyses of three widely used market-based financial models, the Company's risk profile, and the current capital market environment, I conclude that

[1] Throughout my Direct Testimony, I use the terms "ROE" and "cost of equity" interchangeably.

a range of 10.00 percent to 11.40 percent reflects investors' required return for an equity investment in EPE. Within that range, I recommend a ROE at the midpoint, or 10.70 percent.

An ROE in the upper half of the range of the results of the Commission's preferred DCF methodology (i.e., just below the midpoint of the average and upper bound of the 30-day average Constant Growth DCF results) is reasonable and necessary to compensate for the Company's heightened business risk associated with its below-average credit rating, substantial planned capital expenditures, greater proportion of nuclear generation, and significantly smaller size relative to the proxy group. Therefore, my 10.70 percent recommendation gives deference to the Commission's preferred ROE methodology while reflecting the Company's higher risk profile.

As to the Company's capital structure, I conclude that its requested capital structure, consisting of 55.50 percent equity and 44.50 percent debt is consistent with the proportions of debt and equity that finance regulated electric utility operations and should be used for ratemaking purposes. EPE's requested Weighted Average Cost of Capital ("WACC") is shown in Figure JEN-1 below.

/

/

/

Figure JEN-1 : Weighted Average Cost of Capital

	% of Capital	Cost (%)	Weighted Cost
Long-Term Debt	44.50 %	5.43 %	2.42 %
Common Equity	55.50 %	10.70 %	5.94 %
Total	100.00%		8.35 %

Q8. PLEASE PROVIDE A BRIEF OVERVIEW OF THE ANALYSES THAT LED TO YOUR ROE RECOMMENDATION.

A. My recommendation is developed using three widely accepted financial modeling approaches applied to a proxy group of 19 electric utility companies: (1) the constant growth and quarterly growth forms of the Discounted Cash Flow ("DCF") model; (2) the traditional and empirical forms of the Capital Asset Pricing Model ("CAPM"); and (3) the Bond Yield Plus Risk Premium approach. The results of those analytical approaches are summarized in Figure JEN-2 below.

/

/

/

/

/

/

Figure JEN-2: Summary of Results[2]

DCF Model Results		
Constant Growth DCF	**Range**	**Proxy Group Average**
30-Day Average	9.40% -11.19%	10.34%
90-Day Average	9.51% - 11.24%	10.46%
180-Day Average	9.62% - 11.32%	10.55%
Quarterly Growth DCF	**Range**	**Proxy Group Average**
30-Day Average	9.49% - 11.31%	10.43%
90-Day Average	9.57% - 11.36%	10.52%
180-Day Average	9.72% - 11.43%	10.66%

CAPM and Risk Premium Results		
CAPM	**Current 30-Year Treasury Yield (4.66%)**	**Projected 30-Year Treasury Yield (4.58%)**
Long-Term Historical Average Market Return, 5-Year Beta	9.72%	9.69%
Long-Term Historical Average Market Return, 10-Year Beta	10.25%	10.23%
DCF-based Expected Market Return, 5-Year Beta	11.68%	11.66%
DCF-based Expected Market Return, 10-Year Beta	12.42%	12.41%
Empirical CAPM	**Current 30-Year Treasury Yield (4.66%)**	**Projected 30-Year Treasury Yield (4.58%)**
Long-Term Historical Average Market Return, 5-Year Beta	10.33%	10.31%
Long-Term Historical Average Market Return, 10-Year Beta	10.73%	10.72%
DCF-based Expected Market Return, 5-Year Beta	12.53%	12.52%
DCF-based Expected Market Return, 10-Year Beta	13.09%	13.08%

Bond Yield Plus Risk Premium	
Current 30-Year Treasury Yield (4.66%)	10.28%
Projected 30-Year Treasury Yield (4.58%)	10.24%

[2] *See*, Exhibits JEN-2 to Exhibit JEN-6. DCF and CAPM results reflect the average of the proxy group mean and median ROE estimates. Data as of November 28, 2025.

In addition to the results summarized above, my recommendation is supported by: (1) the regulatory environment and the Company's need to access the capital necessary to fund its capital expenditure requirements; (2) the Company's nuclear generation operations; (3) the Company's small size; and (4) the financial risk associated with its capital structure. I also consider the current capital market and macroeconomic environment in which utilities such as EPE operate. Although those factors are relevant to investors, their effect on the Company's cost of equity cannot be directly quantified. Based on these factors, it is my opinion that an ROE above the proxy group average DCF estimates is reasonable.

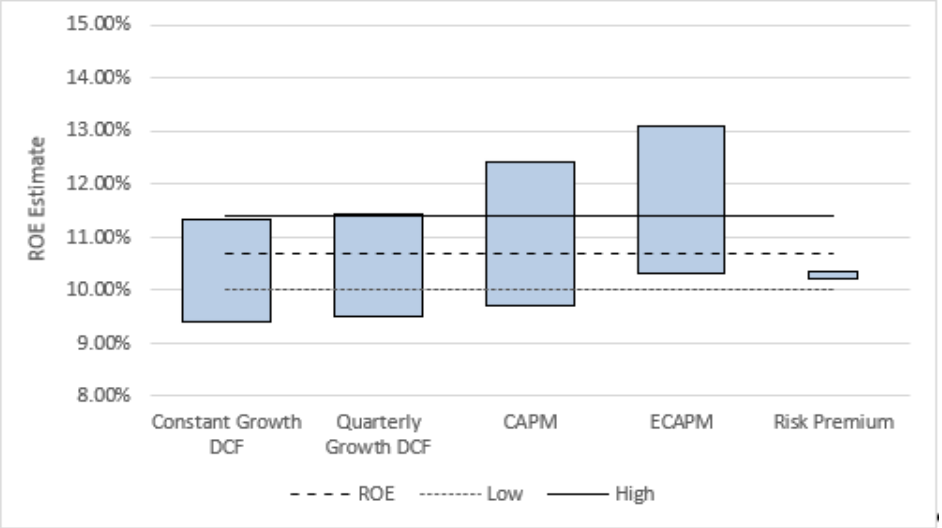
Q9. HOW DID YOU DETERMINE YOUR RECOMMENDED RANGE FROM THE METHODS AND RESULTS SUMMARIZED ABOVE?

A. The cost of equity is an opportunity cost that cannot be precisely quantified. Therefore, it must be estimated using various financial models. Each of the ROE-estimation models is subject to limiting assumptions and each provides a different perspective on investors' return requirements under varying market conditions. The use of multiple financial models, therefore, enables a more robust and comprehensive assessment of the cost of equity instead of relying on one specific estimation model.

After reviewing the analytical results summarized in Figure JEN-2, I assessed the Company's risk profile relative to a group of proxy companies. As

explained in more detail throughout my testimony, EPE's higher risk profile justifies an ROE above the proxy group average. The low end of my range, 10.00 percent, is within the range of the low to average DCF results and the low CAPM results. The high end of my recommended range, 11.40 percent, is within the range of the high end of my DCF results and average of my CAPM results (see Figure JEN-3 below).

Figure JEN-3: Range of ROE Estimate Model Results and Recommendation



My 10.70 percent ROE recommendation is supported by several benchmarks. First, my 10.70 percent ROE recommendation is within the range of DCF estimates using the Commission's preferred DCF methodology and

prescribed inputs.[3] As explained earlier, an ROE above the proxy group average compensates for the Company's higher risk profile, consistent with the *Hope* and *Bluefield* standards described in Section IV.

Second, my 10.70 percent ROE recommendation is equal to the average of (1) my DCF results using mean EPS growth rates (10.49 percent), (2) the average CAPM and ECAPM results (11.34 percent), and (3) average Risk Premium results (10.26 percent). Based on those considerations, and considering the Company's requested capital structure, it is my opinion that an ROE of 10.70 percent is a just and reasonable estimate of EPE's cost of equity.

Q10. HAVE YOU INCORPORATED THE COMMISSION'S PREFERRED APPROACH IN YOUR ANALYSES AND METHODOLOGY?

A. Yes, I have. In its Final Order in Case No. 22-00270-UT, the Commission reiterated its preference for the Constant Growth DCF method with the following inputs: (1) a 30-day average trading period to determine stock price; (2) a full year's growth to adjust the dividend yield; and (3) analyst growth rates from *Value Line*, *Zacks*, and *First Call* (that at the time reported growth rates from Institutional

[3] A dividend yield based on a 30-day average stock price, a full year dividend growth adjustment, and the average analysts' projected earnings per share ("EPS") growth rates from Value Line, Zacks, and I/B/E/S. See, *In re Application of Public Service Company of New Mexico for Revision of its Retail Electric Rates Pursuant to Advice Notice No. 595*, N.M. Pub. Regulation Comm'n, Case No. 22-00270-UT, Final Order at 260 (Jan. 3, 2024).

Brokers' Estimate System, or "I/B/E/S").[4] This approach upheld the methodology in the Recommended Decision that was ultimately approved by the Commission in EPE's last rate proceeding, Case No. 20-00104-UT.[5] To give deference to the Commission's prescribed methodology and inputs, my results include the 30-day average trading period to determine stock price. For a more robust view, I also include longer-ranged stock price averages of 90- and 180-days as further described in Section IV.

Q11. DOES YOUR DCF ANALYSIS INCORPORATE THE COMMISSION'S GUIDANCE ON ITS PREFERRED SOURCES OF ANALYSTS' EARNINGS GROWTH RATES?

A. Yes. As noted above, the Commission indicated in its Final Order in Case No. 22-00270-UT that its preferred DCF inputs include analyst growth rates from three sources: *Value Line*, *Zacks*, and *First Call*. Additionally, the Recommended Decision that was upheld by the Commission in EPE's last rate proceeding directed

[4] *In re Application of Public Service Company of New Mexico for Revision of its Retail Electric Rates Pursuant to Advice Notice No. 595*, N.M. Pub. Regulation Comm'n, Case No. 22-00270-UT, Final Order at 260 (Jan. 3, 2024). I/B/E/S growth rates are now owned by, and available for purchase from, London Stock Exchange Group.

[5] *See, In re Application of Public Service Company of New Mexico for Revision of its Retail Electric Rates Pursuant to Advice Notice No. 267*, N.M. Pub. Regulation Comm'n Case No. 20-00104-UT, Recommended Decision, at 71 ("However, in its next base rate case, EPE should use IBES as one source of its growth estimates.") adopted by Order Adopting Recommended Decision with Modifications, ¶¶A, B (June 23, 2021). I note that *First Call* previously reported growth rates from I/B/E/S but no longer does so.

the Company to include EPS growth rates from I/B/E/S in its next rate case.[6] As such, I have incorporated analysts' projected earnings growth rates from *Value Line*, *Zacks*, and I/B/E/S in my Constant Growth DCF analysis. As shown in Figure JEN-4, the Constant Growth DCF analysis using the Commission's preferred approach results in ROE estimates ranging from 9.40 percent to 11.19 percent, with a mean of 10.34 percent.[7] As noted earlier, an ROE above the proxy group average is necessary to compensate for EPE's higher risk profile relative to the proxy group. Therefore, my 10.70 percent ROE recommendation, which is just below the midpoint of the proxy group average (i.e., 10.34 percent) and high (11.19 percent) DCF results, is reasonable.

Figure JEN-4: Constant Growth DCF Results Using the Commission's Prescribed Inputs[8]

	Low Growth	Mean Growth	High Growth
Proxy Group Mean	9.18%	10.41%	11.34%
Proxy Group Median	9.62%	10.27%	11.04%
Average of the Mean and Median	9.40%	10.34%	11.19%

[6] *Id*.
[7] Average of the proxy group mean and median results.
[8] Exhibit JEN-2.

Q12. GIVEN THAT THE COMMISSION'S PREFERRED APPROACH YIELDS REASONABLE RESULTS IN THE CURRENT MARKET CONDITIONS, WHY DOES IT REMAIN ESSENTIAL TO ASSESS ADDITIONAL METHODOLOGIES?

A. As previously discussed, every ROE estimation method, including the DCF model, is based on assumptions whose consistency with market conditions can vary over time, and each model has strengths and weaknesses. While the Commission's preferred DCF methodology produces reasonable estimates under the current market conditions, that may not always be the case under different market conditions. Therefore, it is important to consider proven methodologies that provide a more comprehensive view across varying market conditions. Furthermore, since the objective of any cost of capital proceeding is to estimate the investor expected return on capital, it is important to consider the methodologies that are employed by investors to inform their investment decisions. The Federal Energy Regulatory Commission ("FERC") explicitly discussed this perspective in its evaluation of additional methodologies:

> To the contrary, our primary reason for proposing to average the results of a DCF analysis with the results of the CAPM, Expected Earnings, and Risk Premium analyses is that investors use those models, in addition to the DCF methodology, to inform their investment decisions. Under this approach, whether a change in the capital market conditions is anomalous or persistent is of less importance, because relying on multiple financial models makes it more likely that our decision will accurately reflect how investors are making their investment decisions. As discussed

above, a key consideration in determining just and reasonable utility ROEs is determining what ROE a utility must offer in order to attract capital, i.e., induce investors to invest in the utility in light of its risk profile.[9]

While my ROE recommendation is within the range of the results of Commission's preferred approach, this alignment may not be consistent across all future market conditions. Therefore, I continue to employ the CAPM and Risk Premium methodologies in addition to the constant and quarterly growth forms of the DCF models.

Q13. DOES THE CONSIDERATION OF WELL-ESTABLISHED, ALTERNATIVE METHODS, SUCH AS RISK PREMIUM-BASED MODELS, DEPART FROM THE PRECEDENT ESTABLISHED IN THE 2023 SUPREME COURT OF NEW MEXICO DECISION?[10]

A. I do not believe it does. I acknowledge the Commission's precedent of relying exclusively on the Constant Growth DCF model in its determination of the ROE in prior decisions. Notably, in its 2023 Decision, the Supreme Court of New Mexico ("the Court") underscored that "the commission may change its past practices or

[9] FERC, *Order Directing Briefs*, 165 FERC ¶ 61,118, at 28. (November 15, 2018).
[10] *El Paso Elec. Co. v. N.M. Pub. Regulation Comm'n*, Nos. S-1-SC-38874 & S-1-SC-38911, 2023 WL 3166936 (NM Sup. Ct. 2023) (unpublished).

procedures, provided that substantial evidence on the record justifies such a change."[11]

Further, New Mexico has noted the importance of reviewing multiple methods in utility proceedings. Although I am not an attorney, it is my layperson's understanding that the Court has previously found that the Commission is not bound to a single method, noting (consistent with *Hope* and *Bluefield*), that the end result is the principle consideration. As the Court noted in *Hobbs Gas*:

> Neither New Mexico case law nor the Public Utility Act imposes any particular method of valuation upon the Commission in ascertaining the rate base of a utility. *Mountain States Tel. v. New Mexico State Corp.*, 90 N.M. 325, 563 P.2d 588 (1977). Nor does the spirit of the statute tie the Commission down to the consideration of a single factor in establishing rates.[12]

Citing to its decision in *Mountain States Telephone*, the Court further noted that:

> The Commission was not bound to the use of any single formula or combination of formulae in determining rates. The rate-making function involves the making of pragmatic adjustments. It is the result reached, not the method employed, which is controlling. (Citations omitted.)[13]

[11] See *El Paso Elec. Co. v. NMPRC*, 2023 WL 3166936, (NMSC 2023) (interpreting NMSA 1978, § 62-6-14(C)).

Q14. PLEASE EXPLAIN WHY AN INCREASE IN EPE'S ROE IS JUSTIFIED AND SUPPORTED BY THE EVIDENCE.

A. Quite simply, the cost of equity has increased since EPE's last rate case, a fact that is supported by several objective measures. Specifically, government and utility bond yields are significantly higher than the levels observed during EPE's last rate case. Accordingly, regulators have recognized this higher capital cost environment by authorizing higher ROEs for electric utilities since 2021. Lastly, the model results, including the Commission's preferred DCF approach, reflect this higher capital cost environment and have consequently increased since I filed my testimony in EPE's last rate case.

Q15. HOW HAS THE CAPITAL COST ENVIRONMENT CHANGED SINCE EPE'S LAST NEW MEXICO RATE CASE WAS DECIDED IN 2021?

A. By several measures, the capital cost environment has increased significantly since the Company's last New Mexico rate case was filed in May 2020. As shown in Figure JEN-5 and Figure JEN-6, at the time of the Commission's order in the Company's 2020 rate case, the 30-year Treasury yield stood at approximately 1.33 percent and the Baa-rated utility bond index stood at 3.60 percent. As of November 28, 2025, the 30-year Treasury bond yield and the Baa-rated utility bond index were 4.66 percent and 5.76 percent, respectively, an *increase of approximately 333 and 216 basis points, respectively*.

Figure JEN-5: 30-Year Treasury Yield

(May 2020 – November 2025 and 5-year Projection)[14]

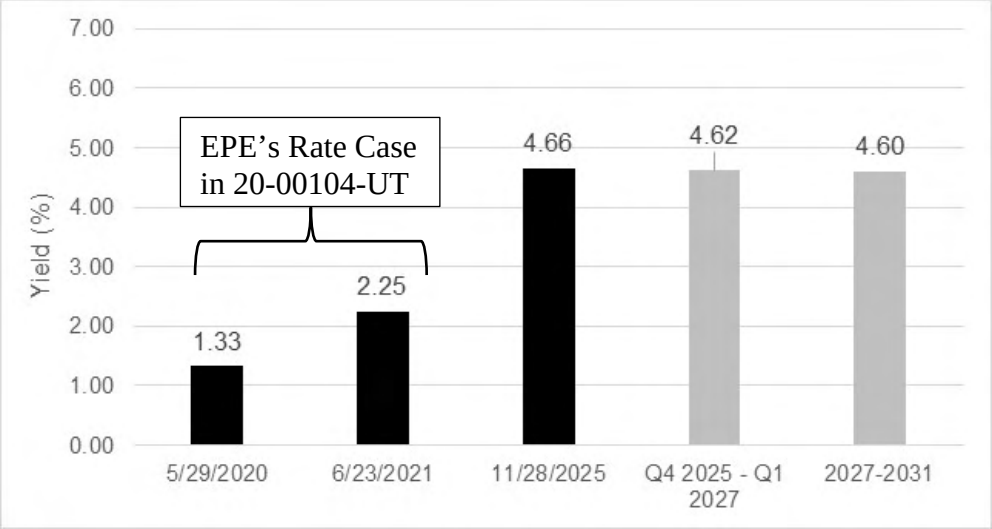

Figure JEN-6: Baa Utility Bond Index

(May 2020 – November 2025 and 5-year Projection)[15]

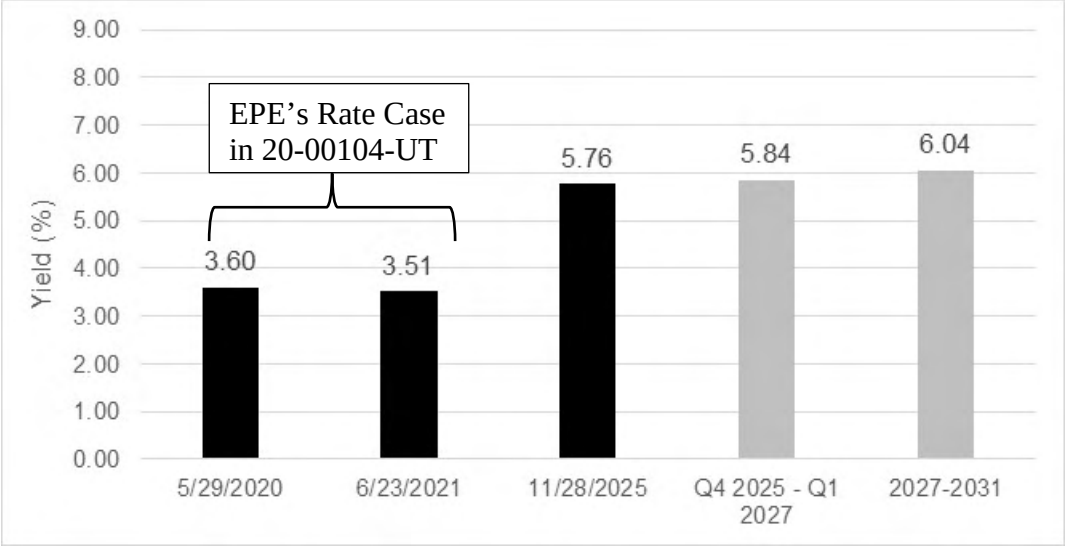

Figure JEN-5 and Figure JEN-6 also show that long-term government and utility bond yields are expected to remain well above the levels observed in the Company's last rate case in the near- to medium-term.

As shown in Figure JEN-7 below, inflation has increased by more than 27 percent on a cumulative basis since the Company filed its last rate case in May 2020.

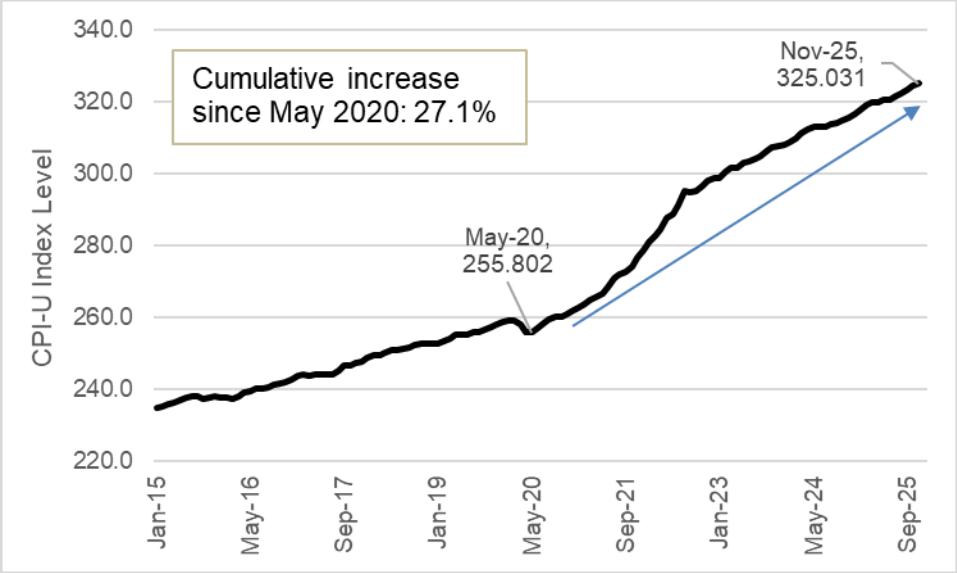
[15] Source: Bloomberg Professional (30-day average) and Federal Reserve Bank of St. Louis, FRED Economic Database (30-day average). Projections sourced from Blue Chip Financial Forecasts, Vol. 44 No. 12, December 1, 2025, at 2 (Q4 2025-Q1 2027) and 14 (2027-2031). Projected Utility "Baa" bond yields are estimated from Blue Chip's projected Baa corporate bond yields plus the average historical spread between Baa-rated corporate and Baa-rated utility bond yields over the last five years.

Figure JEN-7: Consumer Price Index (2015-2025)[16]



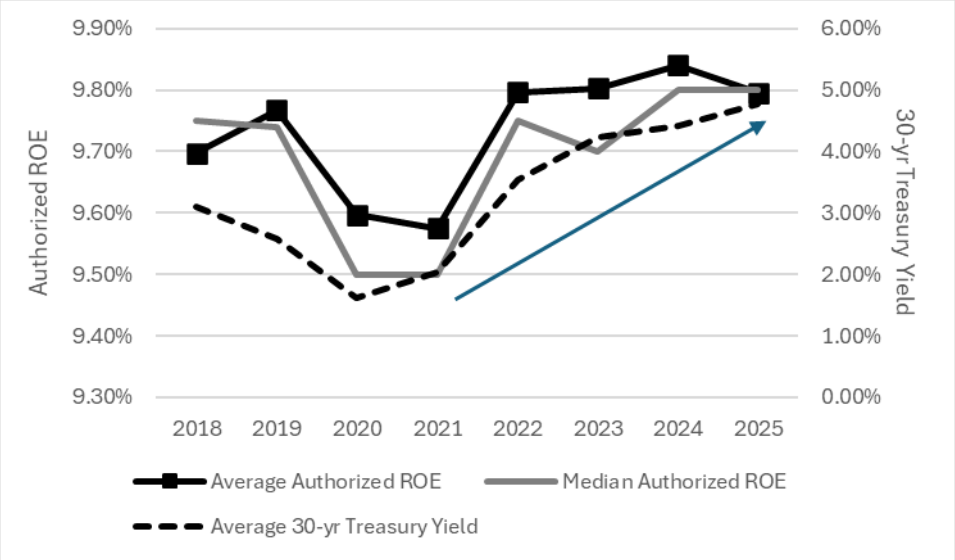
Q16. HOW HAVE AUTHORIZED RETURNS FOR VERTICALLY INTEGRATED ELECTRIC UTILITIES CHANGED WITH HIGHER BOND YIELDS?

A. Prevailing long-term bond yields have a significant impact on utilities' cost of capital, as well as investors' assessment of fair and reasonable return of investment capital. For example, rising treasury yields signal to investors that they can earn a higher return investing in risk-free government bonds. Consequently, investors expect higher returns when investing in assets riskier than government-issued bonds, such as utility equities. As shown in Figure JEN-8, regulators have

[16] Source: Bureau of Labor Statistics.

acknowledged rising capital costs in their ROE decisions, albeit in a lagged fashion. As shown in Figure JEN-8, as the 30-year Treasury bond yield increased from the lows experienced in 2020 and 2021, authorized ROEs for vertically integrated electric utilities have increased. I note, however, that annual average and median authorized ROEs obscure the case specific nuances inherent in each proceeding and thus should not be viewed in a vacuum. Nevertheless, the trend in authorized ROEs has mirrored the trend in long-term government bond yields and has increased in recent years.

Figure JEN-8: Authorized Returns for Vertically Integrated Utilities vs. 30-Year U.S. Treasuries[17]



[17] Source: Regulatory Research Associates ("RRA").

Q17. HOW DO THE MODEL RESULTS PRESENTED IN THIS CASE COMPARE TO THOSE SUBMITTED IN CASE NO. 20-00104-UT IN MAY 2020?

A. As shown in Figure JEN-9, each of the model results has increased between 7 and 123 basis points compared to the analysis filed in my direct testimony in the Company's last rate case.[18] Most notably, the Constant Growth DCF results using the Commission's preferred inputs *increased 123 basis points*. I note that the proxy group in Case No. 20-00104-UT largely overlaps with my proxy group in this proceeding, containing 14 of the 19 companies in my proxy group in this case. Therefore, the composition of the proxy group is not a meaningful driver of the change in model results between the two proceedings.

Figure JEN-9: Comparison of Constant Growth DCF, CAPM, and Risk Premium Results

Model	Case No. 20-00104-UT	Case No. 25-00082-UT	Difference (basis points)
Constant Growth DCF[19]	9.18%	10.41%	+123
Average Forward CAPM & ECAPM	11.56%	12.42%	+86
Risk Premium	10.19%	10.26%	+7

[18] In Case No. 20-00104, I adopted the direct testimony of Robert B. Hevert.
[19] Proxy group average Constant Growth DCF results using a full year dividend growth rate, 30-day stock price average, and average of the three analysts' projected EPS growth rates.

Q18. HOW IS THE REMAINDER OF YOUR DIRECT TESTIMONY ORGANIZED?

A. The remainder of my Direct Testimony is organized as follows:

- Section III – Reviews the current capital market conditions and the effect on the cost of equity;
- Section IV – Provides a summary of issues regarding the cost of equity estimation in regulatory proceedings, describes the regulatory guidelines pertinent to the development of the cost of capital, explains my selection of the proxy group used to develop my analytical results, and describes my analyses on which my ROE determination is based;
- Section V – Discusses the specific business risks that have a direct bearing on the Company's cost of equity;
- Section VI – Assesses the Company's requested capital structure; and
- Section VII – Summarizes my conclusions and recommendations.

III. CAPITAL MARKET ENVIRONMENT

Q19. DO ECONOMIC CONDITIONS INFLUENCE THE REQUIRED COST OF CAPITAL AND REQUIRED RETURN ON COMMON EQUITY?

A. Yes. The required cost of capital, including the ROE, is a function of prevailing and expected economic and capital market conditions. Each of the analytical

models used to estimate the required ROE is influenced by current and expected capital market conditions. Therefore, an evaluation of current and projected market conditions is integral to any ROE recommendation.

Q20. WHAT ARE THE KEY MACROECONOMIC FACTORS AFFECTING THE COST OF EQUITY FOR REGULATED UTILITIES IN THE CURRENT AND PROSPECTIVE CAPITAL MARKETS?

A. The cost of equity for regulated utilities is currently affected by several key factors, including: (1) the interest rate environment and central bank monetary policy; (2) inflationary pressure and the outlook for inflation and long-term government and utility bond yields; and (3) uncertainty in the economic environment due to geopolitical events. As discussed below, although the Federal Reserve reduced the Federal Funds rate three times in both 2024 and 2025, interest rates and inflation are expected to remain above the levels experienced prior to the COVID-19 pandemic. Further, geopolitical events present uncertainties with respect to the near-term economic and capital market in which the Company will be raising external capital.

Q21. PLEASE SUMMARIZE THE CHANGES IN CAPITAL MARKET CONDITIONS IN RECENT MONTHS.

A. At the end of 2024, financial markets were optimistic that the Federal Reserve was

close to attaining a "soft landing" by taming inflation without a consequential rise in unemployment. In 2025, however, economic and federal policy uncertainty climbed sharply. As Blue Chip Financial Forecasts explains, "Numerous Fed officials have noted that there are currently upside risks to the inflation outlook while there are downside risks to the employment outlook, a combination that makes the near-term course for monetary policy very uncertain."[20] Consumer sentiment fell nearly 25 percent year over year between January 2025 and January 2026.[21]

Despite the uncertain economic outlook and weak consumer sentiment, Gross Domestic Product ("GDP") remained resilient. As shown in Figure JEN-10, after posting a decline in the first quarter of 2025, real GDP rose in each of the next two quarters, posting an annual increase of 4.3 percent in the third quarter of 2025. This demonstrates that there are mixed signals among the economic indicators.

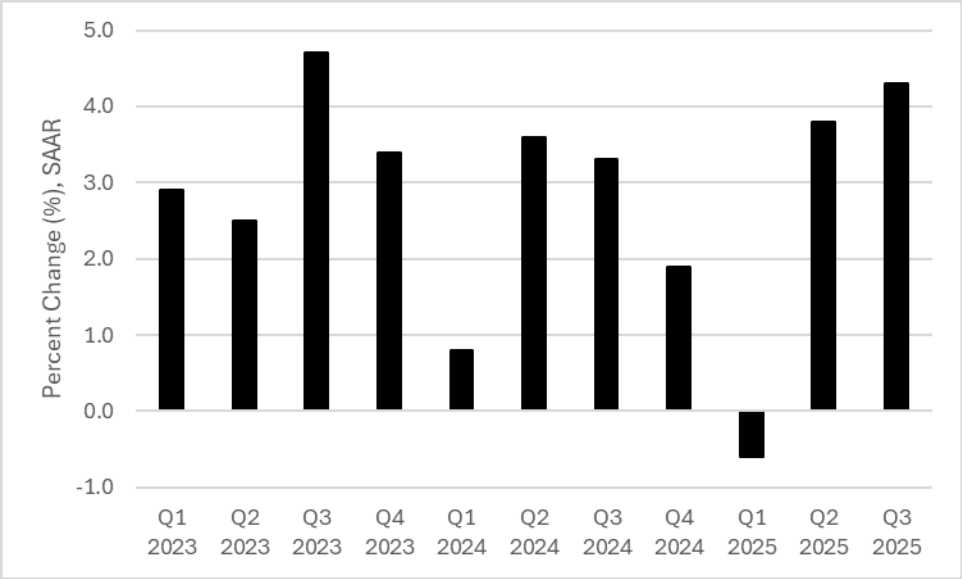
Figure JEN-10: Quarterly Real GDP (Seasonally Adjusted at Annual Rates)[22]



Q22. PLEASE DESCRIBE RECENT MONETARY POLICY ACTIONS BY THE FEDERAL RESERVE.

A. At its December 2025 meeting, the Federal Open Market Committee ("FOMC") lowered the target range of the Federal Funds rate for the third time in 2025 by 25 basis points to 3.50 to 3.75 percent. In doing so, the FOMC noted the downside risks to employment on one hand but that "[i]nflation has moved up since earlier in the year and remains somewhat elevated."[23] The Federal Reserve kept the Federal Funds rate unchanged in its January 28, 22026,meeting citing strong economic

[22] Source: U.S. Bureau of Economic Analysis.
[23] Federal Reserve FOMC Press Release, December 10, 2025, https://www.federalreserve.gov/newsevents/pressreleases/monetary20251210a.htm.

activity and low, but stabilizing job gains. However, the Federal Reserve stated that "uncertainty about the economic outlook remains elevated" and that "inflation remains somewhat elevated."[24] Despite dissent among the Federal Reserve voting members, the market sees low odds of the Federal Reserve cutting rates at its upcoming March meeting and expects a rate cut in the summer at the earliest instead.[25]

Q23. DO THE FEDERAL RESERVE'S RECENT CUTS TO THE FEDERAL FUNDS RATE MEAN THAT LONG-TERM GOVERNMENT AND UTILITY BOND YIELDS WILL AUTOMATICALLY FOLLOW?

A. Not necessarily. Long-term bond yields – like the 30-year Treasury yield that is applied in the ROE models and used as a benchmark for long-term utility debt – are less sensitive to the Federal Reserve's monetary policy. Long-term interest rates are influenced by the demand and supply for long-term bonds, inflation expectations, fiscal policy, and federal debt levels. As explained in more detail below, consumers' long-term inflation expectations remain elevated and fiscal policy has become more uncertain; thus, long-term government bonds have not declined commensurate with the Federal Reserve's reductions in the Federal Funds

[24] Federal Reserve FOMC Press Release, January 28, 2026, https://www.federalreserve.gov/monetarypolicy/files/monetary20260128a1.pdf

[25] J.P. Morgan Wealth Management, "Fed leaves rate unchanged to start 2026: Is a cut coming in March?" January 29, 2026. Accessible at: https://www.jpmorgan.com/insights/markets-and-economy/economy/fed-meeting-january-2026.

rate. As shown in Figure JEN-11 below, since the end of June 2024 (prior to the Federal Reserve's first round of rate cuts), the 1-year and 2-year Treasury yields declined by 161 and 124 basis points, respectively, whereas the 30-year Treasury yields increased by 33 basis points. Since models used to estimate the just and reasonable ROE rely on long-term yields, the market movement of short-term yields does not influence the ROE model results in the way that long-term yields do.

Figure JEN-11: U.S. Treasury Yields (June 2024 vs. December 2025)[26]

	1-year Treasury	2-year Treasury	30-year Treasury
June 28, 2024	5.09%	4.71%	4.51%
December 31, 2025	3.48%	3.47%	4.84%
Change	-1.61%	-1.24%	0.33%

Q24. ARE CHANGES IN LONG-TERM BOND YIELDS MORE RELEVANT TO THE COST OF EQUITY FOR UTILITIES THAN SHORT-TERM INTEREST RATES?

A. Yes. The 30-year Treasury bond yield is a direct input to both the CAPM and Risk Premium models because the term of the bond aligns with the long life of electric utility assets. As long-term bond yields increase, the cost of capital generally

[26] Source: Spot yields reported by Federal Reserve Board of Governors, H15 Selected Interest Rates. https://www.federalreserve.gov/datadownload/Choose.aspx?rel=H15.

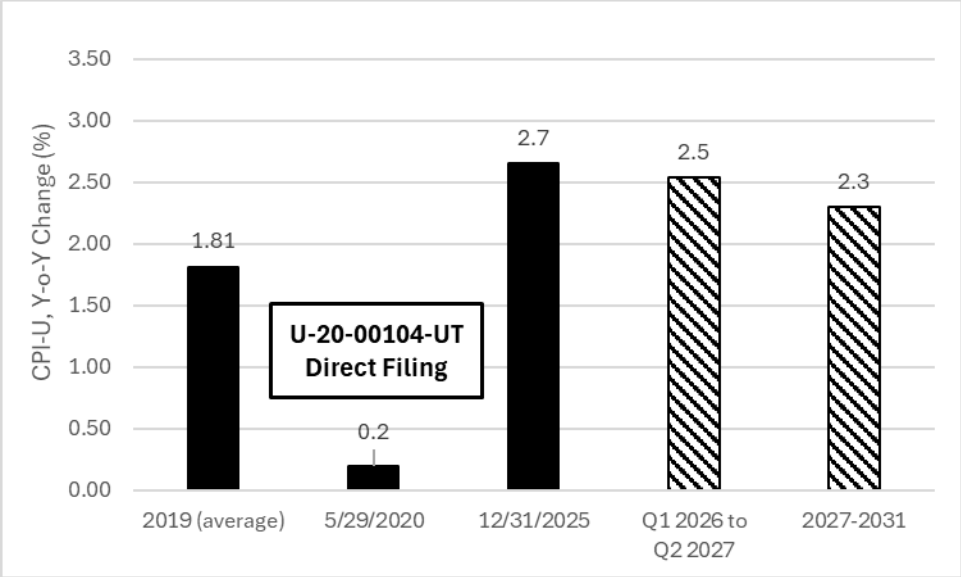
increases, and the ROE estimates from those two models also increase, although not on a one-to-one basis. While interest rates are not a direct input to the DCF model, dividend yields on utility stocks must compete with yields on Treasury bonds. As interest rates on government bonds increase, utilities must offer a higher dividend yield to attract and retain investors, signaling an increase in the cost of equity for utilities. All else equal, higher dividend yields produce higher ROE estimates in the DCF model.

Q25. WHAT ARE THE EXPECTATIONS FOR INFLATION AND LONG-TERM GOVERNMENT AND UTILITY BOND YIELDS IN THE NEAR TERM?

A. Both inflation and long-term government and utility bond yields are expected to remain elevated and significantly above their pre-pandemic levels. As discussed earlier, long-term government and utility bond yields have been higher than the levels experienced in 2020 and 2021 during the Company's last rate case and are expected to remain near current levels over the next five years (see Figures JEN-5 and JEN-6 above).

Similarly, inflation is also higher than it was prior to the COVID-19 pandemic and at the time the Company filed its last rate case. Although growth in inflation is expected to cool slightly, it is clear that economists do not expect inflation to fall to the levels seen pre-pandemic in the near term.

Figure JEN-12: Consumer Price Index (2019, 2020 and Forecasted)[27]



Q26. HOW MIGHT PERSISTENT INFLATION AND ELEVATED INTEREST RATES AFFECT THE COST OF EQUITY FOR UTILITIES?

A. Longer-term bonds like the 30-year Treasury bond are more sensitive to inflation expectations than shorter-term bonds because their value is influenced more by inflation due to their longer maturity holding period and reinvestment rate implications. Thus, as the value (price) of bonds declines due to higher inflation expectations, the yield increases. Because utilities are capital intensive enterprises,

[27] Source: Federal Reserve Bank of St. Louis, FRED Economic Database, series CPIAUCSL, https://fred.stlouisfed.org/series/CPIAUCSL, Blue Chip Financial Forecasts, Vol. 45, No. 1, at 2 and Vol. 44, No. 12, at 14.

higher inflation and interest rates tend to have a negative effect on utility stocks. Higher inflation and interest rates lead to increases in the cost of capital for utilities.

Q27. PLEASE DISCUSS THE RECENT CHANGES IN U.S. TRADE AND GEOPOLITICAL POLICY.

A. During 2025, the Trump administration announced, implemented, or delayed implementation of tariffs on numerous U.S. trade partners. A highlight of this is when, on April 2, 2025, President Trump announced the administration would impose a 10 percent base tariff on all imports from nearly every country plus an additional "reciprocal" tariff customized for each of approximately 60 countries.[28] These reciprocal tariffs were subsequently paused, but significant uncertainty remains around the future course of U.S. trade policy and how it will affect the economy.

Shifting federal trade policies created significant policy and market uncertainty in 2025; as can be seen in Figure JEN-13 below, the Federal Reserve Bank of St. Louis' Economic Policy Uncertainty Index (the "EPU Index") spiked to levels not seen since the COVID-19 pandemic. While the EPU Index has partially subsided in recent months (to 350.42 as of December 2025), it is still significantly above the average level (152.53). The January 3, 2026, U.S. bombing

[28] https://www.whitehouse.gov/presidential-actions/2025/04/regulating-imports-with-a-reciprocal-tariff-to-rectify-trade-practices-that-contribute-to-large-and-persistent-annual-united-states-goods-trade-deficits/.

of Venezuela and subsequent capture of Venezuelan President Maduro,[29] as well as the potential criminal investigations into Federal Reserve board members including Chair Powell[30] further increase the economic and geopolitical uncertainty. Uncertainty increases risk, which increases the cost of equity, all else equal. On February 20, 2026, the U.S. Supreme Court ("Supreme Court") ruled that the Trump administration's tariff policies are unconstitutional; however, the economic policy uncertainty remains as U.S. trade policy continues to evolve and the ultimate impact of the Supreme Court's decision on business and trade remains unclear.

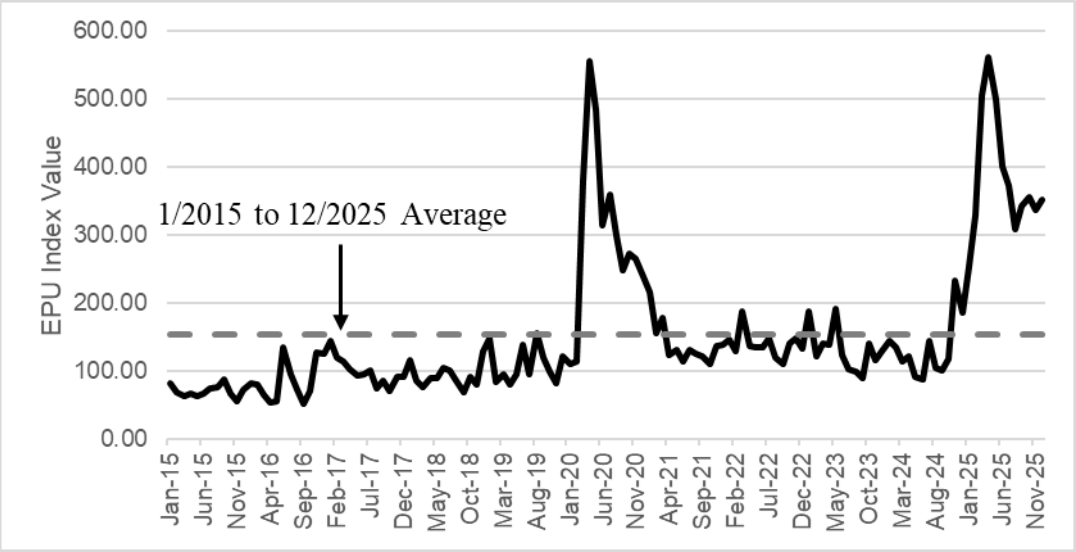
Figure JEN-13: Economic Policy Uncertainty Index
January 1, 2015 – December 31, 2025[31]



Q28. WHAT CONCLUSIONS DO YOU DRAW FROM YOUR REVIEW OF THE CURRENT CAPITAL MARKET ENVIRONMENT AND ITS IMPLICATIONS FOR THE COMPANY'S COST OF EQUITY?

A. My primary conclusion is that the economic and financial market environment is uncertain concerning inflation, the strength of the economy, the outcome of federal trade policy and other geopolitical events, and the path of monetary policy. Although the Federal Reserve has cut the level of short-term interest rates, long-

[31] Source: Federal Reserve Bank of St. Louis, FRED Economic Database, series USEPUINDXD, https://fred.stlouisfed.org/series/USEPUINDXD/.

term government and utility bond yields have not followed suit and remain elevated relative to the very low interest rate environment experienced in the prior decade. Lastly, inflation is expected to remain elevated and above pre-pandemic levels. These factors underscore the importance of using multiple models when determining the Company's cost of equity to gain a comprehensive perspective of the effect of fluid and evolving market conditions on the cost of equity.

IV. COST OF EQUITY ESTIMATION

A. REGULATORY GUIDELINES AND FINANCIAL CONSIDERATIONS

Q29. BEFORE ADDRESSING THE SPECIFIC ASPECTS OF THIS PROCEEDING, PLEASE EXPLAIN THE CONNECTION BETWEEN THE COST OF CAPITAL AND A UTILITY'S COST OF SERVICE.

A. Under the cost-of-service ratemaking paradigm, the development of utility rates begins with determining the utility's total cost to serve customers. This is known as the revenue requirement, since the utility's revenues must be sufficient to recover its costs to serve customers. The revenue requirement consists of four components: (1) operating and maintenance ("O&M") expenses, (2) taxes, (3) the return *of* capital through depreciation expense, and (4) the return *on* capital through the regulated return on rate base. The return on rate base is calculated as the weighted average cost of capital multiplied by the rate base. The return on capital must be sufficient to allow the utility to repay its debt obligations and compensate equity

investors for the use of their financial capital. From that important perspective, the return on capital reflects a cost to the utility just as any other component of the revenue requirement.

Q30. PLEASE EXPLAIN THE COST OF CAPITAL CONCEPTUALLY.

A. The cost of capital is the return that investors require to commit capital to a firm. Investors will provide funds to a firm only if the return that they *expect* is equal to, or greater than, the return that they *require* to accept the risk of investing capital in the firm. Simply, the cost of capital is the expected rate of return prevailing in the capital markets on alternative investments of similar risk.[32] Conceptually, the cost of capital is: (1) forward looking and reflects an expected rate of return; (2) an opportunity cost; (3) determined in the capital markets, and (4) dependent on, and proportional to, the risk of the investment.[33]

Because the cost of equity is expectational and premised on the principle of opportunity costs, it cannot be precisely quantified. Instead, it must be estimated by applying market data to various financial models that are simplified representations of investor behavior and expectations. Further, equity investors have a claim on cash flows only after debt holders are paid; the uncertainty (or risk)

[32] Lawrence A. Kolbe, James A. Read, Jr., and George R. Hall, The Cost of Capital – Estimating the Rate of Return for Public Utilities, The MIT Press, Cambridge, MA, at 13 (1985).
[33] Lawrence A. Kolbe, James A. Read, Jr., and George R. Hall, The Cost of Capital – Estimating the Rate of Return for Public Utilities, The MIT Press, Cambridge, MA, at 13 (1985).

associated with those residual cash flows determines the cost of equity. Because equity investors bear the residual risk, they take greater risks and require higher returns than debt holders. Ultimately, the cost of equity should reflect the return that investors require considering the subject company's risk profile and the returns available on comparable investments.

Q31. HOW IS THE COST OF EQUITY ESTIMATED IN REGULATORY PROCEEDINGS?

A. Regulated utilities primarily use long-term capital (*e.g.*, common stock and long-term debt) to finance their permanent rate base. The rate of return for a regulated utility is calculated as its weighted average cost of capital, in which the costs of the individual sources of capital are weighted by their respective book values.

The ROE reflects the cost of raising and retaining equity capital and is estimated by using one or more market-based analytical approaches. Although quantitative models are used to estimate the ROE, the cost of equity cannot be precisely quantified through a strict mathematical exercise. As such, a reasonable and appropriate ROE reflects the financial, economic, and regulatory environment in which the estimate is developed, as well as the subject company's risk profile.

Q32. PLEASE BRIEFLY SUMMARIZE THE GUIDING PRINCIPLES USED IN ESTABLISHING THE COST OF CAPITAL FOR A REGULATED

UTILITY.

A. Public utility regulation is rooted in the principle that utilities receive a fair rate of return sufficient to attract the capital required to provide safe and reliable public utility service for customers at reasonable rates. The Supreme Court established the guiding principles for establishing a fair return for capital in two seminal cases: (1) *Bluefield Water Works and Improvement Co. v. Public Service Comm'n.* ("*Bluefield*");[34] and (2) *Federal Power Comm'n v. Hope Natural Gas Co.* ("*Hope*").[35] In *Bluefield*, the Court stated:

> A public utility is entitled to such rates as will permit it to earn a return upon the value of the property which it employs for the convenience of the public equal to that generally being made at the same time and in the same general part of the country on investments in other business undertakings which are attended by corresponding risks and uncertainties; but it has no constitutional right to profits such as are realized or anticipated in highly profitable enterprises or speculative ventures. The return should be reasonably sufficient to assure confidence in the financial soundness of the utility and should be adequate, under efficient and economical management, to maintain and support its credit, and enable it to raise the money necessary for the proper discharge of its public duties.[36]

In *Hope*, the Supreme Court reiterated the three primary standards for a regulated rate of return:

> From the investor or company point of view it is important that there be enough revenue not only for operating expenses but also

[34] See, Bluefield Water Works and Improvement Co. v. Public Service Comm'n., 262 U.S. 679, 692 (1923).
[35] See, Federal Power Comm'n v. Hope Natural Gas Co., 320 U.S. 591, 603 (1944).
[36] Bluefield Water Works and Improvement Co. v. Public Service Comm'n., 262 U.S. 679, 692 (1923).

> for the capital costs of the business. These include service on the debt and dividends on stock…By that standard, the return to the equity owner should be commensurate with returns on investments in other enterprises having corresponding risks. That return, moreover, should be sufficient to assure confidence in the financial integrity of the enterprise, so as to maintain its credit and to attract capital.[37]

In summary, the Supreme Court has recognized that the fair return should be: (1) commensurate with returns investors expect to earn on other investments of similar risk (the "comparable return" standard); (2) sufficient to assure confidence in the company's financial integrity (the "financial integrity" standard); and (3) adequate to maintain and support the company's credit and to attract capital (the "capital attraction" standard). Importantly, a fair and reasonable rate of return satisfies all three standards.

Q33. HAS THE COMMISSION ALSO APPLIED THE *HOPE* AND *BLUEFIELD* STANDARDS AS GUIDANCE FOR SETTING RATES?

A. Yes, it has. The Commission upholds the precedents of the *Hope* and *Bluefield* cases and regularly acknowledges that a utility is entitled to a fair and reasonable return.[38] The Public Utility Act describes the Commission's obligation with regard to establishing a reasonable return:

[37] Federal Power Comm'n v. Hope Natural Gas Co., 320 U.S. 591, 603 (1944).
[38] See for example, In re Application of Public Service Company of New Mexico for Revision of its Retail Electric Rates Pursuant to Advice Notice No. 595, N.M. Pub. Regulation Comm'n, Case No. 22-00270-UT, Final Order at 260 (Jan. 3, 2024).

> It is the declared policy of the state that the public interest, the interest of consumers and the interest of investors require the regulation and supervision of public utilities to the end that reasonable and proper services shall be available at fair, just and reasonable rates and to the end that capital and investment may be encouraged and attracted so as to provide for the construction, development and extension, without unnecessary duplication and economic waste, of proper plants and facilities and demand-side resources for the rendition of service to the general public and to industry.[39]

The objective of utility regulation is longstanding. For example, the Supreme Court of New Mexico's ruling in *Southern Union Gas Co. v. N.M. Pub. Serv. Comm'n* cites that along reasonable and proper services made available to the public at fair, just and reasonable rates, capital and investment should be encouraged and attracted for the plants and facilities which are to render that service.[40]

Q34. WHY IS IT IMPORTANT FOR A UTILITY TO BE ALLOWED A REASONABLE OPPORTUNITY TO EARN A RETURN ADEQUATE TO ATTRACT CAPITAL?

A. Regulated utilities have a legal obligation to serve regardless of prevailing economic and capital market conditions. Unlike non-regulated firms, a regulated utility cannot decide to whom it provides utility service in its footprint, how much

[39] NM Stat § 62-3-1 (2024).
[40] Southern Union Gas Co. v. N.M. Pub. Serv. Comm'n, 1972-NMSC-072, 84 N.M. 330, 503 P.2d 310.

service it delivers, nor when it provides service. Utility service requires substantial amounts of capital, and utilities must ensure they have access to external financial capital (debt and equity) on cost effective terms to finance its assets not only during times when markets are favorable, but also when markets are volatile or constrained (e.g., during periods of high inflation and interest rates, global pandemics, changes in government, and economic recessions). A return that is adequate to attract capital at reasonable terms enables the utility to provide safe and reliable service while maintaining its financial integrity. As discussed above, and in keeping with the *Hope* and *Bluefield* standards, that return should be commensurate with the returns expected for investments of equivalent risk.

The ratemaking process is based on the principle that, for investors and companies to commit the capital needed to provide safe and reliable utility services, the utility must have a reasonable opportunity to recover the return of, and the market-required return on, invested capital. The allowed ROE should enable the subject utility to maintain its financial integrity in a variety of economic and capital market conditions. A return that is adequate to attract capital at reasonable terms enables the utility to provide safe, reliable service to customers while maintaining its financial soundness.

Further, the financial community carefully monitors utility companies' current and expected financial conditions, as well as the regulatory environment in which those companies operate. In that respect, the regulatory environment is one

of the most important factors considered in both debt and equity investors' assessments of risk.[41] That consideration is especially important during uncertain economic and financial conditions in which the utility may require access to capital markets.

The outcome of the Commission's order in this case, therefore, must provide EPE with the opportunity to earn an ROE that is: (1) adequate to attract capital at reasonable terms, (2) sufficient to ensure its financial integrity, and (3) commensurate with returns on investments in enterprises having corresponding risks. Providing EPE with a reasonable opportunity to earn its market-based cost of equity ensures that customers receive safe and reliable service at a reasonable cost in all market environments, as the New Mexico Public Utility Act intends.

Q35. HAVE RECENT EVENTS ILLUSTRATED THE IMPORTANCE FOR A UTILITY TO MAINTAIN A STRONG FINANCIAL PROFILE TO ENABLE ACCESS TO CAPITAL?

A. Yes. There have been several significant events that have affected utilities in recent years. These include severe weather events and natural disasters that are unpredictable, costly, and beyond utilities' control such as wildfires, floods, landslides, and severe heat, for example. Utilities must be prepared operationally

[41] See, for example, Moody's Ratings, Rating Methodology: Regulated Electric and Gas Utilities, at 7 (August 6, 2024).

and financially for significant and unpredictable weather events that are occurring with increasing frequency. Other examples include global events like the COVID-19 pandemic, the war in Ukraine, or the 2008-2009 Great Recession that can affect utilities directly, but also the economic and capital market environments in which utilities raise capital. Because utilities have an obligation to serve and cannot delay investments in critical infrastructure, they must be able to access capital markets efficiently and on reasonable terms even when markets are volatile or constrained. A utility with a strong financial profile has a higher likelihood (though not a guarantee) of withstanding adverse events and accessing capital at reasonable terms when needed for the benefit of customers.

Lastly, EPE's significantly smaller size magnifies these risks because as a significantly smaller company, unpredictable and adverse events may affect EPE's revenues or expenses more acutely. It is critical that the Company has the financial strength to withstand such events with a margin of safety.

Q36. WHAT ARE YOUR CONCLUSIONS REGARDING THE REGULATORY PRINCIPLES PERTAINING TO THE COST OF CAPITAL FOR A PUBLIC UTILITY?

A. Congruent to other costs in a utility's cost of service, the regulated return on rate base is a cost that EPE incurs as part of its normal operations, including the need to compensate equity investors for the use of their capital. Under the *Hope* and

Bluefield standards, the cost of equity authorized for EPE in this proceeding should be: (1) adequate to attract capital at reasonable terms; (2) sufficient to ensure its financial integrity; and (3) commensurate with returns on investments having similar risks.

Because utilities are capital intensive and investors have many investment alternatives, the Company's financial profile must be adequate on a relative basis to ensure its ability to attract capital under a variety of economic and financial market conditions. The Commission's decision regarding the authorized ROE and capital structure in this proceeding will directly affect the Company's ability to attract the capital needed to maintain and enhance service to customers.

B. PROXY GROUP SELECTION

Q37. WHY IS IT NECESSARY TO SELECT A GROUP OF PROXY COMPANIES TO DETERMINE THE COST OF EQUITY FOR EPE?

A. Because the ROE is a market-based concept, and EPE is not a separate entity with its own stock price, it is necessary to establish a group of companies that are both publicly traded and comparable to the Company in certain fundamental respects to service as its "proxy" in the ROE estimation process. Even if the Company were a publicly traded entity, short-term events could bias its market value during a given period. A significant benefit of using a proxy group is that it moderates the effects of anomalous, temporary events associated with any one company.

Q38. PLEASE PROVIDE A SUMMARY PROFILE OF EPE'S OPERATIONS.

A. EPE is a wholly owned subsidiary of Sun Jupiter Holdings LLC that is 100 percent rate regulated. The Company is a vertically integrated electric company that provides electric services to approximately 459,000 retail customers in Texas and New Mexico.[42] The Company's current long-term issuer credit ratings are as follows:

Figure JEN-14: EPE's Current Long-term Issuer Credit Ratings[43]

Rating Agency	Current Credit Rating	Outlook
Moody's Investors Service ("Moody's")	Baa2	Stable
Fitch Ratings ("Fitch")	BBB	Stable

Q39. DOES THE FACT THAT EPE IS A SUBSIDIARY OF A PRIVATELY HELD COMPANY AFFECT ITS COST OF EQUITY?

A. No. The cost of equity depends on the risk associated with a firm's operations and the assets supporting those operations. In other words, the cost of equity depends on the *use* of capital, not on the *source* of capital. Therefore, the Company's corporate structure, including whether it (or its parent) is privately held or publicly

[42] Source: S&P Global Market Intelligence, as of December 31, 2024.
[43] Source: Bloomberg Professional Services.

traded, does not affect the analysis. That is, the ROE is not determined by reference to EPE's parent company.

Q40. WHAT CRITERIA DO YOU USE TO SELECT THE PROXY GROUP?

A. Because estimating the cost of equity is a comparative exercise, it is necessary to develop a proxy group of companies with risk profiles that are reasonably comparable to the subject company. As each company is unique, no two companies will have identical business and financial risk profiles. In selecting a proxy group, my objective is to balance the competing interests of selecting companies that are representative of the risks and prospects faced by EPE, while at the same time ensuring that there is a sufficient number of companies in the proxy group. To develop my proxy group, I begin with the companies that *Value Line* classifies as Electric Utilities, and applied the following screening criteria:

- Because certain of the models assume that dividends grow over time, I exclude companies that do not consistently pay quarterly cash dividends, or have cut their dividend in the last two years;
- Because certain of the models assume that earnings grow over time, I exclude companies that do not have positive earnings growth rates from at least two of the following sources: Value Line Investment Survey ("Value Line"), I/B/E/S, and Zacks Investment Research ("Zacks");

- To ensure that the growth rates used in my analyses are not biased by a single analyst, all the companies in my proxy group are consistently covered by at least two utility industry equity analysts;
- Because EPE is a vertically integrated electric utility (*i.e.*, owns and operates regulated generation, transmission, and distribution assets), I exclude companies that are not vertically integrated;
- I exclude companies that do not have (or its primary regulated electric utility subsidiary does not have) an investment-grade corporate or senior unsecured bond credit rating from Standard and Poor's ("S&P") and Moody's Investor's Service ("Moody's);
- To incorporate companies that are primarily regulated electric utilities, I first exclude companies that have less than 60.00 percent of net operating income from regulated operations. I then exclude companies within this group that have less than 60.00 percent of total regulated operating income from regulated electric operations, on average, over the last three years; and
- I eliminate companies that have had significant merger activity or transactions or have had a recent financial event that could affect its market data or financial condition.

Q41. WHICH COMPANIES MEET YOUR SCREENING CRITERIA?

A. The criteria discussed above resulted in a proxy group of the following 19 companies:

Figure JEN-15: Proxy Group Screening Results

Company	Ticker
Alliant Energy Corporation	LNT
Ameren Corporation	AEE
American Electric Power Company, Inc.	AEP
Avista Corporation	AVA
CMS Energy Corporation	CMS
Dominion Energy	D
DTE Energy Company	DTE
Duke Energy Corporation	DUK
Entergy Corporation	ETR
Evergy, Inc.	EVRG
FirstEnergy Corporation	FE
IDACORP, Inc.	IDA
NextEra Energy, Inc.	NEE
OGE Energy Corp.	OGE
Pinnacle West Capital Corporation	PNW
Portland General Electric Company	POR
PPL Corporation	PPL
Southern Company	SO
Xcel Energy Inc.	XEL

The screening criteria results in a group of electric utilities that are comparable (but not identical) to the financial and operational characteristics of

EPE. The screening criterion requiring an investment grade credit rating ensures that the proxy companies, like EPE, are in sound financial condition. Additionally, the criterion screening on the percent of net operating income from regulated electric operations distinguishes between electric utilities that are subject to regulation and those with substantial unregulated operations and are exposed to higher risks. In my opinion, these screens collectively reflect key risk factors that investors consider in making investments in electric utilities.

Q42. HOW DOES EPE COMPARE TO THE PROXY GROUP?

A. As shown below in Figure JEN-16, EPE (on a total company basis) is considerably smaller in terms of both market capitalization, net utility plant, and customers. Additionally, EPE's percentage of net generation from nuclear plants is higher than all its peers and more than 3.0 times the proxy group average.

[50] EPE is not publicly traded. Implied Market Capitalization = EPE Total Common Equity x Median Proxy Group Market-to-Book Ratio of 2.10. *See* Exhibit JEN-9, page 2.

Q43. IS IT POSSIBLE TO DEVELOP A PROXY GROUP THAT MATCHES EPE'S SIZE AND OTHER RISK FACTORS?

A. No, it is not. The Recommended Decision in EPE's last rate case (that was adopted by the Commission's Final Order) referenced prior Commission decisions that stated that the selected proxy group should match the characteristics of the subject utility.[51] However, the proxy group selection process is challenged at the outset by the limited number of publicly traded electric utilities from which to begin the screening process. As shown in Figure JEN-16 above, none of the proxy companies match EPE's characteristics. The two utilities that are closest to EPE in size, Avista Corporation and IDACORP, Inc., do not own nuclear generation. It is simply impossible to develop a proxy group that is identical in risk to EPE. Therefore, an evaluation of EPE's risk compared to the proxy group is necessary to determine whether adjustments to the cost of equity estimate must be made.

Q44. HOW DO EPE'S CREDIT RATINGS COMPARE TO OTHER OPERATING UTILITY COMPANIES?

A. EPE is rated BBB by Fitch Rating and Baa2 from Moody's. As shown in Figure JEN-17 and JEN-18 below, more than three-quarters of electric and natural gas

[51] *In re Application of El Paso Electric Company for Revision of its Retail Electric Rates Pursuant to Advice Notice No. 267,* N.M. Pub. Regulation Comm'n Case No. 20-00104-UT, Recommended Decision, at 78-79 (Apr. 6, 2021) adopted by Order Adopting Recommended Decision with Modifications, ¶¶A, B (June 23, 2021).

utility operating companies have higher issuer credit ratings than EPE. In other words, EPE's ratings are in the bottom quartile. This is a clear indication of EPE's higher risk profile and justifies an authorized ROE above the proxy group average for EPE.

Q45. DID THE COMMISSION ACKNOWLEDGE EPE'S HIGHER RISK PROFILE ASSOCIATED WITH ITS LOWER CREDIT RATING IN THE FINAL ORDER IN CASE NO. 20-00104-UT?

A. Yes. In the Final Order, the Commission acknowledged that "[EPE's] corporate credit ratings are slightly below the average corporate credit rating for the proxy group,"[54] concluding that "EPE's slightly riskier investment risk compared to the

[53] Source: FitchRatings.
[54] *In re Application of El Paso Electric Company for Revision of its Retail Electric Rates Pursuant to Advice Notice No. 267*, N.M. Pub. Regulation Comm'n Case No. 20-00104-UT, Recommended Decision, at 79 (Apr. 6, 2021), adopted by Order Adopting Recommended Decision with Modifications, ¶¶A, B (June 23, 2021).

proxy group average weighs in favor of awarding EPE a slightly higher ROE within the range of reasonable ROEs."[55]

C. COST OF EQUITY MODELS

Q46. WHAT ANALYTICAL APPROACHES DO YOU USE TO DETERMINE THE COMPANY'S ROE?

A. As noted earlier, I rely on the constant growth and quarterly growth forms of the DCF model, the traditional and empirical forms of the CAPM, and the Bond Yield Plus Risk Premium approach. These models are long-standing, time tested by academic theory and widely used in practice,[56] as well as in regulatory proceedings. Additionally, each model provides a different insight into investors' views of risk and return. Therefore, the use of multiple methods provides a comprehensive and robust perspective on investors' return requirements.

1. CONSTANT GROWTH DISCOUNTED CASH FLOW MODEL

Q47. PLEASE DESCRIBE THE CONSTANT GROWTH DCF APPROACH.

A. The Constant Growth DCF approach is based on the theory that a stock's current

[55] *In re Application of El Paso Electric Company for Revision of its Retail Electric Rates Pursuant to Advice Notice No. 267*, N.M. Pub. Regulation Comm'n Case No. 20-00104-UT, Recommended Decision, at 81 (Apr. 6, 2021), adopted by Order Adopting Recommended Decision with Modifications, PP A, B (June 23, 2021).

[56] *See for example*, Eugene Brigham, Louis Gapenski, Financial Management: Theory and Practice, 7th Ed., 1994, at 341.

price represents the present value of all expected future cash flows. In its simplified form, the Constant Growth DCF model shown in Equation [1] below sets the ROE equal to the expected dividend yield plus the expected long-term annual growth rate in perpetuity:

$$k = \frac{D_0\ (1+g)}{P} + g \qquad [1]$$

where:

k = the required ROE,

D_0 = the current annualized dividend,

P = the current stock price, and

g = the expected long-term annual growth rate.

Q48. WHAT ASSUMPTIONS UNDERLIE THE CONSTANT GROWTH DCF MODEL?

A. The Constant Growth DCF model assumes: (1) a constant average annual growth rate for earnings and dividends; (2) dividends are paid annually, and the dividend payout ratio is stable; (3) a constant Price/Earnings multiple; and (4) a discount rate greater than the expected growth rate. The model also assumes that the current cost of equity will remain constant in perpetuity.

Q49. PLEASE SUMMARIZE THE COMMISSION'S PRECEDENT REGARDING THE CONSTANT GROWTH DCF APPROACH AND ITS PREFERRED INPUTS?

A. In its most recent fully litigated case for Public Service Company of New Mexico ("PNM") in Case No. 22-00270-UT, the Commission reiterated its preference for the Constant Growth DCF model and outlined the preferred inputs for that model, as follows:

- A 30-day average trading period to determine stock price;
- A full year's growth to adjust dividend yield; and
- Analyst growth rates from Value Line, Zacks, and First Call.[57]

Q50. HAVE YOU PREPARED A CONSTANT GROWTH DCF ANALYSIS CONSISTENT WITH THE COMMISSION'S PRECEDENT AND PREFERRED INPUTS AS EXPRESSED IN CASE NO. 22-00270-UT?

A. Yes, I have. That analysis is presented in Exhibit JEN-2 and results in an ROE range of 9.40 percent to 11.19 percent.

Q51. WHAT MARKET DATA DO YOU USE TO CALCULATE THE DIVIDEND YIELD IN YOUR CONSTANT GROWTH DCF MODEL?

A. I calculate the Constant Growth DCF result for each of the proxy companies using the following inputs:

[57] In re Application of Public Service Company of New Mexico for Revision of its Retail Electric Rates Pursuant to Advice Notice No. 595, N.M. Pub. Regulation Comm'n Case No. 22-00270-UT, Recommended Decision, at 260 (December 8, 2023) adopted by Final Order, at 44, 77 (January 3, 2024.)

- The average daily closing prices for the 30-, 90-, and 180-trading days ended November 28, 2025, for the term *P*;
- The current quarterly dividend as of November 28, 2025, multiplied by 4, for the term D_0; and
- Long-term earnings per share ("EPS") growth rate projections as of November 28, 2025, reported by Zacks, I/B/E/S, and *Value Line* for the long-term growth rate, *g*.

Q52. WHY DO YOU USE THREE AVERAGING PERIODS TO CALCULATE AN AVERAGE STOCK PRICE?

A. I am aware that in the Company's last rate case, Case No. 20-00104-UT, the Commission chose to rely exclusively on a 30-day averaging period to arrive at the recommended ROE. This practice was upheld in the more recently litigated PNM rate case, Case No. 22-00270-UT.[58] My practice has been to include 30-, 90-, and 180-day trading day average stock prices to ensure that the model's results are not skewed by anomalous events that may affect stock prices on any given trading day. At the same time, the average period should reasonably reflect the expected capital market conditions over the long term. Using 30-, 90-, and 180-trading day

[58] In re Application of Public Service Company of New Mexico for Revision of its Retail Electric Rates Pursuant to Advice Notice No. 595, N.M. Pub. Regulation Comm'n Case No. 22-00270-UT, Recommended Decision, at 260 (Dec. 8, 2023).

averaging periods reasonably balances those concerns. My analysis, therefore, supplements the Commission's preferred approach of a 30-day stock price average with the longer-ranged results of 90- and 180-day stock price averages.

Q53. HOW DO YOU CALCULATE THE EXPECTED DIVIDEND YIELD OVER THE COMING YEAR?

A. Per Commission precedent,[59] I calculate the expected dividend yield by applying a full-year growth rate adjustment to the current dividend yield.

Q54. WHY ARE ANALYSTS' PROJECTED EPS GROWTH RATES THE APPROPRIATE MEASURE OF LONG-TERM GROWTH IN THE CONSTANT GROWTH DCF MODEL?

A. In its Constant Growth form, the DCF model (*i.e.*, as presented in Equation [1] above) assumes a single expected growth estimate in perpetuity, which assumes a fixed payout ratio, and the same constant growth rate in EPS, dividends per share, and book value per share In the long run, dividend growth can only be sustained by earnings growth.

[59] *In re Application of El Paso Electric Company for Revision of its Retail Electric Rates Pursuant to Advice Notice No. 267*, N.M. Pub. Regulation Comm'n Case No. 20-00104-UT, Recommended Decision, at 59 (Apr. 6, 2021), adopted by Order Adopting Recommended Decision with Modifications, PPA, B (June 23, 2021); and *In re Application of Public Service Company of New Mexico for Revision of its Retail Electric Rates Pursuant to Advice Notice No. 595*, N.M. Pub. Regulation Comm'n Case No. 22-00270-UT, Recommended Decision, at 260 (Dec. 8, 2023), adopted by *Final Order* (January 3, 2024).

Further, academic studies have consistently shown that measures of earnings and cash flow are strongly related to returns, and that analysts' forecasts of growth are superior to other measures of growth in predicting stock prices.[60] For example, the research of Vander Weide and Carleton demonstrates that earnings growth projections have a statistically significant relationship to stock valuation levels, while dividend growth rates do not.[61] Those findings indicate that investors form their investment decisions based on expectations of growth in earnings, not dividends.

Similarly, an academic study from The Journal of Portfolio Management found that securities analysts' growth estimates have been shown to be more accurate predictors of future returns than historical earnings and dividend growth rates, as well as sustainable growth rates.[62] Additionally, a 2002 study in the Journal of Accounting Research examined "the valuation performance of a comprehensive list of value drivers" and found that "forward earnings explain stock prices remarkably well" and were generally superior to other value drivers

[60] *See, e.g.*, Andreas C. Christofi, Petros C. Christofi, Marcus Lori and Donald M. Moliver, *Evaluating Common Stocks Using Value Line's Projected Cash Flows and Implied Growth Rate*, Journal of Investing (Spring 1999); Harris and Marston, *Estimating Shareholder Risk Premia Using Analysts' Growth Forecasts*, Financial Management at 21 (Summer 1992); and Vander Weide and Carleton, *Investor Growth Expectations: Analysts vs. History*, The Journal of Portfolio Management (Spring 1988); Robert S. Harris, *Using Analysts' Growth Forecasts to Estimate Shareholder Required Rate of Return*, Financial Management (Spring 1986).

[61] See Vander Weide and Carleton, *Investor Growth Expectations: Analysts vs. History*, The Journal of Portfolio Management (Spring 1988).

[62] David A. Gordon, Myron J. Gordon & Lawrence I. Gould, "Choice Among Methods of Estimating Share Yield," The Journal of Portfolio Management, Spring 1989.

analyzed.[63] A 2013 study from the journal Contemporary Accounting Research found that the sell-side analysts with the most accurate stock price targets were those whom the researchers found to have more accurate earnings forecasts.[64] Lastly, the only forward-looking growth rates that are available on a consensus basis are analysts' EPS growth rates. The fact that earnings growth projections are the only widely available estimates of growth further supports the conclusion that earnings growth is the most meaningful measure of growth among the investment community. For these reasons, earnings growth is the appropriate measure of long-term growth in the DCF model.

Q55. HAS THE COMMISSION PREVIOUSLY RELIED ON ANALYSTS' PROJECTED EARNINGS GROWTH RATES AS ITS PREFERRED MEASURE OF GROWTH IN THE DCF MODEL?

A. Yes. In EPE's last rate case, the Commission reviewed prior decisions regarding the appropriate growth rate in the DCF analysis and ultimately accepted the analysts' projected earnings growth rates that I used in my testimony.[65]

[63] Liu, Jing, et al., "Equity Valuation Using Multiples," Journal of Accounting Research, Vol. 40 No. 1, March 2002.
[64] Gleason, C.A., et al., "Valuation Model Use and the Price Target Performance of Sell Side Equity Analysts," Contemporary Accounting Research, Vol. 30 No. 1, (Spring 2013).
[65] *See, In re Application of El Paso Electric Company for Revision of its Retail Electric Rates Pursuant to Advice Notice No. 267,* Case No. 20-00104-UT, Recommended Decision, at 62-63, 66-69, 68 (Apr. 6, 2021), adopted by Order Adopting Recommended Decision with Modifications, PPA, B (June 23, 2021).

Q56. HOW DID YOU CALCULATE THE CONSTANT GROWTH DCF RESULTS?

A. To provide a spectrum of DCF-based ROE estimates, I calculate the low, mean, and high Constant Growth DCF result for each proxy company. The mean result combines the average of the three EPS growth rate estimates with each proxy company's expected dividend yield. The high DCF result adds the maximum EPS growth rate estimate with each proxy company's expected dividend yield. Similarly, the low DCF result adds the minimum EPS growth rate estimate for each proxy company to the expected dividend yield. I then calculate the mean and median low, mean, and high DCF results for the proxy group. In developing my ROE recommendation, I rely on the average of the mean and median proxy group Constant Growth DCF results (*see* Figure JEN-19, below, and Exhibit JEN-2). By relying on the average of the mean and median proxy group results, the individual DCF results of each proxy company are considered while mitigating the effect of the highest and lowest estimates.

/

/

/

/

/

/

Figure JEN-19: Constant Growth DCF Results[66]

	Low Growth	Mean Growth	High Growth
30-Day Average	9.40%	10.34%	11.19%
90-Day Average	9.51%	10.46%	11.24%
180-Day Average	9.62%	10.55%	11.32%

2. QUARTERLY GROWTH DISCOUNTED CASH FLOW MODEL

Q57. PLEASE DESCRIBE THE QUARTERLY GROWTH DCF MODEL.

A. As noted earlier, the Constant Growth DCF model is based on several limiting assumptions, one of which is that dividends are paid annually. However, most dividend-paying companies, including utilities, pay dividends on a quarterly basis. Although the dividend yield adjustment discussed earlier is intended to reflect that assumption by increasing the observed dividend yield, it does not fully account for the quarterly receipt and reinvestment of dividends. Consequently, the Constant Growth DCF model likely understates the cost of equity. The Quarterly Growth DCF model specifically incorporates the quarterly payment of dividends, and the associated quarterly compounding of those dividends as they are reinvested at the required ROE. As noted by Dr. Roger Morin:

> Clearly, given that dividends are paid quarterly and that the observed stock price reflects the quarterly nature of dividend payments, the market-required return must recognize quarterly compounding, for the investor receives dividend checks and reinvests the proceeds on a quarterly schedule... The annual DCF

[66] *See*, Exhibit JEN-2. Average of the proxy group mean and median results. Highlighted DCF result of 10.34 percent reflects the result using the Commission's preferred inputs.

model inherently understates the investors' true return because it assumes all cash flows received by investors are paid annually.[67]

Q58. HOW IS THE DIVIDEND YIELD PORTION OF THE QUARTERLY DCF MODEL CALCULATED?

A. To reflect the timing and compounding of quarterly dividends, the model replaces the "D" component of the Constant Growth DCF model with the following equation:

$$D = d_1 (1 + k)^{0.75} + d_2 (1 + k)^{0.50} + d_3 (1 + k)^{0.25} + d_4 (1 + k)^0 \quad [2]$$

where:

d_1, d_2, d_3, d_4 = expected quarterly dividends over the coming year; and

k = the required Return on Equity.[68]

To calculate the expected dividends over the coming year for the proxy companies (*i.e.*, d_1, d_2, d_3, and d_4), I obtained the last four paid quarterly dividends for each company and multiplied them by one plus the growth rate (*i.e.*, $1 + g$). To provide a spectrum of quarterly growth DCF-based ROE estimates, I calculate the low, mean, and high quarterly growth DCF result for each proxy company using the low, mean, and high EPS growth estimates. For the P component of the dividend yield, I used the same average stock prices applied in the Constant Growth DCF analysis for each proxy company.

[67] Roger A. Morin, New Regulatory Finance, at 344 (2006).
[68] Because the required ROE (k) is a variable in the dividend yield calculation, the Quarterly Growth DCF model is solved iteratively.

Q59. WHAT ARE THE RESULTS OF YOUR QUARTERLY GROWTH DCF ANALYSES?

A. My Quarterly Growth DCF results are summarized in Figure JEN-20 below (*see also*, Exhibit JEN-3). As with my Constant Growth DCF analysis, I rely on the average of the mean and median proxy group results.

Figure JEN-20: Quarterly Growth DCF Results[69]

	Low Growth	Mean Growth	High Growth
30-Day Average	9.49%	10.43%	11.31%
90-Day Average	9.57%	10.52%	11.36%
180-Day Average	9.72%	10.66%	11.43%

3. CAPITAL ASSET PRICING MODEL AND EMPIRICAL CAPITAL ASSET PRICING MODEL

Q60. PLEASE DESCRIBE THE GENERAL FORM OF THE CAPM.

A. The CAPM is a risk premium method that estimates the cost of equity for a given security as a function of a risk-free return plus a risk premium to compensate investors for the non-diversifiable or "systematic" risk of that security. As shown

[69] *See*, Exhibit JEN-3. Average of the proxy group mean and median results.

in Equation [3], the CAPM is defined by four components, each of which theoretically is a forward-looking estimate:

$$K_e = r_f + \beta(r_m - r_f) \qquad [3]$$

where:

K_e = the required market cost of equity for a security;
β = the Beta coefficient of that security;
r_f = the risk-free rate of return; and
r_m = the required return on the market as a whole.

Equation [3] describes the Security Market Line ("SML"), or the CAPM risk-return relationship, depicted in Figure JEN-21 below. The intercept is the risk-free rate (r_f) which has a Beta coefficient of zero, and the slope is the expected market risk premium ($r_m - r_f$). As shown in Figure JEN-21, the SML is upward sloping, illustrating the principle that investments of higher risk require a higher return. By definition, r_m, the return on the market, has a Beta coefficient of 1.00.

/

/

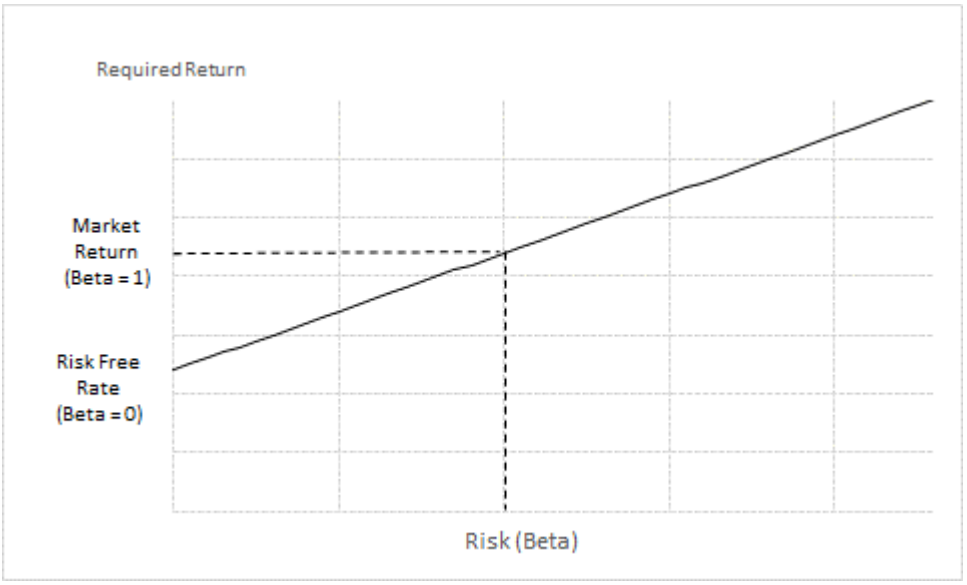
/

/

/

/

Figure JEN-21: Security Market Line



The CAPM assumes that all non-market or unsystematic risk, can be eliminated through diversification. The risk that cannot be eliminated through diversification is called market, or systematic risk. Systemic (or non-diversifiable) risk is measured by the Beta coefficient, which is defined as:

$$\beta_j = \frac{\sigma_j}{\sigma_m} \text{ x } \rho_{j,m} \quad [4]$$

where σ_j is the standard deviation of returns for company "j," σ_m is the standard deviation of returns for the broad market (as measured, for example, by the S&P 500 Index), and $\rho_{j,m}$ is the correlation of returns between company j and the broad market. The Beta coefficient, therefore, represents both relative volatility (*i.e.*, the standard deviation) of returns, and the correlation in returns between the subject company and the overall market. Intuitively, higher Beta coefficients indicate that

the subject company's returns have been relatively volatile and have moved in the same direction as the overall market.

Q61. WHAT RISK-FREE RATE ASSUMPTIONS DID YOU INCLUDE IN YOUR CAPM ANALYSIS?

A. I apply two different estimates of the risk-free rate: (1) the 30-day average yield on 30-year Treasury bonds as of November 28, 2025 (*i.e.*, 4.66 percent);[70] and (2) a projected 30-year Treasury yield (*i.e.*, 4.58 percent).[71]

Q62. WHY DO YOU RELY ON THE 30-YEAR TREASURY YIELD IN THE CAPM ANALYSIS?

A. In determining the security most relevant to the application of the CAPM, the term (or maturity) should approximate the life of the underlying investment. Electric utilities are typically long-term duration investments; therefore, the 30-year Treasury yield is most suitable for the risk-free rate applied in the CAPM.

Q63. WHAT BETA COEFFICIENTS DO YOU USE IN YOUR CAPM MODEL?

[70] Source: Federal Reserve Bank of St. Louis.
[71] The average of: (1) the average projected 30-year Treasury yield for the six quarters ended Q1 2027; and (2) the average long-term projected 30-year Treasury yield for the years 2027-2031 and 2032-2036 reported by Blue Chip Financial Forecast. See, Blue Chip Financial Forecast, Vol. 44, No. 12, December 1, 2025, at 2 at 14.

A. As shown in Exhibit JEN-5, my CAPM analyses rely on two estimates of the Beta coefficient. First, I use the average Beta coefficients from Value Line and Bloomberg for each proxy company as of November 28, 2025. Beta coefficients from both services are calculated using weekly returns over a five-year period, adjusted to reflect the tendency of Beta coefficients to regress toward the market mean of 1.00. I also conduct the CAPM analyses using 10-year adjusted Beta coefficients from Bloomberg.

Q64. WHAT ESTIMATES OF THE EXPECTED MARKET RETURN DO YOU USE TO CALCULATE THE MARKET RISK PREMIUM?

A. I consider two estimates of the expected market return. The first estimate calculates the market capitalization-weighted ROE of the S&P 500 Index by applying the Constant Growth DCF model to the S&P 500 Index. The second estimate is the long-run historical arithmetic average market return of 12.17 percent reported by Kroll (formerly Duff & Phelps) for the years 1926 to 2024.[72]

Q65. PLEASE FURTHER EXPLAIN YOUR FORWARD-LOOKING DCF APPROACH TO ESTIMATING THE MARKET RETURN.

[72] Source: Kroll, Cost of Capital Navigator.

A. For the forward-looking market return estimate, I use the Constant Growth DCF formula to estimate the total market return for the S&P 500 Index. I consider projected earnings growth rates and dividend yields from three sources: (1) S&P's Earnings and Estimates report; (2) Bloomberg Professional; and (3) Value Line. As shown in Figure JEN-22 below, these independent estimates of the expected market return range from 15.09 to 18.96 percent (*see also* Exhibit JEN-4). To be conservative, I rely on the lowest forward market return estimate of 15.09 percent from *Value Line*.

Figure JEN-22: DCF-Based Expected Market Return

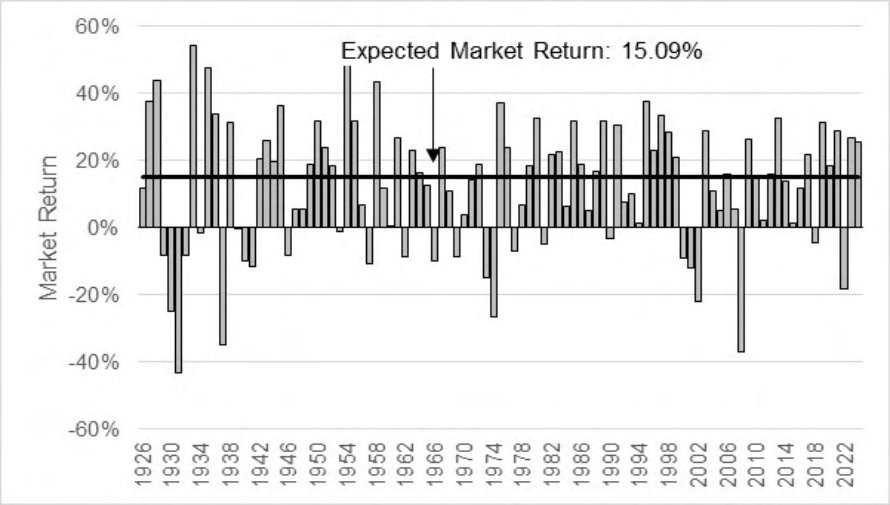
Source	Market Return
S&P Earnings & Estimates Report	18.75%
Bloomberg Professional	18.96%
Value Line	15.09%

Q66. IS THE VALUE-LINE BASED DCF-BASED ESTIMATE OF 15.09 PERCENT CONSISTENT WITH ACTUAL OBSERVED RETURNS ON THE MARKET?

A. Yes, it is. As shown in Figure JEN-23 below, an expected market required return of 15.09 percent or higher occurred in 49 of the last 99 years (i.e., 50 percent of the time). Since 2009, the annual market return has averaged 15.58 percent, and

equaled or exceeded 15.09 percent in nine of the last 16 years and 10 of the last 20 years. In other words, an annual market return of 15.09 percent, or higher, has occurred frequently.

Figure JEN-23: Annual Market Return (1926-2024)[73]



I then subtract the current and projected risk-free rates from the forward-looking market return to calculate market risk premium estimates of 10.43 and 10.51 percent, respectively, as shown Exhibit JEN-5.

Q67. DO YOU ALSO CONDUCT A CAPM ANALYSIS USING ONLY THE MARKET RISK PREMIUM DERIVED FROM THE LONG-TERM

[73] Source: Kroll, 2023 SBBI Yearbook, Appendix A-1, A-7 (years 1926-2022); Cost of Capital Navigator (2023 and 2024 data).

ARITHMETIC AVERAGE HISTORICAL MARKET RETURN OF 12.17%?

A. Yes. Although the estimation of the cost of equity is a forward-looking analysis, it may be reasonable to expect that, over the long term, the market return will revert to its long-run historical arithmetic average. For this reason, I also perform a CAPM analysis using only the current long-term historical average market return of 12.17 percent as reported by Kroll (formerly Duff & Phelps). Subtracting the current and projected risk-free rates from long-term historical average market return produces a market risk premium of 7.51 and 7.59 percent, respectively, as shown in Exhibit JEN-5.

Q68. WHAT ARE THE RESULTS OF YOUR CAPM ANALYSIS?

A. As shown in Exhibit JEN-5, the CAPM results range from 9.69 percent to 12.42 percent (*see* Figure JEN-24 below).

/

/

/

/

/

/

/

Figure JEN-24: Summary of CAPM Results[74]

	Current Risk-Free Rate (4.66%)	Projected Risk-Free Rate (4.58%)
Historical Market Return, 5-Year Average Beta	9.72%	9.69%
Historical Market Return, 10-Year Bloomberg Beta	10.25%	10.23%
Forward Market Return, 5-Year Average Beta	11.68%	11.66%
Forward Market Return, 10-Year Bloomberg Beta	12.42%	12.41%

Q69. DO YOU CONSIDER ANOTHER FORM OF THE CAPM?

A. Yes, I also consider the Empirical CAPM ("ECAPM") approach, which calculates the product of the adjusted Beta coefficient and the Market Risk Premium and applies a weight of 75.00 percent to that result. The model then applies a 25.00 percent weight to the Market Risk Premium, without any effect from the Beta coefficient.[75] The results of the two calculations are summed, along with the risk-free rate, to produce the ECAPM result, as expressed in Equation [5] below:

/

/

/

/

[74] *See*, Exhibit JEN-5.
[75] *See*, *e.g.*, Roger A. Morin, New Regulatory Finance, at 189-190 (2006).

$$k_e = r_f + 0.75\beta(r_m - r_f) + 0.25(r_m - r_f) \quad [5]$$

where:

k_e = the required market cost of equity for a security;

β = the Beta coefficient for that security;

r_f = the risk-free rate of return; and

r_m = the required return on the market as a whole.

Q70. WHAT IS THE BENEFIT OF THE ECAPM APPROACH?

A. The ECAPM addresses the tendency of the CAPM to underestimate the cost of equity for companies with low Beta coefficients, such as regulated utilities. As discussed below, the ECAPM recognizes academic research that indicates that the risk-return relationship is flatter than estimated by the CAPM, and that the CAPM under-estimates the alpha, or the constant return term.[76]

Numerous tests of the CAPM have measured the extent to which security returns and Beta coefficients are related as predicted by the CAPM. The ECAPM method reflects the finding that the actual SML described by the CAPM formula is not as steeply sloped as the predicted SML.[77] Fama and French found that the actual returns on the low Beta coefficient portfolios were higher than the CAPM-

[76] *Id*., at 191 ("The ECAPM and the use of adjusted betas comprised two separate features of asset pricing. Even if a company's beta is estimated accurately, the CAPM still understates the return for low-beta stocks.").
[77] *Id*., at 175.

predicted returns, and vice versa for the high Beta coefficient portfolios.[78] Similarly, Morin states:

> With few exceptions, the empirical studies agree that . . . low-beta securities earn returns somewhat higher than the CAPM would predict, and high-beta securities earn less than predicted.
>
> ***
>
> Therefore, the empirical evidence suggests that the expected return on a security is related to its risk by the following approximation:
>
> $$K = R_F + x\,(R_M - R_F) + (1-x)\beta(R_M - R_F)$$
>
> where x is a fraction to be determined empirically. The value of x that best explains the observed relationship Return = 0.0829 + 0.0520 β is between 0.25 and 0.30. If x = 0.25, the equation becomes:
>
> $$K = R_F + 0.25(R_M - R_F) + 0.75\,\beta(R_M - R_F)$$[79]

Q71. DOES THE APPLICATION OF ADJUSTED BETA COEFFICIENTS IN THE ECAPM ADDRESS THE EMPIRICAL ISSUES WITH THE CAPM?

A. No, it does not. Beta coefficients are adjusted because of their general regression tendency to converge toward 1.00 over time, *i.e.*, over successive calculations. As also noted earlier, numerous studies have determined that at any given point in time,

[78] Eugene F. Fama & Kenneth R. French, *The Capital Asset Pricing Model: Theory and Evidence*, Journal of Economic Perspectives, Vol. 18, No. 3, Summer 2004, at 33.
[79] Roger A. Morin, New Regulatory Finance, at 175, 190 (2006).

the SML is not as steeply sloped as the predicted SML. To that point, Dr. Morin explains:

> Some have argued that the use of the ECAPM is inconsistent with the use of adjusted betas, such as those supplied by Value Line and Bloomberg. This is because the reason for using the ECAPM is to allow for the tendency of betas to regress toward the mean value of 1.00 over time, and, since Value Line betas are already adjusted for such trend, an ECAPM analysis results in double-counting. This argument is erroneous. Fundamentally, the ECAPM is not an adjustment, increase or decrease, in beta. This is obvious from the fact that the expected return on high beta securities is actually lower than that produced by the CAPM estimate. The ECAPM is a formal recognition that the observed risk-return tradeoff is flatter than predicted by the CAPM based on myriad empirical evidence. The ECAPM and the use of adjusted betas comprised two separate features of asset pricing. Even if a company's beta is estimated accurately, the CAPM still understates the return for low-beta stocks. Even if the ECAPM is used, the return for low-beta securities is understated if the betas are understated. Referring back to Figure 6-1, the ECAPM is a return (vertical axis) adjustment and not a beta (horizontal axis) adjustment. Both adjustments are necessary.[80]

Therefore, it is appropriate to rely on adjusted Beta coefficients in both the CAPM and ECAPM.

Q72. ARE YOU AWARE OF ACADEMIC STUDIES THAT SUPPORT THE USE OF THE ECAPM FOR UTILITIES?

A. Yes, I am. In a 2011 study by Stéphane Chrétien and Frank Coggins, the authors

[80] *Id*., at 191.

studied the CAPM's ability to estimate the risk premium for the utility industry in particular subgroups of utilities.[81] The study considered the traditional CAPM approach, the Fama-French three-factor model, and a model similar to the ECAPM. In the study, the ECAPM relied on adjusted Beta coefficients similar to *Value Line*'s approach. As Chrétien and Coggins found, the ECAPM significantly outperformed the traditional CAPM model at predicting the observed risk premium for the various utility subgroups.

Q73. DO INVESTORS USE THE ECAPM APPROACH?

A. Yes. Investors do use the ECAPM, or models that are very similar and assume a flatter security market line as the ECAPM does. For example, in chapter four of Professional Investment Portfolio Management, Kolari, Liu, and Pynnönen detail how they worked with the pension investment division at the Teachers Retirement System of Texas to manage about $100 million using the ZCAPM model (which is a special case of the zero-beta CAPM) from 2013 to 2015.[82]

Q74. HAVE ANY REGULATORY COMMISSIONS EXPLICITLY ACCEPTED THE ECAPM?

[81] Stéphane Chrétien and Frank Coggins, *Cost of Equity for Energy Utilities: Beyond The CAPM*, Energy Studies Review, Vol. 18, No. 2 (2011).
[82] Kolari, James W., Liu, Wei, and Pynnönen, Seppo, Professional Investment Portfolio Management, A New Asset Pricing Model: The ZCAPM, 2023, at 87.

A. Yes. The New York Public Service Commission ("NYPSC") explicitly relies on both the traditional and empirical forms of the CAPM.[83] Additionally, the North Carolina Utilities Commission ("NCUC") accepted the ECAPM in recent orders for Duke Energy Carolinas and Duke Energy Progress.[84] I note that both the NYPSC and NCUC used adjusted Beta coefficients with the ECAPM analysis. Additionally, I am aware that the ECAPM has been accepted by regulatory commissions in Alaska, Maryland, and Mississippi.[85] Lastly, I am aware the ECAPM has been presented by state regulatory commission staff in Maryland, Nevada, and by the Department of Commerce in Minnesota.[86] Consequently, I believe the ECAPM is an accepted approach used by investors and should be accepted by the Commission.

[83] See, New York Public Service Commission, Case 16-G-0058, Proceeding on Motion of the Commission as to the Rates, Charges, Rules and Regulations of KeySpan Gas East Corporation d/b/a National Grid for Gas Service, Order Adopting Terms of Joint Proposal and Establishing Gas Rate Plans, December 16, 2016, at 32.

Q75. WHAT ARE THE RESULTS OF YOUR ECAPM ANALYSES?

A. I apply the same market return, Beta coefficients, and risk-free rates described earlier to the ECAPM formula shown in Equation [5] above. The results of my ECAPM analyses are shown on Exhibit JEN-5 and summarized in Figure JEN-25 below.

Figure JEN-25: Summary of ECAPM Results[87]

	Current Risk-Free Rate (4.66%)	**Projected Risk-Free Rate (4.58%)**
Historical Market Return, 5-Year Average Beta	10.33%	10.31 %
Historical Market Return, 10-Year Bloomberg Beta	10.73%	10.72%
Forward Market Return, 5-Year Average Beta	12.53%	12.52%
Forward Market Return, 10-Year Bloomberg Beta	13.09%	13.08%

4. BOND YIELD PLUS RISK PREMIUM APPROACH

Q76. PLEASE DESCRIBE THE BOND YIELD PLUS RISK PREMIUM APPROACH.

A. The Bond Yield Plus Risk Premium approach is based on the basic financial

[87] *See*, Exhibit JEN-5.

principle of risk and return, which states that equity investors require a premium over the return required as a bondholder to compensate for the residual risk associated with equity ownership. Risk Premium approaches, therefore, estimate the cost of equity as the sum of the equity risk premium and the yield on a particular class of bonds.

Q77. PLEASE EXPLAIN HOW YOU PERFORM YOUR BOND YIELD PLUS RISK PREMIUM ANALYSIS.

A. I first define the equity risk premium as the difference between the authorized ROE and the then-prevailing level of long-term (*i.e.*, 30-year) Treasury yield, using the authorized ROE for 1,845 electric utility rate proceedings between January 1, 1980, and November 28, 2025. To reflect the prevailing level of bond yields during the pendency of the proceedings, I calculate the average 30-year Treasury yield over the average period between the filing of the rate case and the date of the final order (approximately 202 days).

Because the data spans several economic cycles, the analysis is helpful in assessing the change in the equity risk premium over time. Prior research has shown that the equity risk premium is inversely related to the level of bond yields.[88]

[88] In other words, declines in the 30-year Treasury yield are related to an increase in the Equity Risk Premium and vice versa. *See, for example*, Robert S. Harris and Felicia C. Marston, *Estimating*

Q78. HOW DO YOU ANALYZE THE RELATIONSHIP BETWEEN BOND YIELDS AND THE EQUITY RISK PREMIUM?

A. I estimate the relationship between bond yields and the equity risk premium by applying regression analysis, in which the equity risk premium described above is the dependent variable, and the 30-year Treasury yield is the independent variable. To account for the variability in bond yields and authorized ROEs over several decades, I used the semi-log regression, in which the equity risk premium is expressed as a function of the natural log of the 30-year Treasury yield:

$$RP = \alpha + \beta\ (\text{LN}(T_{30})) \quad [6]$$

where:

RP = the equity risk premium;

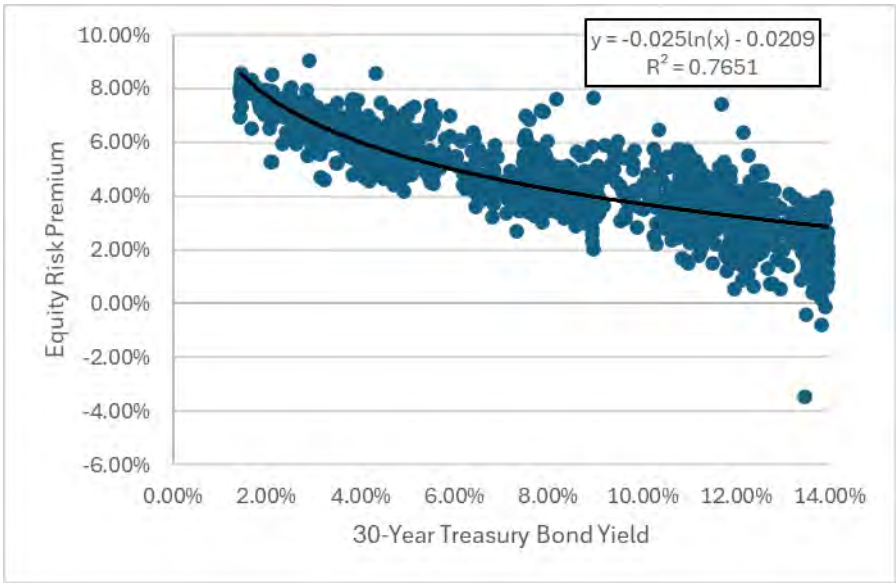
T_{30} = the lagged 30-year Treasury bond yield;

α = the constant term of the regression; and

β = the slope coefficient of the regression.

Shareholder Risk Premia Using Analysts' Growth Forecasts, Financial Management, (Summer 1992), at 63-70; Eugene F. Brigham, Dilip K. Shome, and Steve R. Vinson, *The Risk Premium Approach to Measuring a Utility's Cost of Equity*, Financial Management, (Spring 1985), at 33-45; and Farris M. Maddox, Donna T. Pippert, and Rodney N. Sullivan, *An Empirical Study of Ex Ante Risk Premiums for the Electric Utility Industry*, Financial Management, (Autumn 1995), at 89-95.

Figure JEN-26: Equity Risk Premium[89]



As Figure JEN-26 above illustrates, the equity risk premium increases as interest rates fall. The finding that the equity risk premium and interest rates are inversely related is supported by published research. For example, Dr. Roger Morin notes that: "… [p]ublished studies by Brigham, Shome, and Vinson (1985), Harris (1986), Harris and Marston (1992, 1993), Carleton, Chambers, and Lakonishok (1983), Morin (2005), McShane (2005), and others demonstrate that, beginning in 1980, risk premiums varied inversely with the level of interest rates – rising when rates fell and declining when interest rates rose."[90] Applying the regression

[89] *See*, Exhibit JEN-6.
[90] Roger A: Morin, Ph.D., New Regulatory Finance, Public Utilities Reports, Inc., at 128 (2006).

coefficients in Figure JEN-26 produces ROE estimates of 10.24 percent to 10.28 percent (*see* also Exhibit JEN-6).

Figure JEN-27: Summary of Bond Yield Plus Risk Premium Results[91]

	30-Year Treasury Bond	Risk Premium	Return on Equity
Current 30-Year Treasury	4.66%	5.62%	10.28%
Projected 30-Year Treasury	4.58%	5.66%	10.24%

Q79. DO INVESTORS USE A REGRESSION-BASED APPROACH SIMILAR TO YOUR RISK PREMIUM METHOD?

A. Yes, they do. As an example, in a December 2023 report from UBS on the utility sector, the investment bank presents a regression analysis which shows that current authorized ROEs are below what would be expected given the level of the 10-year Treasury bond yield – i.e., the premise of my Risk Premium analysis.[92]

Q80. WHAT ARE THE ADVANTAGES OF THE RISK PREMIUM APPROACH?

A. There are several advantages. First, authorized ROEs in other jurisdictions are a significant part of the market information that investors consider when evaluating

[91] *See*, Exhibit JEN-6.
[92] UBS, "US Utilities 2024 Outlook: A Year for Resolutions and Resolve," December 12, 2023, at 10.

their investment alternatives. Therefore, they are a direct measure of returns available to other natural gas utilities, as required under the comparable return standard of the *Hope* and *Bluefield* decisions. The authorized ROE also provides a signal to investors about the level of regulatory support that a company can expect with regard to its ability to compete for capital and to ensure its financial integrity. An ROE below its peers for a given period may be an impediment to the Company's ability to attract capital and finance the infrastructure required to provide safe, reliable service to its customers. As discussed in Section V, EPE expects to invest approximately $5.67 billion in infrastructure in the 2026-2030 period. It is important that EPE maintains a strong balance sheet to attract both debt and equity capital on reasonable terms for the benefit of customers.

Second, the use of the Risk Premium model in conjunction with the DCF and CAPM approaches adds diversity to the model results, which enables a more robust and reliable ROE estimate. The fewer models that are relied upon, the more likely it is that model risk biases the ultimate ROE determination. For the same reasons that diversity is a wise and prudent investment strategy, diversity of the models used to estimate the ROE is similarly prudent, as it reduces the risk that the results of any single model may not reasonably reflect investors' return requirements.

A third advantage of the Risk Premium approach is its simplicity and reliance on fewer contentious inputs. Lastly, the Risk Premium approach adds a

measure of stability because it is less vulnerable to changes in market data. As shown in the regression equation in Figure JEN-26 above, the change in the risk premium (and therefore the ROE estimate) that corresponds with a change in bond yields is less than one-to-one. For example, as shown in Figure JEN-27 above, a 7-basis point increase in the bond yield (from 4.58 percent to 4.66 percent) results in a 4-basis point change in the ROE (from 10.24 percent to 10.28 percent).

Q81. PLEASE SUMMARIZE WHY IT IS APPROPRIATE TO CONSIDER THE RISK PREMIUM ANALYSIS THAT RELIES ON ROES AUTHORIZED FOR ELECTRIC UTILITIES AS A METHOD FOR ESTIMATING THE COST OF EQUITY.

A. In my experience, ROE witnesses that represent a broad range of interests often refer to authorized ROEs as a measure of evaluating the reasonableness of ROE recommendations. They do so because the cost of equity is an opportunity cost as recognized by the *Hope* and *Bluefield* "comparable return" standard discussed earlier. Authorized ROEs, however, must be viewed in the context of the capital market environment at the time of the decision and that is what the Risk Premium model accomplishes by modeling the relationship between the equity risk premium and bond yields over many business cycles. Authorized ROEs (as opposed to earned ROEs) are typically established by public utility commissions by reference to market-based models and therefore reflect regulators' views of market required

equity returns at the time of a decision. As explained earlier, authorized ROEs are a significant part of the market information that investors consider when evaluating their investment alternatives and are a measure of regulatory support that significantly influences a utility's financial integrity and access to capital.

V. BUSINESS RISKS AND OTHER CONSIDERATIONS

Q82. ARE THERE FACTORS SPECIFIC TO EPE'S OPERATING ENVIRONMENT THAT YOU CONSIDERED IN YOUR ROE RECOMMENDATION?

A. Yes, there are several additional factors that have a direct bearing on EPE's ability to earn a fair return and on the Company's riskiness relative to the proxy group, including (1) the regulatory environment and the Company's need to access the capital necessary to execute its capital expenditure plan; (2) the Company's nuclear generation operations; and (3) the Company's small size relative to the proxy group. Those factors, which are discussed below, should be considered in terms of their overall effect on EPE's business risk and, therefore, its cost of equity.

A. PLANNED CAPITAL EXPENDITURES, REGULATORY ENVIRONMENT, AND CAPITAL ACCESS

Q83. DO YOU HAVE ANY PRELIMINARY THOUGHTS ON THE IMPORTANCE OF ACCESS TO CAPITAL FOR ELECTRIC UTILITIES SUCH AS EPE?

A. Yes, I do. As a capital-intensive enterprise, the allowed ROE should enable EPE to finance capital expenditures and working capital requirements at reasonable rates and to maintain its financial integrity in a variety of economic and capital market conditions. Because utilities have an obligation to provide safe and reliable service to all customers at all times, utilities require sufficient cash flow and ongoing access to investor-supplied capital to fund the significant capital expenditures needed to maintain, expand, and modernize existing infrastructure. A return that is adequate to attract capital at reasonable terms enables the utility to provide safe, reliable service while maintaining its financial soundness to the benefit of customers. Consistent with the *Hope* and *Bluefield* principles, an adequate return is one that is commensurate with the subject company's risk profile.

The ability to efficiently acquire the capital needed to fund the growing level of infrastructure investments is dependent on the ability to recover that investment in a timely manner. As noted by the American Gas Association:

> Timely cost recovery of prudently incurred safety and reliability investments is of utmost importance to the financial stability of natural gas utilities. Because traditional ratemaking allows recovery of infrastructure investments only following approval in a rate case, there is often a multi-year delay before the recovery of such investments begins. Investments that are recovered long after they are incurred cause the utility to bear carrying costs

> without the opportunity to recover these prudent expenditures. Credit agencies criticize companies with lag in the recovery of their costs and assign a lower credit rating to such utilities that ultimately translates into higher rates for customers. The only alternative is to file a rate case each year, which is a costly activity that also leads to higher rates for customers.[93]

These concepts hold true for electric utilities as well. Electric utilities are one of the most capital-intensive market sectors. On average, electric utilities generate approximately 71 percent less revenue per dollar of assets than the non-utility U.S. companies covered by *Value Line*.[94] To fund the significant capital expenditures needed to maintain, expand, and modernize existing infrastructure, electric utilities require sufficient internally generated cash flow and ongoing access to investor supplied capital. Because electric utilities are often cash flow negative (*i.e.*, cash spent on plant is often more than cash flow received from operations), it is critical that regulation enable timely cost recovery and provide predictable, adequate, and *achievable* allowed returns that support the financial integrity of the utility.

Q84. PLEASE BRIEFLY SUMMARIZE THE COMPANY'S CAPITAL INVESTMENT PLANS.

A. As discussed in the direct testimony of Richard Gonzalez, the Company projects

[93] American Gas Association, "Infrastructure Cost Recovery Update," June 2012, at 2.
[94] Source: *Value Line*. Accessed January 11, 2026.

approximately $5.67 billion in planned capital expenditures over the 2026 to 2030 timeframe. Compared to the capital expenditure budget presented in EPE's 2020 rate case, the total capital expenditure expectations for the forward-looking five-year period have increased by more than 250 percent.[95] Because the Company will continue to make substantial investments in its utility operations, it will require efficient access to capital markets during the period that rates established in this proceeding will be in effect.

The Company's capital investments are critical to support advancement of its transmission and distribution operations in the state, as well as reliability, growth, and resiliency. As further discussed in Richard Gonzalez's direct testimony, the Company's anticipated capital expenditures include the construction of solar and battery capacity, as well as improvements to its Palo Verde Generating Station. These capital expenditures are imperative in supporting the growth in the service territory's energy demands and reliable sources of power.

EPE's capital expenditure program also supports the state's economic and digital infrastructure development as evidenced by its agreement to extend facilities to serve BorderPlex Digital Assets LLC ("BorderPlex"). BorderPlex is building a Digital Infrastructure Campus in Santa Teresa with the goal of helping

[95] *In re Application of El Paso Electric Company for Revision of its Retail Electric Rates Pursuant to Advice Notice No. 267,* Case No. 20-00104-UT, Direct Testimony of Jennifer E. Nelson, at 85. The Company's estimated construction costs for 2020 through 2024 were budgeted for $1.60 billion, as described in the Company's December 31, 2019, 10-K and Fourth Quarter 2019 Investor Presentation.

trade-centric businesses and support New Mexico as a leader in AI technology. EPE has worked with BorderPlex Digital for the last two years to design infrastructure required to support the region's growing power demands and allows EPE to support economic growth in the Santa Teresa community in the future.[96]

Q85. HOW DOES EPE'S CAPITAL SPENDING PROGRAM COMPARE TO THOSE OF THE PROXY COMPANIES?

A. To assess the magnitude of EPE's planned capital investment program, I compared its ratio of projected capital expenditures to net utility plant to the ratios for the proxy companies. Figure JEN-28 below shows that EPE's planned capital expenditures as a percentage of net plant is higher than all the proxy companies even though the proxy companies are significantly larger companies with more resources. EPE's ratio of projected capital expenditures to net utility plant of 138.35 percent is 2.28 times higher than the median ratio for the proxy group of 60.72 percent.

/

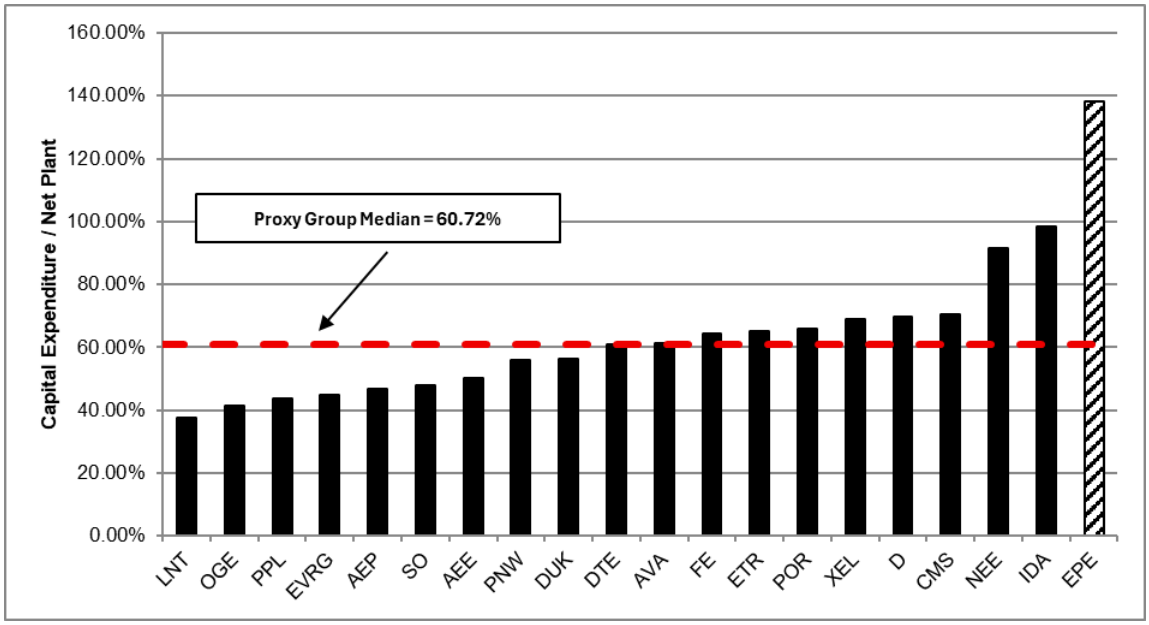
/

/

/

[96] BorderPlex Digital Assets, "$5B deal at the border." https://www.borderplexdigital.com/post/5b-deal-at-the-border

Figure JEN-28: Ratio of Planned Capital Expenditures (2026-2030) to 2024 Net Utility Plant[97]



Q86. HOW DO THE COMPANY'S CAPITAL EXPENDITURE REQUIREMENTS AFFECT ITS RISK PROFILE?

A. As with any utility facing substantial capital expenditure requirements, the Company's risk profile is affected in two significant and related ways: (1) the heightened level of investment increases the risk of under recovery or delayed recovery of the invested capital; and (2) an inadequate return would put downward pressure on key credit metrics due to both the reduction in cash flow and an increase in debt to fund its expenditures.

[97] *See*, Exhibit JEN-7.

Q87. DO CREDIT RATING AGENCIES RECOGNIZE RISK ASSOCIATED WITH INCREASED CAPITAL EXPENDITURES?

A. Yes. From a credit perspective, the additional pressure on cash flows associated with high levels of capital expenditures exerts corresponding pressure on credit metrics and, therefore, credit ratings. To that point, S&P explains the importance of regulatory support for large capital projects:

> When applicable, a jurisdiction's willingness to support large capital projects with cash during construction is an important aspect of our analysis. This is especially true when the project represents a major addition to rate base and entails long lead times and technological risks that make it susceptible to construction delays. Broad support for all capital spending is the most credit-sustaining. Support for only specific types of capital spending, such as specific environmental projects or system integrity plans, is less so, but still favorable for creditors. Allowance of a cash return on construction work-in-progress or similar ratemaking methods historically were extraordinary measures for use in unusual circumstances, but when construction costs are rising, cash flow support could be crucial to maintain credit quality through the spending program. Even more favorable are those jurisdictions that present an opportunity for a higher return on capital projects as an incentive to investors.[98]

Moody's also notes that growing power demand, the need to improve grid resilience, and advancing efforts to reduce carbon emissions is increasing capital

[98] S&P Global Ratings, "Assessing U.S. Investor-Owned Utility Regulatory Environments," August 10, 2016, at 7.

expenditure pressure for utilities, widening cash flow deficits and weakening their financial strength:

> Credit pressure is emerging most acutely for companies with large, complete or multiyear projects or for those that are experiencing a delay in the recovery of investment costs. Unlike exogenous events of recent year – such as severe storms, commodity price spikes and the COVID-19 pandemic, which we viewed as temporary events – capital spending and related financings are core long-term financial policy issues.[99]

To the extent that the regulatory environment does not enable timely and sufficient cost recovery of its full cost of doing business, including capital costs, the Company will face increased pressure on its credit metrics thus raising the cost of both debt and equity. Maintaining the ability to access capital markets on favorable terms, in the form of financial integrity (i.e., capital structure and return on equity) is especially important for utilities and their customers during periods of significant capital investment.

Q88. HOW DOES THE REGULATORY ENVIRONMENT IN WHICH A UTILITY OPERATES AFFECT ITS COST OF CAPITAL?

A. The regulatory environment is one of the most important factors investors consider when assessing a utility's risk, as it is a significant driver of earnings and cash flow

[99] Moody's Ratings, "High capital spending will weigh on credit quality without supportive company actions," October 21, 2024.

that are of utmost importance to investors.[100] Investors and rating agencies understand that a constructive regulatory environment is critical to utilities' credit and financial integrity, especially during stressed market conditions. In fact, 50 percent of the factors that weigh in Moody's ratings determinations relate to the nature of regulation. Predictability and consistency of regulatory actions are among the factors considered by Moody's in assessing the regulatory framework:

> As the revenues set by the regulator are a primary component of a utility's cash flow, the utility's ability to obtain predictable and supportive treatment within its regulatory framework is one of the most significant factors in assessing a utility's credit quality.
>
> ***
>
> In situations where the regulatory framework is less supportive, or is more contentious, a utility's credit quality can deteriorate rapidly.[101]

S&P states that regulatory advantage is "of critical importance" because "[i]t defines the environment in which a utility operates and has a significant bearing on a utility's financial performance."[102] S&P explains that it considers four subfactors when assessing a utility's ability to recover all its costs "on time and in full – and to earn a return on the capital it deploys."[103] Those four subfactors are

[100] Moody's Investors Service, "Rating Methodology, Regulated Electric and Gas Utilities," at 7 (August 6, 2024).
[101] Moody's Investors Service, "Regulatory Frameworks – Ratings and Credit Quality for Investor-Owned Utilities," at 2 (June 18, 2010).
[102] S&P Global Ratings, "Sector-Specific Corporate Methodology," Section 29 Regulated Utilities, at 147 (April 4, 2024).
[103] *Id*.

(1) regulatory stability, (2) tariff-setting procedures and design, (3) financial stability, and (4) regulatory independence and insulation.[104] Thus, predictability and consistency of regulatory actions are among the primary concerns for the rating agencies, as is full and timely cost recovery, including recovery of capital costs.

Q89. WHY IS IT IMPORTANT THAT REGULATION PROVIDE UTILITIES WITH A REASONABLE OPPORTUNITY TO EARN A FAIR RETURN?

A. As noted earlier, the ratemaking process is grounded in the principle that a utility is entitled to a reasonable opportunity to recover prudently incurred expenses and the return of and on prudently invested capital so that it can attract investors to commit capital.

As the National Regulatory Research Institute astutely observes, "regulation recognizes that financially healthy utilities are necessary for the long-term economic welfare of customers."[105]

Similarly, the National Association of Regulatory Utility Commissioners ("NARUC") explains:

> Customers benefit by having a financially stable utility that has the earnings and cash flow sufficient to attract equity and debt on reasonable terms, and the resulting ability to provide safe, reliable, and affordable utility service. Receiving a reasonable authorized ROE and capital structure from regulators is an

[104] *Id*.
[105] *Alternative Rate Mechanisms and Their Compatibility with State Utility Commission Objectives,* National Regulatory Research Institute, at iv (April 2014).

> important contributor to financial stability. The customer benefits that result from being served by a financially healthy utility outweigh the illusory short-term "benefits" of a negative regulatory climate that heightens regulatory risk.
>
> The level of authorized ROE and the ability to earn the authorized ROE through an appropriate capital structure used for ratemaking and tariff-setting are important considerations for investors' evaluation of regulatory quality and risk. Regulatory lag may lead to an earned ROE that falls short of the authorized ROE, thus negatively impacting investors' evaluation of regulatory quality and risk.
>
> ***
>
> Regulators are more effective at serving customers when they harness investors' desire to provide capital rather than constrain it.[106]

The benefit of a solid financial profile, therefore, aligns with customers' interests of receiving safe and reliable service. Consequently, it is critical that regulation provides a reasonable opportunity (which is not a guarantee) to earn an adequate return that supports the financial integrity of the utility.

Q90. HOW DO THE CREDIT RATING AGENCIES VIEW THE REGULATORY ENVIRONMENTS IN WHICH THE COMPANY OPERATES?

[106] National Association Of Regulatory Utility Commissioners *A Cost of Capital and Capital Markets Primer for Utility Regulators*, April 2020, at 8.

A. Fitch has commented on the Company's "challenging" regulatory environment, noting the pressure on credit metrics resulting from regulatory lag, particularly due to "large capex programs planned over the next several years."[107]

Similarly, in its recent credit opinion, Moody's identified the "less supportive regulatory environment in New Mexico relative to other jurisdictions" as one of primary credit challenges of EPE's current credit rating.[108] Moody's notes that New Mexico's regulatory framework has been "less predictable and transparent for EPE than those of *most other US jurisdictions*."[109]

The regulatory environment significantly affects both the access to and the cost of capital. Regulatory decisions regarding the authorized ROE and capital structure directly affect the subject utility's internal cash flow generation, and therefore the financial metrics reviewed by ratings agencies in their ratings assessments. Because credit ratings are intended to reflect the ability to meet financial obligations as they come due, the ability to generate the cash flows required to meet those obligations (and to provide a cushion for unexpected events) is of critical importance to both debt and equity investors.

[107] FitchRatings, "El Paso Electric Company," May 1, 2025, at 1-2.
[108] Moody's Ratings, "El Paso Electric Company: Update to credit analysis," January 22, 2026.
[109] *Id.* [Italics added.]

Q91. HAVE YOU COMPARED EPE'S REGULATORY RISK RELATIVE TO THE ELECTRIC UTILITIES WITHIN THE PROXY GROUP?

A. Yes, I have. To assess the regulatory environment of the proxy companies and EPE, I reviewed the key cost recovery mechanisms and ratemaking frameworks for each of the electric operating companies within the proxy group in the jurisdictions in which they operate, including the cost recovery and volumetric risk mitigation mechanisms in place, test year, and rate base methodology.

As shown in Exhibit JEN-8, like EPE, all the proxy group operating companies with retail supply obligation have a fuel and/or purchased power cost recovery mechanism, 83 percent have a mechanism to recover energy efficiency program costs, and 61 percent have a renewable energy recovery mechanism. However, unlike 60 percent of the proxy group, EPE does not have a mechanism to mitigate volumetric risk, such as revenue decoupling or a lost revenue adjustment mechanism for its energy efficiency programs. Further, 56 percent of the proxy companies are able to use a full or partial forecast test year, whereas the use of a forecasted test year has generally been met with controversy in New Mexico.[110] A historical test year is traditionally a backward-looking measurement of rate base, expenses, and revenues, resulting in regulatory lag. Regulatory lag is a significant

[110] Moody's Ratings, "El Paso Electric Company: Update to credit analysis," January 22, 2026.

challenge for utilities in situations in which costs that may be beyond a utility's control are rising faster than sales, resulting in earnings attrition.

Lastly, Regulatory Research Associates ("RRA") ranks the Commission as "Below Average/1"[111] and views New Mexico's regulatory climate as "relatively restrictive from an investor perspective."[112] In comparison, 85 percent of the proxy group operate in a more favorable regulatory jurisdiction, as ranked by RRA.

On balance, from an investor perspective, the regulatory mechanisms available to the Company do not offer any level of risk mitigation that is meaningfully different from the proxy companies. Furthermore, these regulatory mechanisms are only as effective as their implementation, including a compensatory return. Ultimately, customers benefit from investors' positive perception of the regulatory environment in New Mexico.

Q92. DO THE COMPANY'S REGULATORY MECHANISMS REDUCE ITS RISK?

[111] RRA maintains three principal rating categories for regulatory climates: Above Average, Average, and Below Average. Within the principal rating categories, the numbers 1, 2, and 3 indicate relative position. The designation 1 indicates a stronger rating; 2, a mid-range rating; and, 3, a weaker rating. The evaluations are assigned from an investor perspective and indicate the relative regulatory risk associated with the ownership of securities issued by the jurisdiction's utilities. RRA endeavors to maintain an approximately equal number of ratings above the average and below the average.

[112] Regulatory Research Associates, Commission Profiles, New Mexico Public Regulation Commission, accessed February 9, 2026.

A. No, they do not. The Company employs cost recovery mechanisms similar to those used by the proxy group; as such, its risk relative to the proxy group is not reduced as a result of its rate structures. Further, because the proxy companies all have similar mechanisms, any effects on the cost of equity associated with the rate mechanisms are captured in the analytical model results.

It is important to remember that risk assessment is a comparative exercise. Rate adjustment mechanisms are common in the industry and the financial community is fully aware of their prevalence. In fact, rate adjustment mechanisms have become more common in the industry, not less. As noted earlier, the proxy companies all have similar mechanisms available to them. While the specific details of the mechanics of the rate adjustment mechanisms may differ from utility to utility and jurisdiction to jurisdiction, their objective is the same: to improve the timeliness of cost recovery and mitigate (but not necessarily eliminate) earnings erosion associated with regulatory lag. Because the proxy companies all have mechanisms that improve the timeliness of cost recovery, the Company's regulatory mechanisms simply render it more comparable to its peers.

Q93. WHAT ARE YOUR CONCLUSIONS REGARDING THE COMPANY'S CAPITAL EXPENDITURE PLANS, ITS NEED TO MAINTAIN ACCESS TO CAPITAL, AND THE REGULATORY ENVIRONMENT ON THE COMPANY'S RISK PROFILE?

A. The Company's capital expenditure program is substantial and places increased pressure on its cash flows, making regulatory support critical to EPE's ability to finance and earn a reasonable return on its planned utility investments. The Company's capital expenditure plan emphasizes the importance of the Commission's decision in this proceeding, which will have a direct bearing on the Company's ability to maintain its financial profile and its access to the capital market at reasonable costs and terms.

The Company will need to rely on external sources for funding critical investments to expand and enhance its assets to support the growing demand in New Mexico. Further, the Company's ability to efficiently access the capital markets at favorable terms will depend on the strength of its balance sheet and financial integrity.

B. GENERATION PORTFOLIO

Q94. DOES THE COMPANY'S GENERATION PORTFOLIO INCLUDE NUCLEAR GENERATING ASSETS?

A. Yes. EPE's generation portfolio includes 665 megawatts ("MW") of owned nuclear generating capacity in its Palo Verde facility.[113] On a net generation basis, output from Palo Verde represented approximately 46.88 percent of EPE's total generation

[113] Source: EPE 2024 Corporate Sustainability Report, at 8.

in 2024. As shown earlier in Figure JEN-16**Error! Reference source not found.** above, compared to the Proxy Group, EPE had the highest percentage of net generation from nuclear plants in 2024, approximately 3.0 times the average of the proxy group.[114]

Q95. PLEASE DISCUSS THE ROLE OF NUCLEAR GENERATION IN SERVING CUSTOMERS AND DESCRIBE THE RISKS ASSOCIATED WITH THE OWNERSHIP OF NUCLEAR GENERATING RESOURCES.

A. Nuclear generation is a significant component of EPE's fleet. It is a baseload and highly reliable generation resource. Its importance grows as customer demand increases. Importantly, nuclear generating resources are regulated by the U.S. Nuclear Regulatory Commission ("NRC"). EPE is subject to NRC mandates to meet licensing and safety-related standards that may require increased capital spending and incremental operating costs.

On January 25, 2022, the NRC issued an order approving the application for the indirect transfer of control of EPE's interest in the Palo Verde generation plants. While there were no physical or operational changes, NRC's approval

[114] Source: S&P Capital IQ. As shown earlier in Figure JEN-16, the proxy group average percentage of nuclear net generation in megawatt-hours ("MWh") was 15.51 percent. The average percentage of nuclear generation in 2024 for only the proxy companies that have nuclear generation was 26.78 percent, significantly less than EPE.

reduced the regulatory uncertainty of cost recovery and secured nuclear generation as part of EPE's long-term plans.

Q96. ARE THERE EXAMPLES OF THE INCREASED RISK OF NEW REGULATORY REQUIREMENTS THAT NUCLEAR GENERATION PLANT OPERATORS FACE?

A. Yes. One example is the increased oversight and regulatory requirements that were put in place following the earthquake and tsunami on March 11, 2011, that caused significant damage to the Fukushima Daiichi nuclear complex and threatened the public health. After the Fukushima accident, the NRC assembled a task force to assess current regulations and determine if new measures were required to ensure safety. The task force issued a report in July 2011 that included a set of recommendations for NRC consideration. Those recommendations continue to be modified and expanded by the NRC staff, and the first related regulatory requirements were issued in March.[115]

Q97. HOW DOES THE INVESTMENT COMMUNITY PERCEIVE THE RISK ASSOCIATED WITH NUCLEAR GENERATION ASSETS?

[115] *See*, www.nrc.gov/reactors/operating/ops-experience/japan-info.html.

A. Credit rating agencies are aware of the operating and safety risks associated with nuclear generation assets. For example, S&P Global Ratings discussed the following risks and challenges for nuclear operators:

> Nuclear energy has faced mounting criticism over security concerns, especially in the aftermath of the Fukushima disaster on March 11, 2011. Nuclear operators face unique risks of low-probability, but high-impact catastrophic events. As a consequence, operators face increasing political and social pressures on safety, waste disposal, and storage. While profitability remains a key pillar of our business risk assessment of nuclear operators, we equally take these other risks into account. Furthermore, nuclear-related long-term liabilities typically represent a large portion of nuclear operators' overall S&P-adjusted debt.[116]

With respect to the Company specifically, Moody's observed that EPE "has relatively moderate responsible production risk given its nuclear generation ownership."[117]

C. SMALL SIZE EFFECT

Q98. PLEASE EXPLAIN THE RISK ASSOCIATED WITH SMALL SIZE.

A. Both the financial and academic communities have long accepted the proposition that the cost of equity for small firms is subject to a "size effect."[118] Although

[116] S&P Global Ratings, "The Energy Transition: Nuclear Dead And Alive," November 11, 2019, at 22.
[117] Moody's Ratings, "El Paso Electric Company: Update to credit analysis," January 22, 2026.
[118] *See*, Mario Levis, *The Record on Small Companies: A Review of the Evidence*, Journal of Asset Management at 368-397 (Mar. 2002) for a review of literature relating to the size effect.

empirical evidence of the size effect is often based on studies of industries beyond regulated utilities, utility analysts also have noted the risks associated with small market capitalizations. Specifically, a senior consultant with Ibbotson Associates noted:

> For small utilities, investors face additional obstacles, such as a smaller customer base, limited financial resources, and a lack of diversification across customers, energy sources, and geography. These obstacles imply a higher investor return.[119]

Small size, therefore, leads to two categories of increased risk for investors: (1) liquidity risk (*i.e.*, the risk of not being able to sell one's shares in a timely manner due to the relatively thin market for the securities); and (2) fundamental business risks. As discussed below, relative to the proxy group, EPE's operations are both smaller in size and less diversified than those of the proxy companies.

Q99. HOW DOES THE SMALLER SIZE OF EPE AFFECT ITS BUSINESS RISKS RELATIVE TO THE PROXY GROUP?

A. It is important to bear in mind that my ROE recommendation for EPE is developed based on market data applied to a risk-comparable proxy group. Consequently, an evaluation of the Company's risk associated with its small size is necessarily based on a comparison of its size relative to the proxy group. The Company's smaller

[119] Michael Annin, *Equity and the Small-Stock Effect*, Public Utilities Fortnightly (Oct. 15, 1995).

size relative to the proxy group companies indicates greater relative business risk for the Company because, all else equal, size has a material bearing on risk.

In general, smaller companies are less able to withstand adverse events that affect their revenues and expenses. Any material changes to expected operations and maintenance expenses can have severe consequences on a company's level of operating leverage. Similarly, capital expenditures for non-revenue producing investments such as system maintenance and replacements will put proportionately greater pressure on customer costs, potentially leading to demand reduction. Taken together, these risks affect the return required by investors for smaller companies. As a significantly smaller company, unpredictable and adverse events may affect EPE's revenues or expenses more acutely. It is important that the Company has the financial strength to withstand such events with a margin of safety.

Q100. IS THERE SUPPORT IN THE FINANCIAL COMMUNITY FOR THE USE OF A SMALL SIZE PREMIUM?

A. Yes, there have been several studies that demonstrate the size premium. One of the earliest works in this area found that over a period of 40 years "the common stock of small firms had, on average, higher risk-adjusted returns than the common stock of large firms."[120] The author, who referred to that finding as the "size effect,"

[120] R. W. Banz, The Relationship Between Return and Market Value of Common Stocks, Journal of Financial Economics, 9, 1981 at 3-4.

suggested that the CAPM was mis-specified, in that on average, smaller firms had significantly larger risk-adjusted returns than larger firms. The author also concluded that the size effect was "most pronounced for the smallest firms in the sample."[121] Since then, additional empirical research has focused on explaining the size effect as a function of lower trading volume and other factors, but the proposition that Beta coefficients fail to reflect the risks of smaller firms persists.[122]

In 1994, Fama and French also focused on the issue of whether the CAPM adequately explained security returns and proposed a "three factor" model for expected security returns. Those factors include: (1) the covariance with the market, (2) size, and (3) financial risk as determined by the book/market ratio. As explained by Morningstar, Fama and French "found that the returns on stocks are better explained as a function of size and book-to-market value in addition to the single market factor of the CAPM, with the company's size capturing the size effect and its book-to-market ratio capturing the financial distress of a firm."[123]

Simply put, investors generally demand greater returns from smaller firms to compensate for less marketability and liquidity of their securities. Duff & Phelps discusses the nature of the small-size phenomenon, providing an indication of the

[121] *Id.* at 16.
[122] *See*, for example, Mario Levis, *The record on small companies: A review of the evidence*, Journal of Asset Management, March 2002.
[123] Morningstar, Ibbotson SBBI 2013 Valuation Yearbook, at 109.

magnitude of the size premium based on several measures of size. In discussing "Size as a Predictor of Equity Returns," Duff & Phelps states:

> The size effect is based on the empirical observation that companies of smaller size are associated with greater risk and, therefore, have greater cost of capital [sic]. The "size" of a company is one of the most important risk elements to consider when developing cost of equity capital estimates for use in valuing a business simply because size has been shown to be a *predictor* of equity returns. In other words, there is a significant (negative) relationship between size and historical equity returns - as size *decreases*, returns tend to *increase*, and vice versa. (footnote omitted) (emphasis in original)[124]

Q101. ARE YOU AWARE OF OTHER STUDIES REGARDING THE EXISTENCE OF SIZE PREMIUM FOR REGULATED UTILITIES?

A. Yes. A 2002 study by Thomas M. Zepp[125] concludes that size premia do exist for smaller utilities. Developed in response to a 1993 study by Annie Wong, the Zepp study focuses specifically on the utility industry and the effect of the size premium in a regulated environment. For example, one study reviewed by Zepp found that smaller water utilities had a cost of equity that, on average, was 99 basis points higher than the average cost of equity for the larger water utilities, and the result was statistically significant at the 90.00 percent level.[126] Zepp concludes that "to

[124] Duff & Phelps, Valuation Handbook – U.S. Guide to Cost of Capital, Wiley 2020, at 4-1.
[125] Thomas M. Zepp, *Utility stocks and the size effect – revisited*, Quarterly Review of Economics and Finance, 43 (2003) 578-582.
[126] Thomas M. Zepp, *Utility stocks and the size effect – revisited*, The Quarterly Review of Economics and Finance, 43 (2003), at 580-581.

the extent water utilities are representative of all utilities, there is support for smaller utilities being more risky than larger ones."[127]

Additionally, a 2011 study by Stéphane Chrétien and Frank Coggins in the article "Cost of Equity for Energy Utilities: Beyond the CAPM",[128] considered the Fama-French three-factor model and a model similar to the Empirical CAPM I described earlier. In the article, the Fama-French three-factor model explicitly included an adjustment to the CAPM for risk associated with size. As Chrétien and Coggins show, the Beta coefficient on the size variable for a group of U.S. natural gas utilities was positive and statistically significant supporting the position that small size risk is relevant for regulated utilities.[129]

Q102. IS IT APPROPRIATE TO CONSIDER THE RISK ASSOCIATED WITH EPE'S SMALL SIZE EVEN THOUGH IT IS A SUBSIDIARY OF LARGER ENTITIES?

A. Yes. The widely accepted "stand-alone" regulatory principle treats each utility subsidiary as its own company. Parent entities (whether publicly or privately owned) like other investors, have capital constraints and must look at the

[127] Thomas M. Zepp, *Utility stocks and the size effect – revisited*, The Quarterly Review of Economics and Finance, 43 (2003), at 582.
[128] Chrétien, Stéphane, and Frank Coggins. *Cost Of Equity For Energy Utilities: Beyond The CAPM.* Energy Studies Review, vol. 18, no. 2, at 31.
[129] Chrétien, Stéphane, and Frank Coggins. *Cost Of Equity For Energy Utilities: Beyond The CAPM.* Energy Studies Review, vol. 18, no. 2, at 31.

attractiveness of the expected risk-adjusted return of each investment alternative in their capital budgeting process. The opportunity cost concept applies regardless of the source of the funding. When funding is provided by a parent entity, the return still must be sufficient to provide an incentive to allocate equity capital to the subsidiary or business unit rather than other internal or external investment opportunities. That is, the regulated subsidiary competes for capital with the parent company's affiliates, and with other similarly situated utility companies. In that regard, investors value corporate entities on a sum-of-the-parts basis and expect each division within the parent company to provide an appropriate risk-adjusted return. It is therefore important that the authorized ROE reflects the risks and prospects of the utility's operations and supports the utility's financial integrity from a stand-alone perspective. From that perspective, the fact that EPE is a subsidiary of Sun Jupiter LLC is not relevant to the consideration of the risk associated with EPE's small size.

Q103. HOW DOES EPE COMPARE IN SIZE TO THE PROXY COMPANIES?

A. EPE is substantially smaller than the average of the proxy companies in terms of market capitalization, net utility plant, and number of electric customers (see Figure JEN-16 above). As Exhibit JEN-9 shows, EPE's New Mexico-only jurisdictional-implied market capitalization is approximately $852.34 million (or

3.14 percent of the proxy group median market capitalization).[130] On a total company basis including both EPE's Texas and New Mexico operations, the implied market capitalization is approximately $4,485 million, or 16.50 percent of the proxy group median.[131]

Q104. HOW DID YOU ESTIMATE THE SIZE PREMIUM FOR EPE?

A. In its *Cost of Capital Navigator*, Kroll presents its calculation of the size premium for deciles of market capitalizations relative to the S&P 500 Index. An additional estimate of the size premium associated with EPE, therefore, is the difference in the Kroll size risk premia for the proxy group median market capitalization relative to the Company's implied market capitalization.

As shown in Exhibit JEN-9, according to recent market data, the median market capitalization of the proxy group is $27,176 million, which corresponds to the second decile of Kroll's market capitalization data. Based on Kroll's analysis, that decile corresponds to a size premium of 0.33 percent (or 33 basis points). As noted above, EPE's New Mexico-only implied market capitalization is $852.34 million, which falls within the eighth decile and corresponds to a size premium of

[130] The implied market capitalization is calculated by applying the median Market/Book ratio for the proxy group of 2.10 to EPE's New Mexico-jurisdictional implied total common equity of $407 million. EPE's New Mexico-jurisdictional implied common equity is estimated from the proposed rate base multiplied by the proposed equity ratio. *See*, Exhibit JEN-9, page 1.
[131] *See* Exhibit JEN-9, page 2.

0.88 percent (or 88 basis points). The difference between those size premia is 55 basis points (0.88 percent – 0.33 percent).[132]

I also performed the same analysis for EPE on a *total* company basis. The implied market capitalization for EPE's total company operations is approximately $4,485 million, which falls within the fifth decile and corresponds to a size premium of 0.74 percent (or 74 basis points). The difference between the second and fifth decile size premia is 41 basis points (0.74 percent – 0.33 percent).[133]

Q105. HAVE YOU CONSIDERED THE COMPARATIVELY SMALL SIZE OF EPE IN YOUR ESTIMATED RETURN ON COMMON EQUITY?

A. Yes. While I have quantified the small size effect, rather than proposing an explicit premium, I have considered the Company's small size in my assessment of business risks in determining the reasonableness of EPE's capital structure and my recommended ROE range.

D. SUMMARY OF BUSINESS RISKS AND OTHER CONSIDERATIONS

Q106. PLEASE SUMMARIZE YOUR CONCLUSIONS REGARDING THE BUSINESS RISKS FACING EPE.

A. There are additional factors that must be taken into consideration when determining

[132] Exhibit JEN-9, page 1.
[133] Exhibit JEN-9, page 2.

EPE's cost of equity. These factors include (1) the relationship between the regulatory environment and the Company's need to access external capital necessary to execute its capital expenditure plan and meet the state's renewable energy targets; (2) the Company's nuclear generation operations; and (3) its significantly smaller size.

The regulatory environment is one of the most important issues considered by both debt and equity investors in assessing the risks and prospects of utility companies. From the perspective of debt and equity investors, the authorized return should enable the Company to (1) generate the cash flow needed to meet its near-term financial obligations; (2) make the capital investments needed to maintain and expand its system; (3) maintain sufficient levels of liquidity to fund unexpected events; and (4) sustain confidence in New Mexico's regulatory environment among credit rating agencies and investors. In light of those risks and considering the current capital market environment and the Company's requested capital structure, an ROE of 10.70 percent, which is the midpoint of my range of 10.00 percent to 11.40 percent, and within the range of results of the Commission's preferred results, is reasonable, if not conservative.

VI. CAPITAL STRUCTURE

Q107. WHAT IS EPE'S REQUESTED CAPITAL STRUCTURE?

A. As explained in the direct testimony of Richard Gonzalez, EPE requests its actual

capital structure (adjusted for a dividend payment that was paid and a debt issuance in October 2025) consisting of 55.50 percent common equity and 44.50 percent long-term debt.[134]

Q108. HOW DOES THE CAPITAL STRUCTURE AFFECT THE COST OF EQUITY?

A. A company's total risk consists of business risk and financial risk. Business risk includes operating, market, regulatory, and competitive uncertainties, while financial risk is the incremental risk associated with greater debt. As the percentage of debt in the capital structure increases, so do the fixed obligations for the repayment of that debt and the risk of financial distress.[135] Therefore, the capital structure reflects the financial risk that a company may not have adequate cash flows to meet its financial obligations.

Q109. PLEASE SUMMARIZE THE APPROACHES TO DETERMINING THE APPROPRIATE CAPITAL STRUCTURE FOR REGULATED UTILITIES.

A. There are two primary approaches regulators use to determine the appropriate capital structure for ratemaking purposes. The most common approach is to use the subject utility's actual capital structure. This approach is preferred when the

[134] *See*, Direct Testimony of Richard Gonzalez.
[135] See, Roger A. Morin, Ph.D., New Regulatory Finance, Public Utility Reports, Inc., at 45-46 (2006).

subject utility (1) issues its own debt, (2) has its own credit rating, and (3) its actual capital structure is within industry standards and practice. When the subject utility does not issue its own debt and have its own credit rating, or when the actual capital structure deviates substantially from industry practice, a hypothetical capital structure may be imputed.

Q110. DOES EPE ISSUE ITS OWN DEBT AND HAVE ITS OWN CREDIT RATING?

A. Yes. Therefore, the next step is to assess the reasonableness of its actual capital structure within the context of industry practice.

Q111. WHAT ARE THE REGULATORY GUIDELINES FOR DETERMINING WHETHER A UTILITY'S CAPITAL STRUCTURE IS CONSISTENT WITH SOUND UTILITY PRACTICE?

A. In a 2020 publication titled *A Cost of Capital and Capital Markets Primer for Utility Regulators*, NARUC advises that actual capital structure ratios should be used unless they "greatly diverge" from sound industry practice:

> A utility management must be permitted latitude, discretion, and flexibility in managing capital structure ratios. Since there is no practical methodology to pinpoint theoretically optimal capital structure ratios, targeted ratios can only be broadly conceptualized. Appropriate ratios may shift over time as capital market conditions or business risk characteristics change. Additionally, the timing of upcoming issuances and maturities

> may influence the capital structure ratios because both the size and frequency of issuances are affected by the relative cost-effectiveness of various issuance increments.
>
> Given these practical considerations, capital structure ratios cannot be deemed to be inappropriate unless the ratios greatly diverge from sound industry practice and cause a lack of financial flexibility that may lead to higher overall costs.
>
> ***
>
> As increasing financial leverage shifts the weight from common equity to lower cost debt, it also increases both the cost of debt and the cost of common equity. In practice, these offsetting impacts cancel each other out over a wide range of capital structure ratios."[136]

Further, James C. Bonbright explains in his seminal text *Principles of Public Utility Rates* that a hypothetical capital structure should be used only when actual capital structures are "clearly unsound" or "extravagantly conservative," reasoning that using hypothetical capital structures "substitutes an estimate of what the capital cost would be under non-existing conditions for what it actually is or will soon be under prevailing conditions."[137]

Q112. PLEASE SUMMARIZE YOUR ANALYSIS OF THE PROXY COMPANIES' CAPITAL STRUCTURES.

[136] National Association of Regulatory Utility Commissioners, *A Cost of Capital and Capital Markets Primer for Utility Regulators* (April 2020), at 12 (emphasis added).
[137] James C. Bonbright, Principles of Public Utility Rates, at 243-44 (1960). Republished with permission by the Regulatory Assistance Project.

A. The reasonableness of the requested capital structure is assessed within the context of industry practice and investor requirements. In other words, the capital structure should (1) be reasonably consistent with industry practice, (2) enable the subject company to sustain its operations and its financial integrity, and (3) allow it to maintain access to capital at competitive rates under a variety of market conditions. To assess whether EPE's requested capital structure is consistent with industry practice, I calculated the average common equity and long-term debt ratios for each of the proxy group electric operating companies over the years 2022 to 2024 (*see* Exhibit JEN-10). As shown in Exhibit JEN-10, the common equity ratios of the proxy group range from 44.73 percent to 60.60 percent. By comparison, the Company's proposed equity ratio of 55.50 percent is 5.10 percentage points (510 basis points) below the top of the proxy group range. Therefore, EPE's requested capital structure is within industry standards. More importantly, the Company's requested capital structure supports its financial profile and enables it to raise external funding for its elevated capital expenditure program.

Q113. WHY IS IT IMPORTANT TO USE AVERAGE CAPITAL COMPONENTS RATHER THAN A POINT-IN-TIME MEASUREMENT?

A. Measuring the capital components at a single point in time can skew the capital structure by the specific circumstances of a particular period. For example, a utility may issue debt to fund an acquisition or to ensure liquidity during constrained

capital market environments, which may not reflect the company's long-term capital structure objectives. Moreover, a utility's actual capital structure fluctuates over the course of the year due to the seasonality of earnings, the timing of capital investments, and the timing of debt and equity financings. Further, debt and equity issuances can be lumpy, and the timing of issuances may not coincide. Therefore, it is more appropriate to normalize the relative relationship between the components over a period of time.

Q114. WHAT IS YOUR CONCLUSION REGARDING EPE'S PROPOSED CAPITAL STRUCTURE?

A. EPE's common equity ratio of 55.50 percent is consistent with the proportion of equity capital that finances the regulated electric operations of the proxy group companies. Further, the Company issues its own debt and has its own credit rating. In my opinion, that the Company's proposed capital structure is reasonable and appropriate for the purposes of determining its overall rate of return and compensates for EPE's elevated risk profile.

VII. CONCLUSION

Q115. WHAT IS YOUR RECOMMENDATION REGARDING THE COMPANY'S COST OF EQUITY AND CAPITAL STRUCTURE?

A. As discussed throughout my Direct Testimony, it is important to consider a variety

of quantitative and qualitative information in reviewing analytical results and arriving at ROE determinations. Based on my review of the results from three commonly used analytical approaches, I conclude an ROE in the range of 10.00 percent to 11.40 percent represents the range of equity investors' required return for investment in electric utilities comparable to EPE in today's capital market environment. Within that range, I recommend 10.70 percent. Importantly, my recommendation aligns with the range derived from the Commission's preferred ROE methodology, which appropriately reflects EPE's risk profile and current market dynamics allowing for a reasonable ROE result.

As to the capital structure, I believe that the Company's requested capital structure of 55.50 percent common equity and 44.50 percent long-term debt is within the range of capital structures that finance the regulated electric utility operations of the proxy group and, therefore, is reasonable and appropriate. Recognizing EPE's necessity to maintain a strong financial profile and financial viability during a time of elevated capital expenditure needs, I determined that an equity ratio above the proxy group average, but well within the range of the proxy group, compensates for the Company's elevated risk profile. That conclusion considers EPE's financial risk inherent in its capital structure, as well as its small size, nuclear generation, and ongoing need to access capital as it executes its capital investment plans.

Q116. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes, it does.

CONCENTRIC ENERGY ADVISORS

JENNIFER E. NELSON
VICE PRESIDENT

Ms. Nelson is a Certified Rate of Return Analyst with more than 15 years of experience in the energy industry. As an expert witness, she has testified to the cost of capital and alternative ratemaking proposals for electric, natural gas, and water utilities. In her time as a consultant, Ms. Nelson has provided consulting services on a variety of utility regulatory matters including ratemaking and regulatory policy, cost of service and revenue requirements, integrated resource planning, renewable power contracts, natural gas pipeline development, utility supply planning issues, and merger and acquisition transactions. Ms. Nelson has extensive experience performing statistical analyses, developing economic and financial models, and providing policy analyses and recommendations.

Prior to joining Concentric, Ms. Nelson was a Director at ScottMadden, Inc., and a managing consultant at Sussex Economic Advisors, LLC. Prior to consulting, she was a staff economist at the Massachusetts Department of Public Utilities and a petroleum economist for the State of Alaska. Ms. Nelson holds a Master of Science degree in Resource and Applied Economics from the University of Alaska and a Bachelor of Science degree in Business Economics from Bentley University.

AREAS OF EXPERTISE

Cost of Capital

- Submitted expert testimony on behalf of electric utilities before regulatory commissions in Arkansas, Kansas, Michigan, New Hampshire, New Mexico, North Carolina, Pennsylvania, South Carolina, Texas, and Virginia regarding the cost of capital.
- Submitted expert testimony on behalf of natural gas utilities before regulatory commissions in Alaska, Florida, Michigan, North Carolina, Ohio, Oregon, South Carolina, Utah, West Virginia, and Wyoming regarding the cost of capital.
- Submitted expert testimony on behalf of a water utility before the Kentucky Public Service Commission regarding the appropriate capital structure and cost of debt.
- Supported expert testimony regarding the cost of capital before numerous state utility regulatory commissions and the FERC on behalf of electric and natural gas utilities through research, financial analysis and modeling, and testimony development.

Alternative Ratemaking Mechanisms

- Submitted expert testimony on behalf of electric utilities and a water utility before the Arkansas Public Service Commission regarding the utilities' proposed Formula Rate Plans.
- Submitted expert testimony on behalf of an electric utility before the Oklahoma Corporation Commission regarding the utility's proposed Formula Rate Plan.
- Submitted expert testimony on behalf of an electric and natural gas utility before the Delaware Public Service Commission regarding the utility's proposed performance-based rate plan.

- Submitted expert testimony on behalf of an electric and natural gas utility before the Montana Public Service Commission regarding the utility's proposed alternative rate mechanisms.
- Co-sponsored expert testimony on behalf of a natural gas utility before the Maine Public Utilities Commission regarding the utility's proposed capital investment cost recovery mechanism.
- Supported expert testimony and performed research and analysis on alternative ratemaking frameworks.

Resource and Supply Planning

- Supported expert testimony on the reasonableness of utility resource supply portfolio decisions.
- Assisted in a benchmarking analysis on behalf of a Northeast U.S. natural gas utility regarding its supply planning standards and design day demand forecast process.
- Supported rebuttal testimony filed on behalf of an Alaska natural gas utility regarding the utility's gas supply planning standards.
- Supported the development of a New Hampshire electric utility's Integrated Resource Plan filed with the New Hampshire Public Utility Commission.
- Performed research and financial analysis to evaluate the benefits, costs, and policy options associated with natural gas expansion by Massachusetts natural gas utilities as part of a prepared report for the Massachusetts Department of Energy Resources.
- Developed a dynamic natural gas demand forecast model for in-state use for the State of Alaska, which included forecasting demand from both existing and anticipated natural gas utilities, power consumption, and large commercial operations.
- Conducted research and prepared analyses for a natural gas pipeline Open Season.

Other Regulatory Financial Issues

- Filed expert testimony before the California PUC regarding the benefits of financial flexibility and diversity in sources of financial capital associated with an electric utility's request to lease entitlements as a means of raising capital.
- Supported expert testimony on the appropriate level of remuneration associated with the Massachusetts electric utilities' long-term contracts for wind power through research, financial analysis and modeling, and testimony development.
- Provided research and analytical support estimating financial damages incurred as a result of construction delays for an electric transmission company.
- Prepared a Feasibility Study for an electric cooperative utility supporting a utility-owned solar project.

Mergers & Acquisitions

- Performed buy-side benchmarking and regulatory analysis for utility acquisitions.

Proxy Group Regulatory Risk Comparative Assessment

Notes:
A mechanism may cover one or more cost categories; therefore, designations may not indicate separate mechanisms for each category. Texas T&D electric utilities do not have retail obligation, thus do not need a fuel or purchased power cost recovery mechanism.

[1] Volumetric Risk Mitigation mechanisms include full or partial decoupling, straight fixed variable rate design, weather normalization adjustment clauses, recovery of lost revenues as a result of Energy Efficiency programs, and earnings true-up mechanisms, such as formula rate plans or annual rate review riders.

[2] Includes recovery of costs related to targeted new generation projects, transmission capital, infrastructure replacement, system integrity/hardening, Smart Grid, AMI metering, and other capital expenditures.

[3] Utility-sponsored conservation, energy efficiency, load control, or other demand side management programs.

[4] Recovers costs associated with renewable energy projects, distributed energy resources, REC purchases, net metering, RPS expense, and renewable PPAs.

[5] EPA upgrade costs, emissions control & allowance purchase costs, nuclear/coal plant decommissioning, and other costs to comply with state and federal environmental mandates.

[6] Cost recovery for items such as pension expenses, bad debt costs, low income programs, storm costs, vegetation management, RTO/transmission expense (not capital), government & franchise fees and taxes, and regulatory fees.

[7] RRA maintains three principal rating categories, Above Average, Average, and Below Average, with Above Average indicating a relatively more constructive, lower-risk regulatory environment from an investor viewpoint, and Below Average indicating a less constructive, higher-risk regulatory climate from an investor viewpoint, Within the three principal rating categories, the numbers 1, 2, and 3 indicate relative position. The designation 1 indicates a stronger (more constructive) rating; 2, a mid range rating; and, 3, a weaker (less constructive) rating. We endeavor to maintain an approximately equal number of ratings above the average and below the average.

DECLARATION OF JENNIFER E. NELSON IN SUPPORT OF THE FOREGOING DIRECT TESTIMONY TO THE APPLICATION OF EL PASO ELECTRIC COMPANY FOR REVISION OF ITS RETAIL ELECTRIC RATES PURSUANT TO ADVICE NOTICE NO. 317

I, ***Jennifer E. Nelson***, pursuant to Rule 1-011 NMRA, state as follows:

1. I affirm in writing under penalty of perjury under the laws of the State of New Mexico that the following statements are true and correct.

2. I am over 18 years of age and have personal knowledge of the facts stated herein. I am employed by El Paso Electric Company ("EPE" or "the Company") as the *Consultant.*

3. The foregoing Direct Testimony of Jennifer E. Nelson, together with all exhibits sponsored therein and attached thereto, is true and accurate based on my knowledge and belief.

4. I submit this Declaration, based upon my personal knowledge and upon information and belief, in support of EPE's ***Application for Revision of Its Retail Electric Rates Pursuant to Advice Notice No. 317.***

FURTHER, DECLARANT SAYETH NAUGHT.

I declare under penalty of perjury that the foregoing is true and correct.

Executed on March 27, 2026.

/s/ Jennifer E. Nelson

EL PASO ELECTRIC COMPANY
DIRECT TESTIMONY OF
JOSEPH S. WEISS

I. INTRODUCTION AND QUALIFICATIONS

Q1. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Joseph S. Weiss. My business address is 293 Boston Post Road West, Suite 500, Marlborough, Massachusetts 01752.

Q2. BY WHOM ARE YOU EMPLOYED, AND IN WHAT POSITION?

A. I am a Vice President with Concentric Energy Advisors, Inc. ("Concentric").

Q3. ON WHOSE BEHALF ARE YOU SUBMITTING THIS TESTIMONY?

A. I am testifying in this proceeding before the New Mexico Public Regulation Commission ("NMPRC" or the "Commission") on behalf of El Paso Electric Company ("EPE" or the "Company").

Q4. PLEASE DESCRIBE CONCENTRIC.

A. Concentric provides financial and economic advisory services to many and various energy and utility clients across North America. Concentric's financial advisory activities include buy and sell-side merger, acquisition, and divestiture assignments; due diligence and valuation assignments; project and corporate finance services; and transaction support services. Concentric's regulatory, economic, and market analysis services include utility ratemaking and regulatory advisory services; energy market assessments; market entry and exit analysis;

corporate and business unit strategy development; demand forecasting; resource planning; and energy contract negotiations. In addition, Concentric provides litigation support services on a wide range of financial and economic issues on behalf of clients throughout North America.

Q5. PLEASE DESCRIBE YOUR EDUCATION AND PROFESSIONAL LICENSES.

A. I have a Master of Business Administration from Southern Illinois University Edwardsville and a B.S. in Business Administration (magna cum laude) with a major in Accounting and Finance from Saint Louis University. I have included my résumé as Exhibit JSW-1.

Q6. HAVE YOU PREVIOUSLY PRESENTED EXPERT TESTIMONY BEFORE REGULATORY AGENCIES?

A. Yes. I have testified or presented evidence in proceedings before the Regulatory Commission of Alaska, the Illinois Commerce Commission, the Maine Public Utilities Commission, the Missouri Public Service Commission, the Public Utilities Commission of Ohio, the Oklahoma Corporation Commission, the Rhode Island Public Utilities Commission, the Public Utility Commission of Texas, and the Public Service Commission of West Virginia.

II. PURPOSE AND SCOPE

Q7. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. I have been asked by the Company to present the results of a lead-lag study prepared by Concentric that was used to develop cash working capital ("CWC") factors and ultimately to calculate the CWC requirement of the Company.

Q8. WHAT IS A "CASH WORKING CAPITAL" REQUIREMENT?

A. A cash working capital requirement is the amount of funds the Company needs to keep on hand to finance its day-to-day operations.

Q9. WHAT IS A LEAD-LAG STUDY?

A. A lead-lag study measures the funds needed due to net timing differences between when a utility expends cash for the costs required to provide utility service and when it receives payment from customers for that service. Per Commission Rule 530:

> "Lead-Lag Study" is a method sometimes employed in developing the amount of cash working capital to be included in a Rate Base determination for a utility company. The study seeks to measure and quantify the lag (delay) in receipt of revenues from customers from the time service is rendered offset by the lead that is the period the utility company has from the time it incurs an expense until cash is actually disbursed in payment for the expense.[1]

[1] 17.9.530.70 NMAC.

Specifically, a lead-lag study measures "revenue lags," which are the number of days between when a utility provides service and when its customers pay for that service, and "expense leads," which are the number of days between when a utility incurs expenses and when it must pay for those expenses. The net of the revenue lags and expense leads, when multiplied by the Company's average daily Test Year Period expenses, results in the cash working capital requirement.

Q10. HOW SHOULD THE RESULTS OF THE CASH WORKING CAPITAL ANALYSIS BE TREATED FOR RATEMAKING PURPOSES?

A. The cash working capital requirement should be included as part of EPE's rate base for ratemaking purposes.

Q11. ARE YOU SPONSORING ANY EXHIBITS OR SCHEDULES IN THIS PROCEEDING?

A. Yes. I sponsor Exhibits JSW-1, my résumé and testimony listing, Exhibits JSW-2 through JSW-9 (the Cash Working Capital Study), and Schedule E-1 (the Working Cash Allowance). The Cash Working Capital Study (Exhibits JSW-2 through JSW-9) shows the revenue lags and expense leads that resulted from Concentric's lead-lag study, as well as EPE's total level of cash working capital for the Test Year Period. The expense amounts to which the revenue lags and expense leads are

applied have been provided by EPE witness Cynthia S. Prieto. Schedule E-1 contains the Working Cash Allowance for EPE.

Q12. WERE THE SCHEDULES AND EXHIBITS YOU ARE SPONSORING OR CO-SPONSORING PREPARED BY YOU OR UNDER YOUR DIRECT SUPERVISION?

A. Yes, they were prepared under my direction and supervision and are accurate and complete to the best of my knowledge and belief.

III. SUMMARY OF FINDINGS

Q13. FOR WHAT PERIOD WAS THE LEAD-LAG STUDY PERFORMED?

A. The lead-lag study analyzed the Company's cash transactions and invoices for the twelve months ended March 31, 2025. The calculated revenue lag and expense leads were then applied to Test Year Period (the 12 months ended September 30, 2025) expenses. Concentric reviewed data from the most recent twelve-month period for which actual data was readily available when the study was performed (i.e. the twelve months ended March 31, 2025). From discussions with Company personnel, it was determined that there were no significant changes in EPE's operations since March 31, 2025 affecting those expense leads and revenue lag calculations. This historical data reflects the Company's existing policies and practices.

Q14. PLEASE SUMMARIZE YOUR FINDINGS REGARDING AN APPROPRIATE CWC ALLOWANCE FOR THE COMPANY.

A. Concentric's lead-lag study resulted in a total Company CWC allowance of $281,149 which results in an increase to rate base. That result is provided in Exhibit JSW-2.

IV. APPROACH

Q15. PLEASE PROVIDE AN OVERVIEW OF YOUR APPROACH TO DETERMINING THE COMPANY'S CASH WORKING CAPITAL REQUIREMENT.

A. Concentric analyzed the significant cash inflows and outflows of the Company to develop lead-lag factors for EPE's revenues and expenses to derive a CWC allowance.

Q16. WHAT ARE THE VARIOUS LAGS AND LEADS THAT SHOULD BE CONSIDERED IN A CASH WORKING CAPITAL ANALYSIS?

A. Two broad categories of lags and leads should be considered: (1) lag times associated with the collection of revenues owed to a company (*i.e.*, revenue lags); and (2) lead times associated with the payments for goods and services received by a company (*i.e.*, expense leads).

Q17. WHAT IS A REVENUE LAG?

A. A revenue lag refers to the elapsed time between the delivery of a company's products and services (*i.e.*, electricity generation, transmission, and distribution) and its ability to use the funds received as payment for the delivery of those products and services. In other words, the revenue lag measures the number of days from the date service was rendered by the Company until the date payment was received from customers and such funds were deposited and available to the Company.

Q18. WHAT IS AN EXPENSE LEAD?

A. The expense lead refers to the elapsed time from when a good or service is provided to a company to the point in time when the company pays for the good or service and the funds are no longer available to the company.

Q19. WHAT WAS THE SOURCE OF INFORMATION YOU USED TO DETERMINE THE LEADS AND LAGS IN YOUR CASH WORKING CAPITAL ANALYSIS?

A. EPE provided the accounting and financial data necessary for Concentric to complete the study. The information provided by the Company, together with analytical procedures performed by Concentric, led to the determination of the appropriate number of lead-lag days for EPE.

V. SUMMARY OF THE CASH WORKING CAPITAL ANALYSIS

A. REVENUE LAG

Q20. FROM WHAT SOURCES DOES EPE RECEIVE REVENUES?

A. EPE's revenues include: (1) revenue from sales of electricity to retail customers; and (2) wholesale and other revenues, which were comprised of (a) sales of electricity to wholesale customers; (b) wholesale transmission service revenues; and (c) other revenues.

Q21. DESCRIBE YOUR CALCULATION OF THE REVENUE LAG FOR RETAIL CUSTOMERS.

A. In Concentric's analysis, the revenue lag for retail customers was divided into four distinct components: (1) a service lag; (2) a billing lag; (3) a collections lag; and (4) a payment processing lag. Considered together, these components of the retail revenue lag totaled 50.0 lag days. An explanation of each component of the revenue lag follows, and the calculation of the revenue lag is provided in Exhibit JSW-3, page 1 of 3.

Q22. WHAT IS MEANT BY SERVICE LAG?

A. The service lag refers to the number of days from the mid-point of the service period to the meter reading date for that service period. Using the mid-point methodology, which assumes that service is provided evenly throughout the service period, the

average lag associated with the provisioning of service was 15.2 days (365 days in the year divided by 12 months divided by 2).

Q23. WHAT IS MEANT BY BILLING LAG?

A. Billing lag refers to the average number of days from the date on which the meter was read until the customer was billed. This lag reflects the time needed to send and process meter reading data in the Company's Customer Information System, prepare bills, and deliver bills. Specifically, the meter reading file containing the meter reads obtained during the day is transferred at the end of the business day. That night, the meter reading file is uploaded into the Company's customer billing system, which creates a bill print file. The bill print file is sent to the bill print vendor the following morning. The vendor prints and stuffs the bills and mails them that day. Based on that process, Concentric estimated the billing lag to be 1.0 days.

Q24. WHAT IS MEANT BY COLLECTIONS LAG?

A. The collections lag refers to the average amount of time from the date when bills are issued to the date that the Company receives payment from its customers.

Q25. HOW DID CONCENTRIC CALCULATE EPE'S COLLECTION LAG FOR PURPOSES OF THIS PROCEEDING?

A. Concentric calculated the collection lag by analyzing an aging analysis of EPE's accounts receivable. Such an analysis provides data regarding the average amount of time that customer receivables are outstanding before they are collected. That analysis resulted in a collections lag of 32.5 days, as provided in Exhibit JSW-3, page 2 of 3.

Q26. WHAT IS MEANT BY THE PAYMENT PROCESSING LAG?

A. The payment processing lag reflects the amount time taken to process customer payments. Specifically, different forms of customer payment take different times, on average, to be processed such that the funds become available to the Company. Concentric inquired of the Company regarding the payment processing time for the various forms of customer payment provided in Exhibit JSW-3, page 3 of 3. The resulting payment processing lag was 1.3 days, as shown in Exhibit JSW-3, page 3 of 3.

Q27. PLEASE SUMMARIZE THE CALCULATION OF REVENUE LAG DAYS FOR RETAIL CUSTOMERS.

A. The calculation of the overall revenue lag, by lag component, is summarized in the following figure.

Figure JSW-1: Revenue Lag by Component	
Component	**Lag Days**
Service Lag	15.2
Billing Lag	1.0
Collections Lag	32.5
Payment Processing Lag	1.3
Total Lag	**50.0**

Q28. WHAT ADDITIONAL TYPES OF REVENUES ARE CONSIDERED IN THE REVENUE LAG?

A. In addition to retail revenues, Concentric also considered wholesale and other revenues, including wholesale generation sales, wholesale transmission sales, and other revenues.

Q29. DESCRIBE YOUR CALCULATION OF THE REVENUE LAG FOR WHOLESALE GENERATION AND TRANSMISSION CUSTOMERS.

A. EPE provided Concentric with data regarding the amount and timing of revenue receipts from wholesale generation and wholesale transmission customers. Based on that data, Concentric estimated a revenue lag for wholesale generation revenues of 36.1 days, and a revenue lag for wholesale transmission revenues of 41.8 days, both of which are shown in Exhibit JSW-4.

Q30. WHAT IS INCLUDED IN OTHER REVENUES?

A. Other revenues for the Company include pole rental income, other electric property rental income, and other miscellaneous charges. Based on data provided by the Company for each type of other revenue, Concentric determined a revenue lag of 2.0 days, as shown in Exhibit JSW-4. When weighted with wholesale generation sales and wholesale transmission sales, the revenue lag for wholesale and other revenues was 35.6 days, as also shown on Exhibit JSW-4.

Q31. WHAT WAS THE RESULTING REVENUE LAG, INCLUSIVE OF BOTH RETAIL REVENUES AND WHOLESALE AND OTHER REVENUES?

A. On a weighted basis, the revenue lag, inclusive of both the retail revenue lag of 50.0 days and the wholesale and other revenue lag of 35.6 days, was 47.9 days, as shown on Exhibit JSW-2, Exhibit JSW-4, and Exhibit JSW-2, respectively.

B. EXPENSE LEADS

Q32. WHAT EXPENSE-RELATED LEADS WERE CONSIDERED IN THE LEAD-LAG ANALYSIS?

A. Lead times associated with the following broad expense categories were considered in the lead-lag study: (a) fuel expenses; (b) payroll and benefits; (c) expenses related to EPE's ownership in the Palo Verde Generating Station ("PVGS"); (d) other operations and maintenance ("O&M") expenses; (e) taxes other than income taxes; (f) income taxes; and (g) interest on customer deposits.

Q33. PROVIDE AN EXPLANATION OF THE EXPENSE LEADS ASSOCIATED WITH THE COMPANY'S FUEL EXPENSES.

A. Concentric analyzed data related to EPE's purchase of nuclear fuel and natural gas for its generating units. Payments for nuclear fuel were made on a quarterly basis, with payments made in the month following each quarter. Natural gas purchases were made from multiple vendors, usually on a monthly basis, with payments made following the month of service. The following table provides the expense leads by fuel type, which are also provided in Exhibit JSW-5.

Figure JSW-2: Fuel Expense Leads	
Component	**Lead Days**
Nuclear Fuel	70.0
Natural Gas	41.0

Q34. PROVIDE AN EXPLANATION OF THE EXPENSE LEADS ASSOCIATED WITH THE COMPANY'S POWER PURCHASES.

A. Concentric analyzed accounting records related to EPE's purchase of power, including from net-metered customers. Based on that data, Concentric estimated an expense lead of 48.0 days for purchased power (excluding net-metered customers), and 22.2 days for net-metered customers, as shown in Exhibit JSW-6, page 1 of 3.

Q35. PROVIDE AN EXPLANATION OF THE EXPENSE LEADS ASSOCIATED WITH THE COMPANY'S PAYROLL EXPENSES.

A. EPE's regular payroll disbursements are made every two weeks with the 14-day payroll period running from Monday to Sunday two weeks later. Employees are paid for each payroll period on Friday following the end of the pay period, resulting in 26 to 27 regular payroll disbursements during any given 12-month period (depending on when the first Friday falls in the 12-month period). The midpoint of each 14-day payroll period is seven days. There is an additional expense lead of four days from Sunday to midnight Thursday/12:00 a.m. Friday when payroll is disbursed. In addition, payroll is moved up by one day whenever a holiday falls on a Friday. EPE also provides monthly payments on the first day of each month for the upcoming month under supplemental employee retirement plans ("SERP").[2] Considering both regular payroll and SERP payments, the resulting payroll expense lead was 10.9 days, as shown in Exhibit JSW-7, page 1 of 3.

Q36. YOUR LEAD-LAG STUDY INCLUDES AN EXPENSE LEAD FOR PAYROLL DEDUCTIONS. WHAT DO THOSE REPRESENT AND HOW DID YOU ESTIMATE AN EXPENSE LEAD?

[2] SERP payments included payments under non-qualified pension plans including Supplemental Employee Retirement Plans and Excess Benefit Plans.

A. Payroll deductions represent employee contributions towards benefits programs that are deducted directly from employees' payroll. In circumstances in which EPE does not pay associated vendors until some period after payroll is distributed to employees, the expense lead for that portion of employees' payroll is extended, creating a cash working capital benefit for the Company relative to if EPE had relinquished access to that cash on the payroll date. In other words, the expense lead associated with payroll that is deducted for certain payroll deductions is extended by the amount of time between the payroll date and the eventual payment to benefits providers. Examples of these payroll deductions are employee 401(k) contributions, employee contributions to insurance programs (medical, dental, vision, and life insurance), union dues, charity contributions, and other benefits such as flex-spending accounts, parking, and gym memberships.

Concentric received data from EPE for each type of payroll deduction in order to analyze the additional expense lead associated with the portion of gross payroll that is used for payroll deductions. Payroll deductions added an unweighted 3.1 days to the expense lead for that portion of payroll for a total expense lead of 14.0 days (*i.e.*, 10.9 days for payroll plus 3.1 days for payroll deductions), as shown in Exhibit JSW-7, page 2 of 3.

Q37. WHAT TYPES OF LEADS ASSOCIATED WITH THE COMPANY'S EMPLOYEE BENEFIT PROGRAMS WERE CONSIDERED IN THE ANALYSIS?

A. As shown in Exhibit JSW-7, page 3 of 3, the analysis of lead times associated with employee benefits included consideration of the following types of benefit plans and expenses:

- 401(k) administration and matching;
- The EPE portion of medical, dental, and other health benefits;
- The EPE portion of life insurance premiums;
- The EPE portion of parking benefits;
- Pension-related costs;
- Service Anniversary Gifts; and
- Tuition reimbursement

Concentric received data from EPE related to payments made by the Company for each of these programs. The dollar-weighted expense lead for benefits was 29.5 days, as shown in Exhibit JSW-7, page 3 of 3.

Q38. WHAT CALCULATIONS DID YOU PERFORM RELATED TO THE COMPANY'S INCENTIVE COMPENSATION PAYMENTS?

A. During the Base Period, EPE made incentive compensation payments to its employees. Incentive compensation payments are made in the following year, resulting in an expense lead of 182.5 days (*i.e.*, the midpoint of the prior year) plus the period between the end of the incentive compensation year and when payments are made. The overall expense lead for incentive compensation was thus determined to be 406.3 days, as shown in Exhibit JSW-7.

Q39. WHAT WAS THE RESULTING WEIGHTED EXPENSE LEAD FOR WAGES, SALARIES, AND BENEFITS?

A. On a weighted basis, the expense lead for wages, salaries, and benefits, inclusive of regular payroll (10.9 days), payroll deductions (3.1 days), benefits (29.5 days), and incentive compensation (406.3 days), was 30.4 days, as shown on Exhibit JSW-7.

Q40. DESCRIBE CONCENTRIC'S ANALYSIS OF O&M EXPENSES RELATED TO EPE'S OWNERSHIP IN PVGS.

A. EPE is invoiced weekly for PVGS expenses, with invoices representing estimated charges for the concurrent month. Towards the end of each month, a true-up is performed to charge or credit EPE for any difference between estimated and actual PVGS expenses in the previous month. Concentric analyzed the weekly payments and monthly true-ups related to EPE's PVGS O&M, which had an average expense

lead of (1.0) days. The working capital requirement related to PVGS incorporates an adjustment to remove PVGS-related materials and supplies amounts that are charged to O&M and that represent non-cash charges.

Q41. WHAT DO "OTHER O&M" EXPENSES INCLUDE, AND WHAT APPROACH DID CONCENTRIC USE TO CALCULATE THE ASSOCIATED EXPENSE LEAD?

A. Other O&M expenses include all payments made by EPE for O&M expenses that otherwise were not analyzed as part of Concentric's review of fuel, payroll, benefits, and PVGS O&M expenses. Invoices from providers of such services during the period April 1, 2024, to March 31, 2025, were analyzed to calculate a lead time associated with payment for services related to Other O&M activities. On average, invoices were paid by the Company 50.0 days after receipt, which includes bank float for payments made by check. Concentric adjusted the working capital requirement related to Other O&M to account for prepaid expenses that were charged to Other O&M and that reflect non-cash charges.

Q42. WHAT TAXES OTHER THAN INCOME TAXES AND FEES WERE CONSIDERED IN CONCENTRIC'S ANALYSIS?

A. Concentric's analysis also considered taxes other than income taxes and fees that EPE pays related to utility service. The table below provides those taxes and fees,

along with their respective expense leads.

Figure JSW-3: Taxes Other Than Income Taxes and Fees	
Component	**Lead Days**
Payroll Taxes	10.9
PVGS Payroll Taxes	(1.0)
New Mexico Compensating Taxes	52.1
New Mexico Public Regulation Commission Fees	269.5
New Mexico Property Taxes	226.9
Texas Gross Receipts Taxes	76.1
Texas Franchise Fees	90.2
Texas Public Utility Commission Fees	237.5
Texas Property Taxes	213.4
Arizona Property Taxes	208.5

The expense lead for payroll taxes was assumed to be the same as that for regular payroll (*i.e.*, 10.9 days), and the expense lead for PVGS-related payroll taxes was assumed to be the same as that for PVGS O&M expenses (*i.e.*, (1.0 days)). EPE provided accounting and payment data related to each of the other categories of taxes and fees, upon which Concentric estimated expense leads for each, as shown above and in Exhibit JSW-8.

Q43. HOW DID YOUR STUDY ADDRESS FEDERAL INCOME TAXES?

A. The expense lead attributable to EPE's federal income tax liability was calculated based on quarterly payment dates on or about April 15, June 15, September 15, and December 15 for 2024 calendar year taxes. EPE estimates its quarterly taxable

income based on the net income from the prior quarter, which follows a cyclical pattern whereby taxable income tends to be greater in the Summer and Fall (*i.e.*, in the second and third quarters of the year), following customer usage patterns. Based on the quarterly payment dates and an estimate of the shape of the payments provided by the Company based on greater taxable income in the second and third quarters of each year relative to the first and fourth quarters, Concentric calculated an expense lead of 39.3 days, as shown in Exhibit JSW-9.

Q44. HOW DID THE STUDY ADDRESS STATE INCOME TAXES?

A. In the Base Period, state income taxes were paid approximately quarterly. Like Federal income taxes, State income tax payments follow a cyclical pattern. Concentric estimated the Company to have an expense lead associated with State income taxes of 38.9 days for New Mexico and 63.4 days for Arizona as shown in Exhibit JSW-9. The lead-lag study also reflects Texas state margin taxes, which are paid annually for the current year in May. The resulting lead reflecting the annual payment was (47.5) days.

Q45. WHAT CONSIDERATION DID YOUR STUDY MAKE FOR INTEREST PAID ON CUSTOMER DEPOSITS?

A. Interest is paid by the Company at approximately the end of each calendar year for deposits made during the year. The expense lead was thus determined to be

182.5 days, reflecting the time between the midpoint of the year and payment of interest.

C. OTHER COMPONENTS OF CASH WORKING CAPITAL

Q46. WHAT OTHER COMPONENTS OF CASH WORKING CAPITAL DID YOU CONSIDER IN YOUR ANALYSIS?

A. EPE has three pass-through taxes and fees that are incurred as part of the provision of utility service but that are remitted to the appropriate taxing authority without being recognized as expenses on the Company's books. Those taxes and fees are: (1) New Mexico gross receipts taxes; (2) New Mexico franchise fees; and (3) Texas sales and use taxes. Because collection of those taxes and the associated remittance to taxing authorities occur at different times, there are cash working capital effects on the Company. However, these pass-through taxes and fees are not part of the revenue requirement to which net lags or leads are applied in the lead-lag study, and thus, without separate consideration, would not be reflected in the cash working capital requirement. As such, the total cash working capital requirement calculated by Concentric separately includes the net lag/(lead) associated with those taxes and fees, as shown on Exhibit JSW-2.

Q47. DID CONCENTRIC'S LEAD-LAG STUDY ACCOUNT FOR PETTY CASH?

A. Consistent with the Commission's findings in Case No. 15-00127-UT,[3] petty cash funds are amounts the Company must keep on hand to serve customers (for example, to make change for customers who pay with cash). The Company kept an average petty cash fund balance of $25,300 during the period April 1, 2024, to March 31, 2025. However, the Company has closed all in-person payment stations and because of that there is no petty cash balance added to the CWC allowance.

Q48. BASED UPON THE RESULTS OF THE LEAD-LAG STUDY AND THE LEVEL OF EXPENSES DESCRIBED IN THE TESTIMONY OF EPE WITNESS PRIETO, WHAT IS THE TOTAL COMPANY LEVEL OF CASH WORKING CAPITAL REQUIREMENTS?

A. As shown on Exhibit JSW-2, applying the revenue lag and expense leads that I have calculated to the expense levels provided by EPE witness Prieto results in a total Company cash working capital requirement of $250,870 which results in an increase to rate base.

Q49. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes.

[3] New Mexico Public Regulation Commission Final Order Partially Adopting Recommended Decision (with Corrected Paragraph Numbering), Case No. 15-00127-UT, June 8, 2016, at 102-104.

JOSEPH S. WEISS
VICE PRESIDENT

Mr. Weiss has worked on projects involving revenue requirements, class cost of service, allocation and rate design, cash working capital, rate of return, affiliate transactions, and rate case preparation for gas and electric utilities. As a consultant, Mr. Weiss has provided support for filings with several utility commissions and filed testimony as an expert witness before the Oklahoma Corporation Commission, the Missouri Public Service Commission, the Illinois Commerce Commission, the Maine Public Utilities Commission, the Public Utilities Commission of Ohio, the Regulatory Commission of Alaska, the Public Utility Commission of Texas, the Public Service Commission of West Virginia, and the Rhode Island Public Utilities Commission. He has strong quantitative and research skills and experience in accounting issues. Prior to joining Concentric Energy Advisors, Mr. Weiss was a Consultant with Navigant Consulting, Inc. and has worked for a large Midwest investor-owned utility. Mr. Weiss has an M.B.A. from Southern Illinois University Edwardsville and a B.S. in Business Administration (magna cum laude) with a major in Accounting and Finance from Saint Louis University.

Representative Project Experience

Rates/Regulatory Projects

- Worked on a draft report concerning the gas/electric interdependency of the Pacific Northwest Region.
- Supported lead-lag analysis and testimony for a Canadian electric utility.
- Provided rate case support of a gas rate case filing for a Midwestern gas utility. Work included assisting with a lead-lag study.
- Involved in the calculation and support of a return on equity for a natural gas company.
- Assisted with the preparation of six gas and electric rate case filings for a Midwestern utility. The project included work associated with a gas and electric lead-lag study and the preparation of the minimum filing requirements associated with the rate case. Project included post filing support which involved providing responses and corrections to deficiencies identified by the Illinois Commerce Commission in filing requirements and providing required data in response to data requests of the Illinois Commerce Commission.
- Assisted in the effort to collect and organize plant addition documentation for six Midwest utilities associated with the state commission's audit of rate base.
- Involved in the preparation of an electric rate case filing for an electric transmission and distribution provider in Texas. Work included the completion of the rate filing package associated with the rate case.
- Managed the preparation of the minimum filing requirements for a Midwestern holding company that held three different utility companies. Also managed the preparation of a lead-lag study for the utility. Project included post filing support which involved providing

responses and corrections to deficiencies identified by the Illinois Commerce Commission in filing requirements and providing required data in response to data requests of the Illinois Commerce Commission.

- Managed the preparation of a lead-lag study for an electric rate case filing for a utility in Missouri.
- Worked on the completion of the revenue requirement and filing requirements for an interstate pipeline's rate filing.
- Assisted with a review of the reasonableness of the allocation of shared services costs assigned by Ameren Service Company to the Illinois operating utilities. The review included an assessment of the reasonableness of the accumulated costs, allocation factors employed and resulting allocated costs to each operating utility for the services provided. Concentric also benchmarked the costs of services to assess the reasonableness of the allocated costs compared to other companies.
- Provided testimony analyzing the services and related costs provided by companies affiliated with Ameren Missouri.
- Assisted with an allocated cost of service study and rate design related to an electric rate filing for a Midwestern utility.
- Managed the calculation of the revenue requirement and preparation of a lead-lag study for a gas rate case filing for a utility in Missouri.
- Managed the completion of a lead-lag study for an electric rate fling for a Midwestern utility.
- Managed the preparation of gas and electric rate case filings for a Midwestern utility. The project included work associated with a gas and electric lead-lag study and the preparation of the minimum filing requirements associated with the rate case which included the filing of a future test year. Project included post filing support which involved providing responses and corrections to deficiencies identified by the Illinois Commerce Commission in filing requirements, providing required data in response to data requests of the Illinois Commerce Commission, and assisting company with review and development of testimony
- Managed the completion of the revenue requirement and filing requirements for an interstate pipeline's rate filing.
- Managed the completion of a lead-lag study for an electric filing for a Midwestern utility as well as post-filing support.
- Helped to develop a revenue requirement model to comply with a new performance-based formula ratemaking process for a Midwest electric utility.
- Managed the preparation of an initial formula rate filing for a Midwestern electric utility. The project included work associated with the preparation of the minimum filing requirements and the formula rate template. Project included post filing support which involved providing responses and corrections to deficiencies identified by the Illinois Commerce Commission in filing requirements, providing required data in response to data requests of the Illinois Commerce Commission, and assisting company with review and development of testimony.

- Managed the completion of the revenue requirement and minimum filing requirements for an electric rate filing for a utility in Illinois under new legislation as well as subsequent filings. The work included support throughout the rate case process.
- Assisted with an allocated cost of service study related to a gas rate filing for a Northeastern utility.
- Filed expert testimony in support of the company's cash working capital requirement before the Oklahoma Corporation Commission.
- Managed the preparation of minimum filing requirements utilizing a future test year for a gas filing for a Midwestern utility in multiple rate case filings.
- Managed the completion of lead-lag studies and associated testimony on behalf of our client. Testified to the results of the studies before the Illinois Commerce Commission.
- Prepared a lead-lag study and associated testimony on behalf of our client. Testified to results of the study before the Missouri Public Service Commission.
- Prepared a lead-lag study as well as assistance with the development of the revenue requirement and associated testimony on behalf of our client. Testimony was filed as part of as rate proceeding before the Idaho Public Utilities Commission. The work included support throughout the rate case process.
- Managed the completion of a lead-lag study and associated testimony on behalf of the client in its two most recent rate proceedings. Testimony was filed as part of a rate proceeding before the State Corporation Commission of Virginia.
- Managed the preparation of the Minimum Filing Requirements for a Midwestern gas utility's rate filing utilizing a future test year before the Illinois Commerce Commission and the Company's subsequent filing.
- Managed the completion of a lead-lag study and associated testimony on behalf of the client. Also assisted the client with the development of the revenue requirement. Testimony was filed as part of a rate proceeding before the Maine Public Utilities Commission.
- Managed the completion of a lead-lag study and associated testimony on behalf of the client as part of a rate proceeding before the Tennessee Public Utility Commission.
- Prepared a lead-lag study and associated testimony on behalf of the client. Testimony was filed as part of a rate proceeding in West Virginia.
- Managed the completion of a lead-lag study and associated testimony on behalf of the client. Testimony was filed as part of a rate proceeding before the Georgia Public Service Commission.
- Assisted with the preparation of testimony related to shared services and benchmarking in multiple rate proceedings before the Missouri Public Service Commission.
- Market Research Experience
- Conducted research on gas and electric revenue decoupling mechanisms.
- Researched recent and proposed pipeline projects.

- Research to support expert testimony in a return on equity rate proceeding.

EL PASO ELECTRIC COMPANY
DIRECT TESTIMONY OF
JULISSA I. REZA

I. INTRODUCTION AND QUALIFICATIONS

Q1. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Julissa I. Reza. My business address is 100 N. Stanton Street, El Paso, Texas 79901.

Q2. HOW ARE YOU EMPLOYED?

A. I am employed by El Paso Electric Company ("EPE" or the "Company") as Manager - Regulatory Accounting.

Q3. PLEASE SUMMARIZE YOUR EDUCATIONAL AND PROFESSIONAL BACKGROUND AND EXPERIENCE.

A. I graduated from The University of Texas at El Paso with a Bachelor of Business Administration in Accounting, with honors. I am a Certified Public Accountant in the State of Texas and a member of the Texas Society of Certified Public Accountants and the American Institute of Certified Public Accountants.

Upon graduation, I was employed by KPMG in the audit section from 1990 to 1992. I was employed with EPE from 1992 to 1994 and rejoined EPE in 2002. I have held various positions related to financial accounting and reporting, customer accounting, and internal audit. During my twelve years in financial accounting and reporting, my responsibilities included the preparation, review, and analysis of various internal and external financial statements, along with monthly financial

closing responsibilities related to the monthly deferred fuel calculation and nuclear fuel accounting. In March 2022, I accepted the position of Manager - Regulatory Accounting.

Q4. WHAT ARE YOUR RESPONSIBILITIES WITH EPE?

A. My responsibilities include oversight of the scheduling, preparation, and review of jurisdictional regulatory accounting and reporting, including the Company's monthly fuel accounting and reporting and other regulatory filings to the New Mexico Public Regulation Commission ("NMPRC" or "the Commission"), Public Utility Commission of Texas ("PUCT"), and the Federal Energy Regulatory Commission ("FERC").

Q5. HAVE YOU PREVIOUSLY PRESENTED TESTIMONY BEFORE ANY UTILITY REGULATORY BODIES?

A. Yes, I have previously filed testimony with and testified before the NMPRC and the PUCT.

II. PURPOSE OF TESTIMONY

Q6. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. The purpose of my testimony is to sponsor certain schedules filed as part of this case as identified in Section IV below. I also sponsor and describe certain Test

Year Period adjustments that EPE has made to its Base Period costs. My testimony also includes an analysis of the 12-month rolling average component of EPE's fuel adjustment factor pursuant to the NMPRC's Final Order in Case No. 23-00046-UT.

Q7. HOW IS YOUR TESTIMONY ORGANIZED?

A. In Section IV, I list certain schedules required by the NMPRC's Rate Filing Package for Investor-Owned Electric Utilities ("RFP"), pursuant to Rule 17.9.530 of the New Mexico Administrative Code ("Rule 530"), that I sponsor or co-sponsor in this case. In Section V, I discuss the adjustments made to Base Period expenses and rate base that I sponsor or co-sponsor in this case. Section VI includes a discussion related to the analysis of the 12-month rolling average component of EPE's fuel adjustment factor pursuant to the Final Order in NMPRC Case No. 23-00046-UT.

III. SUMMARY OF TESTIMONY

Q8. PLEASE SUMMARIZE YOUR TESTIMONY

A. First, in Section V.A, I describe each of the adjustments to the cost of service that I sponsor: Adjustment 2 – Fuel and Purchased Power, Adjustment 10 – Regulatory Commission Expense, and Adjustment 13 – Regulatory Assets and Liabilities Amortization Expense. In Section V.B, I describe the adjustments to the Base Period Rate Base that I sponsor: Adjustment 32 – Nuclear Fuel, and Adjustment 33 – Regulatory Assets and Liabilities and Other Additions/Deductions.

Second, in the Final Order in EPE's last fuel continuation filing, Case No. 23-00046-UT, the Commission ordered EPE to provide testimony that addresses the use of the 12-month rolling average of actual fuel and purchased power costs for purposes of calculating the current month fuel adjustment factor. In Section VI of my testimony, I support the continued use of the current methodology for the 12-month rolling average. As I explain below, the current methodology is functioning as intended and has reduced the variability in the monthly factors.

IV. SCHEDULES SPONSORED

Q9. WHAT RULE 530 SCHEDULES FROM THE COMMISSION'S RFP ARE YOU SPONSORING?

A. The schedules I sponsor and co-sponsor are listed below. These schedules comply with Commission Rule 530 and are accurate to the best of my knowledge.

- Schedule B-7: Nuclear Fuel in Process
- Schedule E-3: Fuel Inventories by Plant Location
- Schedule H-2: Cost of Fuel
- Schedule H-3: Revenue Generated Through the Fuel Adjustment Clause
- Schedule P-12: Fuel Statistics Information

V. SUMMARY OF ADJUSTMENTS

Q10. WHAT IS THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY?

A. The purpose of this section of my testimony is to describe the adjustments to the cost of service and rate base that I sponsor or co-sponsor. The adjustments to the cost of service and rate base are shown on Schedule A-3 and associated work papers required by Commission rules.

A. ADJUSTMENTS TO THE COST OF SERVICE

Q11. HAVE YOU MADE ADJUSTMENTS TO THE COMPANY'S BASE PERIOD COST OF SERVICE?

A. Yes. Several adjustments have been made to the Base Period per book amounts to adjust those values to reflect known and measurable changes.

Q12. WHICH COST OF SERVICE ADJUSTMENTS INCLUDED IN SCHEDULE A-3 ARE YOU SPONSORING OR CO-SPONSORING?

A. I am sponsoring or co-sponsoring the cost of service adjustments listed below:

- Adj. 2 – Fuel and Purchased Power
- Adj. 10 – Regulatory Commission Expense
- Adj. 13 – Regulatory Assets and Liabilities Amortization Expense

I address each of the adjustments below.

1. ADJUSTMENT 2 – FUEL AND PURCHASED POWER EXPENSE

Q13. WHAT IS THE PURPOSE OF THE FUEL AND PURCHASED POWER EXPENSE ADJUSTMENT?

A. I co-sponsor this adjustment with EPE witnesses Victor Martinez and Adrian Hernandez. The purpose of this adjustment is to adjust fuel and purchased power expense (collectively referred to as "fuel expense" or "fuel costs") to: 1) reflect changes in kWh sales using the average cost of natural gas during the Base Period; 2) remove Palo Verde Generating Station ("PVGS") Unit 3 costs from cost of service consistent with prior rate treatment by the Commission; 3) remove out of period expense adjustments; and 4) reflect the recovery of capacity charges related to various solar battery energy storage facilities requested for recovery via base rates in this case.

Even though fuel and purchased power is not recovered through base rates, it is necessary for the cost of service to reflect these adjustments in order to calculate the proper amount of the Company's Test Year Period revenue-related taxes, as described by EPE witness Tamara L. Henderson, and uncollectible accounts expense as described by EPE witness Cynthia S. Prieto.

Q14. WHAT WERE THE ADJUSTMENTS TO FUEL EXPENSE?

A. The adjustment to natural gas expense to reflect annualized kWh sales for the Base

Period was an expense decrease of $256,075; Nuclear fuel was decreased by $9,757,788 including the removal of PVGS Unit 3 fuel costs of $11,122,137 and reversing (adding back) to include a U.S. Department of Energy refund for prior periods in the amount of $1,364,349 for PVGS Units 1 and 2. These amounts are on a total Company basis. Schedule A-3 and related workpapers reflect the Test Year Period amounts on both a total Company and a New Mexico jurisdictional basis. EPE witness Hernandez co-sponsors the jurisdictional amounts related to this adjustment.

Q15. WHAT ADJUSTMENT DID YOU MAKE TO PURCHASED POWER EXPENSES?

A. Base Period purchased power expenses were increased by $20,271,566 related to the annual battery capacity charges referenced above. This amount includes the annual battery capacity charge of $19,618,200, on a total Company basis, related to the Buena Vista, Carne, and Santa Teresa battery energy storage system facilities. Please refer to the direct testimony of EPE witness Martinez for support of these capacity charges. In addition, the capacity charges include $653,366 which represents one year of amortization plus carrying costs of the regulatory asset related to the New Mexico portion of Buena Vista battery capacity charges that were approved by the NMPRC in Case No. 19-00348-UT as a system resource. The regulatory asset as of September 2025 includes the deferred battery capacity

charges and carrying costs recorded through September 2025 and is requested for recovery over a two-year period. The Buena Vista battery capacity charges will continue to be deferred in a regulatory asset for the period of October 2025 through the date rates are effective from this case and the annual capacity charges are included in base rates. This additional regulatory asset will be requested for recovery in a future base rate case proceeding. Schedule A-3 and related workpapers reflects the Test Year Period Purchased Power amount on both a total Company and a New Mexico jurisdictional basis. EPE witness Hernandez co-sponsors the jurisdictional amounts related to this adjustment.

2. ADJUSTMENT 10 – REGULATORY COMMISSION EXPENSE

Q16. PLEASE EXPLAIN THE PURPOSE OF THE REGULATORY COMMISSION EXPENSE ADJUSTMENT.

A. The adjustment is intended to reflect the appropriate amount of regulatory commission expense recorded in FERC account 928 that EPE seeks to recover in this rate case. It includes the amortization of projected future costs and excludes certain costs, such as those recovered through separate riders, along with other applicable items.

Q17. WHAT ADJUSTMENT DID YOU MAKE FOR REGULATORY COMMISSION EXPENSE?

A. I sponsor Adjustment No. 10 with the exclusion of rate case expenses which are sponsored by EPE witness George Novela. This adjustment includes the following:

1. Inclusion of estimated costs to be incurred to litigate this case, which EPE witness Novela supports and explains in his direct testimony. As Mr. Novela explains, the estimated total cost of this case is $2,015,800. The costs include legal, accounting, return and cost of capital, depreciation study, travel and miscellaneous expenses, and other expert consultants. EPE is requesting rate case expenses to be recovered over a two-year period.
2. Removal of amortization of prior rate case expenses.
3. Removal of regulatory commission case expenses recovered through separate riders.

This adjustment results in a reduction to Base Period Regulatory Commission expense of $748,137 on a total Company basis. The Company's requested Test Year Period amount of Regulatory Commission expense is shown on both a total Company and a New Mexico jurisdictional basis on Schedule A-3 and related workpapers. EPE witness Hernandez co-sponsors the jurisdictional amounts related to this adjustment. The requested balance in Schedule A-3 also includes costs for ongoing New Mexico regulatory proceedings.

3. ADJUSTMENT 13 – REGULATORY ASSETS AND LIABILITIES AMORTIZATION EXPENSE

Q18. WHAT IS THE PURPOSE OF THE ADJUSTMENT FOR REGULATORY ASSETS AND LIABILITIES AMORTIZATION?

A. The purpose of this adjustment is to reflect the appropriate amount of regulatory assets and liabilities amortization expense in FERC account 407 and 407.3 that EPE seeks to recover in this rate case. It includes the estimated future amortization for certain regulatory assets and liabilities and excludes certain items, such as those recovered through separate riders, along with other relevant adjustments.

Q19. WHAT ADJUSTMENT DID YOU MAKE FOR REGULATORY ASSETS AND LIABILITIES AMORTIZATION?

A. I sponsor Adjustment No. 13 on Schedule A-3 with EPE witnesses Prieto and Hernandez as referenced below. This adjustment presents EPE's requested amortization of $7,221,728 for regulatory assets, on a total Company basis. The regulatory assets and amortization periods are as follows:

1. In NMPRC Case No. 09-00171-UT, the NMPRC extended the depreciable life of Palo Verde an additional 20 years for New Mexico rate making purposes, reducing the depreciation expense collected from New Mexico customers in rates, effective January 2010. In April 2011, the Nuclear Regulatory Commission renewed the operating license for all three units at Palo Verde for an additional 20 years; therefore, the incremental difference in Palo Verde depreciation for the New Mexico jurisdiction of $5,290,460 is being amortized

to account 407.3 over the remaining life of Palo Verde and will be fully depreciated in April 2046. The amount requested represents one year of amortization for the New Mexico regulatory asset related to the extended depreciable life of Palo Verde. Please refer to EPE witness Prieto's direct testimony.

2. The Final Order in Case No. 15-00109-UT, the 2015 Four Corners Power Plant ("Four Corners") Abandonment, which was issued after the 2015 Rate Case Final Order, provided for the deferral by EPE of $1,400,433 of final decommissioning costs for Four Corners Units 4 and 5 to be recovered over a seven-year period beginning in EPE's next base rate case, NMPRC Case No. 20-00104-UT. These costs are currently being amortized over a seven-year period consistent with the Final Order in the 2020 Rate Case. These costs will be fully amortized in June 2028.

3. The Final Order in Case No. 21-00180-UT granted EPE's request to defer in a regulatory asset, the non-capitalized Western Energy Imbalance Market ("EIM") implementation costs. EPE is seeking recovery of $396,559 in costs, including carrying costs, in this proceeding over a two-year period.

4. The Final Order on Remand to the 2020 Rate Case, approved EPE's updated filed rates effective January 1, 2024. The updated rates include approximately $0.6 million in additional annual base revenue requirement related to amounts found to be unlawfully excluded by the NMPRC's prior order in the case. The

Final Order on Remand also approved EPE's request to record additional revenue from the date of the Supreme Court remand to December 31, 2023, as a regulatory asset for recovery in EPE's next rate case. EPE is seeking recovery of $421,236 in costs, including carrying costs, in this proceeding over a two-year period.

5. The Final Order in NMPRC Case No. 24-00113-UT, related to the New Mexico Automated Metering System Time Varying Rate Pilot Program ("AMS TVRPP"), approved the deferral of the program costs to a regulatory asset. EPE is seeking recovery of $581,145 in costs, including carrying costs, in this proceeding over a two-year period.

6. EPE deferred to a regulatory asset the New Mexico portion of bad debt expense and other COVID-19 related expenses. The New Mexico COVID-related regulatory asset is net of the related regulatory liability. EPE is requesting recovery of $4,075,560 in costs, excluding carrying costs, in this proceeding over a two-year period. Please refer to the testimony of EPE witness Prieto for additional details related to these COVID-19 related costs.

7. As reflected in the testimony of EPE witness Hernandez, the amortization related to the Texas regulatory assets in the amount of $2,253,968 will not be allocated to the New Mexico jurisdiction.

8. The unrecovered plant and regulatory study costs related to legacy meters required to be removed from rate base in accordance with NMPRC Case No. 21-00269-UT as discussed in EPE witness Prieto's direct testimony.

9. Reacquired debt costs in the amount of $5,599,564, amortized over the life of the bonds issued to reacquire the debt, approved in NMPRC Case No. 06-00258-UT, and reaffirmed in Case No. 15-00127-UT. These costs will be fully amortized in June 2035.

Additionally, EPE excluded amounts related to regulatory assets which will be fully amortized by June 2026 or recovered through separate riders. The adjustment results in a net increase to Base Period regulatory asset amortization of $583,317 on a total Company basis. The Company's requested Test Year Period amount of regulatory asset amortization expense is shown on both a total Company and a New Mexico jurisdictional basis on Schedule A-3 and related workpapers. EPE witness Hernandez co-sponsors the jurisdictional amounts related to this adjustment.

B. ADJUSTMENTS TO RATE BASE

Q20. HAVE YOU MADE ADJUSTMENTS TO THE COMPANY'S BASE PERIOD RATE BASE?

A. Yes, I have. I have made the adjustments listed below:

- Adj. 32 – Nuclear Fuel
- Adj. 33 – Regulatory Assets and Liabilities and Other Additions/Deductions

1. ADJUSTMENT 32 – NUCLEAR FUEL

Q21. PLEASE EXPLAIN THE ADJUSTMENT RELATED TO NUCLEAR FUEL.

A. Because nuclear fuel costs are financed through the Rio Grande Resource Trust and are recovered through EPE's fuel and purchased power cost adjustment clause ("FPPCAC"), nuclear fuel balances are removed from rate base.

2. ADJUSTMENT 33 – REGULATORY ASSETS AND LIABILITIES AND OTHER ADDITIONS/DEDUCTIONS

Q22. PLEASE SUMMARIZE THE ADJUSTMENT TO COMMISSION APPROVED REGULATORY ASSETS AND LIABILITIES.

A. I co-sponsor Adjustment No. 33 on Schedule A-3 with EPE witnesses Prieto, Steven A. Sierra, and Hernandez as referenced below. This adjustment is made to adjust the Unamortized Regulatory Assets and Liabilities and other additions and deductions to rate base are as follows:

1. New Mexico unamortized amount of $2,931,661, net of one year's amortization, related to the extended depreciable life of Palo Verde in

NMPRC Case No. 09-00171-UT in January 2010 and an additional extension in April 2011. Please refer to EPE witness Prieto's direct testimony.

2. The amounts related to the Texas regulatory assets of $5,083,140 that will not be allocated to the New Mexico jurisdiction.

3. The net book value of non-advanced (legacy) meters which were charged to a regulatory asset in accordance with NMPRC Case No. 21-00269-UT, were removed via the adjustment as this amount is not requested in rate base. The remaining amount of $23,633,725 represents the Texas portion and this amount will not be allocated to the New Mexico jurisdiction. Please refer to the direct testimony of EPE witness Prieto.

4. The net Pensions and other post-employment benefits ("OPEB") asset and addition to rate base of $12,543,000 on a total Company basis as discussed in EPE witness Sierra's direct testimony.

5. The unamortized amount of other additions to rate base recorded in FERC account 186 for the Palo Verde Water Agreement as per the Final Order from the New Mexico Supreme Court in NMPRC Case No. 20-00104-UT. The Palo Verde Water Agreement in the total company amount of $2,066,018 secures a reliable source of cooling water through 2050 for PVGS. The adjustment reflects the removal of one third of the Palo Verde Water Agreement.

6. Unamortized New Mexico Reacquired Debt Cost of $1,798,020, reduced by one year's amortization, as approved in NMPRC Case No. 06-00258-UT, and reaffirmed in Case No. 15-00127-UT.

Taken together, these additions to rate base are offset by other deductions to rate base related to customer deposits and customer advances for construction in total company amounts of $11,208,714 and $62,681,119, respectively. These items are deducted from rate base because they are funded by customers.

This adjustment decreases the Base Period amount of Regulatory Assets and Liabilities and other additions/deductions in rate base to a net liability of $25,834,269 on a total Company basis. The Company's requested Test Year Period amount of Regulatory Assets and Liabilities and other additions/deductions is shown on both a total Company and a New Mexico jurisdictional basis on Schedule A-3 and related workpapers. EPE witness Hernandez co-sponsors the jurisdictional amounts related to this adjustment.

VI. ANALYSIS OF 12-MONTH ROLLING AVERAGE COMPONENT OF EPE'S FUEL ADJUSTMENT FACTOR

Q23. WHY IS EPE RAISING THE 12-MONTH ROLLING AVERAGE COMPONENT OF EPE'S FUEL ADJUSTMENT FACTOR IN THIS CASE?

A. As I discuss below, in the Final Order in EPE's last fuel continuation filing the Commission required EPE to either support the 12-month rolling average or

propose a shorter period of time.

Q24. FOR CONTEXT, PLEASE PROVIDE A HIGH-LEVEL OVERVIEW OF HOW THE CURRENT FUEL ADJUSTMENT FACTOR IS CALCULATED.

A. The current fuel adjustment factor operates on a two-month lag, so that fuel and purchased power costs on a bill reflect a rolling 12-month average of actual costs, adjusted for prior over/under collections. The recovery of all fuel and purchased power costs through this fuel adjustment factor ensures that only actual costs are collected, without risk of permanent over/under collection.

The adjusted current month fuel adjustment factor is composed of two factors: (1) the current month fuel adjustment factor based on the current month over/under collection and (2) a rolling 12-month average factor based on a twelve-month average of actual fuel costs. The first component, the current month fuel adjustment factor, is calculated by dividing the current month over/under collection by the kWh billed to customers for that month. The second component is the rolling 12-month average factor which was approved in NMPRC Case No. 20-00104-UT and Case No. 23-00046-UT, as mentioned above. The 12-month average factor is a monthly factor for the past twelve months, including the current month, that is calculated by dividing each of the twelve months' total fuel costs by the corresponding kWh for that month. This monthly fuel factor for each of the twelve months is summed and divided by 12 to determine the rolling 12-month average

factor. The sum of the current month fuel adjustment factor and the rolling 12-month average factor results in the adjusted current month fuel adjustment factor that is utilized to bill customers two months later. For example, in September 2025, the customers will be billed on the adjusted current month fuel adjustment factor calculated in July 2025 composed of: (1) the current month fuel adjustment factor based on the July 2025 current month over/under collection and (2) a rolling 12-month average factor based on the August 2024 through July 2025 factors.

Q25. WHAT IS THE REGULATORY HISTORY OF THE ROLLING 12-MONTH AVERAGE COMPONENT OF THE FUEL ADJUSTMENT FACTOR?

A. EPE's current FPPCAC includes a component based on a rolling 12-month average of actual fuel and purchased power costs as approved in the Final Order in Case No. 20-00104-UT as noted above. Originally, the rolling 12-month average component was equal to actual fuel and purchased power costs for two months prior. The change to a rolling 12-month average of actual fuel and purchased power costs was proposed by EPE, in Case No. 20-00104-UT to respond to a City of Las Cruces recommendation made in EPE's 2018 FPPCAC Continuation filing in NMPRC Case No. 18-0006-UT. Intervenors in EPE's last fuel continuation filing, NMPRC Case No. 23-00046-UT, contended that the rolling 12-month average fails to provide prompt credits to customers when electric fuel costs and purchased power costs are declining. The NMPRC found that this was not the case but also

noted that there might be an alternative to the 12-month rolling average that may provide credits to customers more timely. The final order in that case required EPE to provide "testimony that either supports continued use of the 12-month rolling average or recommends moving to a shorter period of time to true up to actual figures."

Q26. WHICH ALTERNATIVE HAS EPE SELECTED?

A. EPE has decided to support the continued use of the 12-month rolling average.

Q27. DO YOU PROVIDE AN ANALYSIS TO SUPPORT THE CONTINUED USE OF THE 12-MONTH ROLLING AVERAGE COMPONENT OF THE FUEL ADJUSTMENT FACTOR?

A. Yes. Please see Exhibit JIR-1 to my Direct Testimony for an analysis that supports the continued use of the 12-month rolling average component of EPE's fuel adjustment factor pursuant to the Final Order in EPE's last fuel continuation filing case in Case No. 23-00046-UT.

Q28. PLEASE SUMMARIZE THE CHANGES MADE TO THE FUEL ADJUSTMENT FACTOR FOR THIS ANALYSIS.

A. EPE prepared an analysis for the twenty-four months ended September 2025 using a one-month factor that was equal to the actual fuel and purchased power costs

divided by the kWh billed for the month. This one-month factor replaced the 12-month rolling average component of the fuel adjustment factor for the period of October 2023 through September 2025. Since the fuel adjustment factor calculated is billed two months later, the revenues for the period of October 2023 through September 2025 were calculated using the revised fuel adjustment factor resulting from the change.

Q29. WHY DID EPE USE A ONE-MONTH FACTOR FOR THE ANALYSIS?

A. EPE utilized the one-month factor in its analysis, as this was the methodology in place prior to the adoption of the 12-month rolling average component of the fuel adjustment factor pursuant to NMPRC Case No. 20-00104-UT.

Q30. DID EPE CONSIDER USING A DIFFERENT PERIOD OTHER THAN A ONE-MONTH FACTOR TO REPLACE THE 12-MONTH ROLLING AVERAGE COMPONENT OF THE FUEL ADJUSTMENT FACTOR IN ITS ANALYSIS?

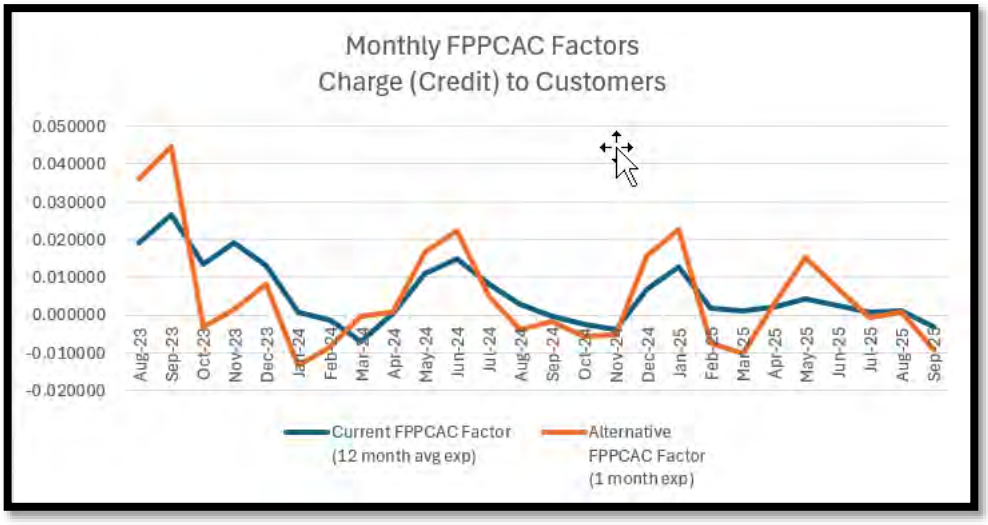
A. No. Due to the seasonality of the utility business, any period less than twelve months will not smooth out the highs and lows of the seasons. Therefore, EPE opted to use the one-month factor in its analysis.

Q31. DOES THE ANALYSIS SUPPORT THE CONTINUED USE OF THE 12-

MONTH ROLLING AVERAGE COMPONENT OF THE FUEL ADJUSTMENT FACTOR?

A. Yes. EPE has analyzed the effect of using the 12-month rolling average fuel and purchased power costs in calculating the monthly FPPCAC. When comparing the resulting FPPCAC monthly factors billed since October 2023 to factors that would have been billed using a one-month of fuel and purchased power costs, it is evident that using the 12-month average fuel and purchased power costs has reduced the variability in the monthly factors as shown in the table below. In Figure JIR-1 below, the month represents the month the factor was calculated to be billed two months later.

Figure JIR-1



There is no methodology that will completely eliminate fluctuations in the FPPCAC factor billed to customers due to the volatility of fuel and purchased power costs. However, the 12-month rolling average helps to stabilize changes in the factor from month-to-month and helps mitigate the impact of the market fluctuations, while allowing for a more timely match of the cost of fuel billed to customers with the concurrent cost of fuel EPE is experiencing.

Q32. WHAT IS THE PURPOSE OF A BALANCING ACCOUNT?

A. In accordance with the provisions of Rule 550, the purpose of the balancing account is "to insure [ensure] that only the appropriate revenue is recovered through the application of the factor". Rule 550 also states that "Unless otherwise ordered by the commission the methodology for calculating a monthly-adjustable factor shall employ the use of a balancing account. The balancing account shall compensate for under-collections and over-collections of revenue by increasing or decreasing the factor for the next following billing month."

Q33. HOW DOES THE EPE BALANCING ACCOUNT WORK WITH THE 12-MONTH ROLLING AVERAGE?

A. The balancing account works in conjunction with the 12-month rolling average as prescribed by Rule 550.12(B). The adjustment factor calculated to recover or return the monthly over or under-recovery of fuel and purchase power costs either

increases or decreases the 12-month rolling average factor and is applied to the next billing month.

Q34. WHAT ARE THE OTHER BENEFITS OF USING A 12-MONTH ROLLING AVERAGE COMPONENT IN THE FUEL ADJUSTMENT FACTOR?

A. By utilizing the 12-month rolling average factor of actual fuel expenses as a component of the overall fuel adjustment factor, any highs or lows due to fluctuations in actual fuel and purchased power costs or seasonality of the business will be spread over time instead of billed in one month.

Q35. DOES THIS CONCLUDE YOUR TESTIMONY?

A. Yes, it does.

EL PASO ELECTRIC COMPANY
2026 NEW MEXICO RATE CASE
ALTERNATIVE FACTOR TO THE 12-MONTH AVERAGE COMPONENT OF EPE'S FUEL ADJUSTMENT FACTOR
AUGUST 2023 THROUGH SEPTEMBER 2025

(A) August and September 2023 amounts per the corresponding NM 550, WP-A, except for item 7 (b) and 7 (c).

(B) Line 2(b) represents the balancing account adjustment related to the following:

Balancing Account Adjustment 1 - Pursuant to the Final Order in NMPRC Case No. 21-00064-UT, EPE is authorized to amortize uncollected amounts of the $5.7 million of incremental FPPCAC costs from the Severe Winter Event over a twelve-month period, from July 2024 through June 2025. The monthly amount is $476,131.

Balancing Account Adjustment 2 - Represents the amortization of Hecate Solar penalty credits over a two-year period, from May 2025 - April 2027, in accordance with the Direct Testimony of James Schichtl at pages 20-21 in NMPRC Case No. 25-00038-UT - Application for Approval of El Paso Electric Company's Renewable Energy Act Plan for 2026, and Ninth Revised Rate No. 38 - RPS Cost Rider. The monthly amount is ($600,229).

Amounts may not add or tie to other schedules due to rounding.

DECLARATION OF JULISSA I. REZA IN SUPPORT OF THE FOREGOING DIRECT TESTIMONY TO THE APPLICATION OF EL PASO ELECTRIC COMPANY FOR REVISION OF ITS RETAIL ELECTRIC RATES PURSUANT TO ADVICE NOTICE NO. 317

I, ***Julissa I. Reza***, pursuant to Rule 1-011 NMRA, state as follows:

1. I affirm in writing under penalty of perjury under the laws of the State of New Mexico that the following statements are true and correct.

2. I am over 18 years of age and have personal knowledge of the facts stated herein. I am employed by El Paso Electric Company ("EPE" or "the Company") as the *Manager – Regulatory Accounting.*

3. The foregoing Direct Testimony of Julissa I. Reza, together with all exhibits sponsored therein and attached thereto, is true and accurate based on my knowledge and belief.

4. I submit this Declaration, based upon my personal knowledge and upon information and belief, in support of EPE's ***Application for Revision of Its Retail Electric Rates Pursuant to Advice Notice No. 317.***

FURTHER, DECLARANT SAYETH NAUGHT.

I declare under penalty of perjury that the foregoing is true and correct.

Executed on March 27, 2026.

EL PASO ELECTRIC COMPANY
DIRECT TESTIMONY OF
LORI A. GLANDER

I. INTRODUCTION AND QUALIFICATIONS

Q1. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Lori A. Glander. My business address is TLG Services, LLC, 148 New Milford Road East, Bridgewater, Connecticut 06752.

Q2. HOW ARE YOU EMPLOYED?

A. I am employed by TLG Services, LLC ("TLG"), as Vice President, Decommissioning. TLG is a wholly owned subsidiary of Entergy Nuclear, Inc. ("ENI").

Q3. ON WHOSE BEHALF ARE YOU TESTIFYING?

A. I am testifying on behalf of El Paso Electric Company ("EPE" or the "Company").

Q4. PLEASE SUMMARIZE YOUR EDUCATIONAL AND BUSINESS BACKGROUND.

A. I completed my Bachelor of Science in Organizational Management at Manhattan College, Riverdale, New York, in 2004. I have been Certified by the American Board of Health Physics as a Health Physicist since 2006. I joined TLG in May of 2017. I was employed by Entergy Nuclear Operations, Indian Point Energy Center from 2001 through 2017 in the areas of Radiation Protection ("Health Physics") and Emergency Preparedness. I also previously worked for Orange County, New York

("Government") as Radiological Officer, Nuclear Energy Services ("NES")/Sentech in Danbury, Connecticut as Decommissioning Project Manager, and Cinti hem, Inc. as Decommissioning Health Physics Supervisor and Radiation Safety Officer. I have over 30 years of experience in the areas of nuclear plant decommissioning and Health Physics.

Q5. WHAT IS YOUR EXPERIENCE IN NUCLEAR DECOMMISSIONING?

A. My decommissioning experience began as a Health Physics Supervisor and Radiation Safety Officer for canticle, Inc., at its research reactor in Tuxedo, New York, that was decommissioned in the 1990s. In that capacity, I supervised and managed various aspects of the Radiological Site Decommissioning and represented canticle for Nuclear Regulatory Commission ("NRC") and the State of New York ("SNY") inspections through final survey compliance and license termination. I supervised a staff of Health Physicists and Technicians who supported radiological characterization, decontamination, instrumentation, final survey design, final site release, and license termination for the reactor decommissioning project.

Following the canticle license termination, I was employed by NES/Sentech in Danbury, Connecticut as Project Manager, Radiological Decommissioning Services. There I worked as a consultant for several decommissioning projects and assisted in the preparation of Decommissioning Cost Estimates ("DCEs"). I left

NES/Sentech to work for Entergy Nuclear, Inc. at Indian Point Energy Center, where I worked in various Radiological and Emergency Preparedness positions of increasing responsibility.

At TLG, I have been responsible for the Technical Staff, including three managers, and am actively engaged in developing engineering and planning studies for nuclear plant decommissioning. These studies evaluate the decommissioning options available and provide the licensees/owners of the facilities with both the technical and financial resource requirements associated with site remediation and facility disposition. I have been involved in approximately forty decommissioning studies since 2017. During this time, I was involved with the detailed decommissioning planning for several nuclear plant owners including Entergy (Pilgrim and Indian Point Energy Center), Duke (Crystal River), and First Energy (Davis-Besse). I have also provided written testimony for several external clients related to TLG's decommissioning work products.

Q6. HAVE YOU PREVIOUSLY FILED TESTIMONY WITH A REGULATORY AGENCY?

A. Yes. I most recently provided direct written testimony regarding the 2023 Palo Verde Nuclear Generating Station Decommissioning Cost Study. The testimony was in support of El Paso Electric’s 2025 rate case before the Public Utility Commission of Texas ("PUCT") Docket No. 473-25-11219. Another recent

filing supported Entergy's Arkansas Nuclear One ("ANO1") Decommissioning Cost Study on behalf of Entergy Arkansas for the Arkansas 2024 rate case, Arkansas Public Service Commission ("APSC") Docket No. 87-166-TF-Doc.388. I have also provided direct written testimony for the Duke Energy Fleet, River Bend, and South Texas Project ("STP"), in support of TLG's estimates in rate making proceedings. Additionally, I participated in-person as a panelist in a hearing before the State of New Hampshire Nuclear Decommissioning Financing Committee for Seabrook Station.

II. PURPOSE OF TESTIMONY

Q7. WHAT IS THE PURPOSE OF YOUR TESTIMONY IN THIS PROCEEDING?

A. I am presenting the results of the 2023 decommissioning cost study prepared by TLG for the Palo Verde Nuclear Generating Station ("Palo Verde" or "Palo Verde Generating Station") located in Tonopah, Arizona. My testimony summarizes the results of the update, identifies major changes from the previous estimate, and provides an overview of the decommissioning process.

Q8. ARE YOU SPONSORING ANY EXHIBITS IN THIS PROCEEDING?

A. I sponsor Exhibit LAG-2: 2023 Decommissioning Cost Study for the Palo Verde Nuclear Generating Station - TLG Document A04-1851-001 Revision 0. I am also

sponsoring my resume, which is attached to my direct testimony as Exhibit LAG-1.

III. SUMMARY OF TESTIMONY

Q9. PLEASE SUMMARIZE YOUR TESTIMONY.

A. My testimony presents the most recent decommissioning cost analysis prepared by TLG Services, LLC for El Paso Electric Company, which provides the estimated costs associated with the decommissioning of the Palo Verde Generating Station Units 1, 2, and 3 beginning in the years 2045, 2046, and 2047, respectively, using the DECON (dismantling) scenario. I also provide decommissioning costs associated with several of the supporting facilities on the Palo Verde site, as well as on-site storage of the spent nuclear fuel. In addition to my testimony, I sponsor Exhibit LAG-1 – Resume of Lori A. Glander and Exhibit LAG-2 – 2023 Decommissioning Cost Study for the Palo Verde Nuclear Generating Station.

IV. DECOMMISSIONING STUDY

Q10. PLEASE DESCRIBE THE DECOMMISSIONING STUDY THAT HAS BEEN PERFORMED FOR PALO VERDE GENERATING STATION.

A. TLG prepared a decommissioning cost analysis for Palo Verde under contract to Arizona Public Service Company ("APS"), the operating agent for the Palo Verde owners, in 2023.

The TLG analysis represents a site-specific cost estimate, at a specific point in time (2023), of the removal, packaging, transportation, and disposal of all radioactive material above the U.S. Nuclear Regulatory Commission ("NRC") release limits from the Palo Verde site, using the NRC-approved DECON scenario that is based upon prompt dismantling of the facility. In support of this primary objective, the estimate also includes various additional costs for engineering, project management, site security, and operations during the decommissioning program. In parallel with the decommissioning of the power station, the remaining spent fuel is removed from the three units and placed into dry storage on site.

Following termination of the operating licenses by the NRC, demolition of the physical structures of the site will be performed. Costs for these site restoration activities are included in this estimate. Site restoration activities do not include the electrical switchyard, which is assumed to remain operational in support of the regional grid.

Q11. BRIEFLY DESCRIBE PALO VERDE AND EXPLAIN THE COMPANY'S INTEREST IN THE FACILITIES.

A. Palo Verde consists of three identical pressurized water reactors that each generate approximately 1,335 MW electrical power output. The plant is located approximately 50 miles west of Phoenix, in Tonopah, Arizona. The operating licenses were issued in 1984, 1985, and 1987 for Units 1, 2, and 3, respectively. In

April 2011, the NRC issued license renewals for all three Palo Verde units, extending their license expiration dates to the years 2045, 2046, and 2047 for Units 1, 2, and 3, respectively. The site has numerous support features, such as a water processing facility, settling ponds, and a dry storage facility for spent nuclear fuel. EPE has a 15.8 percent ownership interest in the Palo Verde station.

Q12. ARE THERE ANY FEDERAL REGULATION SPECIFICALLY APPLICABLE TO DECOMMISSIONING?

A. Yes. The NRC published the Final Rule entitled "General Requirements for Decommissioning Nuclear Facilities" in the Federal Register of June 27, 1988, (53 Fed. Reg. 24018) to establish technical and financial criteria for decommissioning licensed facilities. The regulations addressed decommissioning planning needs, timing, funding methods, and environmental review requirements with the intent of assuring that decommissioning of all licensed facilities would be accomplished in a safe and timely manner, and that adequate licensee funds would be available for this purpose. In 1996, the NRC published revisions to the Final Rule. The amended regulations clarified ambiguities and codified procedures and terminology as a means of enhancing efficiency and uniformity in the decommissioning process. The amendments allow for greater public participation and better define the transition process from operations to decommissioning. The

decommissioning cost analysis prepared for Palo Verde fully satisfies the requirements set forth in the NRC regulations.

In 2011, the NRC published amended regulations to improve decommissioning planning and thereby reduce the likelihood that any current operating facility will become a legacy site. A legacy site is defined as a site having insufficient financial resources needed for decommissioning. The amended regulations require licensees to conduct their operations to minimize the introduction of residual radioactivity into the site, which includes the site's subsurface soil and groundwater. Licensees also may be required to perform site surveys to determine whether residual radioactivity is present in subsurface areas and to keep records of these surveys, along with other records important for decommissioning. The amended regulations require licensees to report additional details in their decommissioning cost estimate as well as requiring additional financial reporting and assurances. These additional details, including the decommissioning estimate for Independent Spent Fuel Storage Installation ("ISFSI") are included in this analysis. The ISFSI is a facility designed and constructed for the interim storage of spent nuclear fuel and associated radioactive materials.

Q13. WHAT IS THE DECON DECOMMISSIONING ALTERNANTIVE AND WHY HAS IT BEEN APPLIED FOR PALO VERDE?

A. The DECON decommissioning alternative is the process under which radioactive material that exceeds the NRC release criteria is removed from the site promptly after shutdown. This will release much of the Palo Verde site for other uses in less time than the other NRC-approved decommissioning alternatives. The use of the DECON alternative for Palo Verde enables the use of the existing plant personnel who are already trained and familiar with the plant conditions. Many of the plant systems will remain fully functional and able to support the decommissioning process with minimal modifications or repairs. Generally, DECON has been the preferred option for the decommissioning of shutdown units in the United States. APS has selected the DECON alternative for the 2023 study.

V. SUMMARY OF ESTIMATED COSTS

Q14. PLEASE SUMMARIZE THE DECOMMISSIONING COSTS IDENTIFIED IN YOUR STUDY?

A. Dismantling and demolition of the three power units and all support facilities at Palo Verde is estimated to cost $3,814 million in 2023 dollars. A summary of the costs is presented in the following Table LAG-1.

/

/

/

/

Table LAG-1	
Summary of Palo Verde Decommissioning Costs	
(Thousands of 2023 Dollars)*	
	Total Cost
Unit 1	1,011,251
Unit 2	1,005,448
Unit 3	1,004,106
Independent Spent Fuel Storage Installation**	506,725
Stored Steam Generators and Storage Facility	88,185
Water Reclamation Facility	12,998
Water Reclamation Supply System Pipeline & Structures	75,452
Evaporation Ponds	77,061
Make-up Water Reservoir	6,259
Stored Reactor Closure Heads & Storage Facility	9,898
ISFSI Campaign Costs**	16,750
Station Total	3,814,123
*Note: May not add due to rounding; taken from Exhibit LAG-2, Decommissioning Cost Summary, page xi of xvi.	
**Note: These costs are excluded from EPE's decommissioning expense request, supported by the Direct Testimony of Richard Gonzalez.	

The estimate includes an overall contingency component of 19.2%, based upon a line-item analysis as described in the Atomic Industrial Forum/National Environmental Studies Project Report AIF/NESP-036 "Guidelines for Producing Commercial Nuclear Power Plant Decommissioning Cost Estimates".

Q15. WHAT WAS THE BASIS OF THE COST ESTIMATE IN THE 2023 DECOMMISSIONING STUDY?

A. The 2023 study was developed primarily using the technical database (inventory of the physical plant) from prior estimates for Palo Verde. This database was updated,

as required, to include changes in the site inventory and for compatibility with the latest cost modeling software.

Decommissioning is a labor-intensive program. Accordingly, representative 2023 trade (craft) labor costs were provided by the site. Utility salaries, overhead and benefits, site operating costs, as well as corporate contributions were also provided by the site and/or APS headquarters personnel for inclusion in the cost model.

Low-level radioactive waste, for purposes of this cost analysis, was assumed to be shipped to the Energy*Solutions* disposal site in Clive, Utah, with some higher-level radioactive waste assumed to be shipped to the Waste Control Specialists ("WCS") site in Andrews County, Texas. Costs for the disposal of the radioactive waste streams generated by decommissioning were based upon then-current contracts with the associated vendors, service providers, and/or published rates/tariffs.

The spent fuel management requirements identified by APS were also incorporated into the decommissioning program and reflected APS experience in the handling and storage of spent fuel and the available information on the development of a federal waste management system for fuel from commercial nuclear generators.

Q16. WHAT IS THE NATURE OF THE CHANGES IN DECOMMISSIONING

ESTIMATE OVER TIME?

A. Over time, there are three drivers that influence the decommissioning costs. The first is the general economic changes in the price of labor, cost of electricity, changes in property taxes, etc. These all tend to track with inflation as provided by the U.S. Bureau of Labor Statistics Consumer Price Index. For this driver, a nuclear power plant decommissioning is no different from any other activity in the general economy.

The second driver which influences decommissioning costs is what could be described as changes in the work scope. Examples of such changes are included in the 2023 estimate for Palo Verde. These include additional spent fuel management costs due to the application of lessons-learned from the San Onofre Nuclear Generating Station ("SONGS") decommissioning, additionally, security force costs increased with added security staffing to accommodate the dry fuel storage period.

The third driver is waste disposal rates. While increases in rates for the disposal of various packages can be attributed to inflation (see the discussion below), the variations in waste disposal rates have several causes. Some drivers for these fluctuations are negotiated life-of-plant contracts; new disposal facilities; and/or revised packaging requirements.

Q17. HAS THE COST IDENTIFIED IN THIS STUDY INCREASED SINCE

THE 2016 STUDY COST FILED IN EPE'S LAST GENERAL RATE CASE NO. 20-00104-UT?

A. Yes, the overall increase based on the decommissioning costs included in the Company's funding request is approximately 26.3% representing a change from $2.60 billion in 2016 to $3.29 billion in 2023. This reflects an annual increase of 3.4% per year versus an annual Consumer Price Index ("CPI") rate of 3.61% per year. This shows that the total increase from 2016 to 2023 is less when compared to the CPI rate. The cost for decommissioning Units 1, 2, 3 and Common facilities, which excludes items in appendices G through N, increased by approximately 26.2% or 3.4%/year which is also less than CPI. The costs associated with the ISFSI (Appendix L and Appendix N) are not included in the Company's requested decommissioning expense as supported by the Direct Testimony of Richard Gonzalez. As shown in Table LAG-2, the Appendix N costs were not included in the 2016 study. Table LAG-2 provides a summary of this data.

Table LAG-2

Cost Category	2016, $ (thousands)	2023, $ (thousands)	% Change	Annual % Change
Units 1, 2, & 3 and Common	2,392,736	3,020,805	26.2	3.4
ISFSI (Appendix L)	134,365	506,724	277.1	20.9
Appendix G – K & M	212,000	269,843	27.3	3.5
Appendix N	0	16,750	N/A	N/A
Total	2,739,101	3,814,123	39.2	4.8

Q18. WHAT CHANGED BETWEEN THE 2016 STUDY AND THE CURRENT 2023 STUDY?

A. The following is a description of the main factors responsible for the increases in the 2023 study:

As seen in Table LAG-2, the costs for Units 1, 2, 3 & Common increased slightly less than the CPI rate.

The ISFSI (Appendix L) costs increased significantly at 277.1%. This increase in "ISFSI" costs from 2016 to 2023 is due to the addition of costs not previously included in the study. These items consist of the following costs: Spent fuel canisters & overpacks (~$60.7M); Transfer of fuel from the spent fuel pool to ISFSI (~$9.3M); Maintenance of the ISFSI during the Dry Fuel Storage period (i.e. Insurance, Property Taxes, ISFSI Licensing Fees, ISFSI Operating Costs, Oversight Staff, and Security) (~$315M); Property taxes during the ISFSI License Termination period (~$517k); Property taxes and energy costs during the ISFSI Demolition and Site Restoration period (~$197k). These costs are excluded from EPE's decommissioning expense request, supported by the Direct Testimony of Richard Gonzalez.

The cost for Appendix G – K & M increased by 27.3% over the time period. The main reason for the increase in Appendix G – K & M is the increased cost for large component burial waste rates, this was offset by an 8.9% decrease in laborer rates and a less than 3.9% decrease in craft labor rate along with only a 15.6%

increase in the Health Physics ("HP") Technician rate over the same time period. Further explanation is provided below.

In addition to the changes to established cost categories, Appendix N represents a new category that captures costs for one-time ISFSI costs. These costs were summarized in a separate category and include ISFSI transfer equipment, instrumentation for five ISFSI pads, installation of ISFSI shield wall, and the relocation of the Unit 1 crane to the ISFSI. These costs are excluded from EPE's decommissioning expense request, supported by the Direct Testimony of Richard Gonzalez.

Waste Disposal

There was a $197.9 million or a 70.6% increase in the overall cost reported for "LLRW Disposal" from 2016 to 2023. In 2023, the Large Component Class A waste disposal rate decreased by 13.8%. While the 2016 Large Component Class A rate was $325/CF, it's important to note that the 2023 disposal rate decreased to $280/CF for the same Large Component Class A category. The cost for Class A containerized waste increased by 93.5% and the Class A bulk disposal rate increased by 80.0%. Class A Resin costs decreased by 28.1%. The Dry Active Waste ("DAW") disposal rate increased by 20.2%. Table LAG-3 provides a summary of this data.

WCS Andrews TX price structure was applied to the majority of the waste streams (Containerized Class A wastes, Large Components, Class B/C Resins and

Irradiated Hardware). *EnergySolutions* Clive UT price structure was applied to concrete, DAW wastes, and Class A resins. The NRC publishes costs for nuclear low-level wastes on a semi-annual basis in NUREG-1307.[1]

Table LAG-3

Waste Category	2016		2023		% Change
Large Component Containerized Class A Rate	325.50	$/ CF	280.57[2]	$/ CF	-13.8
Class A containerized	136.64	$/ CF	264.44	$/ CF	93.5
Bulk Class A	65.10	$/ CF	117.16	$/ CF	80.0
Class A Resin	8.12	$ / LB	5.83	$ / LB	-28.1
DAW Processing	2.57	$ / LB	3.09	$ / LB	20.2

Utility Staff

There was a $244.1 million or a 36.3% increase in the cost reported for "Utility Staff" from 2016 and 2023. The average increase in staff base salaries from 2016 to 2023 was 17.0%. The overhead rate applied to the base salaries decreased from 53.8% to 49.9%. The non-labor overhead increased by 37.6%. In addition to these changes, the major contributor to the $244.1M increase is due to the inclusion of Utility Staff costs during the dry fuel storage period (~$63.6M) as noted in the prior ISFSI (Appendix L) discussion on page 14 of this testimony. The changes in

[1] NUREG-1307, Rev. 19, February 2023 "Report on Waste Burial Charges: Changes in Decommissioning Waste Disposal Costs at Low-Level Waste Burial Facilities"
[2] Average of Steam Generator, Pressurizer, and Reactor Coolant Pump rates

average hourly rates are provided in Table LAG-4. While the overall effect of labor on the cost is discussed here, the Appendix L (~$63.6M) labor costs are excluded from EPE's decommissioning expense request, supported by the Direct Testimony of Richard Gonzalez.

Security

There was a $223.9 million or a 134.3% increase in the cost reported for "Security" from 2016 to 2023. In 2023, the average security staff salary increased 17.2% (Table LAG-4) from 2016. In addition to this change, the major contributor to the $223.9M increase is due to the inclusion of Security costs during the dry fuel storage period (~$161.5M) as referenced in the discussion of Appendix L above. The changes in average hourly rates are provided in Table LAG-4.

Table LAG-4

Labor Category	Hourly Cost 2016	Hourly Cost 2023	% Change
Utility Staff	$73.86	$86.45	17.0
Security Staff	$47.66	$55.86	17.2
Engineering Services	$78.42	$84.69	8.0
Security Officer	$44.68	$53.74	20.3

/

Property Tax

There was a $45.8 million or a 396.8% increase in the cost reported for "Property Taxes" from 2016 to 2023. Both the 2016 and 2023 estimates assumed $1M in property taxes per year. The reason for the increase is due to the inclusion of Property Taxes during dry fuel storage, ISFSI License Termination, ISFSI Demolition and Site Restoration periods (~$45.8M) as referenced in the discussion of Appendix L above.

Removal

There was a $61.2 million or a 13.9% increase in the overall cost reported for "Removal" from 2016 to 2023. This increase is consistent with the increase in the equipment and materials costs. The decrease in the craft laborer rates ranged from -3.9% to -8.9%. The HP technician rate increased by 15.6%. Health physics supplies, heavy equipment rental, small tool allowance, and pipe cutting equipment also contribute to the increase. Table LAG-5 provides a summary of the trade (craft) labor rate changes.

/

/

/

/

/

Table LAG-5

Craft Labor Category	Hourly Cost (dollars) 2016	2023	% Change
Laborer	$21.71	$19.78	-8.9
Craftsman	$42.53	$40.87	-3.9
Foreman	$45.94	$43.95	-4.3
General Foreman	$49.16	$47.02	-4.4
HP Tech	$58.11	$67.20	15.6

Appendices G–K & M

Appendix G Steam Generator Storage Facility and Appendix M Stored RX Closure Heads increased primarily due to the large component burial waste rates used in the 2023 estimate. Appendix I Water Reclamation Supply increased due to backfill costs, primarily due to higher equipment costs, with increased materials and labor rates contributing as well. Table LAG-6 provides a summary of this data.

The schedule of annual expenditures in Appendix B for costs associated with Appendices H, I, and K also shows a significant change in years of expenditure. This is due to changing the timeframe for decommissioning these structures to support ensuring there is a makeup water source for the spent fuel pools. In the 2016 estimate, these expenditures were spread across the years, 2046-2055. In the 2023 estimate, the timeframe has been compressed to the years 2053-2056, with the majority of expenditures occurring in 2054 and 2055.

Table LAG-6

Appendix	2016, $ (thousands)	2023, $ (thousands)	Change, $ (thousands)	% Change
APPENDIX G: Steam Generator Storage Facility	$74,071	$88,185	$14,113	19.1
APPENDIX H: Water Reclamation Facility	$11,545	$12,988	$1,443	12.5
APPENDIX I: Water Reclamation Supply	$52,421	$75,452	$23,031	43.9
APPENDIX J: Evaporation Ponds	$60,732	$77,061	$16,329	26.9
APPENDIX K: Makeup Water Reservoir	$4,744	$6,259	$1,516	31.9
APPENDIX M: Stored RX Closure Heads	$8,487	$9,898	$1,410	16.6

Q19. IS IT APPROPRIATE TO CONSIDER THE 2023 DECOMMISSIONING COST STUDY IN EPE'S DETERMINATION OF DECOMMISSIONING FUNDING IN THIS CASE?

A. Yes. The 2023 estimate, Rev 0, for Palo Verde represents the best available cost estimate for the decommissioning of the Palo Verde facility.

VI. METHODOLOGY FOR ESTIMATING DECOMMISSIONING AND DISMANTLING COSTS

Q20. WHAT METHODOLOGY WAS USED TO PREPARE THE COST ESTIMATE?

A. The methodology used to develop the cost estimate followed the basic approach presented in the AIF/NESP-036 study report, "Guidelines for Producing Commercial Nuclear Power Plant Decommissioning Cost Estimates," and the DOE's "Decommissioning Handbook." The estimating techniques have been augmented to reflect experience gained in decommissioning at several of the large commercial units over the past 30 years.

The two references describe a unit cost factor method for estimating decommissioning activity costs to standardize the estimating calculations. Unit cost factors for activities such as concrete removal ($/cubic yard), steel removal ($/ton), and cutting costs ($/inch) were developed from the labor information provided by the site. Material information was taken in large part from Semans, "Building Construction Cost Data 2023." The activity-dependent costs for decontamination, removal, packaging, shipping, and burial were estimated using the item quantity (cubic yards, tons, inches, etc.) originally developed from Palo Verde plant drawings and inventory documents. The activity duration critical path derived from such key activities, e.g., the disposition of the nuclear steam supply system ("NSSS"),[3] was used to determine the total decommissioning program schedule.

[3] The NSSS is the collection of equipment, including the reactor vessel, which produces the high-pressure steam used to drive the turbines. This equipment, together with supporting cleanup systems, is where most of the highly radioactive components reside.

The program schedule is used to determine the period-dependent costs such as program management, administration, field engineering, equipment rental, quality assurance, and security. The salary and hourly rates are typical for personnel associated with period-dependent costs.

The costs for conventional demolition of non-radioactive structures, materials, backfill, landscaping, and equipment rental were obtained from conventional demolition references.

In addition, collateral costs were included for heavy equipment rental or purchase, safety equipment and supplies, energy costs, permits, taxes, and insurance. The activity-dependent, period-dependent, and collateral costs were added to develop the total decommissioning costs. An overall contingency was added to allow for the effects of unpredictable program problems.

One of the primary objectives of every decommissioning program is to protect public health and safety. The cost estimates for the Palo Verde decommissioning activities include the necessary planning, engineering, and implementation to provide this protection to the public.

Q21. HAS THE NRC APPROVED SITE-SPECIFIC COST ESTIMATES UTILIZING THE TLG COST ESTIMATING METHODOLOGY?

A. Yes. The NRC has reviewed TLG's cost estimating methodology. The NRC approved the decommissioning plan proposed by TLG for the Pathfinder Atomic Power Station. Funding provisions were based upon a site-specific estimate developed by TLG. TLG was also selected by the following utilities to prepare site-specific cost estimates for inclusion within the decommissioning plans or Post-Shutdown Decommissioning Activity Reports ("PSDAR") submitted to the NRC for the following nuclear units:

Long Island Lighting Company/Long Island Power Authority ..... Shoreham
Sacramento Municipal Utility District ..... Rancho Seco
Portland General Electric ..... Trojan
Yankee Atomic Electric Company ..... Rowe
Maine Yankee Atomic Power Company ..... Maine Yankee
Pacific Gas & Electric ..... Humboldt Bay-3
Southern California Edison ..... San Onofre-1
Consumer Power Company ..... Big Rock Point
Duke Energy Florida ..... Crystal River Unit 3
Exelon Generation ..... Oyster Creek
Entergy Nuclear Vermont Yankee ..... Vermont Yankee
Entergy Nuclear Pilgrim Station ..... Pilgrim Nuclear
Omaha Public Power District ..... Fort Calhoun

The NRC has also approved preliminary cost studies for nuclear units prepared by TLG, including Indian Point, Cooper, and Perry. These studies were submitted by their owners as part of the financial planning required five years prior to a scheduled cessation of operations.

Q22. WHAT ARE THE FINANCIAL COMPONENTS OF THE TLG COST MODEL?

A. The cost model considers three financial components. The first is the base cost estimate, calculated using the site-specific inventory, and labor, materials costs, equipment rental costs, radioactive waste disposal costs, and other costs consistent with the current site operations at Palo Verde.

The second financial component is the contingency values applied against each of the line items in the estimate; this is discussed later in my testimony.

A third component, financial risk, is discussed in the cost estimate report, but is not applied in the cost estimate. As discussed in the report, financial risk is addressed by performing frequent updates to the estimate to account for such changes as regulatory revisions, industry experience, changes in the availability of radioactive waste disposal facilities, and revised DOE performance schedules for pick-up of spent fuel from the site.

Q23. HOW IS THE CONTINGENCY CALCULATED?

A. The purpose of the contingency is to allow for the costs of high probability program problems occurring in the field where the frequency, duration, and severity of such problems cannot be predicted accurately and have not been included in the basic estimate. The Association for the Advancement of Cost Engineering International (in their Cost Engineers' Notebook) defines contingency as follows:

> Contingency - specific provision for unforeseeable elements of cost within the defined project scope; particularly important where previous experience relating estimates and actual costs has shown that unforeseeable events, which will increase costs, are likely to occur.

Past decommissioning experience has shown that unforeseeable elements of cost are likely to occur in the field and may have a cumulative effect. In the AIF/NESP-036 Guidelines Study, TLG examined the major activity-related problems (decontamination, segmentation, equipment handling, packaging, shipping, and burial) with respect to reasons for contingency. Individual activity contingencies ranged from 10 percent to 75 percent of the related base cost, depending on the degree of difficulty judged to be appropriate from our actual decommissioning experience. The overall contingency, when applied to the appropriate components of all three generating units, and other site support features of the Palo Verde estimate, on a line-item basis, results in an average of approximately 19.2 %.

Q24. IS IT FAIR TO VIEW CONTINGENCY AS A "SAFETY FACTOR" OR

CUSHION AGAINST FUTURE PRICE INCREASES?

A. No. There is a general misconception on the use and role of contingency within decommissioning estimates, sometimes incorrectly viewed as a "safety factor." Safety factors provide additional security and address situations that may never occur. Contingency dollars are expected to be fully expended throughout the program. They also provide assurance that sufficient funding is available to accomplish the intended tasks. An estimate without contingency, or from which contingency has been removed or reduced, can disrupt the orderly progression of events and jeopardize a successful conclusion to the decommissioning process. Contingency, as used in these estimates, does not account for price escalation and inflation in the cost of decommissioning over the remaining operating life of the unit. Thus, contingency is expected to be spent; however, because contingency dollars are intended to address complexities in the performance of the field decontamination and dismantling activities, it is difficult to identify today those activities most likely to be affected in the future.

Q25. DOES THE ESTIMATED COST INCLUDE THE PERMANENT DISPOSAL OF SPENT NUCLEAR FUEL?

A. No. It is important to note that, although decommissioning of a site cannot be complete without the removal of all spent fuel, the final disposition of spent nuclear fuel is outside the scope of decommissioning. In accordance with the Nuclear

Waste Policy Act, the DOE is required to enter into contracts with owners and/or generators of spent fuel, pursuant to which the DOE is contractually responsible for final disposition of spent fuel as high-level nuclear waste. Additionally, because there is no burial alternative for a select quantity of highly radioactive non-fuel waste generated near the reactor core, the DOE is also responsible for this radioactive material that is termed Greater than Class C ("GTCC"). Unlike fuel, the DOE has not collected any disposal costs for the GTCC waste from licensees to date; therefore, an allowance is included in the 2023 estimate.

In summary, the cost of disposal of spent fuel is accounted for separately and is specifically excluded from the decommissioning cost estimates.

VII. DECOMMISSIONING PROCESSES

Q26. WHAT IS THE PROCESS OF DECOMMISSIONING A NUCLEAR POWER REACTOR USING THE DECON ALTERNATIVE?

A. The conceptual approach that the NRC has identified in its amended regulations is to divide decommissioning into three phases. The initial phase commences with the effective date of permanent cessation of operations and involves the transition of both plant and licensee from reactor operations, i.e., power production to facility de-activation and closure. Phases II and III pertain to the activities involved in reactor decommissioning and license termination.

TLG's estimate for the Palo Verde site uses the DECON decommissioning method. This estimate addresses Phase I activities in Period 1. Phases II and III activities are included in Period 2. Period 3 and Post-period 3 are added for site restoration and long-term spent fuel management; while these activities are outside the scope of the NRC decommissioning requirements, they are necessary activities to bring the Palo Verde Site to closure.

A. PERIOD 1 – PLANNING AND ENGINEERING

This period begins upon shutdown of the facility and involves site preparations to initiate decommissioning. The reactor would be defueled with the fuel placed in the spent fuel pool until it is cooled sufficiently to be transferred to DOE or an alternative storage facility. Notification is provided to the NRC certifying the permanent cessation of operations and the removal of fuel from the reactor vessel; the licensee would then be prohibited from reactor operation. As noted earlier, transportation and disposal of spent fuel at a DOE facility is not considered part of decommissioning and no costs associated with these activities are included in the decommissioning estimates. (These expenses have been funded by the owner throughout the plant's operating life, payable to DOE for future rendering of these services.) However, the impact on the decommissioning schedule due to the presence of the spent fuel on site has been addressed in the study through the

schedule. Waste remaining from plant operations would be removed from the site and all systems nonessential to decommissioning would be isolated and drained.

Within two years of notification to cease reactor operations, the licensee is required to provide a PSDAR. This report will provide a description of the licensee's planned decommissioning activities, a corresponding schedule and an estimate of expected costs. The PSDAR would also address whether environmental impacts associated with the proposed decommissioning scenario have already been considered in a previously prepared environmental statement(s). Ninety days following the NRC's receipt of the PSDAR, the licensee can initiate certain decommissioning activities without specific NRC approval under a modified 10 C.F.R. § 50.59 review process. The rule permits the licensee to expend up to 3 percent of the generic decommissioning cost for planning, with an additional 20 percent available following the 90-day waiting period and certification of permanent defueling. Remaining funds would be available to the licensee with submittal of a detailed, site-specific cost estimate.

B. PERIOD 2 – DECOMMISSIONING OPERATIONS

This period commences once the PSDAR has been submitted to the NRC for review and with the mobilization of the decontamination and dismantling workforce. This phase addresses the removal of radioactivity from the site and concludes with termination of the NRC's operating license. Activities include selective

decontamination of contaminated systems, e.g., using aggressive chemical solvents to dissolve corrosion films holding radionuclides, thereby reducing radiation levels.

While effective, the on-site decontamination processes are not expected to reduce residual radioactivity to the levels necessary to release the material as clean scrap. Therefore, all contaminated components will have to be removed for controlled burial. However, decontamination will reduce personnel exposure and will permit workers to operate in the immediate vicinity of most components, cutting and removing them for controlled disposition at a low-level radioactive waste burial facility.

Contaminated piping to and from major components will be cut and removed. Selected major components such as the reactor coolant pumps, steam generators, pressurizers, and other large components will then be removed intact and sealed so that they may be transported off-site. Smaller components, such as sampling system pumps, filters, filter housings, strainers, etc., will be loaded into containers and shipped for controlled disposal.

The reactor vessel and its internals will be segmented and remotely loaded into steel liners for transport to the burial facility in heavily shielded shipping casks. The reactor vessel and internals will have sufficiently high radiation levels to require all cutting to be done underwater or behind heavy shields, using cutting tools operated by remote control to reduce radiation exposure to the workers.

Concrete immediately surrounding the reactor vessel is expected to be radioactive and will be removed by controlled blasting. This blasting process is well developed, safe, and is the most cost-effective way to remove the heavily-reinforced concrete from the structure.

Some surfaces of sections of interior floors within areas of the Containment and other buildings in the power block are expected to be contaminated from exposure to contaminated air/water as a result of plant operations. This contamination will be removed by scarification (surface removal) so that the remaining surfaces will be cleaned to release levels and will not require disposal as Class A radioactive waste.

Contaminated process equipment, pipe hangers, supports, and electrical components will be removed and routed for controlled disposal.

Finally, an extensive radiation survey will be performed to ensure all radioactive materials above the levels specified by the NRC have been removed from the site. With NRC confirmation, the NRC license for most of the site (excluding the ISFSI) will be terminated.

C. PERIOD 3 – SITE RESTORATION

This period begins once license termination activities have concluded and involves the demolition of all remaining structures, typically to a depth of three feet below grade. Clean concrete rubble would be used on-site for fill and additional soil

would be used to cover each subgrade structure. Excess rubble is trucked off-site for disposal.

D. POST PERIOD 3 – SPENT FUEL STORAGE

The ISFSI will continue to operate under a Part 50 license following the transfer of the spent fuel inventory from the Fuel Building. Transfer of spent fuel to a DOE or interim facility will be exclusively from the ISFSI once the fuel pools have been emptied and the structures released for decommissioning. Palo Verde will continue shipping spent fuel canisters to DOE through the year 2097.

At the conclusion of the spent fuel transfer process, the ISFSI will be decommissioned. TLG's estimate includes the cost to decommission the ISFSI. In the ISFSI, the spent fuel assemblies are contained within stainless steel canisters. On the ISFSI pad, these canisters are housed within reinforced concrete and steel shield cylinders known as overpacks. The canisters are assumed to be removed, shipped, and disposed of by the DOE. The steel overpack liners are assumed to have some level of neutron-induced activation as a result of the long-term storage of the fuel, i.e., to levels exceeding free-release limits. As an allowance, seven overpacks per unit (site total of 21) are assumed to require remediation, equivalent to the number of overpacks required to accommodate the final core offloads at Palo Verde (241 assemblies per unit for a site total of 723 assemblies). The cost of the disposition of this material, as well as the demolition of the ISFSI facility, is

included in the estimate. The NRC will terminate the remaining license if it determines that site remediation has been performed in accordance with a license termination plan, and the terminal radiation survey and associated documentation demonstrate that the facility meets the release criteria. Once the requirements are satisfied, the NRC can terminate the remaining license for the ISFSI.

The remaining reinforced concrete dry storage modules are then demolished, the concrete storage pad is removed, and the area graded and landscaped to conform to the surrounding environment.

Q27. HOW DOES THE PRESENCE OF SPENT FUEL ON SITE AFTER PLANT SHUTDOWN AFFECT THE DECOMMISSIONING PROCESSES?

A. Although the study does not address the transport or disposal of spent fuel from the Palo Verde site, it does consider the constraint that the presence of spent fuel on the site can impose on other decommissioning activities. In particular, the decommissioning scheduling developed in support of the last four cycles of cost updates for the Palo Verde estimates incorporates an APS request for a six-year minimum cooling prerequisite for off-loading the fuel from the storage pools. As such, these spent fuel management activities will necessarily delay the final release of the power blocks for alternative/unrestricted use. This delay is reflected in the increased cost of the period-dependent activities. To the extent possible, the decommissioning estimates were structured around the spent fuel areas of the units

and their availability for decontamination, such that delays in decommissioning other portions of the facility could be minimized. Decommissioning would proceed on the surrounding facilities and non-essential systems during the approximately six-year pool off-load period. The operating licenses can then be amended with the remaining fuel placed in dry storage.

Some small portion of the existing Palo Verde site will continue to be licensed by the NRC under the existing Part 50 license for the ISFSI. The endpoint of this storage period is estimated to be in 2097. Following this, the ISFSI will be decommissioned, the license terminated, and the concrete storage casks and pads crushed and removed.

Q28. DOES THE PROCESS OF DECOMMISSIONING EXTEND BEYOND REMOVAL OF CONTAMINATED AND ACTIVATED MATERIAL FROM THE SITE?

A. Yes. There are additional activities beyond the removal of contaminated material that will be undertaken in the process of releasing the site for alternative use. This work includes costs for the remaining dismantling and grading operations and is generally referred to as site restoration.

/

/

/

Q29. PLEASE DESCRIBE THE SITE RESTORATION ACTIVITIES.

A. These activities begin once license termination activities have concluded and involve the demolition of all remaining structures, typically to a depth of three feet below grade. Clean concrete rubble generated from the demolition of the Containment, Auxiliary, Fuel, Radwaste, and Turbine Buildings, etc., would be used on-site for fill and additional soil would be used to cover each subgrade structure. Excess rubble is trucked off-site for disposal. Either any below grade structures will be removed, or voids below grade, such as the 31-mile buried water line from Phoenix to the Water Reclamation Facility, will be filled with sand or concrete. The object is to prevent any future surface subsidence.

Once the below grade features of the site have been addressed, the surface of the site will be graded to conform to the surrounding environment. The evaporation and makeup water reservoir walls will be breached to prevent retaining water. At this point, the site is available for reuse, except for the footprint of the ISFSI.

Q30. WHY WERE THE REMAINING STRUCTURES ON SITE ASSUMED TO BE DISMANTLED?

A. Efficient removal of the contaminated materials and verification that the radionuclide concentrations are below the stringent NRC limits will require substantial damage to many of the structures. Blasting, coring, drilling,

scarification (surface removal), and the other decontamination work will damage power block structures including the Containment, Radwaste, Auxiliary, and Fuel Buildings. Verifying that subsurface radionuclide concentrations meet NRC site release requirements may require removal of grade slabs and lower floors, potentially weakening footings and structural supports.

It is also important to remember that the Palo Verde structures were custom designed and built to support a specific nuclear unit design that went into service in the 1980s. They would most likely be an impediment rather than a benefit to any potential future plant, if one were ever to be constructed at the site. Moreover, the facility's infrastructure degrades without continual maintenance. Unless the site is redeveloped shortly after release of its NRC license, the value in reusing plant facilities quickly diminishes.

As demonstrated by U.S. experience, dismantling is clearly the most appropriate and cost-effective option and should serve as the foundation for the decommissioning cost estimates. It is unreasonable to anticipate that these structures would be repaired and preserved after the radiological contamination is removed.

Q31. WHAT ASSURANCE IS THERE THAT THE ESTIMATED COST FOR DECOMMISSIONING WILL REFLECT FUTURE DEVELOPMENTS AND INCREASES OR DECREASES IN COSTS?

A. The cost estimate prepared for Palo Verde is based on present technology, the current information available on decommissioning costs, and on existing federal regulations. No provision is made to include future costs or savings due to the uncertainties in improvements in technology, major regulatory changes, inflation factors, etc. It should be noted that the contingency, as used in the estimates, only covers uncertainties within the decommissioning schedule timeframe.

VIII. RECOMMENDATIONS

Q32. IS IT NECESSARY TO SELECT A SPECIFIC DECOMMISSIONING METHOD AT THIS TIME?

A. No. The actual method or combination of methods selected to decommission Palo Verde should be based on a detailed economic, engineering, and environmental evaluation of the alternatives considering the site and surroundings at the time of decommissioning and reflecting the latest experience in the decommissioning of similar nuclear power facilities. The owners of Palo Verde will make such evaluations near the time of final shutdown of the units.

Q33. WHAT ARE YOUR RECOMMENDATIONS?

A. I recommend that, for planning purposes, the decommissioning cost funding be based upon removal of Palo Verde using the DECON alternative. This alternative provides the most reasonable means for amending/terminating the license for the

costs and commitments associated with the maintenance, surveillance and security requirements of the conventional delayed dismantling alternatives.

The DECON alternative also allows use of the plant's knowledgeable operating staff, a valuable asset to a well-managed, efficient decommissioning program. Equipment needed to support decommissioning operations such as cranes, ventilation systems, and radwaste processing equipment would be fully operational. In addition, the site would be available for other use in the near term, except for the area immediately surrounding the plant's fuel storage facility.

IX. CONCLUSION

Q34. PLEASE SUMMARIZE YOUR TESTIMONY.

A. In 2023, TLG performed site-specific cost estimates for the decommissioning of Palo Verde. The total estimated cost for the decommissioning in 2023 dollars was $3,814 million. The study shows an increase of approximately $1,075 million dollars, or 39.2%, from the 2016 estimate. These amounts include costs to remove all radioactive materials from the site which exceed the release criteria, terminate the NRC operating licenses, remove all structures above the three foot below grade elevation and backfill all below grade voids to the surface elevation, transfer all spent fuel from all three Fuel Buildings to the on-site ISFSI, operate this ISFSI until 2097 (excluding ISFSI security and operating staff and ISFSI operating expenses, which are assumed to be recovered from the DOE and therefore not included), and

decommission the ISFSI following removal of all spent fuel and GTCC material by the DOE, currently estimated to occur in the year 2098.

Q35. DOES THIS CONCLUDE YOUR TESTIMONY?

A. Yes, it does.

LORI A. GLANDER, CHP

Vice President, Nuclear Decommissioning Services

Profile

Accomplished executive leader with over 30 years of experience in the nuclear power industry. Specializing in nuclear decommissioning, radiation protection, and health physics. As the Vice President of Nuclear Decommissioning Services at TLG Services, LLC, Ms. Glander brings a wealth of technical expertise, project management skills, and regulatory knowledge to oversee the company's Engineering and Technical teams. With a proven track record of success in various leadership roles at Entergy's Indian Point Energy Center and hands-on experience in nuclear decommissioning projects, her focus is to continuously hone the company's performance and industry expertise, delivering consistently exceptional results to clients. Practical Certified Heath Physicist.

EXECUTIVE SUMMARY

This analysis, prepared for the Operating Agent (OA) of the Palo Verde Nuclear Generating Station (Palo Verde) by TLG Services, LLC. (TLG), evaluates the cost to decommission Palo Verde following the final cessation of plant operations. The total projected station cost for the DECON alternative is estimated at $3.81 billion, reported in 2023 dollars. The cost estimate includes the decommissioning of the three Palo Verde nuclear units, plus the decommissioning of the Water Reclamation Facility, the Water Reclamation Supply System Pipeline & Structures, the Evaporation Ponds, the Make-up Water Reservoirs, the Independent Spent Fuel Storage Facility (ISFSI), the Stored Steam Generators & Storage Facility (facility for storage of six retired steam generators), and the Stored Reactor Closure Heads & Storage Facility.

The major cost contributors to the overall decommissioning cost are labor, radioactive waste disposal, and other removal-related activities (e.g., engineering, support equipment, capital expenditures for spent fuel containers). The costs are based on several key assumptions, including regulatory requirements, estimating methodology, contingency requirements, low-level radioactive waste disposal availability, high-level radioactive waste disposal options, and site restoration requirements.

It should be noted that the estimating methodology was modified to align costs more evenly across Palo Verde Units 1, 2, and 3. Early planning and pre-shutdown costs for utility staff between 2040 and 2045 were allocated only to Unit 1 in previous DCEs, due to it being the first unit that shuts down. In the 2023 DCE, these costs have been allocated evenly where possible across the three units. Also, in previous DCEs, costs for dismantling the common systems and structures were allocated only to Unit 3, since it is the last unit to shut down. In the 2023 DCE, these costs have been allocated as evenly as possible across the three units.

The costs to decommission Palo Verde are evaluated for the DECON decommissioning alternative. The estimate assumes the eventual removal of all the contaminated and activated plant components and structural materials, such that the facility operator may then have unrestricted use of the site with no further requirement for an operating license.

This study provides an estimate for decommissioning Palo Verde under current requirements and is based on present-day costs and available technology. Cost summaries for the various facilities are provided at the end of this section for the major cost components. In addition, the estimate includes the costs to transfer spent fuel from the spent fuel storage pools to the DOE, and to transfer fuel from the ISFSI to the DOE. These costs are shown in Appendix L. This is consistent with the OA's assumption that most ISFSI / spent fuel related operational, maintenance and capital

costs will be paid by reimbursements from the DOE. Costs for the transfer of spent fuel from the spent fuel storage pool to the ISFSI are also shown in appendix L.

The decommissioning scenario analyzed for this estimate is described in Section 2. The assumptions are presented in Section 3. A decommissioning timeline and sequence of decommissioning activities are provided in Section 4 and Appendix D. The major cost contributors are identified in Section 6, and schedules of annual expenditures provided in Appendix B and Appendix O.

Detailed activity costs for each nuclear unit are provided in Appendix C. Detailed costs for the other facilities are provided in Appendices G, H, I, J, K, L, M, and N.

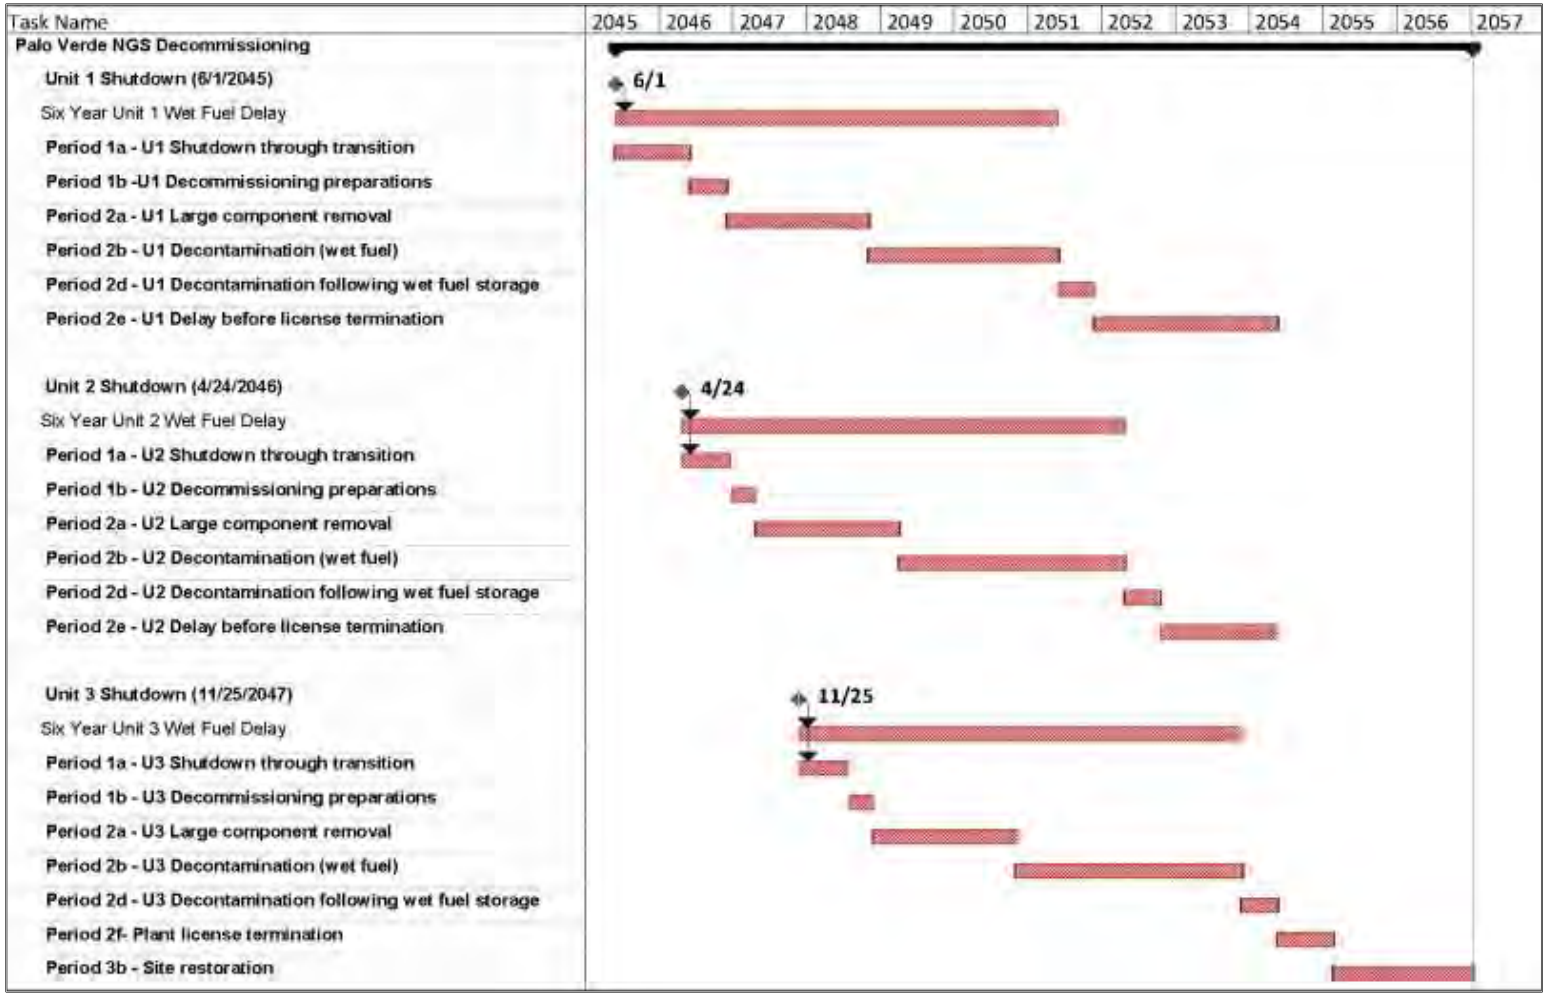
SUMMARY LEVEL MILESTONE SCHEDULE



Note: Removal of the Water Reclamation Facility, Water Reclamation Supply System Pipeline & Structures, and Make-Up Water Reservoirs can begin after spent nuclear fuel is placed in dry storage or transferred to the DOE. Evaporation Ponds, Retired Steam Generators & Storage Facility, and the Stored Reactor Closure Heads & Storage Facility can begin any time after Unit 3 shutdown and must be completed by the end of the site license termination period for the nuclear units.

1. INTRODUCTION

This report presents estimates of the cost to decommission the Palo Verde Nuclear Generating Station (Palo Verde), for the DECON scenario described in Section 2, following a scheduled and permanent cessation of plant operations. The analysis is designed to provide the OA with sufficient information to assess its financial obligations as they pertain to the eventual decommissioning of the nuclear station. It is not a detailed engineering document, but a financial analysis prepared in advance of the detailed engineering that will be required to carry out the decommissioning.

This study incorporates two decommissioning cost reduction alternatives. These alternatives were initially evaluated as part of the 1998 decommissioning cost study, and they have been included in subsequent studies up to and including the 2023 Decommissioning Cost Estimate (DCE). Appendix A is an excerpt from the 1998 study summarizing these alternatives. Two alternatives were approved by the OA for use in conjunction with the 1998 study: On-site disposal of clean fill, and OA to act as Decommissioning Operations Contractor (DOC). As DOC, the OA will provide contract management of the decommissioning labor force, including subcontractors, as well as direct all decontamination and dismantling activities.

Isolation of the spent fuel pool was also first incorporated into the 1998 base estimate and has been retained in the subsequent studies. Section 2.2 contains a further description of this activity. A complete discussion of the assumptions used in this estimate is presented in Section 3.

1.1 OBJECTIVES OF STUDY

The objective of this study is to prepare an estimate of the cost, schedule, and waste volume generated to decommission Palo Verde, including all common and supporting facilities. The study considered the integration of the three-unit dismantling, and the dismantling of the Water Reclamation Facility, the Water Reclamation Supply System Pipeline & Structures, the Evaporation Ponds, the Make-up Water Reservoirs, the Independent Spent Fuel Storage Installation (ISFSI), the Stored Steam Generators and Storage Facility, and the Stored Reactor Closure Heads & Storage Facility. The site Transmission and Distribution System will remain in place and is not considered part of this decommissioning estimate.

Although essentially identical, the three units on the Palo Verde site were designed and constructed using the "slide along" concept, i.e., the second and third units followed along as the design of the first unit was finalized. The

interconnection between the units was minimal since they were not built simultaneously. This schedule resulted in a differential in the start dates of commercial power operation, i.e., Unit No. 3 began commercial operation approximately two years after Unit No. 1. This differential is reflected in the dates for final shutdown and, correspondingly, the initiation of decommissioning activities. Since there are advantages to sequential decommissioning (e.g., a learning curve may increase the overall program efficiency), the offset in shutdown dates was retained in the decommissioning schedule. Consequently, the decommissioning sequence for the three units made use of this offset in integrating the dismantling program for the entire station.

Operating licenses were issued on December 31, 1984 for Unit 1; December 9, 1985 for Unit 2; and March 25, 1987 for Unit 3[1]*. Based upon the license renewal for all the units in 2011, the shutdown dates are June 1, 2045 for Unit 1; April 24, 2046 for Unit 2; and November 25, 2047 for Unit 3. These dates were used as an input to scheduling the decommissioning activities.

1.2 SITE DESCRIPTION

Palo Verde is located approximately 34 miles west of the nearest boundary of the city of Phoenix, in Maricopa County, Arizona. The three Nuclear Steam Supply Systems (NSSS) are standardized designs marketed by ABB/Combustion Engineering as "System 80s." A stretch power program to increase output has been implemented on all three units.

The NSSS of each unit consists of a pressurized water reactor with two independent primary coolant loops, each of which has two reactor coolant pumps and a steam generator. An electrically heated pressurizer and connecting piping complete the system. These systems are housed within seismic Category I reinforced concrete dry structures. Each such containment is a steel-lined, pre-stressed concrete cylinder with a hemispherical dome and a flat, reinforced concrete foundation mat. A welded stainless steel liner plate, anchored to the inside face of the containment, serves as a leak-tight membrane.

Heat produced in each reactor is converted to electrical energy by a Main Steam Supply System. A turbine-generator system converts the thermal energy of steam produced in the steam generators into mechanical shaft power and then into electrical energy. The turbine-generators are each tandem compound, four-element units. They consist of one high-pressure double-flow and three low-pressure double-flow elements driving a direct-coupled generator at 1800 rpm.

* Annotated references for citations in Sections 1-6 are provided in Section 7.

The turbines are operated in a closed feedwater cycle that condenses the steam; the heated feedwater is returned to the steam generators. Heat rejected in the main condensers is removed by the Circulating Water System (CWS).

The CWS provides the heat sink required for removal of waste heat in the thermal cycle. The system has the principal function of removing heat by absorbing this energy in the main condenser. The circulating water pumps take suction from the intake structure and pump the circulating water through the main condensers. The cooling water is returned from the main condensers to the cooling towers.

1.3 REGULATORY GUIDANCE

The Nuclear Regulatory Commission (NRC or Commission) provided initial decommissioning requirements in its rule "General Requirements for Decommissioning Nuclear Facilities," issued in June 1988[2]. This rule set forth financial criteria for decommissioning licensed nuclear power facilities. The regulation addressed decommissioning planning needs, timing, funding methods, and environmental review requirements. The intent of the rule was to ensure that decommissioning would be accomplished in a safe and timely manner and that adequate funds would be available for this purpose. Subsequent to the rule, the NRC issued Regulatory Guide 1.159, “Assuring the Availability of Funds for Decommissioning Nuclear Reactors,” [3] which provided additional guidance to the licensees of nuclear facilities on the financial methods acceptable to the NRC staff for complying with the requirements of the rule. The regulatory guide addressed the funding requirements and provided guidance on the content and form of the financial assurance mechanisms indicated in the rule.

The rule defined three decommissioning alternatives as being acceptable to the NRC: DECON, SAFSTOR, and ENTOMB. The DECON alternative, the option evaluated for this analysis, assumes that any contaminated or activated portion of the plant’s systems, structures, and facilities are removed or decontaminated to levels that permit the site to be released for unrestricted use shortly after the cessation of plant operations.

The rule also placed limits on the time allowed to complete the decommissioning process. For SAFSTOR, the process is restricted in overall duration to 60 years, unless it can be shown that a longer duration is necessary to protect public health and safety. The guidelines for ENTOMB are similar, providing the NRC with both sufficient leverage and flexibility to ensure that these deferred options are only used in situations where it is reasonable and

consistent with the definition of decommissioning. At the conclusion of a 60-year dormancy period (or longer for ENTOMB if the NRC approves such a case), the site would still require significant remediation to meet the unrestricted release limits for license termination.

The 60-year restriction has limited the practicality for the ENTOMB alternative at commercial reactors that generate significant amounts of long-lived radioactive material. In 2017, the NRC's staff issued the regulatory basis for proposed new regulations on the decommissioning of commercial nuclear power reactors. In the regulatory basis, the NRC staff proposed removing any discussion of the ENTOMB option from existing guidance documents "since the method is not deemed practically feasible for current U.S. power reactors, and the timeframe for decommissioning completion using the ENTOMB method is generally inconsistent with current regulations."[4]

In 1996, the NRC published revisions to the general requirements for decommissioning nuclear power plants.[5] When the regulations were originally adopted in 1988, it was assumed that the majority of licensees would decommission at the end of the facility's operating licensed life. Since that time, several licensees permanently and prematurely ceased operations. Exemptions from certain operating requirements were required once the reactor was defueled to facilitate the decommissioning. Each case was handled individually, without clearly defined generic requirements. The NRC amended the decommissioning regulations in 1996 to clarify ambiguities and codify procedures and terminology as a means of enhancing efficiency and uniformity in the decommissioning process. The new amendments allow for greater public participation and better define the transition process from operations to decommissioning.

Under the revised regulations, licensees will submit written certification to the NRC within 30 days after the decision to cease operations. Certification will also be required once the fuel is permanently removed from the reactor vessel. Submittal of these notices will entitle the licensee to a fee reduction and eliminate the obligation to follow certain requirements needed only during operation of the reactor. Within two years of submitting a notice of permanent cessation of operations, the licensee is required to submit a Post-Shutdown Decommissioning Activities Report (PSDAR) to the NRC. The PSDAR describes the planned decommissioning activities, the associated sequence and schedule, and an estimate of expected costs. Prior to completing decommissioning, the licensee is required to submit an application to the NRC to terminate the license, which will include a License Termination Plan (LTP).

In 2011, the NRC published amended regulations to improve decommissioning planning and thereby reduce the likelihood that any current operating facility will become a legacy site.[6] The amended regulations require licensees to conduct their operations to minimize the introduction of residual radioactivity into the site, which includes the site's subsurface soil and groundwater. Licensees also may be required to perform site surveys to determine whether residual radioactivity is present in subsurface areas and to keep records of these surveys with records important for decommissioning. The amended regulations require licensees to report additional details in their DCE as well as requiring additional financial reporting and assurances. These additional details, including an ISFSI decommissioning estimate, are included in this analysis.

1.3.1 High-Level Radioactive Waste Management

Congress passed the "Nuclear Waste Policy Act" [7] (NWPA) in 1982, assigning the federal government's long-standing responsibility for disposal of the spent nuclear fuel created by the commercial nuclear generating plants to the DOE. It was to begin accepting spent fuel by January 31, 1998; however, to date no progress in the removal of spent fuel from commercial generating sites has been made.

Today, the country is at an impasse on high-level waste disposal, even with the License Application for a geologic repository submitted by the DOE to the NRC in 2008. The Obama Administration cut the budget for the repository program while promising to "conduct a comprehensive review of policies for managing the back end of the nuclear fuel cycle … and make recommendations for a new plan." Towards this goal, the Obama administration appointed a Blue Ribbon Commission on America's Nuclear Future (Blue Ribbon Commission) to make recommendations for a new plan for nuclear waste disposal. The Blue Ribbon Commission's charter includes a requirement that it consider "[o]ptions for safe storage of used nuclear fuel while final disposition pathways are selected and deployed."[8]

On January 26, 2012, the Blue Ribbon Commission issued its "Report to the Secretary of Energy" containing several recommendations on nuclear waste disposal. Two of the recommendations that may impact decommissioning planning are:

- "[T]he United States [should] establish a program that leads to the timely development of one or more consolidated storage facilities"

- "[T]he United States should undertake an integrated nuclear waste management program that leads to the timely development of one or more permanent deep geological facilities for the safe disposal of spent fuel and high-level nuclear waste"[9]

In January 2013, the DOE issued the "Strategy for the Management and Disposal of Used Nuclear Fuel and High-Level Radioactive Waste," in response to the recommendations made by the Blue Ribbon Commission and as "a framework for moving toward a sustainable program to deploy an integrated system capable of transporting, storing, and disposing of used nuclear fuel."[10]

"With the appropriate authorizations from Congress, the Administration currently plans to implement a program over the next 10 years that:

- Sites, designs and licenses, constructs, and begins operations of a pilot interim storage facility by 2021 with an initial focus on accepting used nuclear fuel from shut-down reactor sites;
- Advances toward the siting and licensing of a larger interim storage facility to be available by 2025 that will have sufficient capacity to provide flexibility in the waste management system and allows for acceptance of enough used nuclear fuel to reduce expected government liabilities; and
- Makes demonstrable progress on the siting and characterization of repository sites to facilitate the availability of a geologic repository by 2048."

The NRC's review of DOE's license application to construct a geologic repository at Yucca Mountain was suspended in 2011 when the Obama administration significantly reduced the budget for completing that work. However, the US Court of Appeals for the District of Columbia Circuit issued a writ of mandamus (in August 2013)[11] ordering NRC to comply with federal law and resume its review of DOE's Yucca Mountain repository license application to the extent of previously appropriated funding for the review. That review is now complete with the publication of the five-volume safety evaluation report. A supplement to DOE's environmental impact statement and an adjudicatory hearing on the contentions filed by interested parties must be completed before a licensing decision can be made. Although the DOE proposed it would start fuel acceptance in 2025, no progress has been made in the repository program since DOE's 2013 strategy was issued except for the

completion of the Yucca Mountain safety evaluation report

Holtec International submitted a license application to the NRC on March 30, 2017 for a consolidated interim spent fuel storage facility in southeast New Mexico called HI-STORE CIS (Consolidated Interim Storage) under the provisions of 10 CFR Part 72. The application is currently under NRC review.

Waste Control Specialists submitted an application to the NRC on April 28, 2016, to construct and operate a Consolidated Interim Storage Facility (CISF) at its West Texas facility. On April 18, 2017, WCS requested that the NRC temporarily suspend all safety and environmental review activities, as well as public participation activities associated with WCS's license application. In March 2018, WCS and Orano USA, announced their intent to form a joint venture to license the facility. The joint venture, named Interim Storage Partners (ISP), requested that the NRC resume its review of the original CISF license application. Subsequently, in September 2021, NRC issued a license to ISP for its WCS CISF to construct and operate the facility for spent nuclear fuel and GTCC storage. However, the facility is not yet operational.

Completion of the decommissioning process is dependent upon the DOE's ability to remove spent fuel from the site in a timely manner. DOE's repository program had originally assumed that spent fuel allocations would be accepted for disposal from the nation's commercial nuclear plants, with limited exceptions, in the order (the "queue") in which it was discharged from the reactor. However, the Blue Ribbon Commission, in its final report, noted that: "[A]ccepting spent fuel according to the OFF [Oldest Fuel First] priority ranking instead of giving priority to shutdown reactor sites could greatly reduce the cost savings that could be achieved through consolidated storage if priority could be given to accepting spent fuel from shutdown reactor sites before accepting fuel from still-operating plants. …. The magnitude of the cost savings that could be achieved by giving priority to shutdown sites appears to be large enough (i.e., in the billions of dollars) to warrant DOE exercising its right under the Standard Contract to move this fuel first." [12]

This estimate assumes, based upon the oldest fuel receiving the highest priority and an annual maximum rate of transfer of 3,000 metric tons of uranium, DOE would commence pickup of spent fuel from commercial

generators no later than 2034, with fuel completely removed from the site by 2097. For the first 19 years of this period (2034-2052), the annual fuel pickup rate is aligned with DOE/RW-0567, Acceptance Priority Ranking and Annual Capacity Report [39]. Beginning in year 20 (2053) and continuing until 2097, the annual fuel pickup rate is based on a schedule provided by the OA.

The NRC requires that licensees establish a program to manage and provide funding for the caretaking of all irradiated fuel at the reactor site until title of the fuel is transferred to the DOE.[13] Interim storage of the fuel, until the DOE has completed the transfer, will be at an on-site ISFSI.

An ISFSI, operated under a 10 CFR Part 50 General License (in accordance with 10 CFR 72, Subpart K [14]), has been constructed to support continued plant operations. The facility is assumed to be available to support future decommissioning operations. As such, following the final cessation of plant operations, the fuel from the wet storage pools, including the final cores, is either transferred to the DOE or packaged for interim storage at the ISFSI (depending upon the shutdown date assumed). Once the fuel handling building wet storage pools are emptied, the buildings can be either decontaminated and dismantled or prepared for long-term storage.

For cost estimating purposes, the spent fuel storage scenario developed by the OA assumes that the existing ISFSI facility will be available to support decommissioning operations. The current OA spent fuel storage plan projects that spent fuel will be in dry storage at Palo Verde through the year 2097. All costs to operate and maintain the ISFSI along with the costs for transfer of the fuel from the spent fuel pool to the ISFSI and the DOE, and from the ISFSI to the DOE are shown in Appendix L. Also included in this appendix are the purchase costs for the canisters and overpacks required to store the fuel transferred from the pool to the ISFSI post-shutdown. A separate appendix, Appendix N, is included to show one-time costs associated with ISFSI operations (cask handling equipment, instrumentation, crane relocation, and ISFSI shield wall costs).

DOE has breached its obligations to remove fuel from reactor sites and has also failed to provide the plant owners with information about how it will ultimately perform. DOE officials have stated that DOE does not have an obligation to accept already-canistered fuel without an amendment to DOE's contracts with plant licensees to remove the fuel

(the "Standard Contract"), but DOE has not explained what any such amendment would involve. Consequently, the OA has no information or expectations on how DOE will remove fuel from the site in the future. In the absence of information about how DOE will perform, and for purposes of this analysis only, it is assumed that DOE will accept already-canistered fuel. If this assumption is incorrect, it is assumed that DOE will have liability for costs incurred to transfer the fuel to DOE-supplied containers.

1.3.2 Low-Level Radioactive Waste Management

The contaminated and activated material generated in the decontamination and dismantling of a commercial nuclear reactor is classified as low-level (radioactive) waste, although not all of the material is suitable for "shallow-land" disposal. With the passage of the "Low-Level Radioactive Waste Policy Act" in 1980, [15] and its Amendments of 1985, [16] the states became ultimately responsible for the disposition of low-level radioactive waste generated within their own borders.

Arizona is a member of the Southwest Compact, which currently does not have an operational disposal site. For the purposes of the decommissioning estimate, the existing waste disposal options available for the Palo Verde site are used for this estimate.

Except for Texas, no new compact facilities have been successfully sited, licensed, and constructed. The Texas Compact disposal facility is now operational, and waste is being accepted from generators within the Compact by the operator, Waste Control Specialists (WCS).

Disposition of the various waste streams produced by the decommissioning process considered all options and services currently available to Palo Verde. The majority of the low-level radioactive waste designated for direct disposal (Class A[17] containerized) is sent to WCS. Therefore, disposal costs for Class A waste were based on Palo Verde's STARS Alliance Agreement with WCS. Class A bulk waste is sent to the *EnergySolutions* facility in Clive Utah. These disposal costs are based on Palo Verde's STARS Alliance Agreement with Energy*Solutions*.

The WCS facility can also receive the Class B and C waste. As such, for this analysis, Class B and C waste is shipped to the WCS facility. Disposal costs for the waste are based on current rates paid by Palo

Verde. Large components (Pressurizer, Steam Generators, and Reactor Coolant Pumps) are sent to WCS. Disposal costs for large components are based on NUREG-1307 [38] per-component costs for disposal at WCS. Resin and filter package Class A waste is sent to the *EnergySolutions* facility in Clive Utah.

The dismantling of the components residing closest to the reactor core generates radioactive waste that may be considered unsuitable for shallow-land disposal (i.e., low-level radioactive waste with concentrations of radionuclides that exceed the limits established by the NRC for Class C radioactive waste (Greater-than Class C or GTCC)). The Low-Level Radioactive Waste Policy Amendments Act of 1985 assigned the federal government the responsibility for the disposal of this material. The Act also stated that the beneficiaries of the activities resulting in the generation of such radioactive waste bear all reasonable costs of disposing of such waste. However, to date, the federal government has not identified a cost, if any, for GTCC disposal or a schedule for acceptance.

For purposes of this analysis, the GTCC radioactive waste is assumed to be packaged and disposed of in a manner similar to high-level waste and at a cost equivalent to that envisioned for the spent fuel. The GTCC is packaged in the same canisters used for spent fuel and is assumed to be stored on site in the ISFSI and shipped to the DOE following completion of all spent fuel shipments.

1.3.3 Radiological Criteria for License Termination

In 1997, the NRC published Subpart E, "Radiological Criteria for License Termination [18] amending 10 CFR Part 20. This subpart provides radiological criteria for releasing a facility for unrestricted use. The regulation states that the site can be released for unrestricted use if radioactivity levels are such that the average member of a critical group would not receive a Total Effective Dose Equivalent (TEDE) in excess of 25 millirem per year and provided that residual radioactivity has been reduced to levels that are As Low As Reasonably Achievable (ALARA). The decommissioning estimates for Palo Verde assume that the site will be remediated to a residual level consistent with the NRC-prescribed level for radioactive material.

It should be noted that the NRC and the Environmental Protection Agency (EPA) differ on the amount of residual radioactivity considered

acceptable in site remediation. The EPA has two limits that apply to radioactive materials. An EPA limit of 15 millirem per year is derived from criteria established by the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) or Superfund.[19] An additional limit of 4 millirem per year, as defined in 40 CFR Part 141.66, is applied to drinking water.[20]

On October 9, 2002, the NRC signed an agreement with the EPA on the radiological decommissioning and decontamination of NRC-licensed sites. The Memorandum of Understanding (MOU) [21] provides that the EPA will defer exercise of authority under the CERCLA for the majority of facilities decommissioned under NRC authority. The MOU also includes provisions for NRC and EPA consultation for certain sites when, at the time of license termination, (1) groundwater contamination exceeds EPA-permitted levels; (2) the NRC contemplates restricted release of the site; and/or (3) residual radioactive soil concentrations exceed levels defined in the MOU.

The MOU does not impose any new requirements on NRC licensees and should reduce the involvement of the EPA with NRC licensees who are decommissioning. Most sites are expected to meet the NRC criteria for unrestricted use, and the NRC believes that only a few sites will have groundwater or soil contamination in excess of the levels specified in the MOU that trigger consultation with the EPA. However, if there are other hazardous materials on the site, the EPA may be involved in the cleanup. As such, the possibility of dual regulation remains for certain licensees. The present study does not include any costs for such an occurrence.

2. DECON DECOMMISSIONING ALTERNATIVE

This cost study was developed to decommission the Palo Verde units for the NRC-approved DECON decommissioning alternative. This alternative deals with the immediate removal of all regulated radioactive material from the site and ultimate release of the site for unrestricted and/or alternative use. The following sections describe the basic activities associated with the DECON alternative. Although detailed procedures for each activity identified are not provided, and the actual sequence of work may vary, these activity descriptions provide a basis not only for estimating, but also for the expected scope of work, i.e., engineering and planning at the time of decommissioning.

The DECON alternative, as defined by the NRC in the Code of Federal Regulations, is "the alternative in which the equipment, structures, and portions of a facility and site containing radioactive contaminants are removed or decontaminated to a level that permits the property to be released for unrestricted use shortly after cessation of operations." This study recognizes the constraint imposed by the spent fuel residing on site during the decommissioning process, and also the costs associated with the final transfer of the spent fuel containers to the DOE after the shutdown of each of the units, as well as the decontamination and demolition of the ISFSI following removal of all spent fuel and GTCC material. These costs are included in Appendix L.

The conceptual approach that the NRC has described in its regulations divides decommissioning into three phases. The initial phase commences with the effective date of permanent cessation of operations and involves the transition of both plant and licensee from reactor operations (i.e., power production) to facility de-activation and closure. During the first phase, notification is to be provided to the NRC certifying the permanent cessation of operations and the removal of fuel from the reactor vessel. The licensee would then be prohibited from reactor operation.

The second phase encompasses activities during the storage period or during major decommissioning activities, or a combination of the two. The third phase pertains to the activities involved in license termination. The decommissioning estimate developed for Palo Verde is also divided into phases or periods; however, demarcation of the phases is based upon major milestones within the project or significant changes in the projected expenditures.

2.1 Period 0 – Pre-Shutdown

In anticipation of the cessation of plant operations, detailed preparations are undertaken to provide a smooth transition from plant operations to site decommissioning. Through implementation of a staffing transition plan, the organization required to manage the intended decommissioning activities is assembled from available plant staff and outside resources. These pre-shutdown consulting activities are performed by plant staff familiar with decommissioning pre-planning, i.e. historical site assessment, cost estimating, staff transition, and licensing. Preparations include the planning for permanent defueling of the reactor, revision of technical specifications applicable to the operating conditions and requirements, a characterization of the facility and major components, and the development of the PSDAR.

In addition to the PSDAR, two additional documents will be required by the NRC in support of the decommissioning program. The first is a Site-Specific DCE, which will give in greater detail the expected expenditures and time frames for the various aspects of the decommissioning scenario selected by the Owners of Palo Verde. With the NRC acceptance of the Site-Specific DCE, the owners will have full access to their decommissioning trust funds. The second document is an Irradiated Spent Fuel Management Plan, which will detail the expected timetable and costs for the caretaking and transfer of the spent fuel to the DOE.

The PSDAR, required within two years of the notice to cease operations, provides a description of the licensee's planned decommissioning activities, a timetable, and the associated financial requirements of the intended decommissioning program. Upon receipt of the PSDAR, the NRC will make the document available to the public for comment in a local hearing to be held near the reactor site. Ninety days following submittal and NRC receipt of the PSDAR, the licensee may begin to perform major decommissioning activities under a modified 10 CFR § 50.59 procedure, i.e., without specific NRC approval. Major activities are defined as any activity that results in permanent removal of major radioactive components, permanently modifies the structure of the containment, or results in dismantling components (for shipment) containing GTCC, in accordance with 10 CFR Part 61. Major components are further defined as comprising the reactor vessel and internals, large bore reactor coolant system piping, and other large components that are radioactive. The NRC includes the following additional criteria for use of the 10 CFR § 50.59 process in decommissioning. The proposed activity must not:

- foreclose release of the site for possible unrestricted use,

- significantly increase decommissioning costs,
- cause any significant environmental impact, or
- violate the terms of the licensee's existing license.

Existing operational technical specifications are reviewed and modified to reflect plant conditions and the safety concerns associated with permanent cessation of operations. The environmental impact associated with the planned decommissioning activities is also considered. Typically, a licensee will not be allowed to proceed if the consequences of a particular decommissioning activity are greater than that bounded by previously evaluated environmental assessments or impact statements. In this instance, the licensee would have to submit a license amendment for the specific activity and update the environmental report.

The decommissioning program outlined in the PSDAR will be designed to accomplish the required tasks within the ALARA guidelines (as defined in 10 CFR Part 20) for protection of personnel from exposure to radiation hazards. It will also address the continued protection of the health and safety of the public and the environment during the dismantling activity. Consequently, with the development of the PSDAR, activity specifications, cost-benefit and safety analyses, work packages, and procedures would be assembled in support of the proposed decontamination and dismantling activities.

2.2 Period 1 – Preparations

The following activities are initiated following final plant shutdown and in preparation for actual decommissioning activities:

- Notifications of permanent defueling and cessation of operations.
- Characterization of the site and surrounding environs. This includes radiation surveys of work areas, major components (including the reactor vessel and its internals), internal piping, and primary shield walls.
- Isolation of the spent fuel storage pools and fuel handling systems, such that decommissioning operations can commence on the balance of the plant. Decommissioning operations are scheduled around the fuel handling area to optimize the overall project schedule. The fuel is transferred to the DOE or the ISFSI as it decays to the point that it meets the minimum cooling time criteria of the canisters. Consequently, it is assumed that the fuel pools remain operational for approximately

six years following the cessation of plant operations. The spent fuel pools are assumed to be emptied six years after each unit's final shutdown date.

- Deactivation of plant systems & processing plant waste.
- Specification of transport and disposal requirements for activated materials and/or hazardous materials, including shielding and waste stabilization.
- Removal of radioactive source material.
- Development of procedures for occupational exposure control, control and release of liquid and gaseous effluent, processing of radwaste (including dry-active waste, resins, filter media, metallic and non-metallic components generated in decommissioning), site security and emergency programs, and industrial safety.

2.3 Period 2 – Decommissioning Operations

This period includes the physical decommissioning activities associated with the removal and disposal of contaminated and activated components and structures, including the successful termination of the 10 CFR Part 50 operating licenses. Significant decommissioning activities in this phase include:

- Construction of temporary facilities and/or modification of existing facilities to support dismantling activities. This may include a centralized processing area to facilitate equipment removal and component preparations for off-site disposal.
- Reconfiguration and modification of site structures and facilities as needed to support decommissioning operations. This may include the upgrading of roads (on- and off-site) as required to facilitate hauling and transport. Modifications may be required to the containment structure to facilitate access of large/heavy equipment. Modifications may also be required to the refueling area of the buildings to support the segmentation of the reactor vessel internals and component extraction.
- Design and fabrication of temporary and permanent shielding to support removal and transportation activities, construction of contamination control envelopes, and the procurement of specialty tooling.
- Procurement (lease or purchase) of shipping casks, cask liners, and industrial packages.

- Decontamination of components and piping systems as required to control (minimize) worker exposure.
- Removal of piping and components no longer essential to support decommissioning operations.
- Removal of control rod drive housings and the head service structure from reactor vessel head. Segmentation of the vessel closure head.
- Removal and segmentation of the upper internals assemblies. Segmentation will maximize the loading of the shielded transport casks, i.e., by weight and activity. The operations are conducted under water using remotely operated tooling and contamination controls.
- Disassembly and segmentation of the remaining reactor internals, including the core shroud and lower core support barrel. Some material is expected to exceed Class C disposal requirements. As such, the segments will be packaged in modified fuel storage canisters for geologic disposal.
- This study assumes that each unit has legacy GTCC material present in the spent fuel pool at final shutdown. Weight equivalent to the capacity of two GTCC storage canisters are assumed per unit. This material will be stored on the ISFSI pad until the DOE removes all GTCC canisters from the site.
- Segmentation of the reactor vessel. A shielded platform is installed for segmentation as cutting operations are performed in-air using remotely operated equipment within a contamination control envelope. The water level is maintained just below the cut to minimize the working area dose rates. Segments are transferred in-air to containers that are stored under water, for example, in an isolated area of the refueling canal.
- Removal of the activated portions of the concrete biological shield and accessible contaminated concrete surfaces. If dictated by the steam generator and pressurizer removal scenarios, those portions of the associated steam generator cubicles necessary for access and component extraction are removed.
- Removal of the steam generators and pressurizer for controlled disposal. These components can serve as their own burial containers provided that all penetrations are properly sealed and the internal contaminants are stabilized, e.g., with grout. Steel shielding will be added, as necessary, to those external areas of the package to meet transportation limits and regulations. Additional shielding is not required for the retired (stored) steam generators.

- Retired (stored) closure heads will be shipped intact by rail to the disposal site.
- Transfer of the spent fuel from the storage pools to the ISFSI for interim storage or shipment directly to the DOE.

At least two years prior to the anticipated date of license termination, an LTP is required. Submitted as a supplement to the Updated Final Safety Analysis Report (UFSAR) or its equivalent, the plan must include: a site characterization, description of the remaining dismantling activities, plans for site remediation, procedures for the final radiation survey, designation of the end use of the site, an updated cost estimate to complete the decommissioning, and any associated environmental concerns. The NRC will notice the receipt of the plan, make the plan available for public comment, and schedule a local hearing. LTP approval will be subject to any conditions and limitations as deemed appropriate by the Commission. The licensee may then commence with the final remediation of site facilities and services, including:

- Removal of remaining plant systems and associated components as they become nonessential to the decommissioning program or worker health and safety (e.g., waste collection and treatment systems, electrical power, and ventilation systems).
- Removal of the steel liners from the refueling canal, disposing of the activated and contaminated sections as radioactive waste. Removal of any activated/ contaminated concrete.
- Surveys of the decontaminated areas of the containment structures.
- Removal of the contaminated equipment and material from the auxiliary and fuel buildings, and any other contaminated facility. Use radiation and contamination control techniques until radiation surveys indicate that the structures and equipment can be released for unrestricted access and conventional demolition. This activity may necessitate the dismantling and disposition of most of the systems and components (both clean and contaminated) located within these buildings. This activity will facilitate surface decontamination and subsequent verification surveys required prior to obtaining release for demolition.
- Removal of the remaining components, equipment, and plant services in support of the area release survey(s).
- Routing of material removed in the decontamination and dismantling process to a central processing area. Material certified to be free of

contamination is released for unrestricted disposition, e.g., as scrap, recycle, or general disposal. Contaminated material is characterized and packaged for controlled disposal at a LLRW disposal facility.

Incorporated into the LTP is the Final Survey Plan. This plan identifies the radiological surveys to be performed once the decontamination activities are completed and is developed using the guidance provided in the "Multi-Agency Radiation Survey and Site Investigation Manual (MARSSIM)."[22] This document incorporates the statistical approaches to survey design and data interpretation used by the EPA. It also identifies state-of-the-art, commercially available instrumentation and procedures for conducting radiological surveys. Use of this guidance ensures that the surveys are conducted in a manner that provides a high degree of confidence that applicable NRC criteria are satisfied. Once the survey is complete, the results are provided to the NRC in a format that can be verified. The NRC then reviews and evaluates the information, performs an independent confirmation of radiological site conditions, and makes a determination on final termination of the license.

The NRC will amend the operating license(s) to reduce the licensed area to the ISFSI area if it determines that site remediation has been performed in accordance with the LTP, and that the terminal radiation survey and associated documentation demonstrate that the property (exclusive of the ISFSI) is suitable for release.

2.4 Period 3 – Site Restoration

Following completion of decommissioning operations, site restoration activities begin. Efficient removal of the contaminated materials and verification that residual radionuclide concentrations are below the NRC limits will result in substantial damage to many of the structures. Although performed in a controlled and safe manner, blasting, coring, drilling, scarification (surface removal), and the other decontamination activities will substantially degrade power block structures, including the reactor and auxiliary buildings. Under certain circumstances, verifying that subsurface radionuclide concentrations meet NRC site release requirements will require removal of grade slabs and lower floors, potentially weakening footings and structural supports. This removal activity will be necessary for those facilities and plant areas where historical records, when available, indicate the potential for radionuclides having been present in the soil indicate system failures, or where it is required to confirm that subsurface process and drain lines were not breached over the operating life of the station.

Dismantling of site structures following decommissioning is the most appropriate and cost-effective option. It is unreasonable to anticipate that these structures would be repaired and preserved after the radiological contamination is removed. The effort to dismantle site structures with a work force already mobilized on site is more efficient than if the process were deferred. Site facilities quickly degrade without maintenance, adding additional expense and creating potential hazards to the public as well as to future workers. Abandonment creates a breeding ground for vermin infestation as well as other biological hazards.

This cost study presumes that non-essential structures and site facilities are dismantled as a continuation of the decommissioning activity. Foundations and exterior walls are removed to a nominal depth of three feet below grade. The three-foot depth allows for the placement of gravel for drainage, as well as topsoil, so that vegetation can be established for erosion control. Site areas affected by the dismantling activities are restored and the plant area graded as required to prevent ponding and inhibit the refloating of subsurface materials.

Non-contaminated concrete rubble produced by demolition activities is processed to remove reinforcing steel and miscellaneous embedments. The processed material is then used on site to backfill foundation voids. Excess materials are trucked to an on-site landfill.

2.5 ISFSI Operations and Decommissioning

Transfer of spent fuel to the DOE will be initially from the spent fuel pools and subsequently from the ISFSI once the fuel pools have been emptied and the structures released for decommissioning. This estimate includes ISFSI costs in the periods following License Termination through Site Restoration (Insurance, ISFSI Licensing Fees, ISFSI Operating Costs), which are included in Appendix C. ISFSI-related operations and spent fuel transfer costs, license termination costs, demolition costs, and site restoration costs, are included in Appendices L and N.

When all fuel and GTCC canisters from the ISFSI have been shipped off site, the ISFSI will be decommissioned. The Commission will terminate the 10 CFR Part 50 general license in accordance with an ISFSI license termination plan.

The assumed design for the ISFSI is based upon the use of a multi-purpose canister, which contains the spent fuel assemblies, and a concrete overpack that the canister is placed within for pad storage. The overpack liners are

assumed to have some level of neutron-induced activation as a result of the long-term storage of the fuel, i.e., to levels exceeding free-release limits. As an allowance, seven overpacks per unit (site total of 21) are assumed to require remediation, equivalent to the number of overpacks required to accommodate the final core offloads at Palo Verde. The remaining overpacks, once the canisters containing the spent fuel assemblies have been removed, will be dismantled using conventional techniques for the demolition of reinforced concrete. The concrete storage pad will then be removed, and the area graded and landscaped to conform to the surrounding environment.

3. COST ESTIMATE

The cost analysis prepared for decommissioning Palo Verde consider the unique features of the site, including the NSSS, power generation systems, support services, site buildings, and ancillary facilities. The basis of the estimates, including the sources of information relied upon, the estimating methodology employed, site-specific considerations, and other pertinent assumptions, is described in this section.

3.1 BASIS OF ESTIMATE

A site-specific cost estimate was developed using drawings and plant documents provided by the OA. Components were inventoried from the mechanical and electrical Piping & Instrument Diagrams (P&IDs). Structural drawings and design documents were used to analyze the general arrangement of the facility and to determine estimates of building concrete volumes, steel quantities, numbers and sizes of major components, and areas of the plant to be addressed in remediation of the site.

The utility staffing levels for this estimate reflect the same number of personnel as used in the 2019 estimate. Representative labor rates for each designated craft and salaried worker were provided by the OA for use in construction of the unit removal factors, as well as for estimating the carrying costs for site management, worker supervision and essential support services, e.g., health physics and security. This study assumes that the OA will act as the DOC and provide direct management of the decommissioning operations for the project. As DOC, the OA will provide contract management of the decommissioning labor force, including subcontractors, as well as directing all decontamination and dismantling activities.

The security model is based on the existing operating levels as provided by Palo Verde. The operating staff levels are divided equally between all three units at Unit 1 shutdown. As spent fuel conditions progress from wet pool storage to dry storage and decommissioning activities are completed, the staff is reduced accordingly. The staffing levels per unit will maintain access control, material control, and safeguard the spent fuel (in accordance with the requirements of 10 CFR Part 37, Part 72, and Part 73).

3.2 METHODOLOGY

The methodology used to develop the estimates follows the basic approach originally presented in the AIF/NESP-036 study report, "Guidelines for Producing Commercial Nuclear Power Plant Decommissioning Cost Estimates" [23], and the DOE "Decommissioning Handbook" [24]. These documents present a unit factor method for estimating decommissioning activity costs, which simplifies the estimating calculations. Unit factors for concrete removal ($/cubic yard), steel removal ($/ton), and cutting costs ($/inch) were developed using local labor rates. The activity-dependent costs were estimated with the item quantities (cubic yards and tons), developed from plant drawings and inventory documents. Removal rates and material costs for the conventional disposition of components and structures relied upon information available in the industry publication, "Building Construction Cost with RSMeans Data," published by Gordian [25].

This analysis reflects lessons learned from TLG's involvement in the Shippingport Station Decommissioning Project, completed in 1989, as well as the decommissioning of the Cintichem reactor, hot cells, and associated facilities, completed in 1997. In addition, the planning and engineering for the Rancho Seco, Trojan, Yankee Rowe, Big Rock Point, Maine Yankee, Humboldt Bay-3, Oyster Creek, Connecticut Yankee, Crystal River, Vermont Yankee, Fort Calhoun, Pilgrim, and Indian Point nuclear units have provided additional insight into the process, the regulatory aspects, and the technical challenges of decommissioning commercial nuclear units.

The unit factor method provides a demonstrable basis for establishing reliable cost estimates. The detail provided in the unit factors, including activity duration, labor costs (by craft), and equipment and consumable costs, ensures that essential elements have not been omitted. Appendix E presents the detailed development of a typical unit factor. Appendix F provides the values contained within one set of factors developed for this analysis.

Regulatory Guide 1.184[26] Revision 1, issued in October 2013, describes the methods and procedures that are acceptable to the NRC staff for implementing the requirements that relate to the initial activities and the major phases of the decommissioning process. The costs and schedules presented in this analysis follow the general guidance and sequence in the regulations. The format and content of the estimates is also consistent with the recommendations of Regulatory Guide 1.202,[27] issued February 2005.

Work Difficulty Factors

TLG has historically applied work difficulty adjustment factors (WDFs) to account for the inefficiencies in working in a power plant environment. WDFs were assigned to each unique set of unit factors, commensurate with the inefficiencies associated with working in confined, hazardous environments. The ranges used for the WDFs are as follows:

• Access Factor	10% to 20%
• Respiratory Protection Factor	10% to 50%
• Radiation/ALARA Factor	10% to 40%
• Protective Clothing Factor	10% to 30%
• Work Break Factor	8.33%

The factors and their associated range of values were developed in conjunction with the AIF/NESP-036 study. The application of the factors is discussed in more detail in that publication.

Scheduling Program Durations

The unit factors, adjusted by the WDFs as described above, are applied against the inventory of materials to be removed in the radiologically controlled areas. The resulting man-hours, or crew-hours, are used in the development of the decommissioning program schedule, using resource loading and event sequencing considerations. The scheduling of conventional removal and dismantling activities are based upon productivity information available from the "Building Construction Cost Data" publication.

An activity duration critical path is used to determine the total decommissioning program schedule. The schedule is relied upon in calculating the carrying costs, which include program management, administration, field engineering, equipment rental, and support services such as quality control and security. This systematic approach for assembling decommissioning estimates ensures a high degree of confidence in the reliability of the resulting cost estimate.

3.3 IMPACT OF DECOMMISSIONING MULTIPLE REACTOR UNITS

In estimating the decommissioning of three co-located reactor units there can be opportunities to achieve economies of scale, by sharing costs between units, and coordinating the sequence of work activities. There will also be schedule constraints, particularly where there are requirements for specialty equipment

and staff, or practical limitations on when final status surveys can take place. For purposes of the estimates, Units 1, 2, and 3 are assumed essentially identical. Common facilities, assigned to Unit 3 in previous estimates, have been allocated on an equal basis across the three units where possible. A summary of the principal impacts is listed below.

- The sequence of work generally follows the principal that the work is done at Unit 1 first, followed by similar work at Units 2 and 3. This permits the experience gained at Unit 1 to be applied by the workforce at the later units. It should be noted however, that the estimates do not consider productivity improvements at the later units, since there is little documented experience with decommissioning multiple units simultaneously. The work associated with developing activity specifications and procedures can be considered essentially identical between the units, therefore the later units' costs are assumed to be a fraction of the first unit (~ 43%).
- Segmenting the reactor vessel and internals will require the use of special equipment. The decommissioning project will be scheduled such that later unit reactor internals and vessel are segmented after the activities at Unit 1 have been completed.
- Some program management and support costs, particularly costs associated with the more senior positions, can be avoided with multiple reactors undergoing decommissioning simultaneously. As a result, the estimates are based on a "lead" unit that includes these senior positions, and an "additional" unit that excludes these positions. The designation as lead is based on the unit undertaking the most complex tasks (for instance vessel segmentation) or performing tasks for the first time.
- The final radiological survey schedule is also affected by a multi-unit decommissioning schedule. It would be considered impractical to try to complete the final status survey of Unit 1, while Units 2 and 3 still have ongoing radiological remediation work and waste handling in process. As such, the transfer of the spent fuel from the storage pools and subsequent decontamination of the fuel buildings is coordinated to synchronize the final status survey for the station.
- The final demolition of buildings at Units 1, 2 and 3 are considered to take place concurrently. This is considered a reasonable assumption since access to the buildings is considered good at the station.
- Unit 1, as the first unit to enter decommissioning, incurs the majority of site characterization costs.

- Shared systems and structures, assigned to Unit 3 in previous estimates, have been allocated on an equal basis across the three units where possible.
- Station costs such as emergency response fees, regulatory agency fees, corporate overhead, and insurance are generally allocated on an equal basis between the units.

3.4 FINANCIAL COMPONENTS OF THE COST MODEL

TLG's proprietary decommissioning cost model, DECCER, produces many distinct cost elements. These direct expenditures, however, do not comprise the total cost to accomplish the project goal, i.e., license termination and site restoration.

3.4.1 Contingency

Inherent in any cost estimate that does not rely on historical data is the inability to specify the precise source of costs imposed by factors such as tool breakage, accidents, illnesses, weather delays, and labor stoppages. In the DECCER cost model, contingency fulfills this role. Contingency is added to each line item to account for costs that are difficult or impossible to develop analytically. Such costs are historically inevitable over the duration of a job of this magnitude; therefore, this cost analysis includes funds to cover these types of expenses.

The activity- and period-dependent costs are combined to develop the total decommissioning cost. A contingency is then applied on a line-item basis, using one or more of the contingency types listed in the AIF/NESP-036 study. "Contingencies" are defined in the American Association of Cost Engineers "Project and Cost Engineers' Handbook [28] as "specific provision for unforeseeable elements of cost within the defined project scope; particularly important where previous experience relating estimates and actual costs has shown that unforeseeable events which will increase costs are likely to occur." The cost elements in this analysis are based upon ideal conditions and maximum efficiency; therefore, consistent with industry practice, a contingency factor has been applied. In the AIF/NESP-036 study, the types of unforeseeable events that are likely to occur in decommissioning are discussed and guidelines are provided for percentage contingency in each category. It should be noted that contingency, as used in this analysis, does not account for price escalation and inflation in the cost of decommissioning over the remaining operating life of the station.

The use and role of contingency within decommissioning estimates is not a "safety factor issue." Safety factors provide additional security and address situations that may never occur. Contingency funds are expected to be fully expended throughout the program. They also provide assurance that sufficient funding is available to accomplish the intended tasks. An estimate without contingency, or from which contingency has been removed, can disrupt the orderly progression of events and jeopardize a successful conclusion to the decommissioning process.

For example, the most technologically challenging task in decommissioning a commercial nuclear station is the disposition of the reactor vessel and internal components, now highly radioactive after a lifetime of exposure to core activity. The disposition of these components forms the basis of the critical path (schedule) for decommissioning operations. Cost and schedule are interdependent, and any deviation in schedule has a significant impact on cost for performing a specific activity.

Disposition of the reactor vessel internals involves the underwater cutting of complex components that are highly radioactive. Costs are based upon optimum segmentation, handling, and packaging scenarios. The schedule is primarily dependent upon the turnaround time for the heavily shielded shipping casks, including preparation, loading, and decontamination of the containers for transport. The number of casks required is a function of the pieces generated in the segmentation activity, a value calculated on optimum performance of the tooling employed in cutting the various subassemblies. The expected optimization, however, may not be achieved, resulting in delays and additional program costs. For this reason, contingency must be included to mitigate the consequences of the expected inefficiencies inherent in this complex activity, along with related concerns associated with the operation of highly specialized tooling, field conditions, and water clarity.

Contingency funds are an integral part of the total cost to complete the decommissioning process. Exclusion of this component puts at risk a successful completion of the intended tasks and, potentially, subsequent related activities. For this study, TLG examined the major activity-related problems (decontamination, segmentation, equipment handling, packaging, transport, and waste disposal) that necessitate a contingency. Individual activity contingencies ranged from 10% to 75%,

depending on the degree of difficulty judged to be appropriate from TLG's actual decommissioning experience.

The contingency values used in this study are as follows:

• Decontamination	50%
• Contaminated Component Removal	25%
• Contaminated Component Packaging	10%
• Contaminated Component Transport	15%
• Low-Level Radioactive Waste Disposal	25%
• Reactor Segmentation	75%
• NSSS Component Removal	25%
• Reactor Waste Packaging	25%
• Reactor Waste Transport	25%
• Reactor Vessel Component Disposal	50%
• GTCC Disposal	15%
• Non-Radioactive Component Removal	15%
• Heavy Equipment and Tooling	15%
• Supplies	25%
• Engineering	15%
• Energy	15%
• Characterization and Termination Surveys	30%
• Construction	15%
• Taxes and Fees	10%
• Insurance	10%
• Staffing	15%
• Spent Fuel Storage (Dry) Systems	15%
• Spent Fuel Transfer Costs	15%
• Operations and Maintenance Expenses	15%
• ISFSI Decommissioning License Termination Costs	25%

The contingency values are applied to the appropriate components of the estimates on a line-item basis. A composite value is then reported at the end of each estimate. For example, the composite contingency values are 20.0%, 20.3%, and 20.0% for Units 1, 2, and 3, respectively. A flat 15% contingency is applied to the ISFSI campaign costs, shown in Appendix N.

Two of the owners of the Palo Verde station are regulated utilities that are based in states that have specific requirements for the application of contingency as it relates to nuclear power plant DCEs. The California Public Utilities Commission has expressed a desire for owners to conservatively establish an appropriate contingency factor for inclusion in the decommissioning revenue requirements. To that end, a document[29] was prepared by Pacific Gas and Electric Company to address the California commission's request. In addition to the contingency based on the AIF guidelines as identified above, additional contingency was added to the consolidated cash flows in Appendix P to accomplish this need. Additional contingency was added to reflect an overall project contingency of 25%. This contingency was incorporated on a line-item basis, with each line item receiving a pro-rated share of the increase. The nominal increase in contingency to achieve an overall contingency rate of 25% is a multiplier of 1.242 as a site average; each Appendix has a separate calculation to arrive at a 25% value.

The Public Utility Commission of Texas has issued regulations regarding contingency within nuclear DCEs. [30] The Commission's Substantive Rule §25.231(b)(1)(F)(i) requires use of a contingency of 10% of the cost of decommissioning. As a modification to the contingency based on the AIF guidelines as identified above, an administrative reduction was incorporated in the overall contingency on the cash flows in Appendix Q to fulfill this requirement. This contingency reduction was incorporated on a line-item basis, with each line item receiving a pro-rated share of the decrease. The nominal decrease in contingency to achieve an overall contingency rate of 10% is a multiplier of 0.497 as a site average; each Appendix has a separate calculation to arrive at a 10% value.

3.4.2 Financial Risk

In addition to the routine uncertainties addressed by contingency, another cost element that is sometimes necessary to consider when bounding decommissioning costs relates to uncertainty, or risk. Examples can include changes in work scope, pricing, job performance, and other variations that could conceivably, but not necessarily, occur. Consideration is sometimes necessary to generate a level of confidence in the estimate, within a range of probabilities. TLG considers these types of costs under the broad term "financial risk." Included within the category of financial risk are:

- Delays in approval of the decommissioning plan due to intervention, public participation in local community meetings, legal challenges, and national and local hearings.
- Changes in the project work scope from the baseline estimate, involving the discovery of unexpected levels of contaminants, contamination in places not previously expected, contaminated soil previously undiscovered (either radioactive or hazardous material contamination), variations in plant inventory, or configuration not indicated by the as-built drawings.
- Regulatory changes, e.g., affecting worker health and safety, site release criteria, waste transportation, and disposal.
- Policy decisions altering national commitments, e.g., in the ability to accommodate certain waste forms for disposition or in the timetable for such, e.g., the start and rate of acceptance of spent fuel by the DOE.
- Pricing changes for basic inputs such as labor, energy, materials, and disposal. Items subject to widespread price competition (such as materials) may not show significant variation; however, others such as waste disposal could exhibit large pricing uncertainties, particularly in markets where limited access to services is available.

This cost study does not add any additional costs to the estimate for financial risk, because there is insufficient historical data from which to project future liabilities. Consequently, the areas of uncertainty or risk are revisited periodically and addressed through repeated revisions or updates of the base estimate.

3.5 SITE-SPECIFIC CONSIDERATIONS

There are several site-specific considerations that affect the method for dismantling and removal of equipment from the site and the degree of restoration required. The cost impacts of these considerations are identified in this section.

3.5.1 Spent Fuel Disposition

The cost to dispose of spent fuel generated from plant operations is not reflected within the estimates to decommission Palo Verde. Ultimate disposition of the spent fuel is within the province of the DOE's Waste Management System, as defined by the Nuclear Waste Policy Act. Any

delay in the transfer of spent fuel may increase the on-site management costs. As such, the disposal cost was financed by a 1 mill/kWhr surcharge paid into the DOE's waste fund during operations. On November 19, 2013, the U.S. Court of Appeals for the D.C. Circuit ordered the Secretary of the Department of Energy to suspend collecting annual fees for nuclear waste disposal from nuclear power plant operators until the DOE has conducted a legally adequate fee assessment.

The NRC does, however, require licensees to establish a program to manage and provide funding for the management of all irradiated fuel at the reactor site until title of the fuel is transferred to the Secretary of Energy. This requirement is prepared for through inclusion of transfer costs for the spent fuel containers to the DOE within the estimates, as described below.

For the basis of this cost study, it is assumed the existing Palo Verde ISFSI will continue storing spent fuel throughout the decommissioning of Palo Verde, with the OA providing operation and maintenance of the facility through the license termination and site restoration of the ISFSI in 2098. This study assumes no transfer of fuel among the three Palo Verde units. Table 3.1 provides details regarding the spent fuel and GTCC disposition assumptions used in this analysis. Upon shutdown of each unit, it is assumed that the operation and maintenance cost of the spent fuel pools is a decommissioning cost. The decommissioning organization is expected to assume management responsibilities for all fuel bundles in the fuel pools at each unit's shutdown. Each unit includes the continued cost of wet storage of the spent fuel until each cycle has decayed for six years from reactor core discharge date.

Within six years of each unit's shut down, some spent fuel will be transferred from the pools to the DOE and the remainder will be relocated to the ISFSI until such time that transfer to a DOE permanent or interim storage facility can be completed. The spent fuel pools are assumed to be emptied six years after each respective unit's final shutdown date. The cost estimate assumes that the spent fuel storage facility and support systems are isolated from the balance of the systems to allow more flexibility in dismantling and to provide cost savings.

The decommissioning scenario has been developed to permit continued operation of the Fuel Building of each unit. Once the spent fuel assemblies have been placed in dry storage or transferred to the DOE, each unit's wet

spent fuel storage and handling facilities will be available for decommissioning.

The ISFSI is currently licensed to operate under a 10 CFR Part 50 general license (in accordance with 10 CFR 72, Subpart K [14]). The estimate assumes that as decommissioning progresses, the 10 CFR Part 50 license will be reduced to the ISFSI, such that the ISFSI will remain under the General License.

It is assumed that spent fuel will be shipped either to the DOE's geological repository or to an interim spent fuel storage facility during the operational period of the ISFSI facility. The estimate includes ISFSI costs that the OA expects not to be reimbursed by the DOE. This includes ISFSI costs in the periods following License Termination through Site Restoration (Insurance, ISFSI Licensing Fees, ISFSI Operating Fees), which are included in Appendix C. Once all spent fuel and GTCC canisters have been removed from the site, the dry storage facility will be removed.

This estimate also includes certain ISFSI-related costs that are assumed to be reimbursable by the DOE. A summary of these costs, which are included in Appendices L and N, is below.

- Spent fuel transfer costs
- Capital costs for spent fuel canisters and overpacks
- Construction of an ISFSI shield wall
- Installation of an ISFSI crane and cask handling equipment
- ISFSI transfer equipment
- ISFSI operation and maintenance costs (including property taxes)
- Allowance for cost of instrumentation of last 5 pads
- ISFSI staffing costs
- ISFSI security costs

The post-shutdown costs to transfer spent fuel from each spent fuel pool to the DOE or ISFSI and the costs to subsequently transfer casks from the ISFSI to the DOE are reflected within the decommissioning estimate for dry fuel storage as outlined in Appendix L.

TABLE 3.1
PALO VERDE
SPENT FUEL AND GTCC DISPOSITION

GTCC/Legacy Waste	30
Total Casks (spent fuel & GTCC)	470

Notes: [1] Fuel Assemblies

[2] Legacy GTCC waste includes an allowance of 2 canisters per unit remaining from plant operations in spent fuel pool; the remaining 8 canisters per unit hold the GTCC resulting from vessel internals segmentation operations.

3.5.2 Reactor Vessel and Internal Components

The reactor vessel, steam generators, pressurizer, coolant pumps, and piping will be chemically decontaminated prior to any dismantling work. The reactor pressure vessel and its internal components are segmented for disposal in shielded transportation casks. Segmentation and packaging of the internals packages are performed in the refueling canal where a turntable and remote cutter will be installed. The vessel is segmented in place, using a mast-mounted cutter supported off the lower head and directed from a shielded work platform installed overhead in the reactor cavity. Transportation cask specifications and Department of Transportation (DOT) regulations dictate segmentation and packaging methodology. All packages must meet the current physical and radiological limitations and regulations. Cask shipments will be made in DOT-approved, currently available, truck casks.

The dismantling of reactor internals at Palo Verde will generate GTCC radioactive waste generally unsuitable for shallow land disposal. Although the material is not classified as high-level waste, the DOE has indicated it will accept title to this waste for disposal at the future high-level waste repository. However, the DOE has not yet established acceptance criteria or a disposition schedule for this material, and numerous questions remain as to the ultimate disposal cost and waste form requirements. As such, for purposes of this study, the GTCC waste resulting from reactor vessel internals segmentation is assumed to be packaged and disposed of in the same manner as high-level waste, at a cost equivalent to that envisioned for the spent fuel.

Reactor coolant piping is cut from the reactor vessel once the water level in the vessel (used for personnel shielding during dismantling and cutting operations in and around the vessel) is dropped below the nozzle zone. The piping is boxed and shipped by shielded van. The reactor coolant pumps and motors are lifted out intact, packaged, and transported for disposal.

3.5.3 Steam Generators and Other NSSS Components

The recommended method of removal for the steam generators is to extract the steam generators through the existing containment equipment hatch. This approach is the same as the one used to replace the original steam generators.

The containment polar crane will be modified to support the removal.

The generators will then be rigged for removal, disconnected from the surrounding piping, and maneuvered into the open area where they will be lowered onto a dolly. The dolly will allow the lower end of the steam generator to slowly roll outside of the Reactor Building as it is being lowered. Once the steam generator has been lowered to the horizontal position, it will be lowered onto a prime mover and moved to an on-site storage area to await transport to the disposal facility. The second steam generator will be removed using the same technique.

Once at the storage area, the secondary side of the generator (steam dome, separator, and dryer portions above the u-bends) will be removed, segmented, and packaged for disposal. The primary section (tube section and lower channel head) will be cut into smaller sections, which allow unrestricted rail shipment. The generator sections will then be loaded onto a prime mover and moved to an on-site railhead where they will be transported to the WCS facility in Andrews County, Texas. The pressurizer on each unit will be removed using the same techniques and shipped intact.

Palo Verde Units 1, 2, and 3 have already replaced their original sets of steam generators; they are currently stored on site within a concrete protective structure and will remain there until final plant decommissioning. The costs for transportation and disposal of these original sets of steam generators have been included in this estimate.

3.5.4 Main Turbine and Condenser

The main turbine will be dismantled using conventional maintenance procedures. The turbine rotors and shafts will be removed to a laydown area. The lower turbine casings will be removed from their anchors by controlled demolition. The main condensers will also be disassembled and moved to a laydown area. Turbine components are assumed to be clean and will be surveyed and free-released. The condensers for all units are assumed to be contaminated and they will be sent for disposal at the WCS facility in Andrews County, Texas. Components will be packaged and readied for transport in accordance with the intended disposition.

3.5.5 Transportation Methods

Contaminated piping, components, and structural material other than the highly activated reactor vessel and internal components will qualify

as Low Specific Activity (LSA)- II or III, Type A, or Surface Contaminated Object, SCO-I or II, as described in Title 49 of the Code of Federal Regulations.[31] The contaminated material will be packaged in general design packages, as defined in 49 CFR 173.410 in Industrial Packages (IP I, II, or III, as defined in subpart 10 CFR 173.411) or Type A packages as defined in 49 CFR 173.465 for transport unless demonstrated to qualify as their own shipping containers. The reactor vessel and internal components are expected to be transported in accordance with 10 CFR Part 71, as a Type B waste container. It is conceivable that the reactor, due to its limited specific activity, could qualify as LSA II or III. However, the high radiation levels on the outer surface would require that additional shielding be incorporated within the packaging to attenuate the dose to levels acceptable for transport.

Transport of the highly activated metal, produced in the segmentation of the reactor vessel and internal components, will be by shielded truck cask. Cask shipments may exceed 95,000 pounds, including vessel segment(s), supplementary shielding, cask tie-downs, and tractor-trailer. The maximum level of activity per shipment assumed permissible was based upon the license limits of the available shielded transport casks. The segmentation scheme for the vessel and internal segments is designed to meet these limits.

The transport of large intact components, e.g., large heat exchangers and other oversized components will be by a combination of truck, rail, and/or multi-wheeled transporter.

3.5.6 Low-Level Radioactive Waste Disposal

The low-level radioactive waste requiring controlled disposal will be sent to disposal facilities in Utah and Texas. Transportation costs are estimated using published tariffs from Tri-State Motor Transit. [32] Truck transport assumes a maximum normal road weight limit of 80,000 pounds for all shipments, with the exception of the overweight shielded casks and non-divisible large components.

A majority of LLRW generated in the decontamination and dismantling of Palo Verde is disposed of at the WCS facility in Andrews County, Texas. This site will receive contaminated material such as steam generator primary side material, pressurizer, and reactor coolant piping, packaged system components and piping. Contaminated concrete, concrete rubble, and Dry Active Waste (DAW) is assumed to

be sent to the Energy*Solutions* Utah disposal facility. Class B and C waste (principally reactor pressure vessel (RPV) internals) are assumed to be buried at the Waste Control Specialists (WCS) facility in Andrews County, Texas. Clean metallic scrap material primarily from the Turbine Building will be surveyed prior to release.

Based upon current disposal rates for metallic waste, volume reduction and waste processing are not considered economical.

3.5.7 Stored Steam Generators and Storage Facility

This study includes the disposal costs of six retired steam generators (two per unit). They are assumed to be stored in the on-site storage facility until the time of the decommissioning. All activities associated with the stored steam generators and storage facility are considered non-critical and will not affect the overall decommissioning schedule. These generators are assumed to be packaged and transported in the same manner as the steam generators extracted from the Reactor Buildings. The stored steam generators are not expected to require any substantial decontamination or shielding prior to shipment for disposal. Appendix G summarizes the retired steam generator disposal and the facility decommissioning costs.

3.5.8 Water Reclamation Facility

Dismantling of the water reclamation facility is delayed until the spent fuel assemblies from each unit have been placed in dry storage or transferred to the DOE, and each unit's wet spent fuel storage and handling facilities are available for decommissioning. No program management or heavy equipment period-dependent costs have been allocated to this facility. Staff and equipment assigned to the unit activities can support this work since the task can be started and interrupted when critical path activities allow for usage of equipment and labor during this time. Assuming all release criteria are met; the building structures can be removed in an orderly fashion using acceptable controlled demolition techniques. The use of soil remediation technologies will not be required since it is assumed hazardous and radiological release criteria will also be met.

The buildings will be removed to a nominal depth of three feet below grade level. Concrete will be processed (crushed) prior to use as backfill. Holes will be drilled in the foundation base mat to allow for natural drainage. Building and structure sub grade voids will be backfilled with clean

demolition debris and graded. Underground piping will be excavated, and all voids backfilled. Appendix H summarizes the facility decommissioning costs.

3.5.9 Water Reclamation Supply System Pipeline & Structures

Dismantling of the water reclamation facility supply system and structures is delayed until the spent fuel assemblies from each unit have been placed in dry storage or transferred to the DOE, and each unit's wet spent fuel storage and handling facilities are available for decommissioning. There are no specific program management or heavy equipment period-dependent costs assigned since the task can be started and interrupted when critical path activities allow for usage of equipment and labor during this time.

These activities include the removal of the 91st Avenue Wastewater Treatment Plant Interface Structure, Buckeye Irrigation Company Interface, and the Hassayampa Pumping Station. The buildings will be demolished to a nominal depth of three feet below grade level. Concrete will be processed (crushed) prior to use as backfill. Holes will be drilled in the foundation base mat to allow for natural drainage. All piping up to three feet below grade will be excavated and removed. All piping below three feet below grade will be left in place and filled with concrete slurry to prevent any future collapse. Appendix I summarizes the decommissioning costs.

3.5.10 Evaporation Ponds

The study includes the removal, restoration, and closure of all three evaporation ponds. All activities associated with the Evaporation Ponds are considered non-critical and will not affect the overall decommissioning schedule. There are no program management or heavy equipment period-dependent costs assigned since the task can be started and interrupted when critical path activities allow for usage of equipment and labor.

Based upon plant operations and radiological survey information, trace levels of radioactive materials were detected in the two older Evaporation Ponds. Beginning in 1996 and at least annually thereafter samples have been obtained from both Evaporation Ponds and dose calculations each year have indicated that the highest dose from residual radioactivity is

less than 1 mRem/year TEDE. Consequently, no allowance has been provided for remediation of the Evaporation Ponds.

The costs for the site restoration and closure (including development of a Subpart D Permitted landfill in accordance with Arizona statutes) were provided by APS (Arizona Public Service) for inclusion in this report. These costs include complete removal of the sediment, liners, and drainage system, and regrade and revegetation of the surrounding area. The study also includes the cost to develop an onsite Subpart D Permitted landfill which will contain the sediment from the three evaporation ponds. Appendix J summarizes these costs.

3.5.11 Make-up Water Reservoirs

The study includes the removal, site restoration, and closure costs for both make-up water reservoirs. Dismantling of the make-up water reservoirs is delayed until the spent fuel assemblies from each unit have been placed in dry storage or transferred to the DOE, and each unit's wet spent fuel storage and handling facilities are available for decommissioning. There are no program management or heavy equipment period-dependent costs assigned since the task can be started and interrupted when critical path activities allow for usage of equipment and labor during this time.

The costs for the site restoration and closure in accordance with Arizona statutes were provided by APS for inclusion in this report. These costs include complete removal of the sediment, liners and drainage system and regrade and revegetation of the surrounding area. Appendix K summarizes the facility decommissioning costs.

3.5.12 ISFSI

The ISFSI is assumed to have sufficient capacity to accommodate operational and decommissioning fuel storage requirements. The estimate includes ISFSI costs that the OA expects will not be reimbursed by the DOE. This includes ISFSI costs in the periods following License Termination through Site Restoration (Insurance, ISFSI Licensing Fees, ISFSI Operating Costs), which are included in Appendix C. Incremental capital costs related to the utilization of the ISFSI during the decommissioning period have been included in the estimate with the assumption that they are fully reimbursable from the DOE. These costs have been included in separate appendices in this report. The costs

associated with purchase of canisters and overpacks, ISFSI operational costs, and periodic transfer costs from the spent fuel pool to the ISFSI/DOE and from the ISFSI to the DOE are shown in Appendix L. Costs associated with transfer of the Unit 1 fuel building crane to the ISFSI, instrumentation of ISFSI pads, purchase ISFSI transfer equipment, and construction of a radiation shield wall along one side of the ISFSI are shown in Appendix N.

Palo Verde will use the NAC International Universal MPC (Multi-Purpose Canister) System with a maximum loading of 24 assemblies per canister through the year 2018. In 2020, Palo Verde began using the NAC International Magnastor system with a maximum loading of 37 assembly per canister system for the storage and transportation of spent fuel. See Table 3.1 for details regarding spent fuel assumptions for quantities of dry fuel storage and GTCC canisters. Canisters provided by the DOE for transfer from the fuel pool to the DOE are assumed to be provided at no cost; plant personnel will still perform the loading and transfer of these canisters, at the rate of $312 thousand per canister. The loading and transfer of canisters from the ISFSI to the DOE are assumed to be 50% of the wet transfer cost, or $156 thousand per canister.

Some overpack liners are assumed to have some level of neutron-induced activation due to the long-term storage of the fuel, i.e., to levels exceeding free-release limits. Seven overpacks per unit (site total of 21) are assumed to require remediation, equivalent to the number of overpacks required to accommodate the final core offloads at Palo Verde (241 assemblies per unit for a site total of 723 assemblies). The cost of the disposition of this material, as well as the demolition of the ISFSI facility, is included in the estimate.

Considering the use of a 37-assembly canister system, the current ISFSI facility will have adequate capacity to store the GTCC waste. There is no cost included in this estimate for the construction of an additional storage pad.

It is assumed that on-site landfill facilities may be reopened for the disposal of ISFSI demolition debris, if required. The ISFSI decommissioning and demolition will occur in 2098, immediately following the completion of fuel transfer to the DOE in 2097. This is based upon the assumed date that the U.S. DOE begins receipt of spent fuel from the utilities (2034), Palo Verde's priority in the queue, and an assumed rate of shipment from the site to DOE beyond the published DOE queue. For the

first 19 years of this period (2034-2052), the annual fuel pickup rate is aligned with DOE/RW-0567, Acceptance Priority Ranking and Annual Capacity Report. Beginning in year 20 (2053) and continuing until 2097, the annual fuel pickup rate is based on a schedule provided by the OA. Direct canister closure and transfer costs from the pool or ISFSI to a DOE transport vehicle, ISFSI operations, and maintenance costs for the ISFSI are included in this estimate and are assumed to be paid from reimbursements by the DOE. Appendix L summarizes the ISFSI facility fuel transfer and decommissioning costs.

3.5.13 Stored Reactor Closure Heads & Storage Facility

This study includes the disposal costs of three retired reactor closure heads (one per unit). They are assumed to be stored in the on-site storage facility until the time of the decommissioning. All activities associated with the stored closure heads and storage facility are considered non-critical and will not affect the overall decommissioning schedule. These components are assumed to be packaged and transported intact to the disposal site. The stored reactor closure heads are not expected to require any substantial decontamination or shielding prior to shipment for disposal. Appendix M summarizes the retired closure head disposal and the facility decommissioning costs.

3.5.14 On-Site Clean Fill Disposal

Construction debris resulting from the decommissioning project is considered suitable for on-site disposal. This saves some of the transportation costs and the tipping fees at a commercial disposal facility. An existing landfill may be expanded for the disposal of this construction debris, or existing voids (excluding the evaporation ponds) may be utilized for this purpose.

3.5.15 Site Conditions Following Decommissioning

Following the decommissioning effort, the structures and remaining systems will meet the site release limit that will be specified in the Palo Verde NRC license termination plan. The NRC involvement in the decommissioning process typically will end at this point. Local building codes, state environmental regulations, and the OA's future plans for the site will dictate the next steps in the decommissioning process. TLG assumed the total removal of all plant systems and all the above-grade structures from the site except the switchyard and site drainage facilities.

3.5.16 Utility Staffing

This estimate assumes that the OA will act as its own DOC (Decommissioning Operations Contractor) for the project. As such, some contractor management, supervisory, and professional positions will be eliminated. Staffing levels are assigned for each unit by sub-period and functional area. Economies of a multi-unit decommissioning are recognized by establishing a primary and a secondary staff level. The unit assigned the primary staff will include common supervisory positions and positions that may be shared across all units. The types of positions and staffing levels are adjusted based upon the type of activity occurring in each sub-period. The staffing model allows for sharing of resources with other OA operating units and other corporate functions and assignments.

Staffing costs include direct salary as well as an allowance for overheads. A profile of the staffing level for the three-unit decommissioning, including contractors and craft, is provided in Figure 3.1 (at the end of Section 3). The graph shows minimal staff during the pre-shutdown planning phase, which starts five years before the shutdown of Unit 1. Because the shutdowns of the three units will occur within less than a three-year period, the utility and craft staffing levels will increase rapidly during the first three years of the decommissioning. Utility staffing levels will gradually decrease after completing the removal of physical systems at each of the three units.

Staffing levels and management support will vary based upon the amount and type of decommissioning work. Craft labor levels decrease after systems removal and structures decontamination and drop substantially during the delay period and the license termination survey period. However, craft staff levels increase again during the site restoration period due to the work associated with structures demolition.

ISFSI support staff levels during license termination and demolition in 2098 are also included. The ISFSI staffing costs for operation, maintenance, and security of the ISFSI are included and shown in Appendix L.

3.5.17 Miscellaneous Structures Demolition

Appendix C, Tables C-1,2, and 3, activity index 3b.1.1.28 “Miscellaneous Structures & Foundations” includes the cost to remove many of the

smaller common buildings at the site. The facilities included within this line item are listed below.

Blowdown Demineralizer Area
Concrete Block Barriers
Condensate Demineralizer Transfer Pump Area
Diesel Generator Rework Shop
Demineralized Water Storage
Electrical Equipment Facilities
Electrical Battery Storage Building
Emergency Diesel Generator Buildings
Fire Protection Storage Shed
General Maintenance Shop
ICE House
Large Motor Storage Sheds
LSR Waste Holdup Tank Area
Lube Oil Tank Area
Metrology Tower Building
Miscellaneous Yard Foundations
New Fuel Depot Underground Storage Tanks
New Protected Area Security Extension Facility
New Vehicle Maintenance Facility
Pop-Up Barriers
Reactor Makeup Tank Area
Regen Waste Neutral Tank Area
Resin Storage Shed
Sally-Port (West Side)
Single Point Vehicle Access
Spray Pond Pumphouse
Sub-Synchronous Resonance Equipment Building
Startup Transformer Yard
Sulfuric Acid Tank Area
Training Mockup Facility
Turbine Building Tank Storage Area
Underground Weld Test Building
Valve Service Shop
Welding Combination Shop

3.5.18 New Structures

No new structures were added to the site inventory for the 2023 estimate.

3.6 ASSUMPTIONS

The following are the major assumptions made in the development of the cost analysis for decommissioning Palo Verde.

3.6.1 Estimating Basis

1. The estimate is performed in accordance with the methodology described in the AIF/NESP-036 study.
2. Decommissioning costs are reported in the year of projected expenditure; however, the values are provided in 2023 dollars for the current estimate. Costs are not inflated, escalated, or discounted over the period of performance.
3. Plant drawings, equipment, and structural specifications used in the estimate were provided by the OA.
4. All units are assumed to be essentially identical except for common structures and systems. Common systems and structures, assigned to and incorporated within the estimate for Unit 3 in previous estimates, have been allocated on an equal basis across the three units where possible.
5. Additional decommissioning costs for secondary side systems contamination caused by the Unit 2 steam generator tube rupture are included in the estimate. The turbines have been treated as clean components in the estimate. The condensers have been treated as contaminated components for all three units in this estimate.

3.6.2 Labor Costs

1. The craft labor required to decontaminate and dismantle the nuclear units will be acquired through standard site contracting practices. The current rates for labor at the site (fully loaded) are used as an estimating basis.
2. Utility staffing requirements will vary with the level of effort associated with the various phases of the project. Once the decommissioning program commences, the operations staff will be reduced to only those staff positions necessary to support the decommissioning program and ISFSI activities. Staff transition costs from plant operations to decommissioning are included in this study. The total transition costs are calculated for the site and

divided equally between the three units. Employee labor cost data and craft labor rates for site administration, operations, construction, and maintenance personnel were provided by the OA for positions identified by TLG.

3. Site security, radiological controls, and overall site administration during decommissioning and dismantling will be provided by the OA. There is a significant nuclear security presence at each reactor until the spent fuel has been removed from the spent fuel pool to the ISFSI. The spent fuel pools are assumed to be emptied six years after that unit's final shutdown date, at which time the nuclear security force for that unit is significantly reduced.

4. Engineering services for such items as writing activity specifications and detailed work procedures will be provided by outside contractors with the appropriate expertise.

5. All work (except vessel and internals removal activities) will be performed on an 8-hour per day, 5-day per week basis, with no overtime. There are 11 paid holidays per year. Vessel and internal removal activities will be performed using two shifts, with an additional charge for back shift activities.

3.6.3 Design Conditions

1. Any fuel cladding failure that occurred during the lifetime of the plant is assumed to have released fission products at sufficiently low levels that the buildup of quantities of long-lived isotopes (e.g., ^{137}Cs, ^{90}Sr, or transuranics) has been prevented from reaching levels exceeding those which permit the major NSSS components to be shipped under current DOT regulations, and to be buried within the requirements of 10 CFR Part 61.

2. The estimated curie content of the vessel and internal components were derived from those listed in NUREG/CR-3474.[33] Actual estimates were derived from the Ci/gram values in NUREG/CR-3474 and adjusted for the different mass of the Palo Verde components, operating life, and periods of decay. Additional short-lived isotopes were derived from NUREG/CR-0130[34] and NUREG/CR-0672[35] and benchmarked to the long-lived values from NUREG/CR-3474.

3. Segmentation of the reactor vessel internal components will produce a limited quantity of activated material with radionuclide inventories exceeding Class C quantities, as defined in 10 CFR Part

61. The GTCC material is generally not suitable for shallow land disposal and will most likely be disposed of as high-level waste in the DOE's geological repository (unless the NRC approves an alternative solution). The cost of disposal, unlike that for the spent fuel, is not addressed by the DOE's 1 mill/kWhr surcharge on plant electrical generation. As such, the disposal cost for GTCC presumes the packaging of this material in canisters similar to those used for spent fuel disposal, at an equivalent cost in dollars per cubic foot to what the DOE is charging for the disposal of spent fuel using the 1-mill/kWhr surcharge.

4. The only neutron-activated concrete expected to be above release levels is the bioshield, adjacent to and surrounding the reactor vessel. Aside from this, and material resulting from the scarifying of some concrete surfaces, the bulk of concrete in the Reactor Building and other buildings on site is assumed to meet NRC release limits for on-site disposal of material.

5. Control elements will be removed and transferred to the DOE along with the spent fuel, i.e., there is no additional cost provided for their disposal.

3.6.4 General

1. The existing plant equipment is considered obsolete and suitable for scrap as deadweight quantities only. The OA will make economically reasonable efforts to salvage equipment following final plant shutdown. Nonetheless, because placing a salvage value on this machinery and equipment would be speculative, and the value would be small in comparison to overall decommissioning expenses, this estimate does not attempt to quantify the value that the OA may realize based upon those efforts. It is difficult to predict whether the market for used equipment will be stronger or weaker than it is today. For these reasons, no equipment salvage value was included in the estimate.

2. Scrap generated during decommissioning is not included as a credit in this study for two reasons: (1) the relatively low market value of scrap; and (2) the relatively high cost of releasing the material from the site, i.e., the time and expense associated with "contamination-free" certification. It is assumed, for purposes of this estimate, that any value received from the sale of the material would be more than offset by the on-site processing costs.

3. The concrete debris resulting from building demolition activities is crushed on site to reduce the size of the debris. The resulting crushed concrete is used to backfill below grade voids. The rebar removed from the concrete crushing process is disposed of as scrap steel in a similar fashion as other scrap metal as discussed previously.

4. Costs for electrical power required to decommission the plant are included in the estimate. For estimating purposes, the plant is assumed to be de-energized, with decommissioning activities relying on temporary power connections. The OA will provide the temporary power packs and cabling to support the work. During DECON Period 2, Decommissioning Operations, electrical power systems are isolated and removed as they become non-essential to the decommissioning program.

5. Current plant staffing will remove all items of furniture, tools, mobile equipment (such as forklifts, trucks, bulldozers, and other similar mobile equipment), and other such items that can be easily removed without the use of special equipment at no cost or credit to the project.

6. Existing warehouses will be cleared of non-essential material and remain for use until they are dismantled as they become unnecessary to the decommissioning program.

7. The current OA staffing performs the following activities at no cost or credit to the project during the first six months of the planning period:

    - Fuel oil tanks will be emptied and cleaned by flushing or steam cleaning prior to disposal.
    - Acid and caustic tanks will be emptied.
    - Lubricating and transformer oils will be drained and removed from site by a waste disposal vendor.
    - All hazardous and legacy radioactive material will be removed and disposed of.

8. The decommissioning activities will be performed in accordance with the current regulations assumed to be in place at the time of decommissioning. This includes the ability to dispose of demolition debris on-site. Changes in regulations may have a cost impact on decommissioning.

9. Material and equipment costs for conventional demolition and/or construction activities were taken from RSMeans Building Construction Cost Data.

10. The study follows the principles of ALARA through the use of work duration adjustment factors, which incorporate such items as radiological protection instruction, mock-up training, and the use of respiratory protection and personnel protective clothing. These items lengthen a task's duration, which increases the costs and lengthens the overall schedule. ALARA planning is considered in the costs for engineering and planning, and in the development of activity specifications and detailed procedures. Changes to 10 CFR Part 20 worker exposure limits may impact the decommissioning cost and project schedule.

11. FEMA and state fees associated with emergency planning are assumed to continue for approximately 18 months following the cessation of operations. At this time, the FEMA fees are discontinued. The timing is based upon the anticipated condition of the spent fuel (i.e., the hottest spent fuel assemblies are assumed to be cool enough that no substantial Zircaloy oxidation and off-site event would occur with the loss of spent fuel pool water). State and local fees are continued until the spent fuel pools are emptied and all spent fuel is transferred to dry storage casks.

12. Nuclear liability insurance provides coverage for damage or injuries due to radiation exposure from equipment, material, etc., used during decommissioning. Nuclear liability insurance is phased out upon final decontamination of the site. Nuclear property insurance will cease upon termination of the 10 CFR Part 50 or Part 72 license(s). Insurance costs in the estimate are based on premium information for required policies identified by the OA. Premium discounts during specific intervals throughout the analysis are in accordance with NRC guidelines.

13. A $1 million annual property tax allowance is included in the estimate. This cost is shared equally among the three units and is applied through the dry fuel storage period. Sales tax will be included at the local rates for purchased material.

14. This estimate assumes that processed water which meets state and federal release limits can be disposed of without additional cost.

15. The perimeter fence and in-plant security barriers will be moved as appropriate to conform to the Security Plan in force during the various stages in the project.

16. The concrete circulating water piping will be abandoned by accessing the underground piping and permanently backfilling the voids. Contaminated underground concrete pipe will be removed entirely or decontaminated and abandoned. Underground steel pipe will be removed completely. Electrical manholes will be backfilled with suitable earthen material and abandoned. The Water Reclamation & Supply System concrete piping (35 miles of piping from Palo Verde to Phoenix) will be filled with concrete.

17. All site vestiges will be removed to a nominal depth of three feet below ground, with non-contaminated subgrade foundations remaining in place below this level. Holes will be drilled in each of the foundation basemats to allow for natural drainage. Building and structures subgrade voids will be backfilled with clean demolition fill. The site will be graded and landscaped.

18. The existing electrical switchyard will remain after decommissioning in support of the utility's electrical transmission and distribution system.

19. Most railroad tracks on site will be removed; an active spur connecting the ISFSI to the main line will remain to support rail shipments of spent fuel.

20. Road and parking areas with asphalt or concrete surfacing will be broken up and the material used as backfill on site. All gravel road and parking areas will remain in place and be covered with fill. Culverts, head walls, and stone riprap will remain in place to allow natural drainage.

21. The OA will have some existing scaffolding quantities available from plant operations to support the decommissioning project. Therefore, only costs associated with the remaining required scaffolding are included.

22. No significant quantities of asbestos, industrial solvents, chromated water, lead, or mercury are expected to be present on site at the time of decommissioning. Therefore, remediation costs for these types of materials are not included in the study.

23. This study has assumed that the Arizona Revised Statues, specifically 49-762.01 through 49-762.08 and 49-701.01, all regarding the definition and handling of solid waste, do not

interfere with the on-site disposal of concrete rubble; nor do they create any requirement for the removal of below grade clean or decontaminated structures, which this study assumes are abandoned in place. The establishment of a solid waste disposal facility on site will create a long-term liability for the management and caretaking of the disposal facility. Any costs for this ongoing management and caretaking are not included in this estimate.

3.7 COST ESTIMATE SUMMARY

Summaries of the radiological decommissioning costs and annual expenditures are provided in Appendices B, C, G, and H through Q. Table 6.1 provides a breakdown of these costs into the components of decontamination, removal, packaging, transportation, waste disposal, project management (staffing), and "other" cost categories. The costs were extracted from the detailed cost tables in Appendices C, G, H, I, J, K, L, M, N, and O. Note that Appendix O represents a consolidation of the cash flows from Appendices B, C, G, H, I, J, K, L, M, and N; it folds all site costs into the three Palo Verde unit costs. Appendices P and Q represent consolidated cash flows with contingencies of 25% and 10%, respectively. The following should be considered when reviewing these tables:

- "Decon" as used in the headings of these tables, refers to decontamination activities, as opposed to the NRC term DECON which refers to the prompt removal decommissioning scenario.
- "Total" as used in the headings of these tables, is the sum of Decon, Remove, Pack, Ship, Bury, Other (spent fuel, insurance, staffing, fees, etc.) and Contingency.
- The subtotal reported for the major cost categories does not include contingency, which is reported in a separate column.
- "Other" includes different types of costs, which are not easily categorized (such as characterization contract services, license termination survey, contract sources, plant preparation costs, etc.).

Appendices C, G, H, I, J, K, L, M, and N provide the supporting, detailed costs elements. The cost elements are assigned to one of three subcategories: "License Termination," "Spent Fuel Management," and "Site Restoration." The subcategory "License Termination" is used to accumulate costs that are consistent with "decommissioning" as defined by the NRC (i.e., 10 CFR § 50.2). The cost reported for this subcategory is generally sufficient to terminate the unit's operating license, recognizing that there may be some additional cost

impact from spent fuel management. Costs are included in the years 2040 through 2045 for Units 1, 2, and 3 pre-planning; these costs are shown in Appendix C, Tables C-1, C-2, and C-3 in Period 0.

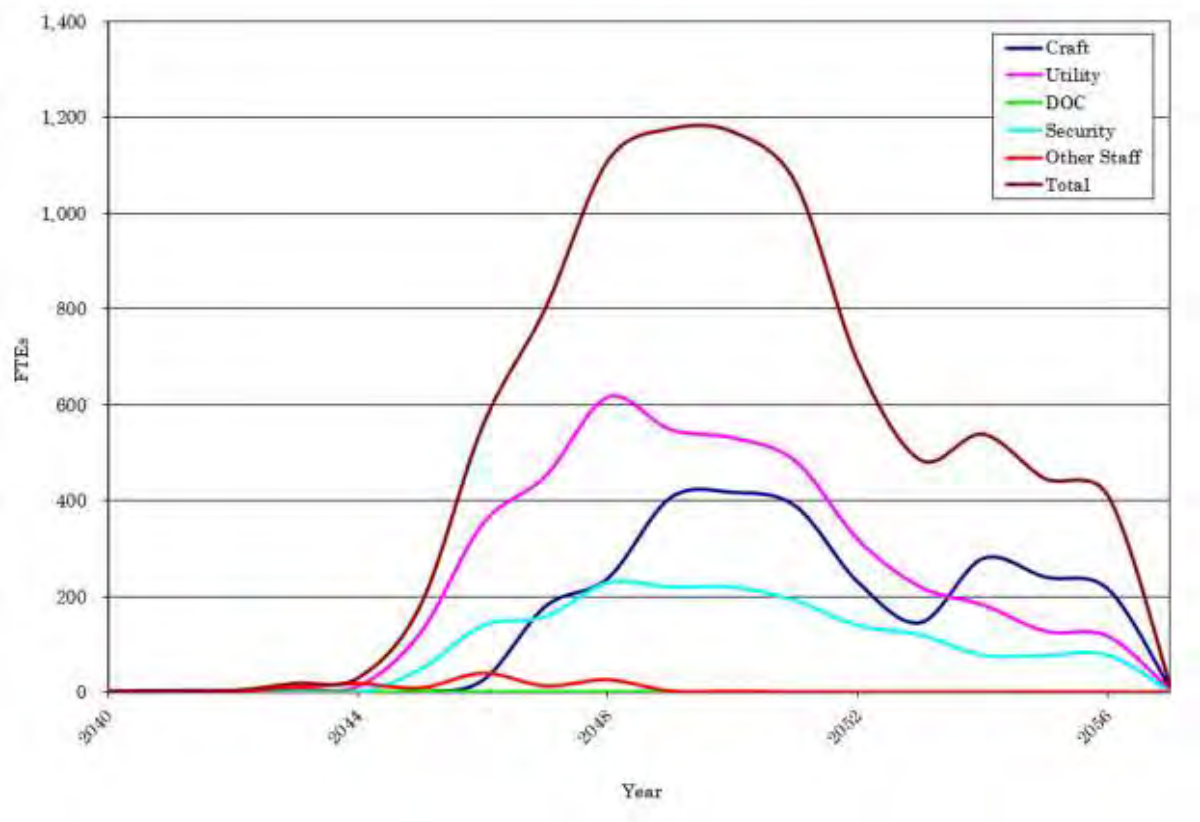
The "Spent Fuel Management" subcategory contains costs associated with the caretaking of the spent fuel and operation of the ISFSI in the periods following License Termination through Site Restoration until all fuel is offsite.

"Site Restoration" is used to capture costs associated with the dismantling and demolition of buildings and facilities demonstrated to be free from contamination. This includes structures never exposed to radioactive materials, as well as those facilities that have been decontaminated to appropriate levels. Structures are removed to a depth of three feet and backfilled to conform to local grade.

The cost of GTCC disposal is included in the "Nuclear Steam Supply System Removal" cost element. While designated for disposal at a federal facility along with the spent fuel, GTCC waste is still classified as low-level radioactive waste and, as such, included as a "License Termination" expense.

Decommissioning costs are reported in 2023 dollars. Costs are not inflated, escalated, or discounted over the period of expenditure (or remaining lifetime of the plant).

FIGURE 3.1
PALO VERDE STAFFING LEVELS



Notes:

1) Labor for fuel transfers from ISFSI to DOE after 2057, for GTCC canister transfers to DOE in 2097, and for decommissioning and demolition of the ISFSI in 2098 not shown

2) The labor hour basis of this chart was taken from Appendices C, G, H, I, J, K, L, M, and N; however, not all line items in these appendices have labor hour values available (e.g., spent fuel canister transfers to the DOE).

4. SCHEDULE ESTIMATE

The schedules for the decommissioning scenarios considered in this study follow the sequence presented in the AIF/NESP-036 study, with minor changes to reflect recent experience and site-specific constraints. In addition, the schedule has been updated to reflect the spent fuel management plans described in Section 3.5.1.

A timeline for the decommissioning of Units 1, 2, 3, and the ISFSI is presented in Figure 4.1. Appendix D presents a more detailed schedule of decommissioning activities for each unit. The scheduling sequence assumes that fuel is removed from the spent fuel pool within the first six years after operations cease at each unit. The key activities listed in the schedule do not reflect a one-to-one correspondence with those activities in the cost tables but reflect dividing some activities for clarity and combining others for convenience. The schedule was prepared using Microsoft Project. [36]

4.1 SCHEDULE ESTIMATE ASSUMPTIONS

The schedule reflects the results of a precedence network developed for the site decommissioning activities, i.e., a PERT (Program Evaluation and Review Technique) Software Package. The work activity durations used in the precedence network reflect the actual man-hour estimates from the cost tables, adjusted by stretching certain activities over their slack range and shifting the start and end dates of others. The following assumptions were made in the development of the decommissioning schedule:

- Planning of decommissioning activities starts approximately five years prior to permanent shutdown of Unit 1. During the pre-shutdown planning period a staff of project and technical personnel are dedicated to the project.
- The Fuel Buildings are isolated until such time that all spent fuel has been discharged from the spent fuel pools to the DOE or to the ISFSI. Decontamination and dismantling of the storage pools is initiated once the transfer of spent fuel is complete.
- Period 2 decommissioning activities for Unit 1 will begin immediately following the 18-month Period 1 preparation phase after the cessation of plant operations. Period 2 activities for Units 2 and 3 will begin following a 12-month Period 1 preparation phase. Sequencing the integrated decommissioning of Palo Verde is intended to maintain an even level of staff resources.

- All work (except vessel and internals removal) is performed during an 8-hour workday, 5 days per week, with no overtime. There are eleven paid holidays per year.
- Reactor and internals removal activities are performed by using separate crews for different activities working on different shifts, with a corresponding backshift charge for the second shift. The number of cask shipments out of the Reactor Building is expected to average three every two weeks. Non-cask shipments will be limited to 10 per week.
- Multiple crews work parallel activities to the maximum extent possible, consistent with optimum efficiency, adequate access for cutting, removal and laydown space, and with the stringent safety measures necessary during demolition of heavy components and structures.
- For plant systems removal, the systems with the longest removal durations in areas on the critical path are considered to determine the duration of the activity.
- Dismantlement and demolition of the miscellaneous non-radioactive facilities are assumed to be performed off the overall critical path schedule. Such activities start after Unit 1 shutdown and are assumed to be complete prior to the end of the site restoration phase (Period 3).

4.2 PROJECT SCHEDULE

The period-dependent costs presented in the Appendix C detailed cost tables are based upon the durations developed in the schedule. Durations are established between several milestones in each project period; these durations are used to establish a critical path for the entire project. In turn, the critical path duration for each period is used as the basis for determining the period-dependent costs. A second critical path is also shown for the spent fuel cooling period, which determines the release of the fuel buildings for final decontamination.

Project timelines are provided in Figure 4.1. Milestone dates are based on shutdown dates of June 1, 2045, April 24, 2046, and November 25, 2047 for Units 1, 2, and 3, respectively.

The OA also provided the assumed completion date for transfer of Palo Verde fuel from the ISFSI to the DOE, i.e., by the end of 2097. The schedule and timeline for the ISFSI therefore shows ISFSI decontamination and demolition in 2098, following the completion of transfer of the spent fuel and GTCC canisters from the ISFSI to the DOE.

5. RADIOACTIVE WASTES

The objectives of the decommissioning process are the removal of all radioactive material from the site that would restrict its future use and the termination of the NRC license(s). This currently requires the remediation of all radioactive material at the site in excess of applicable legal limits. Under the Atomic Energy Act [37] the NRC is responsible for protecting the public from sources of ionizing radiation. Title 10 of the Code of Federal Regulations delineates the production, utilization, and disposal of radioactive materials and processes. In particular, 10 CFR Part 71 defines radioactive material for the purpose of transportation and 10 CFR Part 61 specifies its disposition.

Title 49 of the Code of Federal Regulations is the principle set of rules and regulations (sometimes called administrative law) issued by the Departments of Transportation and Homeland Security, federal agencies of the United States regarding transportation and transportation related security. Most of the materials being transported for controlled burial are categorized as LSA or SCO materials containing Type A quantities, as defined in 49 CFR Parts 173-178. Shipping containers are required to be Industrial Packages (IP-1, IP-2 or IP-3, as defined in § 173.411) or Type A packages (§ 173.465). For this study, commercially available steel containers are presumed to be used for the disposal of piping, small components, and concrete. Larger components can serve as their own containers, with proper closure of all openings, access ways, and penetrations.

The volumes of radioactive waste generated during the various decommissioning activities at the site are shown on a line-item basis in Appendix C and summarized in Table 5.1. The quantified waste volume summaries shown in these tables are consistent with 10 CFR Part 61 classifications. The volumes are calculated based on the exterior dimensions for containerized material and on the displaced volume of components serving as their own waste containers.

The reactor vessel and internals are categorized as large quantity shipments and, accordingly, will be shipped in reusable, shielded truck casks with disposable liners. In calculating disposal costs, the burial fees are applied against the liner volume, as well as the special handling requirements of the payload. Packaging efficiencies are lower for the highly activated materials (greater than Type A quantity waste), where high concentrations of gamma-emitting radionuclides limit the capacity of the shipping containers.

No process system containing/handling radioactive substances at shutdown is presumed to meet material release criteria by decay alone, i.e., systems radioactive at shutdown will still be radioactive over the period during which the

decommissioning is accomplished, due to the presence of long-lived radionuclides. While the dose rates decrease with time, radionuclides such as ^{137}Cs will still control the disposition requirements.

The waste material generated in the decontamination and dismantling of Palo Verde is primarily generated during Period 2. Material that is contaminated or potentially contaminated will be removed and sent primarily to the WCS facility in Andrews County, Texas.

For purposes of constructing the estimates, the current cost for disposal at the WCS facility is used for most of the radioactive waste produced from the decommissioning activities. Separate rates were used for containerized waste and large components. Demolition debris including miscellaneous steel, scaffolding, and concrete is disposed of at a bulk rate at the Energy*Solutions* facility in Clive, Utah. This decommissioning waste stream destination also includes Class A resins and dry active waste.

Class A waste is disposed of at the WCS facility in Andrews County, Texas. Metallic waste is buried at a cost of $264 per cubic foot (based upon an average waste density of 65 pounds per cubic foot). Large component waste burial is at a cost of $312, $353, and $177 per cubic foot for SGs, RCPs, and PZR, respectively. Concrete, soil, asbestos, and other bulk debris are disposed of at a rate of $117 per cubic foot (based upon an average waste density of 88 pounds per cubic foot) at the Energy*Solutions* facility in Clive, Utah. Dry active wastes, e.g., cloth, paper, and plastics, are disposed of at $62 per cubic foot, with an assumed density of 20 pounds per cubic foot at the Energy*Solutions* facility in Clive, Utah.

Disposal costs for the Class B and C irradiated hardware material and Class B waste from liquid waste processing were based upon existing Palo Verde agreements with WCS for the Andrews County, Texas disposal facility.

Class B resin and filter waste is disposed of at $2,556 per cubic foot at the Waste Control Specialists facility in Andrews County, Texas. Classes B and C wastes resultant from irradiated reactor hardware are disposed of at $10,442 per cubic foot.

GTCC waste is disposed of at a rate of $5,752 per cubic foot, as packaged in a spent fuel canister. GTCC waste is stored on site at the ISFSI until the DOE is ready to receive the shipments; this is assumed to occur in 2097.

6. RESULTS

The analysis to estimate the costs to decommission Palo Verde relied primarily upon the site-specific, technical information developed from previous analyses. The systems and structures data was updated for the current estimate. While not an engineering study, the estimates provide the OA with sufficient information to assess its financial obligations as they pertain to the eventual decommissioning of the nuclear station.

The estimates described in this report are based on numerous fundamental assumptions, including regulatory requirements, project contingencies, LLRW disposal practices, high-level radioactive waste management options, and site restoration requirements. The decommissioning scenarios assume continued operation of the plants' spent fuel pools for a minimum of six years following the cessation of operations for continued cooling of the assemblies. An ISFSI will be used to store the spent fuel until such time that the DOE can complete the transfer of the assemblies to its repository.

The cost projected to promptly decommission (DECON) Palo Verde is estimated to be $3.81 billion (2023 dollars). Most of this cost, approximately 75%, is associated with the physical decontamination and dismantling of the nuclear units so that the licenses can be terminated. The management, interim storage, and eventual transfer of the spent fuel accounts for approximately 15%. The remaining 10% is for the demolition of the designated structures and limited restoration of the site and off-site facilities.

The primary cost contributors, identified in Tables 6.1, are either labor-related or associated with the management and disposition of the radioactive waste. Program management is the largest single contributor to the overall cost. The magnitude of the expense is a function of both the size of the organization required to manage the decommissioning, and the duration of the program. It is assumed, for purposes of this analysis, that the OA will oversee the decommissioning program and self-manage the decommissioning labor force and the associated subcontractors. The size and composition of the management organization varies with the decommissioning phase and associated site activities. However, once the operating licenses are terminated, the staff is substantially reduced for the conventional demolition and restoration of the site, and for the long-term care of the spent fuel.

As described in this report, the spent fuel pools will remain operational for six years following the cessation of operations. The pools will be isolated and independent spent fuel islands created. This will allow decommissioning operations to proceed in and

around the pool area. Over the six-year period, the spent fuel will be packaged into DOE-provided transport casks (21 assemblies per canister) or transferred to the ISFSI for interim storage (37 assemblies per canister). The costs of transferring the fuel to the DOE from the spent fuel pool or the ISFSI are assumed non-reimbursable by the DOE and are included in this estimate in Appendix L.

The cost for waste disposal includes only those costs associated with the controlled disposition of the LLRW generated from decontamination and dismantling activities, including plant equipment and components, structural material, filters, resins, and dry-active waste. Radioactively contaminated material will be sent either to WCS in Andrews, Texas, or to the Energy*Solutions* facility in Clive, Utah for burial. Highly activated components, requiring additional isolation from the environment, are packaged for geologic disposal. The cost of geologic disposal is based upon a cost equivalent for spent fuel.

The cost identified in the summary table for off-site waste processing of metallic wastes is reported as zero, since the pricing for such processing of metallic waste is not cost effective with the current LLRW disposal rates.

Removal costs reflect the labor-intensive nature of the decommissioning process, as well as the management controls required to ensure a safe and successful program. Decontamination and packaging costs also have a large labor component that is based upon prevailing union wages. Non-radiological demolition is a natural extension of the decommissioning process. With a work force mobilized to support decommissioning operations, non-radiological demolition can be an integrated activity and a logical expansion of the work being performed in the process of terminating the operating license. Prompt demolition reduces future liabilities and can be more cost effective than deferral, due to the deterioration of the facilities (and therefore the working conditions) with time.

The reported cost for transport includes the tariffs and surcharges associated with moving large components and/or overweight shielded casks overland, as well as the general expense, e.g., labor and fuel, of transporting material to the destinations identified in this report. For purposes of this analysis, material is primarily moved overland by truck.

License termination survey costs are associated with the labor intensive and complex activity of verifying that contamination has been removed from the site to the levels specified by the regulating agency. This process involves a systematic survey of all remaining plant surface areas and surrounding environs, sampling, isotopic analysis, and documentation of the findings. The status of any plant components and materials

not removed in the decommissioning process will also require confirmation and will add to the expense of surveying the facilities alone.

The remaining costs include allocations for heavy equipment and temporary services, as well as for such expenses as regulatory fees and premiums for nuclear insurance. While site operating costs are greatly reduced following the final cessation of plant operations, certain administrative functions do need to be maintained either at a basic functional nor regulatory level.

APPENDIX A
SUMMARY OF 1998 STUDY
COST REDUCTION ALTERNATIVES

Excerpt from 1998 Palo Verde Decommissioning Cost Study - Executive Summary:

EXECUTIVE SUMMARY APPENDIX
COST ALTERNATIVE STUDY

A study prepared for the Operating Agent (OA) of the Palo Verde Nuclear Generating Station (PVNGS) by TLG Services, Inc. (TLG), evaluates the costs associated with decommissioning cost reduction alternatives. A baseline estimate for Unit 1 of PVNGS using the DECON decommissioning alternative was prepared for use as a comparison of cost savings. The following is a summary of the ten alternatives evaluated. A breakdown of cost savings and associated comments is reported in the Summary Table herein.

1. Removal of the reactor vessel and internals as an integrated package, transported for intact disposal.

2. Use of a second shift in the decontamination and dismantling of PVNGS, assessing the ultimate impact on the decommissioning schedule and associated costs.

3. Use of alternative disposal sites for clean waste. This evaluation will consider expanding the current on-site waste disposal facility. Each alternative will be ranked based on feasibility and overall cost.

4. Evaluation of alternative burial sites for LLW. This evaluation will consider development of an on-site, Part 61 licensed facility. Each alternative will be ranked based on feasibility and overall cost.

5. Incremental decontamination and dismantling costs of a single unit with secondary-side contamination at two levels: (1) Current Unit 1, and (2) Unit 2 immediately after 1989 tube rupture event.

6. Establishment of an on-site LLW decontamination, processing, and salvage facility. Three cases will be established for a 70%, 80%, and 90% reduction in the volume of LLW that will require controlled disposal.

7. Disposal of all LLW at the Chem-Nuclear Systems, Inc., Barnwell, S.C., disposal facility. Costs will be based on the November 1, 1996, CNSI instituted weight-based cost schedule.

8. The assumption of responsibility for the management of all decommissioning operations by the OA (currently assumed to be performed by a DOC).

9. Based on item 8 above, evaluation of decommissioning planning being initiated early, so as to have the required approvals at or shortly after (3-6 months) final shutdown. (Decontamination and dismantling would begin as soon as possible for Unit 1. Schedules for Units 2 and 3 would follow so as to maximize the use of rented, leased, or purchased equipment.)

10. Isolation of the fuel building from the remainder of the facility (electrical, thermal, and hydraulic) so as not to impede D&D operations. This will include alternatives to monitor and control the fuel building activities from other than the current location.

The alternatives were evaluated and grouped into three categories to better define their cost impact.

Cost Bounding: These alternatives change the base scope of the study by adding assumptions that currently should be considered, and further bound the cost estimate by identifying changes that will add to the scope or further define the level of detail required.

Cost Reductions: Changes to the base case that reduce the overall cost of the decommissioning project. This category can be further defined by cost reductions that can occur under current regulatory requirements and those which would require modifications to current requirements.

Not Cost-Effective: Those alternatives that showed no cost benefit, or that increase the base cost.

After reviewing each alternative and evaluating the cost impacts and savings to the original decommissioning cost estimate, TLG has developed a list of three recommendations for inclusion into the base case study.

TLG recommends three of the cost reduction alternatives. Alternative #8, the OA management of the decommissioning project (serving as DOC) is the highest ranked alternative for cost reduction. Of all the current options, it is the most feasible and easiest to adopt and offers a potential cost savings of $18.5 million. The next two recommendations are waste-related. Alternative # 3, the on-site disposition of clean construction debris rather than shipment to a local vendor would result in substantial savings of approximately $7.6 million. Similarly, Alternative # 6 the on-site

processing of low-level waste is a viable alternative. A review of state-of-the-art processes in processing and volume reduction is recommended; TLG feels the potential of 90% volume reduction is not unrealistic and should be investigated prior to the planning of such a facility. Although even 70% reduction could yield $ 0.9 million dollars in savings, a 90% reduction could result in savings of up to $5.5 million.

TLG also recommends further investigation into one of the cost savings alternatives that would require regulatory revisions for the OA -- that being to create an on-site facility for the storage of low-level waste. While the cost for such a facility might not be economical for a single unit, the money to be saved with three units would be substantial. The site's remote location, its stable profile as a nuclear area, and the fact that Arizona is the next host state for the Southwest Compact all contribute to the potential for a successful and profitable venture. TLG recommends that the OA consider a feasibility study to determine the technical and political viability of obtaining a Part 61 license. A feasibility study would not only examine the financial aspects (startup, operation, maintenance) of such a venture, but would also consider such environmental aspects as community involvement and licensing issues/requirements.

Two cost reduction alternatives were approved by the OA to be utilized in the development of this cost study:

Alternative # 8 in which the OA will act as Decommissioning Operations Contractor (DOC), providing contract management of the decommissioning labor force and subcontractors, directing all decontamination and dismantling activities. Other activities that are included but not limited to, are engineering services for such items as writing activity specifications, detailed procedures, detailed activation analyses, and structural modifications.

Alternative # 3 in which an on-site facility will be used for clean construction debris disposal is the second alternative utilized in the study. Environmental closure requirements will need to be defined before selection of the on-site location is determined.

SUMMARY TABLE: COST REDUCTION ALTERNATIVES

(Millions of 1998 Dollars)

	Alternative	Category	Potential Cost Impact/ Savings	TLG Rec	Comments
1	One-Piece Vessel Lift	C	(35.2)		Regulation revisions required, several utilities submitting similar scenario. Until NRC approves scenario, alternative remains unlikely.
2	Alternative Shift Schedule	NC	3.0		Fuel storage restricts schedule reduction, savings are offset by cost of second shift operations.
3	Alternative Disposal Site - Clean fill	C	(7.6)	Yes	Existing voids created by Evaporator Ponds and Water Make-up utilized for clean fill disposal, acceptable per Arizona Revised Statute.
4	Alternative Burial Site-On-site Part 61 Licensed LLW Facility	C	(220)	Yes *	Regulation revision required, on-site development highly speculative, greatest potentials for savings with highest risk.
5	Secondary-Side Contamination	B	20.7	Yes	Major cost impact, should be added to cost estimate. Further characterization should be performed to verify extent of contamination.
6	On-Site Recycling -70% Vol. Reduction -80% Vol. Reduction -90% Vol. Reduction	C	 (0.9) (7.0) (5.5)	Yes *	On-site facility capital and operating cost (70% reduction) is within 1% of off-site vendor cost. Due to responsibilities assumed by vendor and potential of achieving similar savings, recommend further investigation. New technologies yet to be proven must be evaluated as they become available.
7	Weight-Based Burial	B	(3.7)	*	Savings less than 1% of total decommissioning cost to utilize Barnwell. Recommend cost estimate to assume Southwest Compact burial will be available.
8	OA Assumes DOC Responsibilities	C	(18.5)	Yes	Most feasible and easiest to adopt. Minimal risk with good record indicated at other utilities.
9	Pre-Planning	NC	(1.2)		Cost savings are offset by delay in fuel storage pool decommissioning. $4.2 million savings offset by $3 million additional cost due to lengthening of schedule caused by fuel storage delay. Savings in period not worth increase in schedule.
10	Fuel Building Isolation	B	0		Base estimate allocates $2.1 million (21,000 man-hours) for license and related document modifications. This is equal to several current utility allocations. Including building modification cost of $1.1 million, base estimate allocates $3.2 million. No savings are indicated.

Legend: ***** Further investigation required.
B = Cost Bounding C = Cost Reduction NC = Not Cost-Effective

APPENDIX E

UNIT COST FACTOR DEVELOPMENT

APPENDIX E

UNIT COST FACTOR DEVELOPMENT

Example: Unit Factor for Removal of Contaminated Heat Exchanger < 3,000 lbs.

1. SCOPE

Heat exchangers weighing < 3,000 lbs. will be removed in one piece using a crane or small hoist. They will be disconnected from the inlet and outlet piping. The heat exchanger will be sent to the packing area.

2. CALCULATIONS

Activity Description	Critical Duration (minutes)
Install contamination controls, remove insulation, and mount pipe cutters	60
Disconnect inlet and outlet lines, cap openings	60
Rig for removal	30
Unbolt from mounts	30
Remove contamination controls	15
Remove heat exchanger, wrap in plastic, and send to packing area	60
Critical Duration	255

Work Adjustments (Work Difficulty Factors)

+ Respiratory Protection (50% of Critical Duration)	128
+ Radiation/ALARA (37.08333% of Critical Duration)	95
Adjusted Work Duration	478
+ Protective Clothing (30% of Adjusted Work Duration)	143
Productive Work Duration	621
+ Work break adjustment (8.33 % of Productive Work Duration)	52
Total Work Duration	673

***** Total Work Duration = 673 minutes or 11.217 hours *****

APPENDIX E
(continued)

3. LABOR REQUIRED

Crew	Number	Duration (hours)	Rate ($/hr)	Cost
Laborers	3.00	11.217	$19.78	$665.62
Craftsmen	2.00	11.217	$40.87	$916.88
Foreman	1.00	11.217	$43.95	$492.99
General Foreman	0.25	11.217	$47.02	$131.86
Fire Watch	0.05	11.217	$19.78	$11.09
Health Physics Technician	1.00	11.217	$67.20	$753.78
Total labor cost				$2,972.22

4. EQUIPMENT & CONSUMABLES COSTS

Equipment Costs	none
Consumables/Materials Costs	
-Gas torch consumables 1 @ $23.89/hour x 1 hour {1}	$23.89
-Blotting paper 50 @ $0.81/sq. ft {2}	$40.50
-Tarpaulin 7.5 mils 50 @ $0.49/sq. ft {3}	$23.89
Subtotal cost of equipment and materials	$88.89
Overhead & sales tax on equipment and materials @ 16.300%	$14.49
Total costs, equipment & material	$103.38
TOTAL COST: Removal of contaminated heat exchanger <3000 pounds:	**$3,075.60**
Total labor cost:	$2,972.22
Total equipment/material costs:	$103.38
Total craft labor man-hours required per unit:	81.884

APPENDIX E
(continued)

5. NOTES AND REFERENCES

- Work difficulty factors were developed in conjunction with the AIF (now NEI) program to standardize nuclear DCEs and are delineated in Volume 1, Chapter 5 of the "Guidelines for Producing Commercial Nuclear Power Plant Decommissioning Cost Estimates," AIF/NESP-036, May 1986.

- References for equipment & consumables costs:

    1. R.S. Means (2023) Division 01 54 33, Section 40-6360, page 744
    2. www.mcmaster.com online catalog (7193T88)
    3. R.S. Means (2023) Division 01 56, Section 13.60-0600, page 23

- Material and consumable costs were adjusted using the regional indices for Phoenix, Arizona.

UNIT COST FACTOR LISTING

(DECON: Power Block Structures Only)

APPENDIX F

UNIT COST FACTOR LISTING
(DECON: Power Block Structures Only)

Unit Cost Factor	Cost/Unit ($)
Removal of clean instrument and sampling tubing, $/linear foot	0.26
Removal of clean pipe 0.25 to 2 inches diameter, $/linear foot	2.64
Removal of clean pipe >2 to 4 inches diameter, $/linear foot	4.02
Removal of clean pipe >4 to 8 inches diameter, $/linear foot	8.57
Removal of clean pipe >8 to 14 inches diameter, $/linear foot	15.72
Removal of clean pipe >14 to 20 inches diameter, $/linear foot	20.70
Removal of clean pipe >20 to 36 inches diameter, $/linear foot	30.39
Removal of clean pipe >36 inches diameter, $/linear foot	35.99
Removal of clean valve >2 to 4 inches	55.96
Removal of clean valve >4 to 8 inches	85.67
Removal of clean valve >8 to 14 inches	157.16
Removal of clean valve >14 to 20 inches	206.97
Removal of clean valve >20 to 36 inches	303.89
Removal of clean valve >36 inches	359.90
Removal of clean pipe hanger for small bore piping	21.96
Removal of clean pipe hanger for large bore piping	67.44
Removal of clean pump, <300 pound	150.02
Removal of clean pump, 300-1000 pound	426.47
Removal of clean pump, 1000-10,000 pound	1,625.61
Removal of clean pump, >10,000 pound	3,162.98
Removal of clean pump motor, 300-1000 pound	174.06
Removal of clean pump motor, 1000-10,000 pound	669.33
Removal of clean pump motor, >10,000 pound	1,506.00
Removal of clean heat exchanger <3000 pound	884.74
Removal of clean heat exchanger >3000 pound	2,253.62
Removal of clean feedwater heater/deaerator	6,269.39
Removal of clean moisture separator/reheater	12,777.30
Removal of clean tank, <300 gallons	192.34
Removal of clean tank, 300-3000 gallon	595.98
Removal of clean tank, >3000 gallons, $/square foot surface area	5.31

APPENDIX F

UNIT COST FACTOR LISTING
(DECON: Power Block Structures Only)

Unit Cost Factor	Cost/Unit ($)
Removal of clean electrical equipment, <300 pound	77.63
Removal of clean electrical equipment, 300-1000 pound	283.39
Removal of clean electrical equipment, 1000-10,000 pound	566.78
Removal of clean electrical equipment, >10,000 pound	1,380.64
Removal of clean electrical transformer < 30 tons	958.85
Removal of clean electrical transformer > 30 tons	2,761.28
Removal of clean standby diesel generator, <100 kW	979.38
Removal of clean standby diesel generator, 100 kW to 1 MW	2,186.01
Removal of clean standby diesel generator, >1 MW	4,525.49
Removal of clean electrical cable tray, $/linear foot	7.57
Removal of clean electrical conduit, $/linear foot	3.32
Removal of clean mechanical equipment, <300 pound	77.63
Removal of clean mechanical equipment, 300-1000 pound	283.39
Removal of clean mechanical equipment, 1000-10,000 pound	566.78
Removal of clean mechanical equipment, >10,000 pound	1,380.64
Removal of clean HVAC equipment, <300 pound	93.88
Removal of clean HVAC equipment, 300-1000 pound	340.52
Removal of clean HVAC equipment, 1000-10,000 pound	678.65
Removal of clean HVAC equipment, >10,000 pound	1,380.64
Removal of clean HVAC ductwork, $/pound	0.27
Removal of contaminated instrument and sampling tubing, $/linear foot	1.16
Removal of contaminated pipe 0.25 to 2 inches diameter, $/linear foot	18.22
Removal of contaminated pipe >2 to 4 inches diameter, $/linear foot	28.44
Removal of contaminated pipe >4 to 8 inches diameter, $/linear foot	47.69
Removal of contaminated pipe >8 to 14 inches diameter, $/linear foot	87.31
Removal of contaminated pipe >14 to 20 inches diameter, $/linear foot	103.48
Removal of contaminated pipe >20 to 36 inches diameter, $/linear foot	140.02
Removal of contaminated pipe >36 inches diameter, $/linear foot	163.88
Removal of contaminated valve >2 to 4 inches	349.74
Removal of contaminated valve >4 to 8 inches	413.24

APPENDIX F

UNIT COST FACTOR LISTING
(DECON: Power Block Structures Only)

Unit Cost Factor	Cost/Unit ($)
Removal of contaminated valve >8 to 14 inches	797.55
Removal of contaminated valve >14 to 20 inches	1,004.92
Removal of contaminated valve >20 to 36 inches	1,324.58
Removal of contaminated valve >36 inches	1,563.22
Removal of contaminated pipe hanger for small bore piping	116.25
Removal of contaminated pipe hanger for large bore piping	348.31
Removal of contaminated pump, <300 pound	745.95
Removal of contaminated pump, 300-1000 pound	1,694.80
Removal of contaminated pump, 1000-10,000 pound	4,922.34
Removal of contaminated pump, >10,000 pound	11,983.18
Removal of contaminated pump motor, 300-1000 pound	764.12
Removal of contaminated pump motor, 1000-10,000 pound	2,050.31
Removal of contaminated pump motor, >10,000 pound	4,603.62
Removal of contaminated heat exchanger <3000 pound	3,075.60
Removal of contaminated heat exchanger >3000 pound	9,061.63
Removal of contaminated tank, <300 gallons	1,250.38
Removal of contaminated tank, >300 gallons, $/square foot	23.01
Removal of contaminated electrical equipment, <300 pound	552.46
Removal of contaminated electrical equipment, 300-1000 pound	1,340.61
Removal of contaminated electrical equipment, 1000-10,000 pound	2,584.07
Removal of contaminated electrical equipment, >10,000 pound	5,087.72
Removal of contaminated electrical cable tray, $/linear foot	26.80
Removal of contaminated electrical conduit, $/linear foot	14.25
Removal of contaminated mechanical equipment, <300 pound	613.87
Removal of contaminated mechanical equipment, 300-1000 pound	1,477.78
Removal of contaminated mechanical equipment, 1000-10,000 pound	2,843.69
Removal of contaminated mechanical equipment, >10,000 pound	5,087.72
Removal of contaminated HVAC equipment, <300 pound	613.87
Removal of contaminated HVAC equipment, 300-1000 pound	1,477.78
Removal of contaminated HVAC equipment, 1000-10,000 pound	2,843.69

APPENDIX F

UNIT COST FACTOR LISTING
(DECON: Power Block Structures Only)

Unit Cost Factor	Cost/Unit ($)
Removal of contaminated HVAC equipment, >10,000 pound	5,087.72
Removal of contaminated HVAC ductwork, $/pound	1.90
Removal/plasma arc cut of contaminated thin metal components, $/linear in.	2.79
Additional decontamination of surface by washing, $/square foot	5.75
Additional decontamination of surfaces by hydrolasing, $/square foot	27.91
Decontamination rig hook up and flush, $/ 250 foot length	5,121.11
Chemical flush of components/systems, $/gallon	32.73
Removal of clean standard reinforced concrete, $/cubic yard	69.22
Removal of grade slab concrete, $/cubic yard	78.61
Removal of clean concrete floors, $/cubic yard	316.76
Removal of sections of clean concrete floors, $/cubic yard	885.85
Removal of clean heavily rein concrete w/#9 rebar, $/cubic yard	99.49
Removal of contaminated heavily rein concrete w/#9 rebar, $/cubic yard	1,736.18
Removal of clean heavily rein concrete w/#18 rebar, $/cubic yard	134.65
Removal of contaminated heavily rein concrete w/#18 rebar, $/cubic yard	2,293.51
Removal heavily rein concrete w/#18 rebar & steel embedments, $/cubic yard	437.15
Removal of below-grade suspended floors, $/cubic yard	188.48
Removal of clean monolithic concrete structures, $/cubic yard	709.46
Removal of contaminated monolithic concrete structures, $/cubic yard	1,716.90
Removal of clean foundation concrete, $/cubic yard	563.04
Removal of contaminated foundation concrete, $/cubic yard	1,600.61
Explosive demolition of bulk concrete, $/cubic yard	41.47
Removal of clean hollow masonry block wall, $/cubic yard	27.46
Removal of contaminated hollow masonry block wall, $/cubic yard	72.65
Removal of clean solid masonry block wall, $/cubic yard	27.46
Removal of contaminated solid masonry block wall, $/cubic yard	72.65
Backfill of below-grade voids, $/cubic yard	38.55
Removal of subterranean tunnels/voids, $/linear foot	80.12
Placement of concrete for below-grade voids, $/cubic yard	185.04
Excavation of clean material, $/cubic yard	2.79
Excavation of contaminated material, $/cubic yard	39.19

APPENDIX F

UNIT COST FACTOR LISTING
(DECON: Power Block Structures Only)

Unit Cost Factor	Cost/Unit ($)
Removal of clean concrete rubble (tipping fee included), $/cubic yard	26.77
Removal of contaminated concrete rubble, $/cubic yard	24.60
Removal of building by volume, $/cubic foot	0.33
Removal of clean building metal siding, $/square foot	0.97
Removal of contaminated building metal siding, $/square foot	3.99
Removal of standard asphalt roofing, $/square foot	1.21
Removal of transite panels, $/square foot	1.71
Scarifying contaminated concrete surfaces (drill & spall), $/square foot	11.82
Scabbling contaminated concrete floors, $/square foot	6.45
Scabbling contaminated concrete walls, $/square foot	16.34
Scabbling contaminated ceilings, $/square foot	55.40
Scabbling structural steel, $/square foot	5.51
Removal of clean overhead crane/monorail < 10 ton capacity	420.46
Removal of contaminated overhead crane/monorail < 10 ton capacity	1,434.98
Removal of clean overhead crane/monorail >10-50 ton capacity	1,009.10
Removal of contaminated overhead crane/monorail >10-50 ton capacity	3,443.37
Removal of polar crane > 50 ton capacity	4,292.23
Removal of gantry crane > 50 ton capacity	15,417.13
Removal of structural steel, $/pound	0.23
Removal of clean steel floor grating, $/square foot	3.58
Removal of contaminated steel floor grating, $/square foot	11.56
Removal of clean free standing steel liner, $/square foot	7.96
Removal of contaminated free standing steel liner, $/square foot	26.65
Removal of clean concrete-anchored steel liner, $/square foot	3.98
Removal of contaminated concrete-anchored steel liner, $/square foot	31.11
Placement of scaffolding in clean areas, $/square foot	14.87
Placement of scaffolding in contaminated areas, $/square foot	22.86
Landscaping with topsoil, $/acre	27,847.98
Cost of CPC B-88 LSA box & preparation for use	2,263.59
Cost of CPC B-25 LSA box & preparation for use	1,928.18

APPENDIX F

UNIT COST FACTOR LISTING
(DECON: Power Block Structures Only)

Unit Cost Factor	Cost/Unit ($)
Cost of CPC B-12V 12 gauge LSA box & preparation for use	1,738.44
Cost of CPC B-144 LSA box & preparation for use	11,549.73
Cost of LSA drum & preparation for use	370.00
Cost of cask liner for CNSI 8 120A cask (resins)	15,409.10
Cost of cask liner for CNSI 8 120A cask (filters)	10,826.94
Decontamination of surfaces with vacuuming, $/square foot	0.68

DECON Decommissioning Cost Estimate
(Thousands of 2023 Dollars)

Activity Index	Activity Description	Decon Cost	Removal Cost	Packaging Costs	Transport Costs	Off-Site Processing Costs	LLRW Disposal Costs	Other Costs	Total Contingency	Total Costs1	NRC Lic. Term. Costs	Spent Fuel Management Costs	Site Restoration Costs	Processed Volume Cu. Feet	Burial Volumes				Burial / Processed Wt., Lbs.	Craft Manhours	Utility and Contractor Manhours
															Class A Cu. Feet	Class B Cu. Feet	Class C Cu. Feet	GTCC Cu. Feet			
TOTAL COST TO DECOMMISSION WITH 20% CONTINGENCY:						$77,061	thousands of 2023 dollars														
TOTAL NRC LICENSE TERMINATION COST						$ -	thousands of 2023 dollars														
NON-NUCLEAR DEMOLITION COST						$ 77,061	thousands of 2023 dollars														

Note 1: The Evaporation Pond closure and Subtitle D Permitted Landfill cost estimates were provided by APSC.
TLG assumes that the costs provided for development of the permitted landfill and closure of the Evaporation Ponds to be all-inclusive
TLG escalated the Evaporation Pond closure costs from 2007 & 2009 $'s, to 2023 dollars.
The Subtitle D Permitted Landfill costs were provided based upon waste volumes after 60 years of plant operation. Direct costs were reduced by 33% to reflect 40 years of operation.

UNIT 3 - CONSOLIDATED (INCLUDES SITE FACILITIES)
(Thousands of 2023 Dollars)

Year	Labor	Equipment & Materials	Energy	Burial	Other	Total
Total	683,472	240,670	16,219	200,524	127,661	1,268,546

Note: One third of the decommissioning cost of each of the Site Facilities (Stored Steam Generators and Storage Facility, Water Reclamation Facility, Water Reclamation Supply System Pipeline & Structures, Evaporation Ponds, Make-up Water Reservoir, Stored Reactor Closure Heads & Storage Facility, and ISFSI) has been allocated to each unit's cash flow.

APPENDIX P

SCHEDULE OF ANNUAL EXPENDITURES - CONSOLIDATED 25% CONTINGENCY*

Table Page

P-1 Schedule of Palo Verde Annual Expenditures, Unit 1 - 25% contingency.....2
P-2 Schedule of Palo Verde Annual Expenditures, Unit 2 - 25% contingency.....5
P-3 Schedule of Palo Verde Annual Expenditures, Unit 3 - 25% contingency.....8

* Calculated with 25% contingency as required to comply with the California Public Utility Commission as detailed in "Technical Position Paper for Establishing an Appropriate Contingency Factor for Inclusion in the Decommissioning Revenue Requirements", Study Number: DECON-POS-H002, Revision B

EL PASO ELECTRIC COMPANY, Applicant.	)	

DECLARATION OF LORI A. GLANDER IN SUPPORT OF THE FOREGOING DIRECT TESTIMONY TO THE APPLICATION OF EL PASO ELECTRIC COMPANY FOR REVISION OF ITS RETAIL ELECTRIC RATES PURSUANT TO ADVICE NOTICE NO. 317

I, ***Lori A. Glander***, pursuant to Rule 1-011 NMRA, state as follows:

1. I affirm in writing under penalty of perjury under the laws of the State of New Mexico that the following statements are true and correct.

2. I am over 18 years of age and have personal knowledge of the facts stated herein. I am employed by El Paso Electric Company ("EPE" or "the Company") as a *Consultant.*

3. The foregoing Direct Testimony of Lori A. Glander, together with all exhibits sponsored therein and attached thereto, is true and accurate based on my knowledge and belief.

4. I submit this Declaration, based upon my personal knowledge and upon information and belief, in support of EPE's ***Application for Revision of Its Retail Electric Rates Pursuant to Advice Notice No. 317.***

FURTHER, DECLARANT SAYETH NAUGHT.

I declare under penalty of perjury that the foregoing is true and correct.

Executed on March 27, 2026.

/s/ Lori A. Glander

Exhibit JJS-1 Statement of Qualifications

EL PASO ELECTRIC COMPANY
DIRECT TESTIMONY OF
JOHN J. SPANOS

I. INTRODUCTION AND QUALIFICATIONS

Q1. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is John J. Spanos. My business address is 300 Sterling Parkway, Mechanicsburg, Pennsylvania 17055 (formally 207 Senate Avenue, Camp Hill, Pennsylvania 17011).

Q2. ARE YOU ASSOCIATED WITH ANY FIRM?

A. Yes. I am associated with the firm of Gannett Fleming Valuation and Rate Consultants, LLC, a subsidiary of GFT Infrastructure, Inc ("Gannett Fleming").

Q3. HOW LONG HAVE YOU BEEN ASSOCIATED WITH GANNETT FLEMING?

A. I have been associated with the firm since June 1986.

Q4. WHAT IS YOUR POSITION WITH THE FIRM?

A. I am President.

Q5. ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS CASE?

A. I am testifying on behalf of El Paso Electric Company ("EPE" or the "Company").

Q6. PLEASE STATE YOUR QUALIFICATIONS.

A. I have over 39 years of depreciation experience, which includes giving expert testimony in more than 500 cases before 47 regulatory commissions, including the New Mexico Public Regulation Commission ("Commission"). These cases have included depreciation studies in the electric, gas, water, wastewater, and pipeline industries. In addition to cases where I have submitted testimony, I have also supervised over 900 other depreciation or valuation assignments. Please refer to Exhibit JJS-1 for my qualifications statement, which includes further information with respect to my work history, case experience, and leadership in the Society of Depreciation Professionals.

II. PURPOSE OF TESTIMONY AND SUMMARY OF EPE's DEPRECIATION STUDY

Q7. WHAT IS THE PURPOSE OF YOUR TESTIMONY IN THIS PROCEEDING?

A. I sponsor Schedule C-2, which is the depreciation study performed for EPE ("Depreciation Study"). The Depreciation Study sets forth the calculated annual depreciation accrual rates by account as of June 30, 2025. The proposed rates appropriately reflect the rates at which EPE's assets should be depreciated over their useful lives and are based on the most commonly used methods and procedures for determining depreciation rates in the regulated electric utility industry.

Q8. DID YOU PREPARE THE DEPRECIATION STUDY?

A. Yes. I prepared the Depreciation Study submitted by the Company with its filing in this proceeding. My report is entitled: "2025 Depreciation Study - Calculated Annual Depreciation Accruals Related to Electric Plant as of June 30, 2025."

Q9. IN PREPARING THE DEPRECIATION STUDY, DID YOU FOLLOW GENERALLY ACCEPTED PRACTICES IN THE FIELD OF DEPRECIATION VALUATION?

A. Yes.

Q10. CAN YOU SUMMARIZE THE RESULTING EFFECTS ON DEPRECIATION RATES BASED ON THE DEPRECIATION STUDY?

A. Yes. Table JJS-1 below sets forth a comparison of the currently approved depreciation rates and resultant expense to the proposed depreciation rates and expense by function as of June 30, 2025.

/

/

/

/

/

/

Table JJS-1

Function	Current Rates	Current Expense	Proposed Rates	Proposed Expense
Steam	3.51	$26,883,435	6.15	$47,033,879
Solar	5.19	78,836	3.37	51,185
Gas Turbine	3.18	19,145,453	4.91	29,515,540
Transmission	1.66	12,660,948	1.73	13,166,041
Distribution	2.11	43,181,925	2.41	49,403,917
Battery Storage	7.04	152,258	7.04	152,258
General	3.44	9,377,632	3.98	10,844,341
Total		$111,480,487		$150,166,161

Q11. CAN YOU EXPLAIN SOME OF THE MAJOR FACTORS THAT CAUSED THE CHANGE IN DEPRECIATION RATES?

A. Yes. The major components that caused rates to change by function are as follows:

- Steam Production Plant: The utilization of updated probable retirement dates for some generating facilities and the capital additions at many of the facilities caused the increased expense.
- Gas Turbine Plant: The utilization of shorter life spans for the Montana Power Station and Rio Grande Unit 9.
- Distribution Plant: The utilization of more negative net salvage percentages for Accounts 365, 368 and 369.
- General Plant: The primary factor is the capital additions for various accounts.

Q12. CAN YOU FURTHER EXPLAIN THE FACTORS THAT CAUSED CHANGES IN DEPRECIATION RATES BY FUNCTION?

A. Yes. The shorter life spans or probable retirement dates for some steam production plant and gas turbines relates to the matching recovery of the facilities to the regulations in New Mexico. There are no expected steam or gas facilities to stay in operation beyond 2045. The more negative net salvage percentages for distribution accounts 365, 368 and 369 reflect the labor effort required to replace or retire distribution assets in these accounts. The statistical analysis for these accounts supports the change. The increase for general plant is primarily the higher capital investment into Account 397.30, Communication Equipment, which reduced the reserve to plant ratio.

III. DEPRECIATION STUDY

Q13. PLEASE DEFINE THE CONCEPT OF DEPRECIATION.

A. Depreciation refers to the loss in service value not restored by current maintenance, incurred in connection with the consumption or prospective retirement of utility plant in the course of service from causes which are known to be current operations against which the Company is not protected by insurance. Among the causes to be given consideration are wear and tear, decay, action of the elements, inadequacy, obsolescence, changes in the art, changes in demand, and the requirements of public

regulatory authorities.

Q14. ARE THE METHODS AND PROCEDURES REFLECTED IN THE DEPRECIATION STUDY CONSISTENT WITH PAST PRACTICES?

A. The methods and procedures used to create this study are the same as those utilized in the 2019 study filed in Docket No. 20-00104-UT for the Company as well as others before this Commission. Depreciation rates are determined based on the average service life procedure and the remaining life method.

Q15. PLEASE DESCRIBE THE CONTENTS OF YOUR REPORT.

A. My report is presented in nine parts. Part I, Introduction, presents the scope and basis for the Depreciation Study. Part II, Estimation of Survivor Curves, includes descriptions of the methodology of estimating survivor curves. Parts III and IV set forth the analysis for determining life and net salvage estimation. Part V, Calculation of Annual and Accrued Depreciation, includes the concepts of depreciation and amortization using the remaining life. Part VI, Results of Study, presents a description of the results and a summary of the depreciation calculations. Parts VII, VIII, and IX include graphs and tables that relate to the service life and net salvage analyses, and the detailed depreciation calculations.

The table on pages VI-4 through VI-8 presents the estimated survivor curve, the net salvage percent, the original cost as of June 30, 2025, the book depreciation

reserve, and the calculated annual depreciation accrual and rate for each account or subaccount. The section beginning on page VII-2 presents the results of the retirement rate analyses prepared as the historical bases for the service life estimates. The section beginning on page VIII-2 presents the results of the salvage analysis. The section beginning on page IX-2 presents the depreciation calculations related to surviving original cost as of June 30, 2025.

Q16. PLEASE EXPLAIN HOW YOU PERFORMED YOUR DEPRECIATION STUDY.

A. I used the straight line remaining life method of depreciation, with the average service life procedure. The annual depreciation is based on a method of depreciation accounting that seeks to distribute the unrecovered cost of fixed capital assets over the estimated remaining useful life of each unit, or group of assets, in a systematic and reasonable manner.

For General Plant Accounts 391.00, 393.00, 394.00, 395.00, 397.30, and 398.00[1], I used the straight line remaining life method of amortization. The account numbers identified throughout my testimony represent those in effect for EPE as of June 30, 2025. The annual amortization is based on amortization accounting

[1] 391.00, Office Furniture and Equipment; 393.00, Stores Equipment; 394.00, Tools, Shop and Garage Equipment; 395.00, Laboratory Equipment; 397.30, Communication Equipment; 398.00, Miscellaneous Equipment.

that distributes the unrecovered cost of fixed capital assets over the remaining amortization period selected for each account and vintage.

Q17. HOW DID YOU DETERMINE THE RECOMMENDED ANNUAL DEPRECIATION ACCRUAL RATES?

A. I did this in two phases. In the first phase, I estimated the service life and net salvage characteristics for each depreciable group, that is, each plant account or subaccount identified as having similar characteristics. In the second phase, I calculated the composite remaining lives and annual depreciation accrual rates based on the service life and net salvage estimates determined in the first phase.

Q18. PLEASE DESCRIBE THE FIRST PHASE OF THE DEPRECIATION STUDY, IN WHICH YOU ESTIMATED THE SERVICE LIFE AND NET SALVAGE CHARACTERISTICS FOR EACH DEPRECIABLE GROUP.

A. The service life and net salvage study consisted of compiling historical data from records related to EPE's plant; analyzing the data to obtain historical trends of survivor characteristics; obtaining supplementary information from management and operating personnel concerning practices and plans as they relate to plant operations; and interpreting the above data and the estimates used by other regulated electric utilities to form judgments of average service life and net salvage

characteristics.

Q19. WHAT HISTORICAL DATA DID YOU ANALYZE FOR THE PURPOSE OF ESTIMATING SERVICE LIFE CHARACTERISTICS?

A. Generally speaking, I analyzed the Company's accounting entries that record plant transactions during the period of 1993 through 2023. The transactions included additions, retirements, transfers, sales, and the related balances.

Q20. WHAT METHOD DID YOU USE TO ANALYZE THESE SERVICE LIFE DATA?

A. I used the retirement rate method. The retirement rate method is a depreciation approach used primarily for large groups of similar assets, particularly common in utility companies and industries with extensive infrastructure. This is the most appropriate method when retirement data covering a long period of time is available because this method determines the average rates of retirement actually experienced by the Company during the period of time covered by the Depreciation Study.

Q21. HOW DID YOU USE THE RETIREMENT RATE METHOD TO ANALYZE THE COMPANY'S SERVICE LIFE DATA?

A. I applied the retirement rate analysis to each different group of property in the study.

For each property group, I used the retirement rate data to form a life table which, when plotted, shows an original survivor curve for that property group. Each original survivor curve represents the average survivor pattern experienced by the several vintage groups during the experience band studied. The survivor patterns do not necessarily describe the life characteristics of the property group; therefore, interpretation of the original survivor curves is required to use them as valid considerations in estimating service life. The Iowa-type survivor curves were used to perform these interpretations.

Q22. WHAT IS AN "IOWA-TYPE SURVIVOR CURVE" AND HOW DID YOU USE SUCH CURVES TO ESTIMATE THE SERVICE LIFE CHARACTERISTICS FOR EACH PROPERTY GROUP?

A. Iowa-type curves are a widely-used group of survivor curves that contain the range of survivor characteristics routinely experienced by utilities and other industrial companies. The Iowa curves were developed at the Iowa State College Engineering Experiment Station through an extensive process of observing and classifying the ages at which various types of property used by utilities and other industrial companies had been retired. The Iowa curves are universally utilized for determining life characteristics for utility property. Part II of the Depreciation Study details the Iowa curves and how they are developed.

Iowa-type curves are used to smooth and extrapolate original survivor curves determined by the retirement rate method. The Iowa curves and truncated Iowa curves were used in this study to describe the forecasted rates of retirement based on the observed rates of retirement and the outlook for future retirements.

The estimated survivor curve designations for each depreciable property group indicate the average service life, the family within the Iowa system to which the property group belongs, and the relative height of the mode. For example, the Iowa 65-R2.5 indicates an average service life of sixty-five years; a right-moded, or R, type curve (the mode occurs after average life for right-moded curves); and a moderate height, 2.5, for the mode (possible modes for R type curves range from) 5 to 5).

Q23. WHAT APPROACH DID YOU USE TO ESTIMATE THE LIVES OF SIGNIFICANT FACILITIES SUCH AS PRODUCTION PLANTS?

A. I used the life span technique to estimate the lives of significant facilities for which concurrent retirement of the entire facility is anticipated. In this technique, the survivor characteristics of such facilities are described using interim survivor curves and estimated probable retirement dates. The interim survivor curves describe the rate of retirement related to the replacement of elements of the facility, such as, for a building, the retirements of plumbing, heating, doors, windows, roofs,

etc., that occur during the life of the facility. The probable retirement date provides the rate of final retirement for each year of installation for the facility by truncating the interim survivor curve for each installation year at its attained age at the date of probable retirement. The use of interim survivor curves truncated at the date of probable retirement provides a consistent method for estimating the lives of the several years of installation for a particular facility inasmuch as a single concurrent retirement for all years of installation will occur when it is retired.

Q24. HAS GANNETT FLEMING USED THIS APPROACH IN OTHER PROCEEDINGS?

A. Yes, we have used the life span technique in performing depreciation studies presented to and accepted by many public utility commissions across the United States and Canada, including this Commission. This technique is currently being utilized by EPE in the same manner in this case as in the 2019 Study and the rates approved by this Commission.

Q25. WHAT ARE THE BASES FOR THE PROBABLE RETIREMENT YEARS THAT YOU HAVE ESTIMATED FOR EACH FACILITY?

A. The probable retirement years are life spans for each facility that are estimated based on informed judgment that incorporates a consideration of the age, use, size, nature of construction, management outlook, regulations within the state

jurisdiction, and typical life spans experienced and used by other electric utilities for similar facilities. Most of the life spans result in probable retirement years that are many years in the future. As a result, the retirements of these facilities are not yet subject to specific management plans. Such plans would be premature. At the appropriate time, detailed studies of the economics of rehabilitation and continued use or retirement of the structure will be performed and the results incorporated in the estimation of the facility's life span.

Q26. HAVE SOME OF THE PROBABLE RETIREMENT DATES FOR GENERATING UNITS CHANGED SINCE THE 2019 DEPRECIATION STUDY?

A. Yes. Some of the probable retirement dates have changed for some of the older generating units due to revisions in Company plans. Also, some have been shortened to reflect the statutory requirements in New Mexico. EPE witness George Novela discusses the statutory requirements in New Mexico. However, shortening of life spans for generating facilities is a trend throughout the industry. The updated probable retirement dates were discussed with management to ensure these decisions were consistent with industry expectations.

Q27. DID YOU PHYSICALLY OBSERVE EPE'S PLANT AND EQUIPMENT AS PART OF YOUR DEPRECIATION STUDY?

A. Yes. My most recent field review of the Company's property as part of this study was made in October 2024 to observe representative portions of plant. Previous field reviews have been conducted in February 2020, August 2014, February 2009 and February 2003. Field reviews are conducted to become familiar with company operations and to obtain an understanding of the function of the plant and information with respect to the reasons for past retirements and the expected future causes of retirements. This knowledge, as well as information from other discussions with management, was incorporated in the interpretation and extrapolation of the statistical analyses.

Q28. WOULD YOU EXPLAIN THE CONCEPT OF "NET SALVAGE"?

A. Net salvage is a component of the service value of capital assets that is reflected in depreciation rates. The service value of an asset is its original cost less its net salvage. Net salvage is the salvage value received for the asset upon retirement less the cost to retire the asset. When the cost to retire exceeds the salvage value, the result is negative net salvage.

Inasmuch as depreciation expense is the loss in service value of an asset during a defined period, e.g., one year, it must include a ratable portion of both the original cost and the net salvage. That is, the net salvage related to an asset

should be incorporated in the cost of service during the same period as its original cost so that customers receiving service from the asset pay rates that include a portion of both elements of the asset's service value, the original cost, and the net salvage value.

For example, the full recovery of the service value of a $10,000 line transformer includes not only the $10,000 of original cost, but also, on average, $2,600 to remove the transformer at the end of its life and $100 in salvage value. In this example, the net salvage component is negative $2,500 ($100 - $2,600), and the net salvage percent is negative 25% (($100 - $2,600)/$10,000).

Q29. HOW DID YOU ESTIMATE NET SALVAGE PERCENTAGES?

A. I estimated the net salvage percentages by reviewing the Company's account specific historical salvage and cost of removal data for the period 1993 through 2023 as a percentage of the associated retired plant as well as considering industry experience in terms of net salvage estimates for other electric companies.

Q30. WERE THE NET SALVAGE PERCENTAGES FOR GENERATING FACILITIES BASED ON THE SAME ANALYSES?

A. Yes, for the interim net salvage estimates. The net salvage percentages for generating facilities were based on two components, the interim net salvage

percentage and the final net salvage percentage. The interim net salvage percentage is determined based on the historical indications from the period 1993 to 2023 of the cost of removal and gross salvage amounts as a percentage of the associated plant retired. The final net salvage or dismantlement component was determined based on the retirement activities associated with the assets anticipated to be retired at the concurrent date of final retirement.

Q31. HAVE YOU INCLUDED A DISMANTLEMENT OR DECOMMISSIONING COMPONENT INTO THE OVERALL RECOVERY OF GENERATING FACILITIES?

A. Yes. For clarity, a dismantlement or decommissioning component refers to the estimated future costs of taking apart, removing, or cleaning up an asset at the end of its useful life, which are included in the asset's initial cost and depreciated over its lifetime. A dismantlement or decommissioning component has been included in the net salvage percentage for steam and other production facilities.

Q32. CAN YOU EXPLAIN HOW THE FINAL NET SALVAGE COMPONENT IS INCLUDED IN THE DEPRECIATION STUDY?

A. Yes. The dismantlement component is part of the overall net salvage for each location within the production assets. Based on studies for other utilities, it was determined that the dismantlement or decommissioning costs for steam and other

production facilities is best calculated by dividing the dismantlement cost by the surviving plant at final retirement. These amounts at a location basis are added to the interim net salvage percentage of the assets anticipated to be retired on an interim basis to produce the weighted net salvage percentage for each location. The calculation of terminal and interim retirements as a percentage of plant by location is set forth in Table 2, page VIII-2 of the Depreciation Study. The detailed calculations of the overall net salvage for each location or unit is set forth on Table 3 in Column 6, page VIII-3 of the Depreciation Study.

Q33. PLEASE DESCRIBE THE SECOND PHASE OF THE PROCESS THAT YOU USED IN THE DEPRECIATION STUDY IN WHICH YOU CALCULATED COMPOSITE REMAINING LIVES AND ANNUAL DEPRECIATION ACCRUAL RATES.

A. After I estimated the service life and net salvage characteristics for each depreciable property group, I calculated the annual depreciation accrual rates for each group, using the straight line remaining life method, and using remaining lives weighted consistent with the average service life procedure.

Q34. PLEASE DESCRIBE THE STRAIGHT-LINE REMAINING LIFE METHOD OF DEPRECIATION.

A. The straight line remaining life method of depreciation allocates the original cost of the property, less accumulated depreciation, less future net salvage, in equal amounts to each year of remaining service life.

Q35. PLEASE DESCRIBE AMORTIZATION ACCOUNTING.

A. In amortization accounting, units of property are capitalized in the same manner as they are in depreciation accounting. Amortization accounting is used for accounts with a large number of units, but small asset values. Depreciation accounting is difficult for these assets because periodic inventories are required to properly reflect plant in service. Consequently, retirements are recorded when a vintage is fully amortized rather than as the individual units are removed from service. That is, there is no dispersion of retirements. All units are retired when the age of the vintage reaches the amortization period. Each plant account or group of assets is assigned a fixed period which represents an anticipated life during which the asset will render full benefit. For example, in amortization accounting, assets that have a 15-year amortization period will be fully recovered after 15 years of service and taken off the Company's books but not necessarily removed from service. In contrast, assets that are taken out of service before 15 years remain on the books until the amortization period for that vintage has expired.

Q36. FOR WHICH PLANT ACCOUNTS IS AMORTIZATION ACCOUNTING BEING UTILIZED?

A. Amortization accounting is only appropriate for certain General Plant accounts. These accounts are 391.00, 393.00, 394.00, 395.00, 397.30 and 398.00. These accounts represent slightly more than 1 percent of the Company's depreciable plant. The concept of amortization accounting and why certain general plant accounts are most appropriately recovered through this methodology are discussed in Part V of the Depreciation Study.

Q37. PLEASE USE AN EXAMPLE TO ILLUSTRATE HOW THE ANNUAL DEPRECIATION ACCRUAL RATE FOR A PARTICULAR GROUP OF PROPERTY IS PRESENTED IN YOUR DEPRECIATION STUDY.

A. I will use Account 368.00, Line Transformers, as an example because it is one of the largest depreciable mass accounts and represents approximately nine percent of depreciable plant.

The retirement rate method was used to analyze the survivor characteristics of this property group. Aged plant accounting data was compiled from 1993 through 2023 and analyzed in periods that best represent the overall service life of this property. The life table for the 1993-2023 experience band is presented on pages VII-86 through VII-88 of the Depreciation Study. The life table displays

the retirement and surviving ratios of the aged plant data exposed to retirement by age interval.

For example, page VII-86 shows $117,542 retired at age 0.5 with $298,474,421 exposed to retirement. Consequently, the retirement ratio is 0.0004 and the surviving ratio is 0.9996. This life table, or original survivor curve, is plotted along with the estimated smooth survivor curve, the 51-R3, on page VII-85. The net salvage percent is presented on pages VIII-43 and VIII-44. The percentage is based on the result of annual gross salvage minus the cost to remove plant assets as compared to the original cost of plant retired during the period 1993 through 2023. The 31-year period experienced $4,643,183 ($2,9,14,456 - $7,557,640) in net salvage for $20,613,350 plant retired. The result is negative net salvage of 23 percent ($4,643,183/$20,613,350) and the most recent five-year result is negative net salvage of 44 percent. Therefore, based on industry ranges, historical indications of these assets and Company expectations, I determined that negative 25 percent was the most appropriate estimate for this account. My calculation of the annual depreciation related to the original cost as of June 30, 2025 of electric plant is presented on pages IX-98 through IX-100.

The calculation is based on the 51-R3 survivor curve, 25 percent negative net salvage, the attained age, and the allocated book reserve. The tabulation sets forth the installation year, the original cost, calculated accrued depreciation,

allocated book reserve, future accruals, remaining life, and annual accrual. These totals are brought forward to the table on page VI-7.

IV. CONCLUSION

Q38. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes.

2025 DEPRECIATION STUDY

Attention Cynthia S. Prieto
Vice President - Controller

Ladies and Gentlemen:

Pursuant to your request, we have conducted a depreciation study related to the electric plant of El Paso Electric Company as of June 30, 2025. The attached report presents a description of the methods used in the estimation of depreciation, the summary of annual depreciation accrual rates, the statistical support for the service life and net salvage estimates and the detailed tabulations of annual depreciation.

We gratefully acknowledge the assistance of El Paso Electric personnel in the conduct of this study.

Respectfully submitted,

EL PASO ELECTRIC COMPANY
DEPRECIATION STUDY
EXECUTIVE SUMMARY

Pursuant to El Paso Electric Company's ("El Paso" or "Company") request, Gannett Fleming Valuation and Rate Consultants, LLC ("Gannett Fleming") conducted a depreciation study related to the electric plant as of June 30, 2025. The purpose of this study was to determine the annual depreciation accrual rates and amounts for book and ratemaking purposes.

The depreciation rates are based on the straight line method using the average service life ("ASL") procedure and were applied on a remaining life basis. The calculations were based on attained ages and estimated average service life, and net salvage characteristics for each depreciable group of assets.

El Paso's accounting policy has not changed since the last depreciation study was prepared. However, there has been change in expected life spans of generating facilities, recording retirements of assets as well as the associated cost of removal and gross salvage. These changes have caused the proposed depreciation rates in the depreciation study to change from those currently-approved from the last depreciation study as of December 31, 2019.

Gannett Fleming recommends the calculated annual depreciation accrual rates set forth herein apply specifically to electric plant in service as of June 30, 2025 as summarized by Table 1 of the study. Supporting analysis and calculations are provided within the study.

The study results set forth an annual depreciation expense of $150.2 million when applied to depreciable plant balances as of June 30, 2025. The results are summarized at the functional level as follows:

SUMMARY OF ORIGINAL COST, ACCRUAL RATES AND AMOUNTS

FUNCTION	ORIGINAL COST AS OF JUNE 30, 2025	PROPOSED RATE	PROPOSED EXPENSE
Steam Production Plant	$765,032,283.77	6.15	$47,033,879
Solar Production Plant	1,517,692.12	3.37	51,185
Gas Turbine Plant	601,728,933.87	4.91	29,515,540
Transmission Plant	762,294,706.38	1.73	13,166,041
Distribution Plant	2,046,799,670.24	2.41	49,402,917
Battery Storage Plant	2,162,780.21	7.04	152,258
General Plant	272,473,740.15	3.98	10,844,341
Total	**$4,452,009,806.74**	**3.37**	**$150,166,161**

PART I. INTRODUCTION

EL PASO ELECTRIC COMPANY
DEPRECIATION STUDY

PART I. INTRODUCTION

SCOPE

This report sets forth the results of the depreciation study for El Paso Electric Company ("El Paso"), to determine the annual depreciation accrual rates and amounts for book purposes applicable to the original cost of electric plant as of June 30, 2025. The rates and amounts are based on the straight line remaining life method of depreciation. This report also describes the concepts, methods and judgments which underlie the recommended annual depreciation accrual rates related to electric plant in service as of June 30, 2025.

The service life and net salvage estimates resulting from the study were based on informed judgment which incorporated analyses of historical plant retirement data as recorded through 2023, a review of Company practice and outlook as they relate to plant operation and retirement, and consideration of current practice in the electric industry, including knowledge of service lives and net salvage estimates used for other electric companies.

PLAN OF REPORT

Part I, Introduction, contains statements with respect to the plan of the report, and the basis of the study. Part II, Estimation of Survivor Curves, presents descriptions of the considerations and the methods used in the service life and net salvage studies. Part III, Service Life Considerations, presents the factors and judgment utilized in the average service life analysis. Part IV, Net Salvage Considerations, presents the judgment utilized for the net salvage study. Part V, Calculation of Annual and Accrued Depreciation, describes the procedures used in the calculation of group depreciation.

Part VI, Results of Study, presents summaries by depreciable group of annual depreciation accrual rates and amounts, as well as composite remaining lives. Part VII, Service Life Statistics presents the statistical analysis of service life estimates, Part VIII, Net Salvage Statistics sets forth the statistical indications of net salvage percents, and Part IX, Detailed Depreciation Calculations presents the detailed tabulations of annual depreciation.

BASIS OF THE STUDY

Depreciation

Depreciation, in public utility regulation, is the loss in service value not restored by current maintenance, incurred in connection with the consumption or prospective retirement of utility plant in the course of service from causes which are known to be in current operation and against which the utility is not protected by insurance. Among causes to be given consideration are wear and tear, deterioration, action of the elements, inadequacy, obsolescence, changes in the art, changes in demand, and the requirements of public authorities.

Depreciation, as used in accounting, is a method of distributing fixed capital costs, less net salvage, over a period of time by allocating annual amounts to expense. Each annual amount of such depreciation expense is part of that year's total cost of providing electric utility service. Normally, the period of time over which the fixed capital cost is allocated to the cost of service is equal to the period of time over which an item renders service, that is, the item's service life. The most prevalent method of allocation is to distribute an equal amount of cost to each year of service life. This method is known as the straight line method of depreciation.

For most accounts, the annual depreciation was calculated by the straight line method using the average service life procedure and the remaining life basis. For

certain General Plant accounts, the annual depreciation is based on amortization accounting. Both types of calculations were based on original cost, attained ages, and estimates of service lives and net salvage.

The straight line method, average service life procedure is a commonly used depreciation calculation procedure that has been widely accepted in jurisdictions throughout North America. Gannett Fleming recommends its continued use. Amortization accounting is used for certain General Plant accounts because of the disproportionate plant accounting effort required when compared to the minimal original cost of the large number of items in these accounts. An explanation of the calculation of annual and accrued amortization is presented beginning on page V-4 of the report.

Service Life and Net Salvage Estimates

The service life and net salvage estimates used in the depreciation and amortization calculations were based on informed judgment which incorporated a review of management's plans, policies and outlook, a general knowledge of the electric utility industry, and comparisons of the service life and net salvage estimates from our studies of other electric utilities. The use of survivor curves to reflect the expected dispersion of retirement provides a consistent method of estimating depreciation for electric plant. Iowa type survivor curves were used to depict the estimated survivor curves for the plant accounts not subject to amortization accounting.

The procedure for estimating service lives consisted of compiling historical data for the plant accounts or depreciable groups, analyzing this history through the use of widely accepted techniques, and forecasting the survivor characteristics for each depreciable group on the basis of interpretations of the historical data analyses and the probable future. The combination of the historical experience and the estimated future yielded estimated survivor curves from which the average service lives were derived.

PART II. ESTIMATION OF SURVIVOR CURVES

PART II. ESTIMATION OF SURVIVOR CURVES

The calculation of annual depreciation based on the straight line method requires the estimation of survivor curves and the selection of group depreciation procedures. The estimation of survivor curves is discussed below and the development of net salvage is discussed in later sections of this report.

SURVIVOR CURVES

The use of an average service life for a property group implies that the various units in the group have different lives. Thus, the average life may be obtained by determining the separate lives of each of the units or by constructing a survivor curve by plotting the number of units which survive at successive ages.

The survivor curve graphically depicts the amount of property existing at each age throughout the life of an original group. From the survivor curve, the average life of the group, the remaining life expectancy, the probable life, and the frequency curve can be calculated. In Figure 1, a typical smooth survivor curve and the derived curves are illustrated. The average life is obtained by calculating the area under the survivor curve, from age zero to the maximum age, and dividing this area by the ordinate at age zero. The remaining life expectancy at any age can be calculated by obtaining the area under the curve, from the observation age to the maximum age, and dividing this area by the percent surviving at the observation age. For example, in Figure 1, the remaining life at age 30 is equal to the crosshatched area under the survivor curve divided by 29.5 percent surviving at age 30. The probable life at any age is developed by adding the age and remaining life. If the probable life of the property is calculated for each year of age, the probable life curve shown in the chart can be developed. The frequency curve presents the number of units retired in each age interval. It is derived by obtaining the differences between the amount of property surviving at the beginning and at the end of each interval.

This study has incorporated the use of Iowa curves developed from a retirement rate analysis of historical retirement history. A discussion of the concepts of survivor curves and of the development of survivor curves using the retirement rate method is presented below.

Iowa Type Curves

The range of survivor characteristics usually experienced by utility and industrial properties is encompassed by a system of generalized survivor curves known as the Iowa type curves. There are four families in the Iowa system, labeled in accordance with the location of the modes of the retirements (or the portion of the frequency curve with the highest level of retirements) in relationship to the average life and the relative height of the modes. The left moded curves, presented in Figure 2, are those in which the greatest frequency of retirement occurs to the left of, or prior to, average service life. The symmetrical moded curves, presented in Figure 3, are those in which the greatest frequency of retirement occurs at average service life. The right moded curves, presented in Figure 4, are those in which the greatest frequency occurs to the right of, or after, average service life. The origin moded curves, presented in Figure 5, are those in which the greatest frequency of retirement occurs at the origin, or immediately after age zero. The letter designation of each family of curves (L, S, R or O) represents the location of the mode of the associated frequency curve with respect to the average service life. The numbers represent the relative heights of the modes of the frequency curves within each family. A higher number designates a higher mode curve.

The Iowa curves were developed at the Iowa State College Engineering Experiment Station through an extensive process of observation and classification of the ages at which industrial property had been retired. A report of the study which resulted in the classification of property survivor characteristics into 18 type curves, which constitute three of the four families, was published in 1935 in the form of the Experiment Station's Bulletin 125.

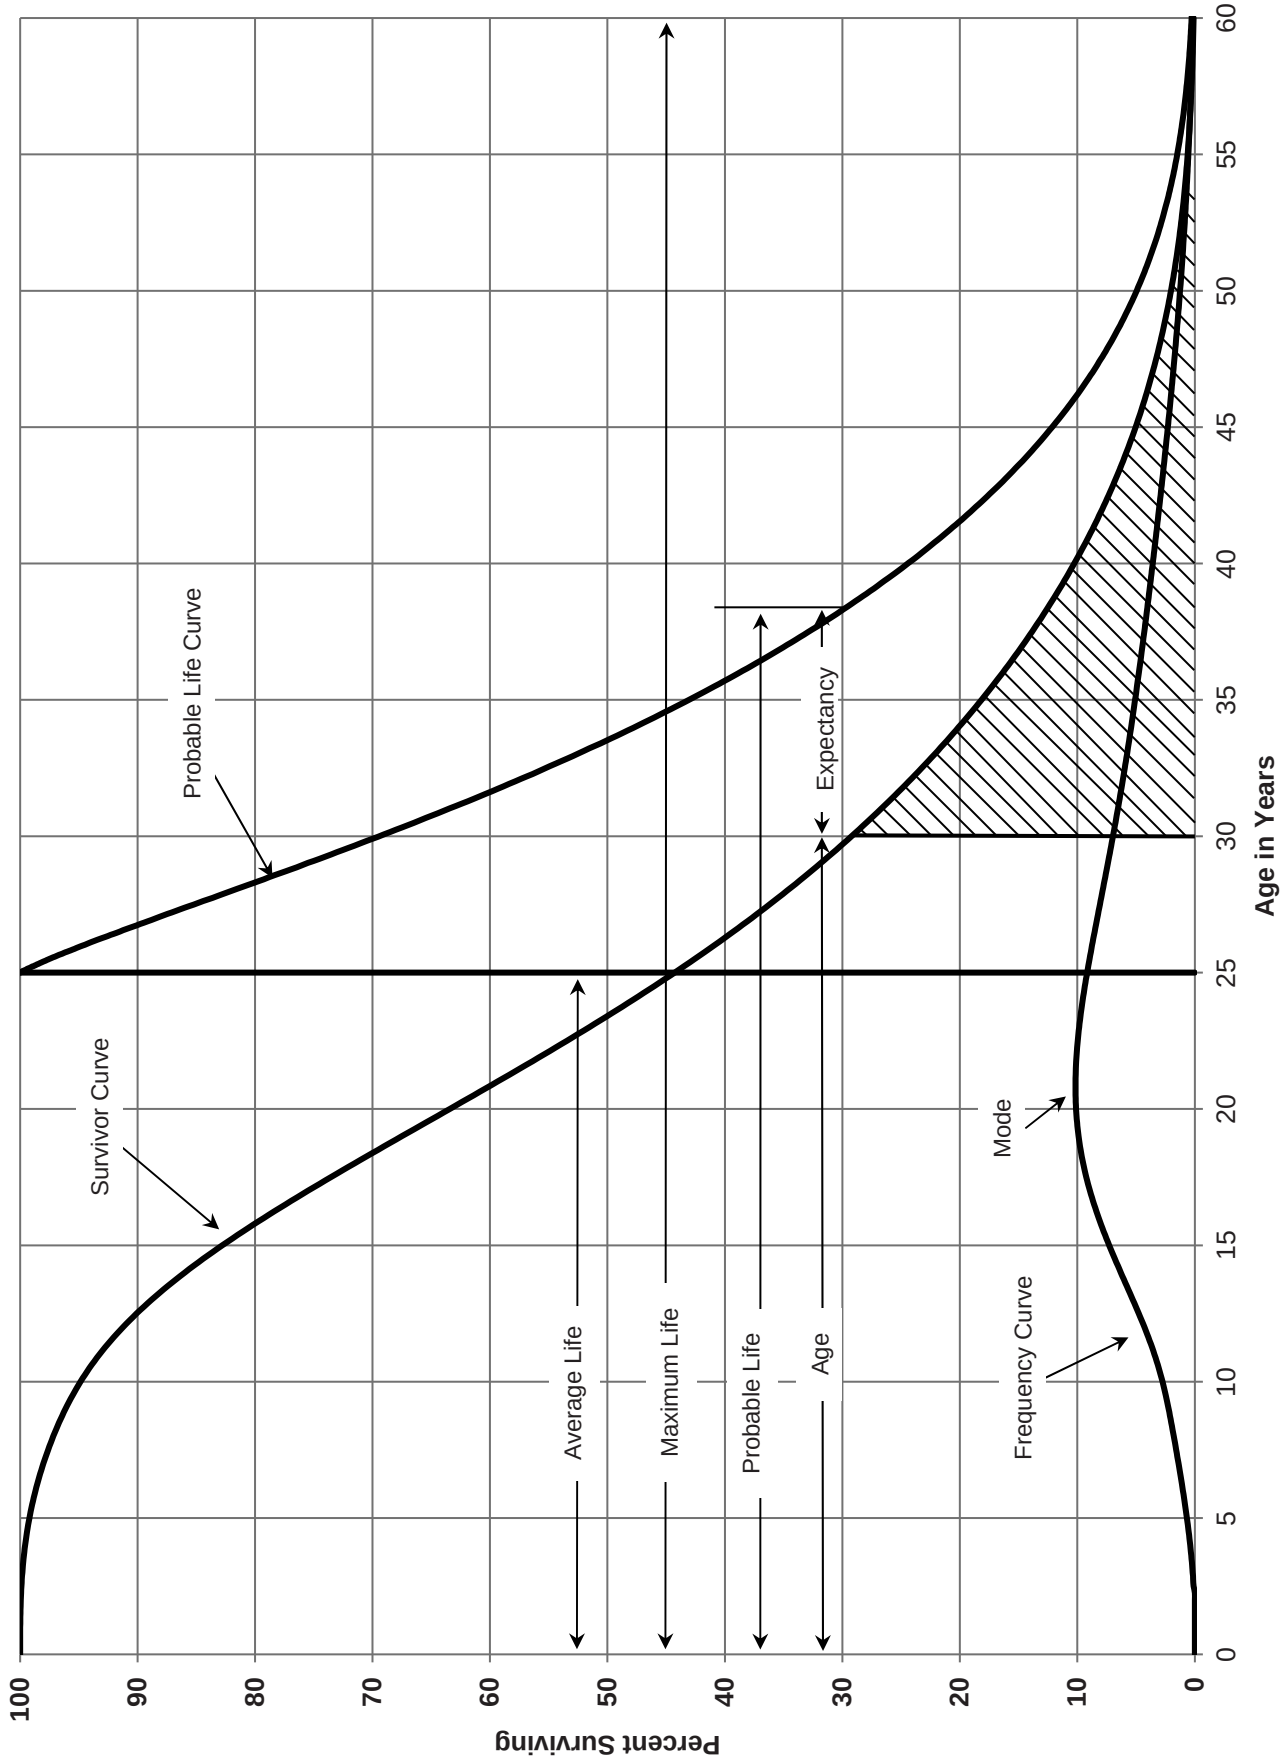

FIGURE 1. TYPICAL SURVIVOR CURVE AND DERIVED CURVES

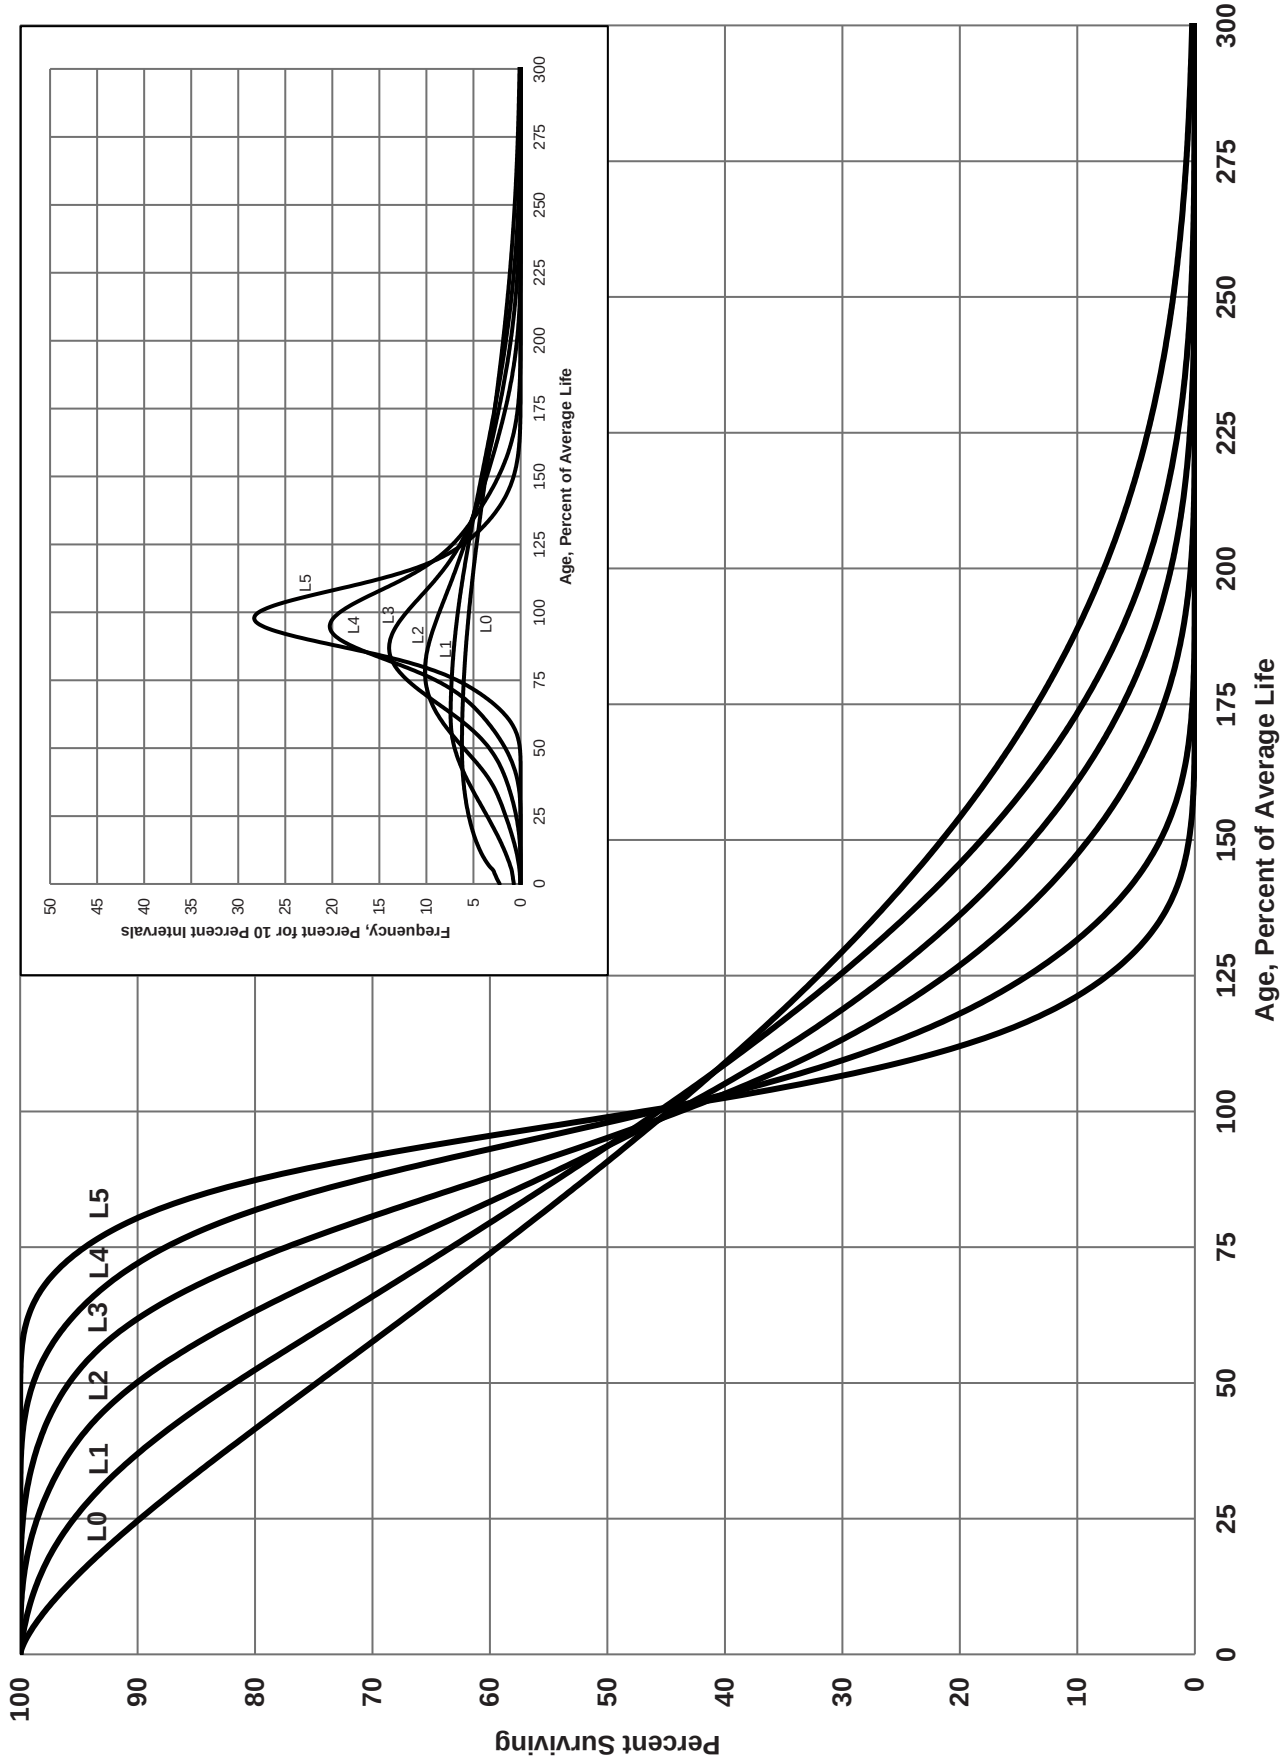

FIGURE 2. LEFT MODAL OR "L" IOWA TYPE SURVIVOR CURVES

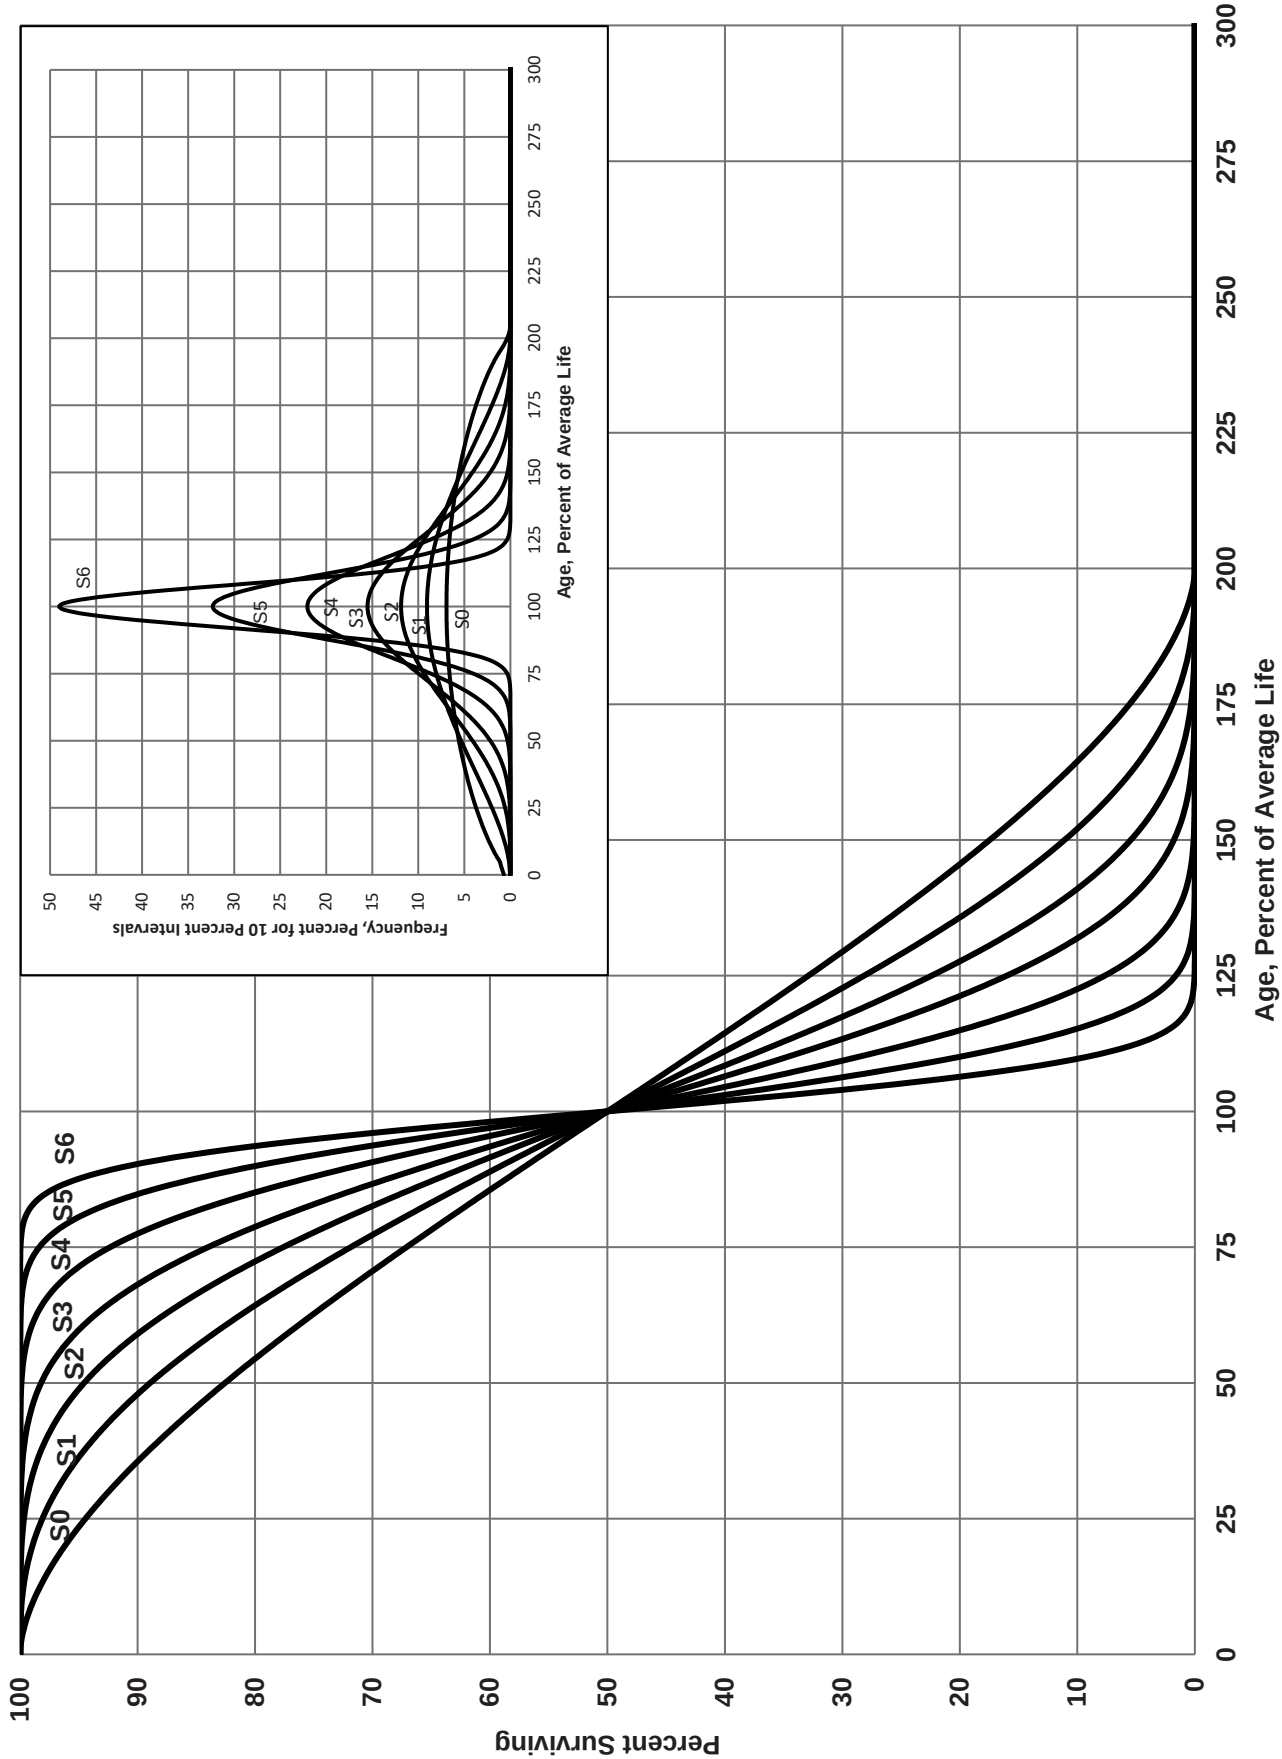

FIGURE 3. SYMMETRICAL OR "S" IOWA TYPE SURVIVOR CURVES

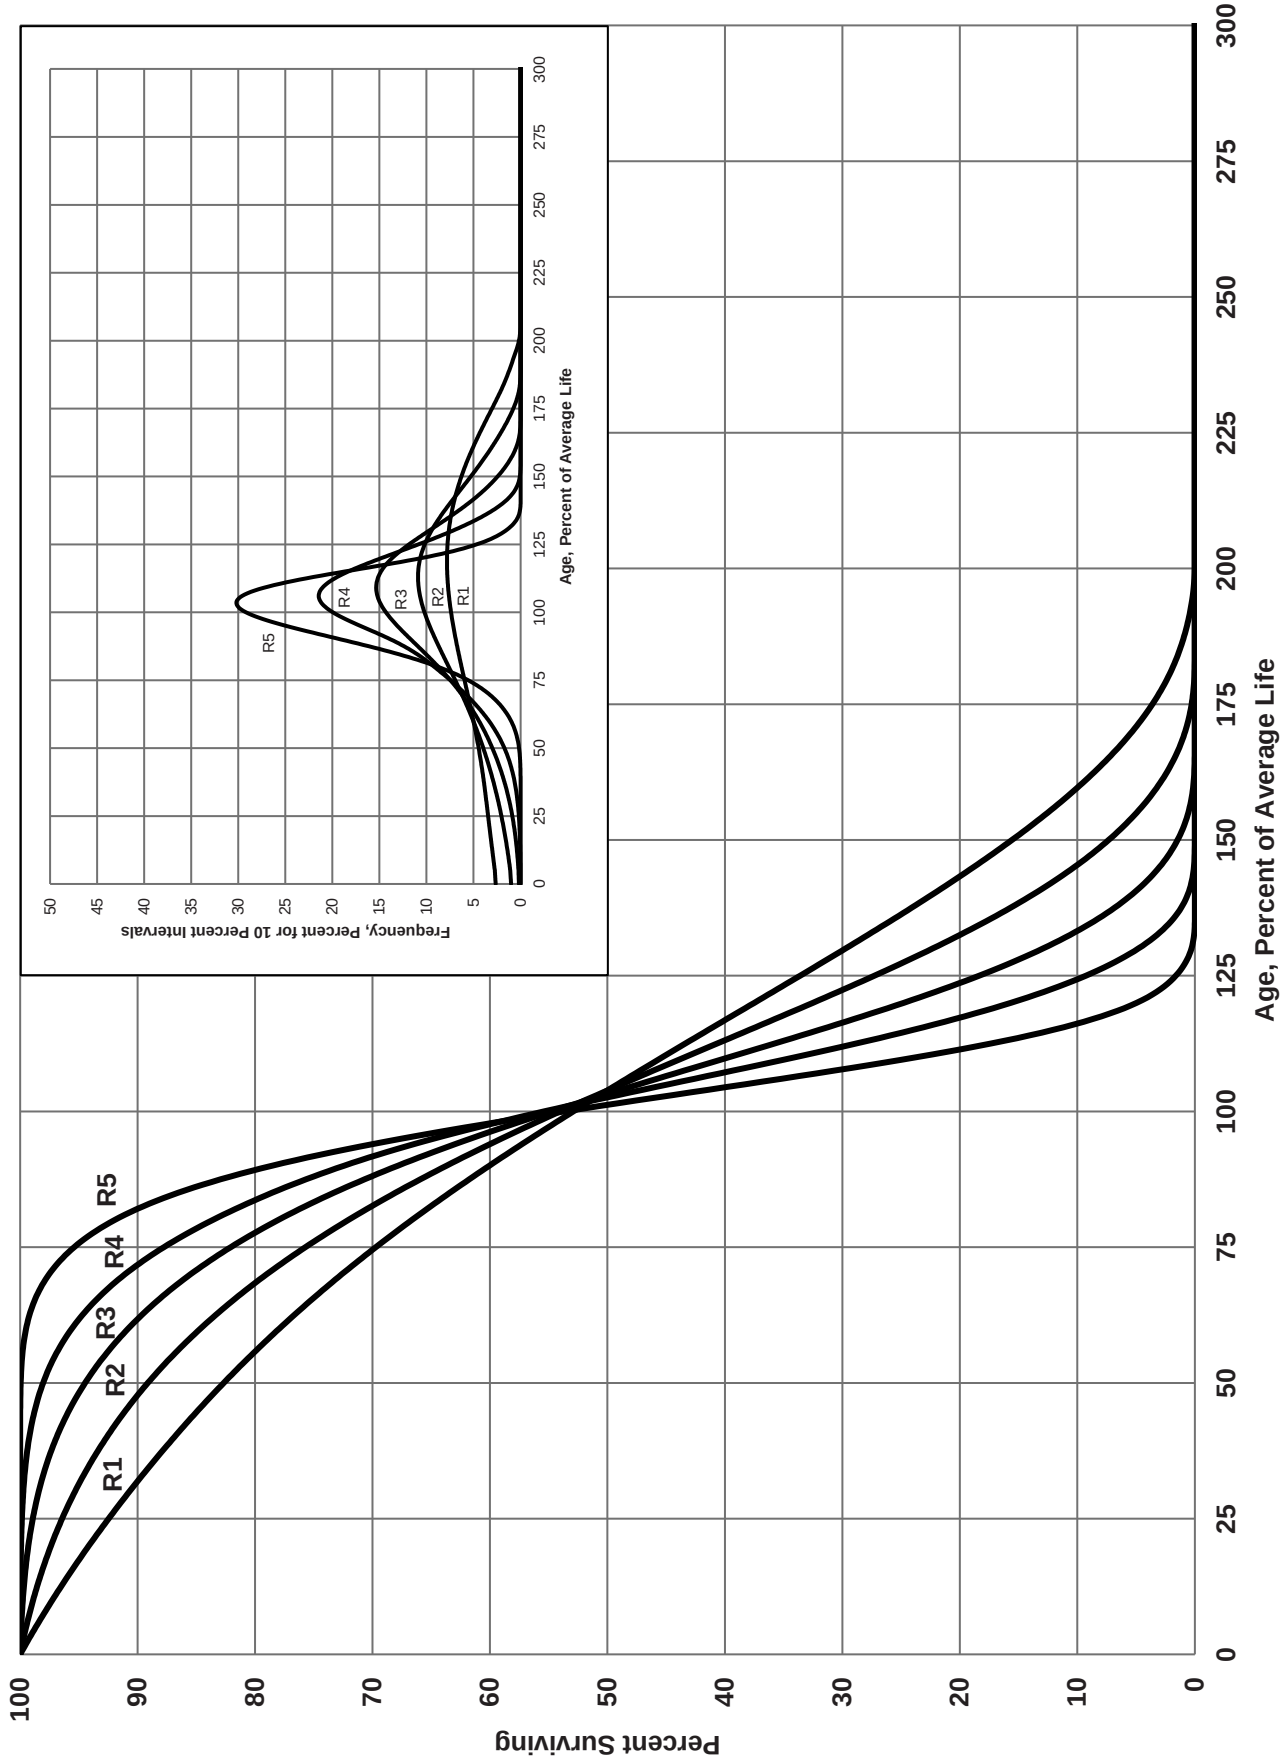

FIGURE 4. RIGHT MODAL OR "R" IOWA TYPE SURVIVOR CURVES

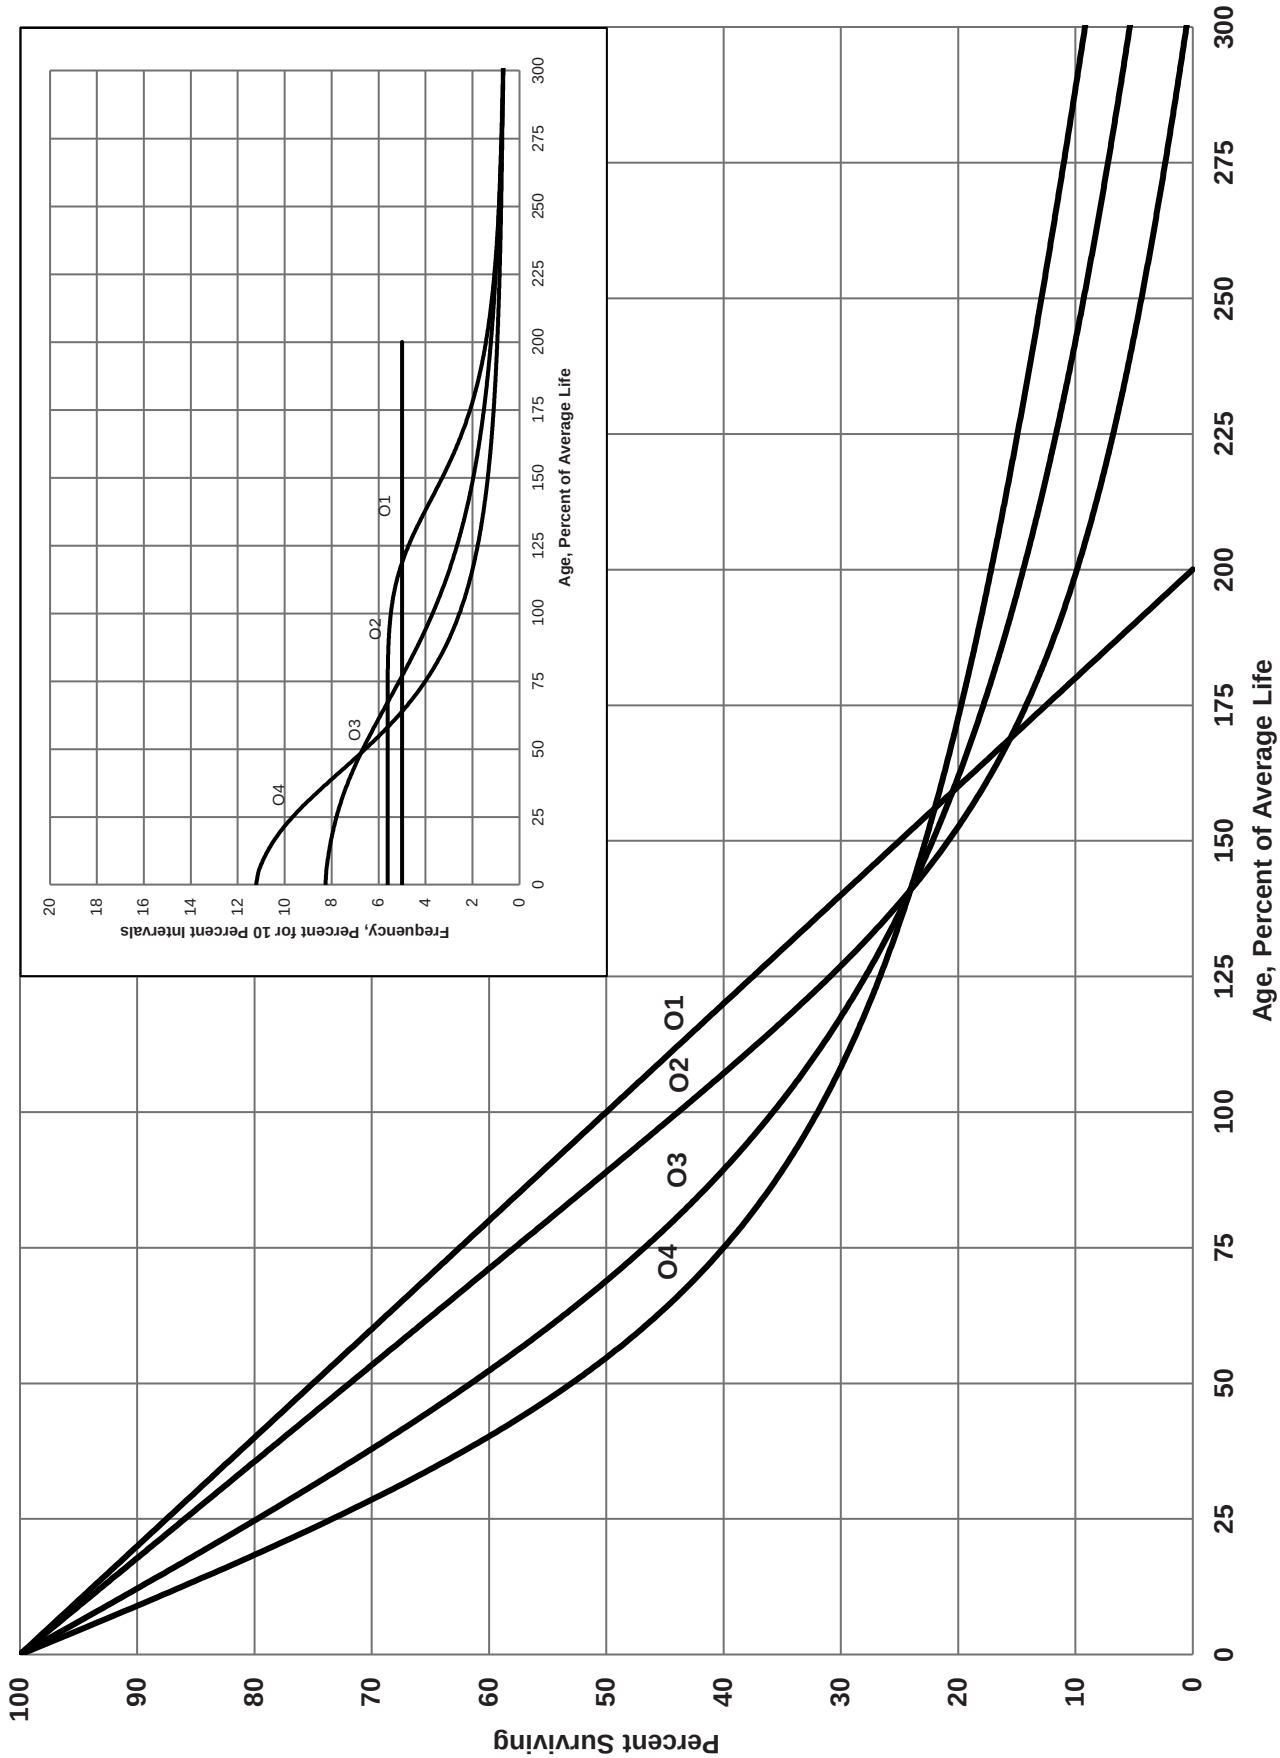

FIGURE 5. ORIGIN MODAL OR "O" IOWA TYPE SURVIVOR CURVES

These curve types have also been presented in subsequent Experiment Station bulletins and in the text, "Engineering Valuation and Depreciation."[1] In 1957, Frank V. B. Couch, Jr., an Iowa State College graduate student, submitted a thesis presenting his development of the fourth family consisting of the four O type survivor curves.

Retirement Rate Method of Analysis

The retirement rate method is an actuarial method of deriving survivor curves using the average rates at which property of each age group is retired. The method relates to property groups for which aged accounting experience is available and is the method used to develop the original stub survivor curves in this study. The method (also known as the annual rate method) is illustrated through the use of an example in the following text and is also explained in several publications including "Statistical Analyses of Industrial Property Retirements,"[2] "Engineering Valuation and Depreciation,"[3] and "Depreciation Systems."[4]

The average rate of retirement used in the calculation of the percent surviving for the survivor curve (life table) requires two sets of data: first, the property retired during a period of observation, identified by the property's age at retirement; and second, the property exposed to retirement at the beginning of the age intervals during the same period. The period of observation is referred to as the experience band. The band of years which represent the installation dates of the property exposed to retirement during the experience band is referred to as the placement band. An example of the calculations used in the development of a life table follows. The example includes schedules of annual aged property transactions, a schedule of plant exposed to retirement, a life table and illustrations of smoothing the stub survivor curve.

Schedules of Annual Transactions in Plant Records

The property group used to illustrate the retirement rate method is observed for the experience band 2014-2023 for which there were placements during the years 2009-2023. In order to illustrate the summation of the aged data by age interval, the data were compiled in the manner presented in Schedules 1 and 2 on pages II-11 and II-12. In Schedule 1, the year of installation (year placed) and the year of retirement are shown. The age interval during which a retirement occurred is determined from this information. In the example which follows, $10,000 of the dollars invested in 2009 were retired in 2014. The $10,000 retirement occurred during the age interval between 4½ and 5½ years on the basis that approximately one-half of the amount of property was installed prior to and subsequent to July 1 of each year. That is, on the average, property installed during a year is placed in service at the midpoint of the year for the purpose of the analysis. All retirements also are stated as occurring at the midpoint of a one-year age interval of time, except the first age interval which encompasses only one-half year.

The total retirements occurring in each age interval in a band are determined by summing the amounts for each transaction year-installation year combination for that age interval. For example, the total of $143,000 retired for age interval 4½-5½ is the sum of the retirements entered on Schedule 1 immediately above the stair step line drawn on the table beginning with the 2014 retirements of 2009 installations and ending with the 2023 retirements of the 2018 installations. Thus, the total amount of 143 for age interval 4½-5½ equals the sum of:

10 + 12 + 13 + 11 + 13 + 13 + 15 + 17 + 19 + 20.

SCHEDULE 1. RETIREMENTS FOR EACH YEAR 2014-2023
SUMMARIZED BY AGE INTERVAL

Experience Band 2014-2023

Placement Band 2009-2023

Year Placed	Retirements, Thousands of Dollars During Year										Total During Age Interval	Age Interval
	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023		
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12)	(13)
2009	10	11	12	13	14	16	23	24	25	26	26	13½-14½
2010	11	12	13	15	16	18	20	21	22	19	44	12½-13½
2011	11	12	13	14	16	17	19	21	22	18	64	11½-12½

[a] Transfer Affecting Exposures at Beginning of Year
[b] Transfer Affecting Exposures at End of Year
[c] Sale with Continued Use
Parentheses Denote Credit Amount.

In Schedule 2, other transactions which affect the group are recorded in a similar manner. The entries illustrated include transfers and sales. The entries which are credits to the plant account are shown in parentheses. The items recorded on this schedule are not totaled with the retirements, but are used in developing the exposures at the beginning of each age interval.

Schedule of Plant Exposed to Retirement

The development of the amount of plant exposed to retirement at the beginning of each age interval is illustrated in Schedule 3 on page II-14. The surviving plant at the beginning of each year from 2014 through 2023 is recorded by year in the portion of the table headed "Annual Survivors at the Beginning of the Year." The last amount entered in each column is the amount of new plant added to the group during the year. The amounts entered in Schedule 3 for each successive year following the beginning balance or addition are obtained by adding or subtracting the net entries shown on Schedules 1 and 2. For the purpose of determining the plant exposed to retirement, transfers-in are considered as being exposed to retirement in this group at the beginning of the year in which they occurred, and the sales and transfers-out are considered to be removed from the plant exposed to retirement at the beginning of the following year. Thus, the amounts of plant shown at the beginning of each year are the amounts of plant from each placement year considered to be exposed to retirement at the beginning of each successive transaction year. For example, the exposures for the installation year 2019 are calculated in the following manner:

Exposures at age 0	= amount of addition	= $750,000
Exposures at age ½	= $750,000 - $ 8,000	= $742,000
Exposures at age 1½	= $742,000 - $18,000	= $724,000
Exposures at age 2½	= $724,000 - $20,000 - $19,000	= $685,000
Exposures at age 3½	= $685,000 - $22,000	= $663,000

SCHEDULE 3. PLANT EXPOSED TO RETIREMENT
JANUARY 1 OF EACH YEAR 2014-2023
SUMMARIZED BY AGE INTERVAL

Experience Band 2014-2023

Placement Band 2009-2023

Year Placed	Exposures, Thousands of Dollars Annual Survivors at the Beginning of the Year 2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	Total at Beginning of Age Interval	Age Interval
	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12)	(13)
2009	255	245	234	222	209	195	239	216	192	167	167	13½-14½
2010	279	268	256	243	228	212	194	174	153	131	323	12½-13½
2011	307	296	284	271	257	241	224	205	184	162	531	11½-12½
2012	338	330	321	311	300	289	276	262	242	226	823	10½-11½
2013	376	367	357	346	334	321	307	297	280	261	1,097	9½-10½
2014	420[a]	416	407	397	386	374	361	347	332	316	1,503	8½-9½
2015		460[a]	455	444	432	419	405	390	374	356	1,952	7½-8½
2016			510[a]	504	492	479	464	448	431	412	2,463	6½-7½
2017				580[a]	574	561	546	530	501	482	3,057	5½-6½
2018					660[a]	653	639	623	628	609	3,789	4½-5½
2019						750[a]	742	724	685	663	4,332	3½-4½
2020							850[a]	841	821	799	4,955	2½-3½
2021								960[a]	949	926	5,719	1½-2½
2022									1,080[a]	1,069	6,579	½-1½
2023										1,220[a]	7,490	0-½
Total	1,975	2,382	2,824	3,318	3,872	4,494	5,247	6,017	6,852	7,799	44,780	

[a]Additions during the year

For the entire experience band 2014-2023, the total exposures at the beginning of an age interval are obtained by summing diagonally in a manner similar to the summing of the retirements during an age interval (Schedule 1). For example, the figure of 3,789, shown as the total exposures at the beginning of age interval 4½-5½, is obtained by summing:

255 + 268 + 284 + 311 + 334 + 374 + 405 + 448 + 501 + 609.

Original Life Table

The original life table, illustrated in Schedule 4 on page II-16, is developed from the totals shown on the schedules of retirements and exposures, Schedules 1 and 3, respectively. The exposures at the beginning of the age interval are obtained from the corresponding age interval of the exposure schedule, and the retirements during the age interval are obtained from the corresponding age interval of the retirement schedule. The retirement ratio is the result of dividing the retirements during the age interval by the exposures at the beginning of the age interval. The percent surviving at the beginning of each age interval is derived from survivor ratios, each of which equals one minus the retirement ratio. The percent surviving is developed by starting with 100% at age zero and successively multiplying the percent surviving at the beginning of each interval by the survivor ratio, i.e., one minus the retirement ratio for that age interval. The calculations necessary to determine the percent surviving at age 5½ are as follows:

Percent surviving at age 4½	=	88.15				
Exposures at age 4½	=	3,789,000				
Retirements from age 4½ to 5½	=	143,000				
Retirement Ratio	=	143,000	÷	3,789,000	=	0.0377
Survivor Ratio	=	1.000	-	0.0377	=	0.9623
Percent surviving at age 5½	=	(88.15)	x	(0.9623)	=	84.83

The totals of the exposures and retirements (columns 2 and 3) are shown for the purpose of checking with the respective totals in Schedules 1 and 3. The ratio of the total retirements to the total exposures, other than for each age interval, is meaningless.

SCHEDULE 4. ORIGINAL LIFE TABLE
CALCULATED BY THE RETIREMENT RATE METHOD

Experience Band 2014-2023 Placement Band 2009-2023

(Exposure and Retirement Amounts are in Thousands of Dollars)

Age at Beginning of Interval	Exposures at Beginning of Age Interval	Retirements During Age Interval	Retirement Ratio	Survivor Ratio	Percent Surviving at Beginning of Age Interval
(1)	(2)	(3)	(4)	(5)	(6)
0.0	7,490	80	0.0107	0.9893	100.00
0.5	6,579	153	0.0233	0.9767	98.93
1.5	5,719	151	0.0264	0.9736	96.62
2.5	4,955	150	0.0303	0.9697	94.07
3.5	4,332	146	0.0337	0.9663	91.22
4.5	3,789	143	0.0377	0.9623	88.15
5.5	3,057	131	0.0429	0.9571	84.83
6.5	2,463	124	0.0503	0.9497	81.19
7.5	1,952	113	0.0579	0.9421	77.11
8.5	1,503	105	0.0699	0.9301	72.65
9.5	1,097	93	0.0848	0.9152	67.57
10.5	823	83	0.1009	0.8991	61.84
11.5	531	64	0.1205	0.8795	55.60
12.5	323	44	0.1362	0.8638	48.90
13.5	167	26	0.1557	0.8443	42.24
					35.66
Total	44,780	1,606			

Column 2 from Schedule 3, Column 12, Plant Exposed to Retirement.
Column 3 from Schedule 1, Column 12, Retirements for Each Year.
Column 4 = Column 3 Divided by Column 2.
Column 5 = 1.0000 Minus Column 4.
Column 6 = Column 5 Multiplied by Column 6 as of the Preceding Age Interval.

The original survivor curve is plotted from the original life table (column 6, Schedule 4). When the curve terminates at a percent surviving greater than zero, it is called a stub survivor curve. Survivor curves developed from retirement rate studies generally are stub curves.

Smoothing the Original Survivor Curve

The smoothing of the original survivor curve eliminates any irregularities and serves as the basis for the preliminary extrapolation to zero percent surviving of the original stub curve. Even if the original survivor curve is complete from 100% to zero percent, it is desirable to eliminate any irregularities, as there is still an extrapolation for the vintages which have not yet lived to the age at which the curve reaches zero percent. In this study, the smoothing of the original curve with established type curves was used to eliminate irregularities in the original curve.

The Iowa type curves are used in this study to smooth those original stub curves which are expressed as percents surviving at ages in years. Each original survivor curve was compared to the Iowa curves using visual and mathematical matching in order to determine the better fitting smooth curves. In Figures 6, 7, and 8, the original curve developed in Schedule 4 is compared with the L, S, and R Iowa type curves which most nearly fit the original survivor curve. In Figure 6, the L1 curve with an average life between 12 and 13 years appears to be the best fit. In Figure 7, the S0 type curve with a 12-year average life appears to be the best fit and appears to be better than the L1 fitting. In Figure 8, the R1 type curve with a 12-year average life appears to be the best fit and appears to be better than either the L1 or the S0.

In Figure 9, the three fittings, 12-L1, 12-S0 and 12-R1 are drawn for comparison purposes. It is probable that the 12-R1 Iowa curve would be selected as the most representative of the plotted survivor characteristics of the group.

PART III. SERVICE LIFE CONSIDERATIONS

PART III. SERVICE LIFE CONSIDERATIONS

FIELD TRIPS

In order to be familiar with the operation of the Company and observe representative portions of the plant, a field trip was conducted for the study. A general understanding of the function of the plant and information with respect to the reasons for past retirements and the expected future causes of retirements are obtained during field trips. This knowledge and information were incorporated in the interpretation and extrapolation of the statistical analyses.

The following is a list of the locations visited during the most recent field trips.

October 1, 2024

Newman Generating Station
Stan Roberts Substation
Copper Substation
Copper Power Station
East Side Distribution Operations Center
El Paso Electric Operations and Training Center
Montana Power Station
Mesa Substation
Triumph Substation

February 24, 2020

East Side Distribution Operations Center
Montana Power Substation
Montana Power Generating Facility
Caliente Substation
Pelicano Substation
Newman Generating Station
Rio Grande Generating Station

August 18, 2014

Newman Generating Station
Rio Grande Generating Station
Stanton Tower

August 19, 2014
- Wrangler Substation
- Wrangler Solar Facility
- Diamond Head Substation
- East Side Distribution Operations Center
- Montana Power Generating Facility
- Montana Power Substation

February 9, 2009
- Vanderbilt Service Center
- Vista Substation
- Wrangler Substation
- Hawkins Service Center
- Copper Training Center
- Copper Combustion Station
- Roland Lucky Building
- Stanton Building

February 10, 2009
- Rio Grande Generating Station
- Systems Operating Center
- Newman Generation Station

February 19, 2003
- Newman Generating Station
- Systems Operating Center
- Rio Grande Generating Station
- 501 Engineering Building
- Centre Building

- Sante Fe Building
- Ascarate Substation
- Copper Combustion Station
- Copper Substation
- Copper Training Facility
- Hawkins Warehouse
- Montwood Substation
- Caliente Substation

SERVICE LIFE ANALYSIS

The service life estimates were based on informed judgment which considered various factors. The primary factors were the statistical analyses of data; current Company policies and outlook as determined during conversations with management;

and the survivor curve estimates from previous studies of this company and other electric companies.

For many of the plant accounts for which survivor curves were estimated, the statistical analyses using the retirement rate method resulted in good to excellent indications of the survivor patterns experienced. These accounts represent 74 percent of depreciable plant. Generally, the information external to the statistics led to no significant departure from the indicated survivor curves for the accounts listed below. The statistical support for the service life estimates is presented in the section beginning on page VII-2.

Account No.	Account Description
STEAM PLANT	
312.00	Boiler Plant Equipment
314.00	Turbogenerator Units
315.00	Accessory Electric Equipment
316.00	Miscellaneous Power Plant Equipment
TRANSMISSION PLANT	
352.00	Structures and Improvements
353.00	Station Equipment
355.00	Wood and Steel Poles
DISTRIBUTION PLANT	
361.00	Structures and Improvements
362.00	Station Equipment
364.00	Poles, Towers and Fixtures
365.00	Overhead Conductors and Devices
366.00	Underground Conduit
367.00	Underground Conductors and Devices
368.00	Line Transformers
370.00	Meters
371.00	Installations on Customers' Premises
GENERAL PLANT	
390.00	Structures and Improvements – Minor Structures
392.10	Transportation Equipment – Cars – Sedans
392.20	Transportation Equipment – Light Duty Vehicles
392.40	Transportation Equipment – Heavy Duty Vehicles
392.50	Transportation Equipment – Trailers
396.00	Power Operated Equipment

Account 312.00, Boiler Plant Equipment, is used to illustrate the manner in which the study was conducted for the generating plant. Aged plant accounting data have been compiled for the years 1993 through 2023. These data have been coded in the course of the Company's normal record keeping according to account or property group, type of transaction, year in which the transaction took place, and year in which the electric plant was placed in service. The retirements, other plant transactions, and plant additions were analyzed by the retirement rate method.

The survivor curve estimate is based on the statistical indications for the period 1993 through 2023. The Iowa 65-R4 is a reasonable fit of the original interim survivor curve. The 65-year service life for interim retirements is reasonable for assets in this account. The 65-year life is shorter than the 70-year life previously used by the Company.

Account 364.00, Poles, Towers and Fixtures, is used to illustrate the manner in which the study was conducted for the mass accounts. Aged retirement and other plant accounting data were compiled through the year 2023. These data were coded in the course of the Company's normal recordkeeping according to plant account or property group, type of transaction, year in which the transaction took place, and year in which the electric plant was placed in service. The data were analyzed by the retirement rate method of life analysis. The survivor curve chart for the account is presented on page VII-71 and the life table for the experience band plotted on the chart follows it.

The historical service life indication for Account 364.00, Poles, Towers and Fixtures is the 45-S2.5 based on the experience band, 1993-2023. The prior survivor curve estimate for Account 364.00, Poles, Towers and Fixtures was the 45-R3. Typical service lives for poles of other electric companies range from 40 to 55 years. The Iowa

45-S2.5 survivor curve reflects the outlook of management, is within the range of service life estimates used by other electric companies and is a reasonable interpretation of the significant portion of the stub survivor curves through age 72.

For Account 365.00, Overhead Conductors and Devices, the estimate of survivor characteristics is based on the 1993-2023 experience band. Most retirements have been due to inadequacy or voltage conversions. Typical service lives for overhead conductors range from 40 to 55 years. The Iowa 48-R2.5 survivor curve is within the range of other estimates, is a reasonable interpretation of the significant portions of the survivor curves through age 76 and reflects the outlook of management.

Life Span Estimates

The life span technique was used for the Company's generation accounts. The life span procedure is appropriate for these accounts since all of the assets within the plant will be retired concurrently. Probable retirement dates were estimated for each power plant. Life spans for each generating station were estimated based on discussions with management regarding future outlook, age and condition of the plant and life spans typically experienced and estimated for similar plants. The life span and probable retirement dates used for each generating unit are as follows:

Depreciable Group	Major Year in Service	Probable Retirement Year	Life Span
Steam Production Plant			
Rio Grande #6	1957	2025	68
Rio Grande #7	1958	2026	68
Rio Grande #8	1973	2033	60
Newman #1	1959	2026	67
Newman #2	1962	2027	65
Newman #3	1966	2034	68
Newman #4	1975	2031	56
Newman #5	2009	2045	36
Newman Zero Liquid Discharge	2011	2045	34
Gas Turbine Plant			
Copper	1980	2030	50
Rio Grande #9	2013	2045	32
Montana Power #1	2015	2045	30
Montana Power #2	2015	2045	30
Montana Power #3	2016	2045	29
Montana Power #4	2016	2045	29

Power plants typically are retired when there are other units that can generate electricity at a lower cost. Typical life spans for base load, steam power plants have been 50 to 65 years in the past. For example, Units 6, 7 and 8 at Rio Grande were completed in 1957, 1958 and 1973, respectively. The estimated probable retirement dates for Rio Grande are 2025, 2026 and 2033. Thus, the life spans estimated for the Rio Grande steam units are 68 years for Unit 6, 68 years for Unit 7 and 60 years for Unit 8, which are within, or slightly longer than, the typical range. The estimated retirement dates should not be interpreted as commitments to retire these plants on these dates, but rather, as reasonable estimates subject to modification in the future as circumstances dictate. However, environmental regulations will impact decisions for closures which will lead to shorter life spans for facilities built in recent years.

For all production accounts, an interim survivor curve was estimated for each account, since interim retirements, i.e., retirements prior to the final retirement, are experienced in such accounts.

Similar studies were performed for the remaining plant accounts. Each of the judgments represented a consideration of statistical analyses of aged plant activity, management's outlook for the future, and the typical range of lives used by other electric companies.

The selected amortization periods for other general plant accounts are described in the section "Calculated Annual and Accrued Amortization."

PART IV. NET SALVAGE CONSIDERATIONS

PART IV. NET SALVAGE CONSIDERATIONS

NET SALVAGE ANALYSIS

The estimates of net salvage by account were based in part on historical data compiled for the years 1993 through 2023. Cost of removal and gross salvage were expressed as percents of the original cost of plant retired, both on annual and three-year moving average bases. The most recent five-year average also was calculated for consideration. The net salvage estimates by account are expressed as a percent of the original cost of plant retired.

Net Salvage Considerations

The estimates of future net salvage are expressed as percentages of surviving plant in service, i.e., all future retirements. In cases in which removal costs are expected to exceed salvage receipts, a negative net salvage percentage is estimated. The net salvage estimates were based on judgment which incorporated analyses of historical cost of removal and gross salvage data, expectations with respect to future removal requirements and markets for retired equipment and materials.

The analyses of historical cost of removal and gross salvage data are presented in the section titled “Net Salvage Statistics” for the plant accounts for which the net salvage estimate relied partially on those analyses.

Statistical analyses of historical data for the period 1993 through 2023 contributed significantly toward the net salvage estimates for 14 plant accounts, representing 49 percent of the depreciable plant, as follows:

STEAM PRODUCTION PLANT

312.00	Boiler Plant Equipment
314.00	Turbogenerator Units
315.00	Accessory Electric Equipment
316.00	Miscellaneous Power Plant Equipment

TRANSMISSION PLANT

353.00	Station Equipment
355.00	Wood and Steel Poles
356.00	Overhead Conductors and Devices

DISTRIBUTION PLANT

365.00	Overhead Conductors and Devices
367.00	Underground Conductors and Devices
368.00	Line Transformers
370.00	Meters
371.00	Installations on Customers' Premises
373.00	Street Lighting and Signal Systems

GENERAL PLANT

396.00	Power Operated Equipment

Account 367.00, Underground Conductors and Devices, will be used to illustrate the manner in which the study was conducted for most mass plant accounts. Net salvage data were compiled for the years 1993 through 2023. These data include the retirements, cost of removal and gross salvage.

Discussions with management indicated that retired underground conductors are either reused or sold for scrap. The previous estimate of net salvage for underground conductors was negative 20 percent. The range of typical net salvage estimates used by other electric companies for underground conductors is negative 10 percent to negative 30 percent.

The net salvage estimate for this account is negative 30 percent and is based on the current practices in place for recording cost of removal and gross salvage. Cost of removal as a percent of the original cost retired averaged around 35 percent through the 1990s, then went to 0 percent starting in 2002 when recording practices changed. In 2013, a new practice for recording cost of removal was started and will continue into the future. Gross salvage was generally between 5 and 30 percent during the 1990s, then also went to 0 percent in 2002. Then new practices were implemented in 2013

which will continue into the foreseeable future, therefore, the most recent period is the best indicator of the future. The overall net salvage percent is negative 38 percent. The most recent five-year average for net salvage indicates negative 76 percent. Given the overall statistical indications, most recent five-year average and the estimates of others, a negative 30 percent net salvage was utilized.

The overall net salvage estimates for the Company's production facilities, for which the life span method is used, are based on estimates of both final net salvage and interim net salvage. Final net salvage is the net salvage experienced at the end of a production plant's life span. Interim net salvage is the net salvage experienced for interim retirements that occur prior to the final retirement of the plant. The final net salvage estimates in the study were based on decommissioning analyses incorporating a $/kW estimate that was consistent with similar facilities determined by a variety of engineering specialists. The interim net salvage estimates were based in part on analysis of historical interim retirement and net salvage data. Based on informed judgment that incorporated these interim net salvage analyses for each plant account, an interim net salvage estimate of negative 5 percent was used for all steam plant accounts, and a negative 5 percent estimate was used for gas turbine plant accounts.

The interim survivor curve estimates for each account and production facility were used to calculate the percentage of plant expected to be retired as interim retirements and final retirements. These are shown on Table 2 in the Net Salvage Statistics section on page VIII-2. These percentages were used to determine the weighted net salvage estimate for each account and production facility based on the interim and final net salvage estimates. The calculations, as well as the estimated final net salvage amounts and interim net salvage percents, are shown on Table 3 of the Net Salvage Statistics section on page VIII-3.

The net salvage estimates for most of the remaining accounts were estimated using the above-described process incorporating judgment, historical indications and review of the typical range of estimates used by other electric companies. The results of the net salvage analysis for each plant account are presented in account sequence beginning in the section titled “Net Salvage Statistics,” page VIII-2.

Generally, the net salvage estimates for the general plant accounts were zero percent, consistent with amortization accounting.

PART V. CALCULATION OF ANNUAL AND ACCRUED DEPRECIATION

PART V. CALCULATION OF ANNUAL AND ACCRUED DEPRECIATION

GROUP DEPRECIATION PROCEDURES

A group procedure for depreciation is appropriate when considering more than a single item of property. Normally the items within a group do not have identical service lives but have lives that are dispersed over a range of time. There are two primary group procedures, namely, average service life and equal life group. In the average service life procedure, the rate of annual depreciation is based on the average life or average remaining life of the group, and this rate is applied to the surviving balances of the group's cost. A characteristic of this procedure is that the cost of plant retired prior to average life is not fully recouped at the time of retirement, whereas the cost of plant retired subsequent to average life is more than fully recouped. Over the entire life cycle, the portion of cost not recouped prior to average life is balanced by the cost recouped subsequent to average life.

Single Unit of Property

The calculation of straight line depreciation for a single unit of property is straightforward. For example, if a $1,000 unit of property attains an age of four years and has a life expectancy of six years, the annual accrual over the total life is:

$$\frac{\$1{,}000}{(4 + 6)} = \$100 \text{ per year.}$$

The accrued depreciation is:

$$\$1{,}000 \left(1 - \frac{6}{10}\right) = \$400.$$

Remaining Life Annual Accruals

For the purpose of calculating remaining life accruals as of June 30, 2025, the depreciation reserve for each plant account is allocated among vintages in proportion to the calculated accrued depreciation for the account. Explanations of remaining life accruals and calculated accrued depreciation follow. The detailed calculations as of June 30, 2025, are set forth in the Results of Study section of the report.

Average Service Life Procedure

In the average service life procedure, the remaining life annual accrual for each vintage is determined by dividing future book accruals (original cost less book reserve) by the average remaining life of the vintage. The average remaining life is a directly weighted average derived from the estimated future survivor curve in accordance with the average service life procedure.

The calculated accrued depreciation for each depreciable property group represents that portion of the depreciable cost of the group which would not be allocated to expense through future depreciation accruals if current forecasts of life characteristics are used as the basis for such accruals. The accrued depreciation calculation consists of applying an appropriate ratio to the surviving original cost of each vintage of each account based upon the attained age and service life. The straight line accrued depreciation ratios are calculated as follows for the average service life procedure:

$$Ratio = 1 - \frac{Average\ Remaining\ Life}{Average\ Service\ Life}.$$

CALCULATION OF ANNUAL AND ACCRUED AMORTIZATION

Amortization is the gradual extinguishment of an amount in an account by distributing such amount over a fixed period, over the life of the asset or liability to which it applies, or over the period during which it is anticipated the benefit will be realized. Normally, the distribution of the amount is in equal amounts to each year of the amortization period.

The calculation of annual and accrued amortization requires the selection of an amortization period. The amortization periods used in this report were based on judgment which incorporated a consideration of the period during which the assets will render most of their service, the amortization period and service lives used by other utilities, and the service life estimates previously used for the asset under depreciation accounting.

Amortization accounting is proposed for a number of accounts that represent numerous units of property but a very small portion of depreciable electric plant in service. The accounts and their amortization periods are as follows:

ACCT	TITLE	AMORTIZATION PERIOD, YEARS
391.00	Office Furniture and Equipment	20
393.00	Stores Equipment	25
394.00	Tools, Shop and Garage Equipment	25
395.00	Laboratory Equipment	15
397.30	Communication Equipment	15
398.00	Miscellaneous Equipment	15

For the purpose of calculating annual amortization amounts as of June 30, 2025, the book depreciation reserve for each plant account or subaccount is assigned or allocated to vintages. The book reserve assigned to vintages with an age greater than the amortization period is equal to the vintage's original cost. The remaining book

reserve is allocated among vintages with an age less than the amortization period in proportion to the calculated accrued amortization. The calculated accrued amortization is equal to the original cost multiplied by the ratio of the vintage's age to its amortization period. The annual amortization amount is determined by dividing the future amortizations (original cost less allocated book reserve) by the remaining period of amortization for the vintage.

PART VI. RESULTS OF STUDY

PART VI. RESULTS OF STUDY

QUALIFICATION OF RESULTS

The calculated annual and accrued depreciation are the principal results of the study. Continued surveillance and periodic revisions are normally required to maintain continued use of appropriate annual depreciation accrual rates. An assumption that accrual rates can remain unchanged over a long period of time implies a disregard for the inherent variability in service lives and net salvage and for the change of the composition of property in service. The annual accrual rates were calculated in accordance with the straight line remaining life method of depreciation, using the average service life procedure based on estimates which reflect considerations of current historical evidence and expected future conditions.

The annual depreciation accrual rates are applicable specifically to the electric plant in service as of June 30, 2025. For most plant accounts, the application of such rates to future balances that reflect additions subsequent to June 30, 2025, is reasonable for a period of three to five years.

DESCRIPTION OF DETAILED TABULATIONS

Table 1 is a summary of the results of the study as applied to the original cost of electric plant as of June 30, 2025 presented on pages VI-4 through VI-8 of this report.

The service life estimates were based on judgment that incorporated statistical analysis of retirement data, discussions with management and consideration of estimates made for other electric utilities. The results of the statistical analysis of service life are presented in the section beginning on page VII-2, within the supporting documents of this report.

For each depreciable group analyzed by the retirement rate method, a chart depicting the original and estimated survivor curves followed by a tabular presentation of the original life table(s) plotted on the chart. The survivor curves estimated for the depreciable groups are shown as dark smooth curves on the charts. Each smooth survivor curve is denoted by a numeral followed by the curve type designation. The numeral used is the average life derived from the entire curve from 100 percent to zero percent surviving. The titles of the chart indicate the group, the symbol used to plot the points of the original life table, and the experience and placement bands of the life tables which were plotted. The experience band indicates the range of years for which retirements were used to develop the stub survivor curve. The placements indicate, for the related experience band, the range of years of installations which appear in the experience.

The analyses of net salvage data are presented in the section titled, "Net Salvage Statistics." The tabulations present annual cost of removal and gross salvage data, three-year moving averages and the most recent five-year average. Data are shown in dollars and as percentages of original costs retired.

The tables of the calculated annual depreciation applicable to depreciable assets as of June 30, 2025 are presented in account sequence starting on page IX-2 of the supporting documents. The tables indicate the estimated survivor curve and net salvage percent for the account and set forth, for each installation year, the original cost, the calculated accrued depreciation, the allocated book reserve, future accruals, the remaining life, and the calculated annual accrual amount.

DECLARATION OF JOHN J. SPANOS IN SUPPORT OF THE FOREGOING DIRECT TESTIMONY TO THE APPLICATION OF EL PASO ELECTRIC COMPANY FOR REVISION OF ITS RETAIL ELECTRIC RATES PURSUANT TO ADVICE NOTICE NO. 317

I, ***John J. Spanos***, pursuant to Rule 1-011 NMRA, state as follows:

1. I affirm in writing under penalty of perjury under the laws of the State of New Mexico that the following statements are true and correct.

2. I am over 18 years of age and have personal knowledge of the facts stated herein. I am employed by El Paso Electric Company ("EPE" or "the Company") as a *Consultant.*

3. The foregoing Direct Testimony of John J. Spanos, together with all exhibits sponsored therein and attached thereto, is true and accurate based on my knowledge and belief.

4. I submit this Declaration, based upon my personal knowledge and upon information and belief, in support of EPE's ***Application for Revision of Its Retail Electric Rates Pursuant to Advice Notice No. 317.***

FURTHER, DECLARANT SAYETH NAUGHT.

I declare under penalty of perjury that the foregoing is true and correct.

Executed on March 27, 2026.

/s/ John J. Spanos

EL PASO ELECTRIC COMPANY
DIRECT TESTIMONY OF
TAMERA L. HENDERSON

I. INTRODUCTION AND QUALIFICAITONS

Q1. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Tamera L. Henderson. My business address is 100 N. Stanton Street, El Paso, Texas 79901.

Q2. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by El Paso Electric Company ("EPE" or the "Company") as Director of Tax.

Q3. PLEASE SUMMARIZE YOUR EDUCATIONAL BACKGROUND AND PROFESSIONAL EXPERIENCE.

A. I have a Bachelor of Business Administration with a concentration in Accounting and a Master of Accountancy, both from the University of Texas at El Paso. I am a Certified Public Accountant in the State of Texas. I have been employed by EPE since August of 2006. My entire time served at EPE has been in the Tax Department. I have served the Company in the capacity of Tax Accountant, Tax Supervisor, Tax Manager and currently, as Director of Tax. Prior to being hired by EPE, I worked for approximately one year as an outsourced Accountant for EPE's Payroll department. I have attended numerous tax, accounting, and regulatory seminars.

Q4. WHAT ARE YOUR PRINCIPAL AREAS OF RESPONSIBILITY?

A. As Director of Tax I am responsible for managing EPE's tax department. I oversee the preparation of federal and state income tax returns and maintain the tax accounting data for the Company. This includes the preparation of tax accounting and related tax data usen in regulatory filings.

Q5. HAVE YOU PREVIOUSLY FILED TESTIMONY BEFORE UTILITY REGULATORY BODIES?

A. Yes. I have filed testimony before The Public Utility Commission of Texas.

II. PURPOSE OF TESTIMONY

Q6. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. The purpose of my direct testimony is to support EPE's federal and state income tax amounts found in the H-9 through H-13 schedules of the Rate Filing Package ("RFP"). My testimony will also address the calculation of income tax expense on a standalone basis and any relevant changes to tax law since EPE's last general rate case, Docket No. 20-00104-UT (the "2020 Rate Case"). I also sponsor EPE's taxes other than income amounts, referenced on the H-8 schedules.

Q7. WHY ARE YOU THE APPROPRIATE PERSON TO SPONSOR THESE TOPICS?

A. In my role as Director of Tax, I have detailed knowledge regarding the income tax accounts used to determine income tax expense as well as the amounts included in current income taxes payable, unamortized investment tax credits, accumulated deferred income taxes, and taxes other than income paid by EPE.

Q8. WERE THE RULE 530 SCHEDULES PREPARED BY YOU OR UNDER YOUR DIRECT SUPERVISION?

A. Yes, they were. A summary of the schedules I sponsored in this case is included in Section IX below.

Q9. ON WHAT BASIS WERE THE REFERENCED SCHEDULES PREPARED?

A. The schedules were prepared using the books and records of the Company, and they are accurate summaries of the business records upon which they are based.

Q10. PLEASE DESCRIBE THE TEST YEAR PERIOD UTILIZED IN THE RATE FILING.

A. The Company is using a Historic Test Year Period with the Base Period of October 1, 2024 through September 30, 2025. EPE adjusts the Base Period amounts to

reflect the effects of annualizations, normalizations, and known and measurable changes to arrive at Test Year Period amounts as addressed by EPE witness Steven A. Sierra.

III. BACKGROUND OF INCOME TAX ACCOUNTING AND RATEMAKING

Q11. CAN YOU PLEASE DESCRIBE THE ACCOUNTING FOR INCOME TAXES REQUIRED UNDER GENERALLY ACCEPTED ACCOUNTING PRINCIPLES ("GAAP")?

A. Yes. Accounting for income taxes under GAAP is contained in the Accounting Standards Codification ("ASC") in section ASC 740 (formerly SFAS No. 109, Accounting for Income Taxes). There are several components to the calculation: currently payable income taxes, deferred income taxes, and investment tax credits.

Q12. WHAT IS THE FIRST COMPONENT, CURRENTLY PAYABLE INCOME TAXES?

A. Currently payable income tax expense represents the estimated amount of current year income taxes payable based on current year taxable income. Taxable income for the year is determined in accordance with the Internal Revenue Code ("IRC"). For purposes of preparing an income tax return each year, the IRC contains procedures for determining if and when an item is "taxable" or "deductible".

Q13. WHAT IS THE SECOND COMPONENT, DEFERRED INCOME TAXES?

A. The IRC rules for determining what is taxable or deductible may differ from what is reportable as "revenue" or "expense" under GAAP. For instance, certain expenses recorded on the financial statements under GAAP in one year may be deductible on the tax return in a different period. There are also instances where the amounts shown as deductions on the tax return in one year are not reflected on the financial statements until a later year. As a result, at the end of each reporting period, there will likely be accumulated differences of reported assets and liabilities resulting from different book and tax return treatment of revenues and expenses. These differences are referred to as temporary differences. By recognizing deferred income taxes for temporary differences, total income tax expense reflects the amount of taxes that will be paid currently, and in the future, based upon current period revenues and expenses.

Q14. CAN YOU PROVIDE AN EXAMPLE OF "TEMPORARY DIFFERENCES"?

A. Yes. One common temporary difference is depreciation. For book purposes, GAAP requires that the asset be depreciated over its estimated useful life in a systematic and rational manner. As a result, straight-line depreciation over the useful life of assets is used for book purposes. For income tax purposes, the asset

may be depreciated using an accelerated depreciation method that is generally shorter than the estimated useful life. Initially, tax depreciation will exceed book depreciation. In later years, the reverse will be true because given the same capitalized asset cost over the life of the asset, total depreciation will be the same. Because the total depreciation for both book and taxes purposes will ultimately be the same, the difference is referred to as a temporary difference.

Q15. WHAT IS THE ACCOUNTING FOR TEMPORARY DIFFERENCES UNDER ASC 740?

A. Under GAAP, because the financial statements reflect accrual and not cash-basis accounting, deferred income taxes are recorded on temporary differences. As a result, income tax expense under GAAP includes both a currently payable component (as previously described, based on the tax return) as well as a deferred income tax component (based on temporary differences). Such deferred income taxes reflect the liability or asset for income taxes payable or receivable in the future stemming from transactions recorded in the financial statements currently. The balance sheet liability or asset for future taxes is referred to as Accumulated Deferred Income Tax ("ADIT").[1] In other words, to the extent that accelerated tax depreciation is claimed on the income tax return in an amount that exceeds book

[1] The use of the acronym ADIT refers to deferred taxes recorded for both federal and state income tax.

depreciation reported on the financial statements, a liability for future taxes results. This future tax liability is due to the fact that greater depreciation claimed in early years will "use up" the tax basis of assets and result in higher taxes in the future.

Under ASC 740, a calculation of required ADIT is performed at the end of each reporting period. The required ADIT is measured by multiplying the temporary differences by the currently applicable income tax rates. Comparing the ADIT at the current balance sheet date to the ADIT at the previous balance sheet date results in "deferred income tax expense." For regulated entities, such as EPE, the process of recording deferred income taxes on temporary differences is referred to as "normalization," "deferred tax accounting," or "comprehensive interperiod income tax allocation."

Q16. DOES CLAIMING DEDUCTIONS FOR INCOME TAX PURPOSES IN EXCESS OF EXPENSES RECORDED FOR BOOK PURPOSES PROVIDE INCENTIVES TO THE COMPANY THAT BENEFIT CUSTOMERS?

A. Yes. By claiming tax deductions for such things as accelerated depreciation, the Company reduces its current income tax payments. But, with respect to temporary differences, tax payments will be higher in the future when the temporary differences reverse. As a result, ADIT balances are "interest free loans" from the U.S. Treasury. This was the objective Congress intended when it included

accelerated depreciation provisions in the IRC. Congress believed that allowing companies to increase their tax depreciation deductions (and thereby reducing current income tax payments) would lower the financing costs of their investment in capital assets and thus companies would be incented to make such expenditures. For accounting purposes, using the tax basis of capital assets is both a cost to be recognized in the financial statements when claimed (i.e., deferred tax expense) and a liability for future taxes due when the turnaround occurs and book depreciation exceeds tax depreciation (i.e., ADIT).

Q17. HOW IS THIS "INTEREST FREE LOAN" OR ADIT REFLECTED IN THE COMPANY'S RATES AS FILED?

A. The interest free loan represents non-investor-supplied cost-free capital and has therefore been deducted from rate base to provide ratepayers the benefit of such cost-free capital. Schedule H-12 contains the Company’s ADIT.

Q18. ARE ALL BOOK/TAX DIFFERENCES "TEMPORARY DIFFERENCES" AND SIMPLY A MATTER OF WHEN THE ITEM IS INCLUDED ON THE TAX RETURN VERSUS WHEN THE ITEM IS SHOWN ON THE FINANCIAL STATEMENTS?

A. No. Most book/tax differences are temporary, and, over time, the same amount will be included on the financial statements and tax returns. However, certain items of revenue and expense are, over time, treated differently for financial reporting purposes than for income tax purposes. These are referred to as permanent differences.

Permanent differences do not result in deferred income taxes. In the period reported, current income taxes will be adjusted to reflect the increased deduction or non-deductibility of these costs and there will be no deferred income taxes since these amounts will either never be included in the financial statements or deducted on the tax return thereby permanently decreasing or increasing current tax expense. An example of a permanent difference in EPE's tax calculation is the cost of meals and entertainment. The cost of meals and entertainment are reported as expenses in the financial statements but, under the IRC, are not completely deductible on the income tax return, and therefore, result in a permanent difference that increases current tax expense.

Q19. IS THE DISTINCTION BETWEEN PERMANENT AND TEMPORARY DIFFERENCES IMPORTANT IN THE INCOME TAX CALCULATION?

A. Yes. Permanent differences need to be separately identified and included in the income tax calculation because they do not require deferred income tax accounting.

Permanent differences either increase or decrease the total income tax expense for a given period permanently. Therefore, the permanent differences for the Test Year Period are included in the revenue requirement for this rate case.

Q20. IS THERE ANOTHER COMPONENT OF THE INCOME TAX CALCULATION?

A. Yes. In addition to current and deferred income taxes, a third element of the tax computation is the Investment Tax Credit ("ITC").

Q21. CAN YOU PLEASE SUMMARIZE WHAT THE ITC IS AND HOW IT IS TREATED FOR ACCOUNTING/RATEMAKING PURPOSES?

A. The ITC, which has gone in and out of existence over the years, lowers income tax expense permanently if certain qualifying investments are made. It is intended as an incentive for companies to invest in qualifying assets. To make sure that its objectives are met for regulated utilities, the IRC prescribes methods of sharing the benefit between customers and shareholders.

The ITC is a direct reduction of income taxes payable in a given year. Unlike accelerated depreciation and other book-tax temporary differences that will eventually reverse or turn around, the ITC is comparable to a rebate. The ITC provides an incentive to capital investment by granting a tax credit (a direct, dollar-

for-dollar offset to current taxes payable) based on a percentage applied to investment in tangible personal property, which for EPE includes most generation, transmission, and distribution assets.

The accounting for the ITC is contained in ASC 740, codifying the accounting for ITC previously contained in Accounting Principles Board Opinions 2 and 4, *Accounting for the Investment Credit*. Most regulated utilities, like EPE, account for the ITC by reducing current income taxes payable in the year the credit is earned for the full amount of the credit but recognize an equal and offsetting amount of deferred tax expense. The amount of the credit is then amortized to reduce income tax expense over the book life of the property giving rise to the ITC.

In 1972, for ratemaking purposes, the IRS required utilities to elect how they intended to share the ITC between customers and shareholders. Most utilities, including EPE, chose "Option 2" and elected to share the ITC as described in the preceding paragraph by including the annual amortization to income tax expense as a reduction to cost of service. In accordance with this election, the unamortized ITC basis is not deducted from rate base. The resulting reduced income tax expense benefits customers when it is included in rates.

IV. EFFECTS OF CHANGES IN TAX LAWS

Q22. SINCE EPE'S LAST GENERAL RATE CASE, HAVE THERE BEEN ANY SIGNIFICANT CHANGES IN TAX LAW?

A. Yes, on August 16, 2022, President Biden signed into law The Inflation Reduction Act of 2022 ("IRA").

Q23. CAN YOU PLEASE BRIEFLY DESCRIBE THE IRA?

A. The purpose of the IRA legislation was to fight inflation through deficit reduction and to advance climate initiatives. In general, the provisions within the IRA apply to tax years beginning after December 31, 2022. The IRA contains significant benefits for clean energy and renewable generation investments. To achieve the goal of providing these benefits, without adding to the deficit, the IRA reinstated and revised the Corporate Alternative Minimum Tax ("CAMT") which was repealed with the Tax Cuts and Jobs Act of 2017 ("TCJA").

Q24. WHAT ARE THE MAIN ELEMENTS OF FEDERAL TAX REFORM UNDER THE IRA THAT ARE APPLICABLE TO UTILITIES SUCH AS EPE?

A. The IRA changes certain elements of the IRC. Several of the provisions are applicable to utilities, including:

- Restoration and extension of the renewable electricity production tax credit ("PTC") and the clean electricity investment tax credit ("ITC").
- Creation of new tax credits designed to incentivize investment in renewable energy.
- Establishment of a non-deductible 1% excise tax on certain corporate share repurchases.
- Imposition of a 15% CAMT based upon adjusted financial statement income ("AFSI").

Q25. HOW DOES THE IRA CURRENTLY AFFECT THE COMPANY AND THIS FILING?

A. The 1% excise tax is not applicable to EPE. EPE ceased to be a publicly traded company on July 29, 2020, the date of our merger. Therefore, the Company no longer has publicly traded stock that could be repurchased. The CAMT applies to large corporations with annual AFSI exceeding $1 billion. The CAMT is currently not applicable to EPE or this filing because the Company's AFSI does not exceed $1 billion. The restoration and extension of the PTC and ITC and the new renewable energy tax credits have the greatest *potential* impact on the Company in future rate cases. However, the PTC and ITC authorized by the IRA do not apply

to EPE in this filing because the applicable rate base assets at the end of the Test Year Period are directly assigned to Texas.

Q26. SINCE EPE'S LAST GENERAL RATE CASE, IS THERE ANY ADDITIONAL SIGNIFICANT CHANGES IN TAX LAW?

A. Yes, on July 4, 2025, President Trump signed into law the legislation commonly referred to as The One Big Beautiful Bill ("OBBBA").

Q27. CAN YOU PLEASE BRIEFLY DESCRIBE THE OBBBA?

A. The passed legislation enacted a wide range of policy changes related to tax, border security, energy, federal spending and debt. It is a complex piece with hundreds of provisions that affect individuals, businesses, and government programs. Broadly speaking, the OBBBA extends many expiring provisions of the TCJA and amends other provisions of the IRC.

Q28. WHAT ARE THE MAIN ELEMENTS OF THE OBBBA APPLICABLE TO UTILITIES SUCH AS EPE?

A. Several of the provisions are applicable to utilities, including:

- Phase out of the ITC and PTC for wind and solar property.
- Phase out of ITC for battery storage.

- Changes to the definition of "beginning of construction" and removal of the 5% safe harbor.
- Foreign Entities of Concern restrictions.
- Removes clean energy facilities, property and technology from the list of 5-year MACRS recovery.
- Restores immediate expense for Domestic Research and Development.
- Elimination of the Commercial Clean Vehicle Tax Credit.

Q29. HOW DOES THE OBBBA CURRENTLY AFFECT THE COMPANY AND THIS FILING?

A. The Company, in the long term, will be most affected by the changes to, and phase out of, clean energy credits. EPE has embarked on a large solar initiative, which was driven in part by the benefits of these credits. As it relates to this filing, there is no monetary impact. As mentioned earlier in my testimony, the facilities that are currently generating PTCs are directly assigned to Texas.

V. NORMALIZATION REQUIREMENTS

Q30. IS NORMALIZATION ACCOUNTING REQUIRED FOR A UTILITY TO REFLECT CERTAIN DEDUCTIONS AND CREDITS IN ITS FEDERAL TAX RETURN?

A. Yes. The IRC requires that regulated utilities must use the normalization method and not the flow-through method to calculate the tax expense related to temporary differences (IRC Section 168), Contributions In Aid of Construction, Investment Tax Credits, Excess Deferred Taxes, and Net Operating Loss Carryforwards created by accelerated depreciation in order to avoid certain penalties.

Q31. WHAT IS THE FEDERAL ENERGY REGULATORY COMMISSION'S ("FERC") POSITION ON DEFERRED INCOME TAXES?

A. The FERC Uniform System of Accounts embraces normalization of deferred income taxes by requiring comprehensive interperiod income tax allocation for all book-tax timing (temporary) differences. FERC Order Nos. 144 and 144-A provide guidance in this area. This has been the FERC methodology since the early 1980s.

Q32. DID EPE FOLLOW NORMALIZED ACCOUNTING IN PREPARING THE SCHEDULES FOR THIS RATE CASE?

A. Yes.

VI. EXCESS DEFERRED INCOME TAXES ("EXCESS ADIT")

Q33. WHAT IS EXCESS ADIT?

A. As discussed above, deferred income taxes or ADIT results when there is a

temporary difference between a company's income tax expense for book purposes and the amount of currently payable taxes to the IRS. The currently payable tax expense is included in EPEs cost of service, and the future tax expense (ADIT) is included as a reduction to rate base as cost-free capital. This future tax expense or ADIT is calculated based on the tax rate in effect when the temporary difference occurs. When there is a subsequent change to the tax rate through legislative action, it changes the temporary book/tax difference and the calculation of ADIT. The difference between the originally calculated ADIT and the revised ADIT resulting from the tax rate change is excess ADIT.

Q34. HAS THERE BEEN A CORPORATE INCOME TAX RATE CHANGE IN RECENT YEARS?

A. Yes. The TCJA changed the federal corporate statutory income tax rate from 35% to 21% effective January 1, 2018. The TCJA also eliminated bonus depreciation for regulated utilities, for assets acquired and placed into service after December 31, 2017.

Q35. HOW DO THE REDUCTION IN THE FEDERAL CORPORATE INCOME TAX RATE AND THE ELIMINATION OF BONUS DEPRECIATION

GENERALLY IMPACT THE COMPANY'S TAX EXPENSE INCLUDED IN ITS APPLIED FOR CUSTOMER RATES?

A. The reduction in the federal income tax rate reduces the income tax expense reflected in EPE's cost of service. As explained above, the income tax expense the Company recovers in rates includes both currently payable taxes and income taxes deferred for payment in the future. Over the last several years, EPE deferred significant amounts of income tax payments by deducting accelerated depreciation, including bonus depreciation. Those deferred income tax payments were calculated based on the corporate federal income tax rate of 35% in effect at that time.

The reduction in the federal income tax rate reduces the amount of current income taxes EPE must pay and the amount of deferred income taxes it will pay in the future. Both the reduction in the federal income tax rate and the Company's inability to deduct bonus depreciation reduce the amount of deferred income tax amounts that accrue each year. Most of the excess ADIT on the Company's books at the September 30, 2025, Base Period is related to the TCJA rate change.

Q36. WHAT ARE THE RULES THAT GOVERN THE CALCULATION OF AMORTIZATION OF EXCESS ADIT?

A. The IRC normalization rules require the division of excess ADIT into two

categories, "protected" and "unprotected." Excess ADIT resulting from accelerated depreciation is classified as "protected", while excess ADIT resulting from temporary differences not related to accelerated depreciation is classified as "unprotected". The classification of excess ADIT is crucial in calculating the amortization of excess ADIT. In IRC § 168(i)(9)(A)(i), the amortization of protected excess ADIT is required to be calculated utilizing the Average Rate Assumption Method ("ARAM") in order to avoid a normalization violation. The TCJA (Section 13001(d)(d)(B)) defines ARAM as the:

> "method under which the excess in the reserve for deferred taxes is reduced over the remaining lives of the property as used in its regulated books of account which gave rise to the reserve for deferred taxes. Under such method, during the time period in which the timing differences for the property reverse, the amount of the adjustment to the reserve for the deferred taxes is calculated by multiplying (1) the ratio of the aggregate deferred taxes for the property to the aggregate timing differences for the property as of the beginning of the period in question, by (2) the amount of timing differences which reverse during such period."

Revenue Proclamation ("Rev. Proc.") 2020-39 provides further guidance on the amortization method of protected excess ADIT, referred to as "ETR" (Excess Tax Reserves). Rev. Proc. § 4(1) states "taxpayers must use ARAM to calculate the reversal of their ETR if the taxpayer's regulatory books are based upon the vintage account data necessary to use ARAM."

Q37. WHAT WOULD BE THE CONSEQUENCES OF A NORMALIZATION VIOLATION AND HOW WOULD IT AFFECT THE COMPANY AND ITS CUSTOMERS?

A. If the normalization rules were violated, there would be two negative results: (1) income taxes would become payable for the amount of amortization in excess of the ARAM calculation and, more importantly, and (2) the Company would not be permitted to use accelerated depreciation methods for income tax purposes in the future. Instead, book depreciation would have to be used for income tax purposes. If this were to happen, it would be devasting for the Company and its customers. If EPE is not able to use accelerated tax depreciation for any of its assets, there would be no future ADIT associated with the depreciation-related temporary differences (i.e., protected ADIT) for those assets. Not only is protected ADIT a significant source of cost-free capital that the Company uses to fund the assets needed to serve its customers, in addition, there would be no protected ADIT rate base offset in future rate cases.

Q38. DOES THE COMPANY HAVE THE VINTAGE RECORDS NEEDED TO COMPUTE AMORTIZATION OF PROTECTED EXCESS ADIT USING ARAM?

A. Yes. The Company utilizes Power Tax software, which is commonly used throughout the utility industry to store the vintage account data related to its plant in service balances, calculate federal tax depreciation and calculate the amortization of protected excess ADIT using ARAM. Vintage account data includes two components. The first is the year the property is placed in service, or the vintage year. The second is the account data. Account data refers to plant in service accounts adopted in the FERC Uniform System of Accounts, i.e., FERC Accounts 301399.1. No further subdivision is required since tax amounts related to each FERC account are also depreciated using a common tax depreciation methodology and rate. Since the Company has the vintage account records for its plant in service, the IRC requires the Company to utilize ARAM to avoid a normalization violation. Amortizing protected excess ADIT using another method could result in a normalization violation.

Q39. HOW IS THE ANNUAL AMORTIZATION OF PROTECTED EXCESS ADIT CALCULATED?

A. The amortization of excess ADIT using ARAM does not begin until book depreciation exceeds tax depreciation, which is calculated for each vintage account record for the Company's plant in service. ARAM amortization is similar to the reversal of accumulated ADIT in that you continue to accumulate deferred income

taxes until book depreciation exceeds tax depreciation, then you begin amortizing the deferred ADIT over the remaining book life of the underlying asset. Congress provided for the use of accelerated tax depreciation in order to provide an incentive for the investment in certain capital assets. The normalization rules preserve this incentive by, in part, (i) requiring that excess ADIT be amortized no faster than the rate at which the ADIT would have been reduced had the tax rate not changed and the excess not been created and (ii) requiring that this determination be made on an asset-by-asset basis (i.e., vintage account records) if the required property records are available. As a result, if the property records are available, ARAM requires the development of an average rate of amortization equal to (i) the amount of excess ADIT for each asset or asset class divided by (ii) the total amount of ADIT that has been provided on that same asset. Once the book depreciation exceeds tax depreciation, the average rate of amortization is calculated and applied to the annual ADIT reversal to calculate the amortization of the excess ADIT on an annual basis.

Q40. DOES THE TOTAL AMORTIZATION OF PROTECTED EXCESS ADIT CHANGE ANNUALLY?

A. Yes. Because the calculation of the amortization of protected excess ADIT does not begin until book depreciation exceeds tax depreciation for each vintage account,

the Company's total amortization will change annually as ADIT begins to reverse for each asset and vintage.

Q41. HOW DID THE COMPANY CALCULATE THE AMORTIZATION OF THE EXCESS ADIT FROM THE TCJA IN THIS FILING?

A. The actual amortization of protected excess ADIT from the TCJA cannot be finalized for any year until both the book depreciation and federal income tax depreciation are finalized, which occurs when the federal income tax return is filed for that year. The amortization of the protected excess ADIT from the TCJA that is included in income tax expense in this filing is the excess activity related to the Company's most recently filed 2024 tax return and can be seen in Schedule H-09 and WP H-09.4.

Q42. IS THE COMPANY REQUESTING ANY UNPROTECTED EXCESS AMORTIZATION RESULTING FROM THE TCJA IN THIS FILING?

A. No.

Q43. WHY IS THE COMPANY NOT REQUESTING ANY AMORTIZATION OF ADDITIONAL UNPROTECTED EXCESS ADIT RESULTING FROM THE TCJA IN THIS FILING?

A. In compliance with the final order in the 2020 Rate Case, Case No. 20-000104-UT, the Company has already returned the TCJA unprotected excess ADIT accrued prior to January 1, 2018, and the excess ADIT resulting from the TCJA that accrued from January 1, 2018 through December 31, 2020 (i.e., the "stub period") via a rate rider.

Q44. ARE THERE ADDITIONAL EXCESS ADIT BALANCES THAT ARE INCLUDED IN THIS FILING?

A. Yes. Although there are no new excess ADIT issues since the 2020 Rate Case, the Company continues to amortize the excess ADIT from federal income tax rate changes in the 1980s. The Company also has excess state ADIT resulting from the normalization of state income taxes and excess state ADIT that relate to prior years phase in of state rate reductions. These amounts can be found in the work papers to Schedule H-09.

VII. FEDERAL INCOME TAXES

Q45. HOW HAVE FEDERAL INCOME TAXES INCLUDED IN COST OF SERVICE BEEN CALCULATED?

A. Federal income taxes have been calculated using the return method for the Test Year Period, as required by the Instructions and Schedules to Rule 530.

Q46. WHAT IS THE RETURN METHOD?

A. The calculation of federal income taxes provided on Schedule H-09 is commonly referred to as the return method because it calculates federal income taxes using an after-tax return as the starting point. Under this method, equity return, or total return less interest, is adjusted for items for which there is no tax deduction to offset amounts recovered through revenues — such as book amortization of Allowance for Equity Funds Used During Construction, other flow-through differences, permanent differences, ITC amortization, and the amortization of excess ADIT. The return method calculates federal income tax expense in total, with no segregation between current and deferred federal income taxes. The return method tax calculation provided on Schedule H-09 reflects a stand-alone approach to calculating federal income taxes.

Q47. WHAT IS MEANT BY A STAND-ALONE APPROACH?

A. The stand-alone methodology calculates federal income taxes on utility revenues and expenses that are included in the utility's revenue requirement. This approach appropriately allocates federal income taxes between customers and shareholders using the benefits and -burdens criteria outlined by FERC Opinion No. 173. Under this methodology, federal income tax expense relates to, and results from, the

provision of utility service to customers. Additionally, the stand-alone federal income tax calculation includes an adjustment to synchronize interest. Synchronized interest represents the portion of return that is deductible for tax purposes and is calculated by multiplying the weighted cost of debt by rate base. Use of synchronized interest in the tax calculation effectively synchronizes the calculation of federal income tax expense with rate base and rate of return. Synchronized interest may be more or less than the actual interest deducted on the tax return.

Q48. WHY IS THE STAND-ALONE APPROACH THE PROPER METHODOLOGY TO USE IN CALCULATING FEDERAL INCOME TAXES FOR RATEMAKING PURPOSES?

A. The stand-alone approach includes in cost of service only federal income taxes that result from the provision of utility service to customers. Federal income taxes requested by the Company are based on revenues and expenses included in the cost-of-service calculation. There are no additions to or reductions from tax expense resulting from revenues or expenses not included in the Company's request. It is neither appropriate nor equitable to increase or reduce cost of service by tax costs or benefits that are not related to the rendition of utility service to customers.

Said another way, income taxes have no independent existence of their own. They are based on revenues and expenses. Once the Commission decides on the appropriate revenues and expenses that are necessary for the provision of electric service, the related income taxes can be determined.

Q49. WHAT IS THE AMOUNT OF FEDERAL INCOME TAX EXPENSE THE COMPANY IS REQUESTING TO BE INCLUDED IN RATES?

A. The Total Company amount of federal income tax expense that the company is requesting be included in its overall cost of service is reflected on Schedule A as calculated on Schedule H-09. The New Mexico jurisdictional federal income tax expense that the Company is requesting be included in its cost of service is reflected on Schedule A-3 and related workpapers.

VIII. STATE INCOME TAXES

Q50. WHAT IS THE AMOUNT OF STATE INCOME TAX EXPENSE THE COMPANY IS REQUESTING BE INCLUDED IN COST OF SERVICE?

A. The Company is requesting the Total Company amount of state income tax expense in cost of service reflected on Schedule H-9.

Q51. IN WHAT JURISDICTIONS DOES THE COMPANY FILE INCOME TAX RETURNS?

A. The Company files state income tax returns in New Mexico, Arizona, and Texas jurisdictions.

Q52. IS THE INCOME TAX EXPENSE FROM EACH OF THESE JURISDICTIONS INCLUDED IN THIS FILING?

A. Yes. EPE includes state tax expense from each of the jurisdictions in its cost of service and the associated state ADIT in rate base.

Q53. WHY IS EPE INCLUDING STATE INCOME TAXES FOR JURISDICTIONS OUTSIDE OF NEW MEXICO?

A. EPE is including state income taxes for each of its taxing jurisdictions in which it has property or payroll (i.e., employees). Property and payroll generally cause nexus for state income tax purposes, which obligates EPE to pay income taxes in those jurisdictions. EPE's property and payroll in each of these jurisdictions are integral to the Company being able to serve its customers in New Mexico. Therefore, state income taxes for all three jurisdictions are included in this filing.

Q54. HOW DID YOU CALCULATE THE CURRENT AND DEFERRED STATE INCOME TAX AMOUNTS?

A. The Company is subject to state income taxes in New Mexico, Texas, and Arizona.

The calculation of state income taxes reflected on Schedule H-9 applies the applicable state income tax rate and apportionment factors to the taxable amounts in each state to arrive at a total state income tax expense on a total company basis. The New Mexico jurisdictional state income tax expense requested in the cost of service is located in Schedule A-3 and related workpapers.

IX. SPONSORED RULE 530 TAX SCHEDULES AND ADJUSTMENTS

A. TAX SCHEDULES

Q55. PLEASE DESCRIBE SCHEDULE H-9, FEDERAL INCOME TAXES PER BOOKS.

A. Schedule H-9 shows the calculation of federal and state income tax expense for the Base Period, Test Year Period adjustments, jurisdictional revenue adjustments, and the Test Year Period. The calculation of income tax expense in Schedule H-9 is used in the determination of the cost of service for the Test Year Period.

Q56. PLEASE DESCRIBE SCHEDULE H-10, RECONCILIATION OF TEST YEARBOOK NET INCOME TO TAXABLE NET INCOME.

A. Schedule H-10 reconciles book income and current taxable income for the Base Period, the Test Year Period adjustments, jurisdictional revenue adjustments, and the Test Year Period. Because Schedule H-10 is a comparison to the most recently

filed federal income tax return, amounts include both operating and nonoperating activities. Schedule H-10 contains explanations of all items in the reconciliation for both the Test Year Period and the tax return.

Q57. PLEASE DESCRIBE SCHEDULE H-11, INCOME TAX EFFECT AS A RESULT OF EPE JOINING IN A CONSOLIDATED FEDERAL INCOME TAX RETURN.

A. This schedule is not applicable. This schedule provides descriptions of any tax effect on the filing utility because of its inclusion within a consolidated income tax return for the most recent tax year. EPE did file as part of a consolidated group in its most recently filed tax return for the calendar year ended December 31, 2024. However, the taxes contained in this filing are presented on a stand-alone basis and contain no consolidated effects.

Q58. PLEASE DESCRIBE SCHEDULE H-12, ACCUMULATED DEFERRED INCOME TAXES.

A. Schedule H-12 provides detail of the ADIT activity for each of the 12 months ended September 30, 2025, and ADIT balances for the Base Period, the Test Year Period adjustments, jurisdictional revenue adjustments, and the Test Year Period. The ADIT accounts included in rate base are those that relate to underlying amounts

included in rate making (*i.e.*, in rate base, cost of service, or weighted average cost of capital). ADIT accounts that relate to amounts excluded from rate making are excluded from rate base, consistent with the stand-alone methodology.

Q59. PLEASE DESCRIBE SCHEDULE H-13, INVESTMENT TAX CREDITS.

A. Schedule H-13 provides detail of the accumulated deferred ITC for the Base Period, the Test Year Period adjustments, jurisdictional revenue adjustments, and the Test Year Period.

B. TAX ADJUSTMENTS

Q60. WERE ADJUSTMENTS MADE TO INCOME TAX EXPENSE IN THE BASE PERIOD?

A. Adjustments were made to federal and state income taxes in accordance with the stand-alone methodology to remove items not included in cost of service or rate base in this filing. These adjustments are reflected on Schedules H-9 (Schedule A-3, Adjustments Nos. 23, 24, 25, and 26) and H-10 and include:

- The Company's election under Section 46(f)(2) of the IRC does not permit amortization of ITC to reduce income tax expense in cost of service at a rate more rapidly than ratably — no faster than over the book life of the assets that generated the ITC. The stripped book depreciation rate requested is

derived from the proposed depreciation rate calculations supported by EPE witness John Spanos. This rate represents the life or investment portion of the depreciation rate without regard to amounts for cost of removal or salvage. The stripped depreciation rate is multiplied by the ITC amortization base to calculate the annual amount of ITC amortization included in cost of service. The stripped depreciation rate is used in this computation to avoid a potential normalization violation that could result if the ITCs were amortized in cost of service at a rate more rapid than ratably. The ITC amortization for the Test Year Period is calculated at Workpaper H-13.1. For each class of assets generating the ITC, the Company applied the stripped depreciation rate to the ITC amortization base to arrive at the ITC amortization used to reduce income tax expense.

- For all state income taxes, adjustments were made to state income tax amounts to include associated federal income tax impacts for the Test Year Period.

Q61. WERE ADJUSTMENTS MADE TO ADIT IN THE BASE PERIOD?

A. Yes. Adjustments were made to ADIT Base Period amounts where necessary to reflect adjustments to the underlying rate making items in accordance with the

stand-alone methodology. These adjustments are reflected on Schedule H-12 (Schedule A-3, Adjustment No. 35) and include:

- ADIT balances for depreciation and basis differences were adjusted to remove amounts related to PVGS Unit 3 to correspond to the removal of Palo Verde Generation Station ("PVGS") Unit 3 from rate base. These adjustments are reflected on Schedule H-12, column (c)

Q62. PLEASE DESCRIBE ADFIT-RATE CASE EXPENSE.

A. The Company did not have any ADFIT associated with rate case expense reflected on the books on September 30, 2025.

Q63. WERE ADJUSTMENTS MADE TO SFAS 109 REGULATORY ASSETS AND LIABILITIES IN THE BASE PERIOD?

A. Yes. Adjustments were made to SFAS 109 Regulatory Asset and Liability Base Period amounts where necessary to reflect adjustments to the underlying ADIT amounts. These adjustments are reflected on Schedule A-3, Adjustment No. 34 and include:

- Regulatory asset and liability amounts were adjusted to remove amounts where the underlying assets and liabilities are not included in rate making or the amount is related to amounts removed from ADIT. The regulatory

asset and liability amounts removed were for AEFUDC (page 2, column e, line 1), and ITC (page 2, column e, line 5.

X. TAXES OTHER THAN INCOME

Q64. WHAT IS THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY?

A. In this section of my testimony, I first discuss the Company's property taxes. I then discuss the remaining taxes other than income that the Company incurs.

A. PROPERTY TAXES

Q65. WHAT WAS THE TOTAL AMOUNT OF PROPERTY TAXES DURING THE BASE PERIOD?

A. The total amount of property taxes for the Company in the Base Period is shown on Schedule H-8.

Q66. WHAT IS THE NET REQUESTED RECOVERY AMOUNT FOR THE COMPANY'S PROPERTY TAXES?

A. The total amount of requested property taxes can be found on Schedule H-8.

Q67. HOW ARE THE PROPERTY TAXES FOR THE COMPANY DETERMINED?

A. The property taxes charged to the Company are the amounts imposed by taxing authorities to which the Company is subject. Property taxes are capitalized to construction work in process for assets currently under construction based on an assessed value or are expensed for assets in electric plant in service.

Q68. PLEASE DESCRIBE THE VARIOUS TAXING AUTHORITIES THAT LEVY PROPERTY TAXES AGAINST THE COMPANY'S PROPERTY.

A. The Company is subject to property taxation by many different taxing jurisdictions. These taxing jurisdictions include, but are not limited to, counties, cities, independent school districts, fire districts, and industrial districts. Also, various taxing jurisdictions overlap, and, for example, a single piece of utility property may be the basis for property tax levied by as many as six or more jurisdictions.

Q69. HOW ARE THE PROPERTY TAX AMOUNTS IMPOSED BY THE TAXING JURISDICTIONS DETERMINED?

A. Property tax is typically assessed against the appraised or taxable value of the Company's property located within the jurisdiction of a taxing authority. Generally, the property tax appraisal process is a two-step process for a regulated utility. The first step is to establish market value for all of the utility's property, collectively. This is referred to as a "unit" valuation. The second step is to allocate that market

value of the unit to the taxing jurisdictions in which the utility owns taxable property.

Once the taxable value for a tax jurisdiction is determined and final, the jurisdiction calculates and sends a bill to the taxpayer. The billed amount is determined by multiplying the jurisdiction's tax rate by the taxable value of EPE's property in that jurisdiction.

Q70. PLEASE DESCRIBE SCHEDULE H-8, AD VALOREM TAXES AND PLANT BALANCES.

A. This schedule shows the amount of ad valorem taxes assessed, penalties paid, and discounts taken for the three calendar years shown on Schedule H-8, as well as the net plant balances at the beginning of each of those years.

Q71. HAS THE COMPANY MADE ANY ADJUSTMENTS TO ITS BASE PERIOD PROPERTY TAX AMOUNT?

A. Yes. The Company has made adjustments to its Base Period property tax amounts to reflect an effective rate of tax assessed on adjusted net plant in service balances on September 30, 2025. The adjustment is included in Workpaper A-3, Adjustment No. 15. An adjustment was also made to remove property taxes related to PVGS Unit 3, shown on Schedule A-3, Adjustment No. 16, page 2, column (c), line 9.

B. REVENUE-RELATED TAXES

Q72. WHAT IS THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY?

A. In this section of my testimony, I sponsor the Company's revenue-related taxes. By "revenue-related taxes", I mean the Company's directly incurred local franchise fees; sales, use and gross receipts taxes; and other miscellaneous taxes plus state regulatory assessments.

Q73. WHAT WAS THE TOTAL AMOUNT OF REVENUE-RELATED TAXES DURING THE BASE PERIOD?

A. The total amount of revenue-related taxes for the Company in the Base Period is shown on Schedule H-8.

Q74. WHAT IS THE NET REQUESTED RECOVERY AMOUNT FOR THE COMPANY'S REVENUE-RELATED TAXES?

A. The total amount of requested revenue-related taxes can be found on Schedule H-8.

Q75. HAS THE COMPANY MADE ANY ADJUSTMENTS TO ITS BASE PERIOD REVENUE-RELATED TAXES?

A. Yes. Adjustments were made to revenue-related taxes that were necessary to reflect adjustments to the underlying amounts in cost of service. The adjustments were

calculated based on an effective tax rate determined by dividing the applicable taxes expensed by taxable Company revenues. These effective tax rates were adjusted for the effective uncollectible expenses rate and then applied to requested revenues to determine the amount of taxes included in the requested cost of service. These adjustments are reflected on Schedule H-8 and are calculated in Workpaper A-3, Adjustment No. 18 through Adjustment No. 22.

C. PAYROLL TAXES

Q76. WHAT WAS THE TOTAL AMOUNT OF PAYROLL TAXES DURING THE TEST YEAR PERIOD?

A. The total amount of payroll taxes for the Company in the Test Year Period is shown on Schedule H-8.

Q77. WHAT IS THE NET REQUESTED RECOVERY AMOUNT FOR THE COMPANY'S PAYROLL TAXES?

A. The total amount of requested payroll taxes can be found on Schedule H-8.

Q78. HAS THE COMPANY MADE ANY ADJUSTMENTS TO ITS BASE PERIOD PAYROLL TAXES?

A. Yes. Payroll taxes were adjusted to reflect salary and wage levels and remove the portion of payroll taxes related to PVGS Unit 3, as discussed in the testimony of

EPE witness Sierra. These adjustments are reflected on Schedule H-8 and are calculated in Workpaper A-3, Adjustment No. 17.

Q79. ARE THESE EXPENSES NECESSARY AND REASONABLE?

A. Yes. All of the above-described taxes are necessary because they are required by law to allow the Company to operate in its applicable jurisdictions. The amounts are reasonable because the taxes are imposed by law and calculated in accordance with applicable law and reflect the requested rate base and cost of service.

CONCLUSION

Q80. PLEASE STATE YOUR CONCLUSIONS.

A. EPE's per books and Test Year Period federal and state income tax amounts found in the H-9 schedules and included in the Company's requested cost of service and rate base are reasonable and necessary and calculated in accordance with Rule 530 and the Commission's rules. Additionally, the amounts of EPE's taxes other than income found in the H-8 schedules and included in the Company's requested cost of service are also reasonable and necessary and calculated in accordance with applicable law.

Q81. DOES THIS CONCLUDE YOUR TESTIMONY?

A. Yes, it does.

TAX SHARING AGREEMENT

This Tax Sharing Agreement (this "Agreement"), dated effective as of July 29, 2020, is made and entered into as of July 29, 2020, by and among Sun Jupiter Topco LLC, a Delaware Limited Liability Company ("Parent"), Sun Jupiter Parent LLC, a Delaware Limited Liability Company, Sun Jupiter Holdings LLC, a Delaware Limited Liability Company and El Paso Electric Company, a Texas Corporation (each party, a "Sun Jupiter Affiliate" and collectively, the "Sun Jupiter Affiliates").

RECITALS

WHEREAS, all of the Sun Jupiter Affiliates are members of an affiliated group of corporations within the meaning of section 1504(a) of the Internal Revenue Code of 1986, as amended (the "Code"), of which Parent is the common parent (the "Sun Jupiter Group");

WHEREAS, some or all of the Sun Jupiter Affiliates may be included in a group of entities headed by Parent or another Sun Jupiter Affiliate that is entitled to file Tax Returns (as defined below) with respect to state or local Taxes (as defined below) on a consolidated, combined, or unitary basis (a "State Group"); and

WHEREAS, the Sun Jupiter Affiliates desire to set forth their agreement regarding the allocation of Taxes and the rights and responsibilities of the Sun Jupiter Affiliates with respect to Tax Returns, Tax Contests (as defined below) and other related Tax matters.

AGREEMENT

NOW, THEREFORE, in consideration of the mutual obligations and undertakings contained herein, the Sun Jupiter Affiliates agree as follows:

1. DEFINITIONS.

1.1 Previously Defined Terms. Each term defined in the first paragraph of this Agreement and the Recitals shall have the meaning specified above whenever used in this Agreement.

1.2 Other Definitions. When used in this Agreement, the following terms shall have the following respective definitions:

"Combined Tax Return" shall have the meaning specified in Section 3.2 of this Agreement.
