Vice President – Regulatory & Government Affairs
El Paso Electric Company
P. O. Box 982
El Paso, TX 79960-0982

RE: 2021 EL PASO LOSS ANALYSES

Dear Mr. Schichtl:

Transmitted herewith are the results of the 2021 Analysis of System Losses for El Paso Electric Company's (EPE) power system. These results consist of an Annual analysis which develops cumulative expansion factors (loss factors) for both demand (peak hour-kW) and energy (annual average-kWh) losses by discrete voltage levels applicable to metered sales data. The loss calculations were made using a separate and expanded transmission loss model to derive the final results prescribed herein. Our analyses consider only technical losses in arriving at our final recommendations.

On behalf of MAC, we appreciate the opportunity to assist you in performing the loss analysis contained herein. The level of detail, multiple databases, and multiple power flow analyses reflect reasonable and representative power losses on the El Paso Electric Company system. Our review of these data and calculated loss results support the proposed loss factors as presented herein for your use in various cost of service, rate studies, and demand analyses.

Should you require any additional information, please let us know at your earliest convenience.

Sincerely,

Paul M. Normand
Principal

EL PASO ELECTRIC COMPANY

2021 ANALYSIS OF SYSTEM LOSSES

Appendix B – Results of El Paso Electric Company 2021 Loss Analysis – Transmission and Distribution with Generation Step Up (GSU) Losses

Appendix C – Discussion of Hoebel Coefficient

1.0 EXECUTIVE SUMMARY

This report presents El Paso Electric Company's (EPE) 2021 Analysis of System Losses for its integrated power system as performed by Management Applications Consulting, Inc. (MAC). Our analyses considered only technical losses and did not attempt to quantify non-technical factors such as theft and metering accuracy. The study developed separate one-hour peak demand (kW) and annual energy (kWh) loss factors for each voltage level of service in the power system. The cumulative loss factor results by voltage level, as presented herein, can be used to adjust metered sales data for losses to input in performing cost of service studies, determining voltage discounts, and other analyses which may require a loss adjustment.

The procedures used in the overall loss study emphasized the use of "in house" resources where possible. To this end, extensive use was made of the Company's power flow studies (ten separate analyses) and distribution plant investments in the model. Using estimated load data provided a means of calculating reasonable estimates of losses by using a "top-down" and "bottom-up" procedure. In the "top-down" approach, losses from the high voltage system, through and including distribution substations, were calculated along with power flow data, conductor and transformer loss estimates, and metered sales.

At this point in the analysis, system loads and losses at the input into the distribution substation system are known with reasonable accuracy. However, it is the remaining loads and losses on the distribution substations, primary system, secondary circuits, and services which are generally difficult to estimate. Estimated and actual Company load data provided the starting point for performing a "bottom-up" approach for calculating the remaining distribution losses. Basically, this "bottom-up" approach develops line loadings by first determining loads and losses at each level beginning at a customer's meter service entrance and then going through secondary lines, line transformers, primary lines and finally distribution substation. These distribution system loads and associated losses are then compared to the initial calculated input into Distribution Substation loadings for reasonableness prior to finalizing the loss factors. An overview of the loss study is shown on Figure 1 on page 4.

The definition of transmission losses recognized in the industry is simply to sum all losses at transmission as an integrated system. This approach will typically increase the resulting composite transmission loss factors but better reflects the topology of the systems with dispersed supply resources and interconnections. This study performed separate loss analyses for EPE's EHV (500 kV and 345 kV) networks and its local 115 kV and 69 kV networks to recognize the differing loss behavior of the two distinct transmission networks.

The load research data provided the starting point for performing a "bottom-up" approach for estimating the remaining distribution losses. Basically, this "bottom-up" approach develops line loadings by first determining loads and losses at each level beginning at a customer's meter and service entrance and then going through secondary lines, line transformers, primary lines and finally distribution substation. These distribution system loads and associated losses are then compared to the initial calculated input into Distribution Substation loadings for reasonableness. An overview of the loss study is shown on Figure 1 on page 5.

Appendix A presents the results of the El Paso Electric Company Transmission 2021 Loss Analysis for 69 kV and 115 through 345 kV and 500 kV. These results were developed using distinct power flows at loading levels representing 8,760 hours of the calendar year. The analyses were developed on a seasonal basis to reflect the varying load levels and loss characteristics for the EHV (500 kV and 345 kV) and the local transmission (115 kV and 69 kV) networks separately.

Appendix B of this report incorporates Appendix A's transmission loss results and presents the integrated total El Paso power system losses and resulting loss factors by delivery voltage. Table 1, below, provides the final results from Appendices A and B for the calendar year. The detailed distribution system losses are developed in Appendix B for all voltage levels. These loss expansion factors are applicable only to metered sales at the point of receipt for adjustment to the power system's input level.

TABLE 1
Loss Factors at Sales (Metered) Level

Voltage Level of Service	w/ GSU* (a)	w/o GSU* (b)	Delivery (c)
Demand (kW)

Losses – Net System Input[2]		6.14% MWh 7.04% MW	
Losses – Net System Output[3]		6.54% MWh 7.58% MW	

**Generation Step Up Transformers*

[1] Reflects results from Appendix A for 500 kV, 345 kV, 115 kV and 69 kV.
[2] Net system input equals firm sales plus losses, Company use less non-requirement sales and related losses. See Appendix B, Exhibit 1, for their calculations.
[3] Net system output uses losses divided by output or sales data as a reference.

Table 1, above, presents three loss factor columns as follows:

Column (a) These loss factors are calculated with the transmission component which includes GSU losses as calculated and presented in Appendix A, Schedules 1 and 2 (Section I).

Column (b) These loss factors are similar to Column (a) except that transmission losses do not include any GSU losses as presented in Appendix A, Schedule 1 (Section II).

Column (c) These are Delivery Only loss factors that exclude all transmission losses.

The delivery voltages considered in Table 1 are defined in Appendix B, Exhibit 1, and include 1 kV through 34 kV for primary and voltages less than 1 kV for secondary.

The loss factors presented in the Delivery Only column (c) of Table 1 are the Total El Paso Electric Company loss factors divided by the transmission loss factor in order to remove the transmission losses from each service level loss factor. For example, the secondary distribution demand loss factor of 1.05510 includes the recovery of all non-transmission losses from distribution substation, primary lines, line transformers, secondary conductors and services.

The net system input shown in Table 1 represents the MWh losses of 6.14% for the total El Paso Electric Company load using calculated losses divided by the associated input energy to the system. The 7.04% represents the MW losses also using system input as a reference. The net system output reference shown in Table 1 represents MWh losses of 6.54% and MW losses of 7.58%. These results use the appropriate total losses for each but are divided by system output or sales. These calculations are all based on the results from Exhibits 1, 7 and 9 of Appendix B.

The loss factor derivations for any voltage level must consider both the load at that level plus the loads from lower voltages and their associated losses. As a result, cumulative losses on losses equates to additional load at higher levels along with future changes (+ or –) in loads throughout the power system. It is therefore important to recognize that losses are multiplicative in nature (future) and not additive (test year only) for all future years to ensure total recovery based on prospective fixed loss factors for each service voltage.

The derivation of the cumulative loss factors shown in Table 1 have been detailed for all electrical facilities in Exhibit 9, page 1 for demand and page 2 for energy. Beginning on line 1 of page 1 (demand) under the secondary column, metered sales are adjusted for service losses on lines 3 and 4. This new total load (with losses) becomes the load amount for the next higher facilities of secondary conductors and their loss calculations. This process is repeated for all the installed facilities until the secondary sales are at the input level (line 45). The final loss factor for all delivery voltages using this same process is shown on line 46 and Table 1 for demand. This procedure is repeated in Exhibit 9, page 2, for the energy loss factors.

The loss factor calculation is simply the input required (line 45) divided by the metered sales (line 2).

Table 2 below expands the Table 1 to include a separation of the transmission voltage range to identify a range of 115 kV to 500 kV and a separate 69 kV level for possible use in the Company's studies.

TABLE 2
Loss Factors at Sales (Metered) Level

Voltage Level of Service	w/ GSU* (a)	w/o GSU* (b)	Delivery (c)

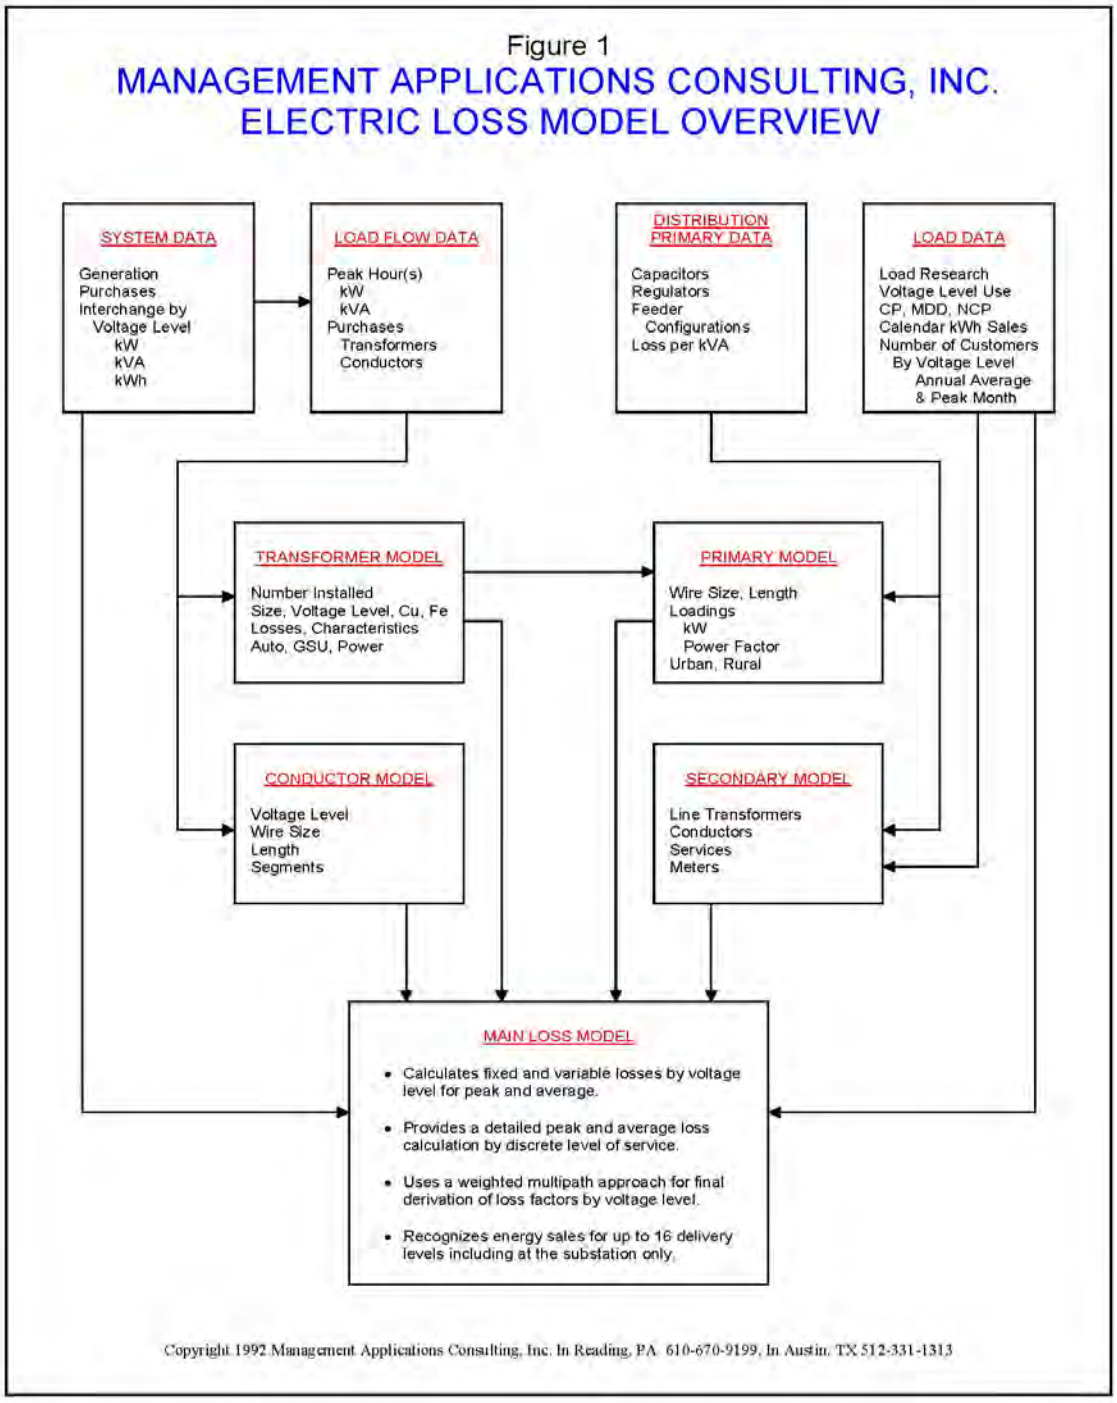
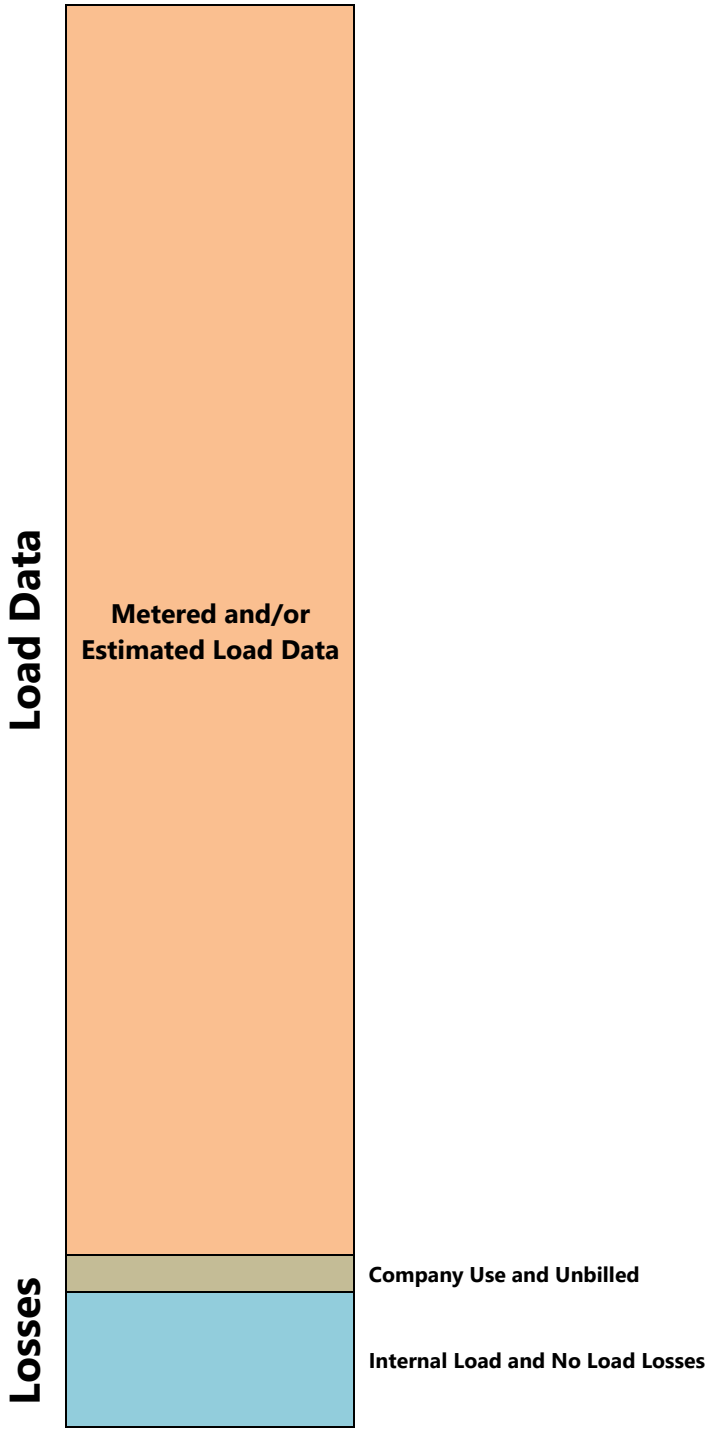
El Paso Electric Company
2021 Analysis of System Losses



El Paso Electric Company
2021 Analysis of System Losses

Figure 2
INTERNAL ENERGY ELEMENTS



2.0 INTRODUCTION

This report of the 2021 Analysis of System Losses provides a summary of results, conceptual background or methodology, description of the analyses, and input information related to the study.

2.1 Conduct of Study

Typically, between five to ten percent of the total peak hour MW and annual MWH requirements of an electric utility is lost or unaccounted for in the delivery of power to customers. These losses occur as a result of heating or magnetizing various electrical components of a power system. Investments must be made in facilities which support the total load which includes losses or unaccounted for load. While losses are a small portion of total delivered energy, they cannot be eliminated. Revenue requirements associated with load losses are an important concern to utilities and regulators in that customers must equitably share in all of these cost responsibilities. Loss expansion factors by voltage are the mechanism by which customers' metered demand and energy data are mathematically adjusted to the generation or input level (point of reference) when performing cost and revenue calculations.

An acceptable accounting of losses can be determined for any given time period using available engineering, system, and customer data along with empirical relationships. This loss analysis for the delivery of demand and energy utilizes such an approach. A microcomputer loss model[7] is utilized as the vehicle to organize the available data, develop the relationships, calculate the losses, and provide an efficient and timely avenue for future updates and sensitivity analyses. Our procedures and calculations are similar with prior loss studies, and they rely on numerous databases that include customer statistics and power system investments at various voltage levels of service.

Company personnel performed most of the data gathering and data processing efforts. MAC analyzed the Company's various databases and performed calculations to check the reasonableness of results. Efforts in determining the data required to perform the loss analysis centered on information which was available from existing studies or reports within the Company. From an overall perspective, our efforts concentrated on five major areas:

1. System information relating to multiple peak demands by season and metered annual sales data by voltage level,
2. High voltage power system power flow analyses and associated loss calculations,
3. Distribution system primary and secondary loss calculations,
4. Derivation of fixed and variable losses by voltage level, and
5. Development of final cumulative expansion factors at each voltage level for peak demand (kW) and annual energy (kWh) requirements reconciled to system input.

2.2 Electric Power Losses

Losses in power systems consist of primarily technical losses with a much smaller level of non-technical losses.

Technical Losses

Electrical losses result from the transmission of energy over various electrical equipment. The largest component of total losses during peaking conditions is power dissipation as a result of varying loading conditions and are oftentimes called load losses which are mostly related to the square of the current (I^2R). These peak hour losses can be as high as 65% to 80% of all technical losses during peak loading conditions. The remaining losses are called no-load and represent essentially fixed (constant) energy losses throughout the year. These no-load losses represent energy required to energize various electrical equipment regardless of their loading levels over the entire year. The major portion of these no-load losses consist of core or magnetizing energy related to installed transformers throughout the power system and generates the major component of annual losses on any distribution system.

The following Table 3 summarizes the unadjusted fixed and variable losses by major functional categories from Exhibit 5 of Appendix A:

TABLE 3

	DEMAND (PEAK HOUR)			ENERGY (ANNUAL AVERAGE)		
	FIXED	VARIABLE	TOTAL	FIXED	VARIABLE	TOTAL
TRANS	7.67	43.47	51.14	67,193	153,668	220,862
(%)	15.00%	85.00%	100.00%	30.42%	69.58%	100.00%

TOTAL DIST	20.89	65.73	86.61	182,979	132,608	315,587
(%)	24.12%	75.88%	100.00%	57.98%	42.02%	100.00%

Non-Technical Losses

These are unaccounted for energy losses that are related to energy theft, metering, non-payment by customers, and accounting errors. Losses related to these areas are generally very small and can be extremely difficult and subjective to quantify. Our efforts generally do not develop any meaningful level because we assume that improving technology and utility practices have minimized these amounts.

2.3 Loss Impacts from Distributed Generation (DG)

The impacts of losses on a power system from the installation of various DG facilities will depend somewhat on the penetration level, type of installations and location on a circuit. Based on the results presented in Table 2 of this loss study, the impacts are significantly different from looking at any single peak load hour versus the potential impacts over all hours of an entire year. Use of a typical uniform loss factor(s) for each voltage level may require additional consideration to recognize that a reduced consumption level could have little or no impact due to the recovery requirements for the high level of fixed losses over the entire hourly electric grid condition for any DG location.

2.4 Description of Model

The Loss Model is a customized applications model, constructed using the Excel software program. Documentation consists primarily of the model equations at each cell location. A significant advantage of such a model is that the actual formulas and their corresponding computed values at each cell of the model are immediately available to the analyst.

A brief description of the major categories of effort for the preparation of each loss model is as follows:

- Main sheet which contains calculations for all primary and secondary losses, summaries of all conductor and transformer calculations from other sheets discussed below, output reports and supporting results.

- Transformer sheet which contains data input and loss calculations for each high voltage transformer and distribution substation. Separate iron and winding losses are calculated for each transformer by identified type.

- Conductor sheet containing summary data by major voltage level as to circuit miles, loading assumptions, and kW and kWh loss calculations. Separate loss calculations for each recognized line segment were made using the Company's power flow data and summarized by voltage level in this model.

3.0 METHODOLOGY

3.1 Background

The objective of a Loss Study is to provide a reasonable set of energy (average) and demand (peak) loss expansion factors which account for system losses associated with the transmission and delivery of power to each voltage level over a designated period of time. The focus of this study is to identify the difference between total energy inputs and the associated sales with the difference being equitably allocated to all delivery levels. Several key elements are important in establishing the methodology for calculating and reporting the Company's losses. These elements are:

- Selection of voltage level of services,
- Recognition of losses associated with conductors, transformations, and other electrical equipment/components within voltage levels,
- Identification of customers and loads at various voltage levels of service,
- Review of generation or net power supply input at each level for the test period studied, and
- Analysis of kW and kWh sales by voltage levels within the test period.

The three major areas of data gathering and calculations in the loss analysis were as follows:

1. System Information (monthly and annual)
   - MWH generation and MWH sales.
   - Coincident peak estimates and net power supply input from all sources and voltage levels.
   - Customer load data estimates from available load research information, adjusted MWH sales, and number of customers in the customer groupings and voltage levels identified in the model.
   - System default values, such as power factor, loading factors, and load factors by voltage level.
2. High Voltage System (Appendix A)
   - Conductor and transformer information was summarized from a database by the Company which reflects the transmission system by voltage level. Extensive use was made of the Company's power flow capability with the

losses calculated for ten separate load levels. Loss calculations were then performed hourly based on a linear interpolation of the ten power flow analyses and incorporated into the final loss calculations.

- Transformer information was developed in a database to model a wide range of loading transformation at each voltage level. Substation power, step-up, and auto transformers were identified along with any operating data related to loads and losses.

- Power flow data of peak and several additional load conditions were the primary source of equipment loadings and derivation of load losses in the high voltage loss calculations.

3. Distribution System (Appendix B)

- Distribution Substations – data was developed for modeling each substation as to its size and loading. Loss calculations were performed from this data to determine load and no load losses separately for each transformer.

- Primary lines – Line loading and loss characteristics were reviewed from distribution feeder analyses. These loss results developed kW loss per MW of load by Primary Voltage level. The final estimated primary losses were developed iteratively after establishing all other loss characteristics.

- Line transformers – Losses in line transformers were based on each customer service group's size, as well as the number of customers per transformer. Accounting and load data provided the foundation with which to model the transformer loadings and calculate load and no load losses.

- Secondary network – Typical secondary networks were estimated for conductor sizes, lengths, loadings, and customer penetration for residential and small general service customers.

- Services – Typical services were estimated for each secondary service class of customers identified in the study with respect to type, length, and loading.

The loss analysis was thus performed by constructing the model in segments and subsequently calculating the composite until the constraints of peak demand and energy were met:

- Information as to the physical characteristics and loading of each transformer and conductor segment was modeled.

- Conductors, transformers, and distribution were grouped by voltage level, and unadjusted losses were calculated.

- The loss factors calculated at each voltage level were determined by "compounding" the per-unit losses. Equivalent sales at the supply point were obtained by dividing sales at a specific level by the compounded loss factor to determine losses by voltage level.

- The resulting demand and energy loss expansion factors were then used to adjust all sales to the generation or input level in order to estimate the difference.

- Reconciliation of kW and kWh sales by voltage level using the reported system kW and kWh was accomplished by adjusting the initial loss factor estimates until the mismatch or difference was eliminated.

3.2 Calculations and Analysis

This section provides a discussion of the input data, assumptions, and calculations performed in the loss analysis. Specific appendices have been included in order to provide documentation of the input data utilized in the model.

3.2.1 Bulk and Transmission Lines

The transmission and subtransmission (500 kV, 345 kV, 115 kV, and 69 kV) line losses were calculated based on a modeling of unique voltage levels identified by the Company's power flow data and configuration for the entire integrated El Paso Electric Power System. Specific information as to length of line, voltage level, peak load, maximum load, etc., were provided based on Company records.

Actual loadings were based on El Paso Electric's peak loading conditions. Calculations of line losses were performed by EPE by voltage levels for reporting purposes as shown in the Discussion of Results (Section 4.0) of this report. The loss calculations consisted of determining multiple line loading levels separately and evaluating the I^2R results for each recognized segment which was summed by voltage levels.

After several system coincident peak hour losses were identified by season for each major transmission voltage level, a separate calculation was then made to develop annual average energy losses based on an hourly loss calculation. Using the results of EPE's ten power flows, hourly losses were derived for hours of the calendar year as detailed in Appendix A.

3.2.2 Transformers

The transformer loss analysis required several steps in order to properly consider the characteristics associated with various transformer types; such as, step-up, auto transformers, distribution substations, and line transformers. In addition, further efforts were required to identify both iron and winding losses within each of these transformer types in order to obtain reasonable peak (kW) and average energy (kWh) losses. While iron losses were considered essentially constant for each hour, recognition had to be made for the varying degree of winding losses due to hourly equipment loadings.

Standardized test data tables were used to represent no load information (fixed) and full load (variable) losses for different types and sizes of distribution transformers. This test data was incorporated into the loss model to develop relationships representing winding and iron or core losses for the transformer loss calculation. These results were then totaled by various groups, as identified and discussed in Section 4.0.

The remaining miscellaneous losses considered in the loss study consisted of several areas which do not lend themselves to any reasonable level of modeling for estimating their respective losses and were therefore lumped together into a single loss factor as shown in Appendix A, Workpaper 2. The typical range of values for these losses is from 0.10% to 0.25%, and we have assumed the lower value to be conservative at this time. The losses associated with this loss factor include bus bars, unmetered station use, grounding transformers, cooling fans, heating and air conditioning requirements, and other remaining station use requirements.

3.2.3 Distribution System

The load data at the substation and customer level, coupled with primary and secondary network information, was sufficient to model the distribution system in adequate detail to calculate losses.

Primary Lines

Estimates were made by the Company of primary line losses by the different levels of distribution voltage. Our final recommendations and loss levels were derived by calculating all other loss categories with the final primary loss level estimated by subtraction.

Line Transformers

Losses in line transformers were determined based on typical transformer sizes for each secondary customer service group and an estimated or calculated number of customers per transformer. Accounting records and estimates of load data provided the necessary database with which to model the loadings. These calculations also made it possible to determine separate winding and iron losses based on a table of representative losses for various transformer sizes.

Secondary Line Circuits

Calculations of secondary line circuit losses were performed for loads served through these secondary line investments. Estimates of typical conductor sizes, lengths, loadings and customer class penetrations were made to obtain total circuit miles and losses for the secondary network. Customer loads which do not have secondary line requirements were also identified so that a reasonable estimate of losses and circuit miles of the investments could be made.

Service Drops and Meters

Service drops were estimated for each secondary customer reflecting conductor size, length and loadings to obtain demand losses. A separate calculation was also performed using customer maximum demands to obtain kWh losses. Meter loss estimates were also made for each customer and incorporated into the calculations of kW and kWh losses included in the Summary Results.

4.0 DISCUSSION OF RESULTS

A brief description of each Schedule and calculations is provided in **Appendix A**. A brief description of each Exhibit is provided in **Appendix B** as follows:

Exhibit 1 - Summary of Company Data

This exhibit reflects system information used to determine percent losses and a detailed summary of kW and kWh losses by voltage level. The loss factors developed in Exhibit 7 are also summarized by voltage level.

Exhibit 2 - Summary of Conductor Information

A summary of MW and MWH load and no load losses for conductors by voltage levels is presented. The sum of all calculated losses by voltage level is based on input data information provided in Appendix A. Percent losses are based on equipment loadings.

Exhibit 3 - Summary of Transformer Information

This exhibit summarizes transformer losses by various types and voltage levels throughout the system. Load losses reflect the winding portion of transformer losses while iron losses reflect the no load or constant losses. MWH losses are estimated using a calculated loss factor for winding and the test year hours times no load losses.

Exhibit 4 - Summary of Losses Diagram (2 Pages)

This loss diagram represents the inputs and output of power at system peak conditions. Page 1 details information from all points of the power system and what is provided to the distribution system for primary loads. This portion of the summary can be viewed as a “top down” summary into the distributor system.

Page 2 represents a summary of the development of primary line loads and distribution substations based on a “bottom up” approach. Basically, loadings are developed from the customer meter through the Company’s physical investments based on load research and other metered information by voltage level to arrive at MW and MVA requirements during peak load conditions by voltage levels.

Exhibit 5 - Summary of Sales and Calculated Losses

Summary of Calculated Losses represents a tabular summary of MW and MWH load and no load losses by discrete areas of delivery within each voltage level. Losses have been identified and are derived based on summaries obtained from Exhibits 2 and 3 and losses associated with meters, capacitors and regulators.

Exhibit 6 - Development of Loss Factors, Unadjusted

This exhibit calculates demand and energy losses and loss factors by specific voltage levels based on sales level requirements. The actual results reflect loads by level and summary totals of losses at that level, or up to that level, based on the results as shown in Exhibit 5. Finally, the estimated values at generation are developed and compared to actual generation to obtain any difference or mismatch.

Exhibit 7 - Development of Loss Factors, Adjusted

The adjusted loss factors are the results of adjusting Exhibit 6 for any difference. All differences between estimated and actual are prorated to each level based on the ratio of each level's total load plus losses to the system total as shown on Exhibit 8. These new loss factors reflect an adjustment in losses due only to kW and kWh mismatch.

Exhibit 8 – Adjusted Losses and Loss Factors by Facility

These calculations present an expanded summary detail of Exhibit 7 for each segment of the power system with respect to the flow of power and associated losses from the receipt of energy at the meter to the generation for the Company's power system.

Exhibit 9 – Appendix B Only – Summary of Losses by Delivery Voltage

These calculations present a reformatted summary of the losses presented in Exhibits 7 and 8 by power system delivery segment as calculated by voltage level of service based on sales.

Pages 1-2 Index

Schedule 1A, Page 3 Presents the summary loss results of the calculated hourly losses for the Company at the annual peak hour and for the annual average losses for all hours of the year.

Calculated loss factors are applicable to the metered (output) sales level.

Section I shows transmission losses of greater than or equal to 115 kV including the GSU losses.

Section II shows the same numbers as Section 1 except that the GSU losses (A) have been removed from the losses in B and C.

Schedule 1B, Page 4 Presents the summary loss results of the calculated hourly losses for only the 69 kV at the annual peak hour and for the annual average losses for all hours of the year.

Calculated loss factors are applicable to the metered (output) sales level.

Section I shows transmission losses equal to 69 kV.

Section II shows the same numbers as Section 1 except that the GSU losses (A) have been removed from the losses in B and C.

Schedule 1C, Page 5 Presents the summary loss results of the calculated hourly losses for the Company at the annual peak hour and for the annual average losses for all hours of the year.

Calculated loss factors are applicable to the metered (output) sales level.

Section I shows transmission losses of greater than or equal to 69 kV including the GSU losses.

Section II shows the same numbers as Section 1 except that the GSU losses (A) have been removed from the losses in B and C.

Schedule 2, Page 6 Section I shows the summary of the summer and winter peak hour MW and annual MWH losses for the system greater than or equal to 115 kV.

Section II shows the summary of the summer and winter peak hour MW and annual MWH losses for the system equal to 69 kV.

Results are detailed by segment and season: Summer (June, July, August, and September), Winter (all months excluding Summer months).

Loss data is from Schedule 3.

Schedule 2, Page 7 Section III shows the summary of the summer and winter peak hour MW and annual MWH losses for the total system.

Results are detailed by segment and season: Summer (June, July, August, and September), Winter (all months excluding Summer months).

Loss data is from Schedule 3.

Schedule 3, Page 8 Summary of MW and MWH loss results by season and voltage level.

Schedule 4, Page 9 Summary of seasonal peak hour MW and average MWH loss results for El Paso Electric Company by voltage level from Appendices A (Winter-5832 hours) and B (Summer-2928 hours) hourly loss calculations.

Appendix C

Discussion of Hoebel Coefficient

El Paso Electric Company
2021 Analysis of System Losses

COMMENTS ON HOEBEL COEFFICIENTS

The Hoebel constant represents an established industry standard relationship between peak losses and average losses and is used in a loss study to estimate energy losses from peak demand losses. H. F. Hoebel described this relationship in his article, "Cost of Electric Distribution Losses," Electric Light and Power, March 15, 1959.

Within any loss evaluation study, peak demand losses can readily be calculated given equipment resistance and approximate loading. Energy losses, however, are much more difficult to determine given their time-varying nature. This difficulty can be reduced by the use of an equation which relates peak load losses (demand) to average losses (energy). Once the relationship between peak and average losses is known, average losses can be estimated from the known peak load losses.

Within the electric utility industry, the relationship between peak and average losses is known as the loss factor. For definitional purposes, loss factor is the ratio of the average power loss to the peak load power loss, during a specified period of time. This relationship is expressed mathematically as follows:

$$(1)\quad F_{LS} \cong A_{LS} \div P_{LS}$$

where: F_{LS} = Loss Factor
A_{LS} = Average Losses
P_{LS} = Peak Losses

The loss factor provides an estimate of the degree to which the load loss is maintained throughout the period in which the loss is being considered. In other words, loss factor is the ratio of the actual kWh losses incurred to the kWh losses which would have occurred if full load had continued throughout the period under study.

Examining the loss factor expression in light of a similar expression for load factor indicates a high degree of similarity. The mathematical expression for load factor is as follows:

$$(2)\quad F_{LD} \cong A_{LD} \div P_{LD}$$

where: F_{LD} = Load Factor
A_{LD} = Average Load
P_{LD} = Peak Load

This load factor result provides an estimate of the degree to which the load loss is maintained throughout the period in which the load is being considered. Because of the similarities in definition, the loss factor is sometimes called the "load factor of losses." While the definitions are similar, a strict equating of the two factors cannot be made. There does exist, however, a relationship between these two factors which is dependent upon the shape of the load duration curve. Since resistive losses vary as the square of the load, it can be shown mathematically that the loss factor can vary between the extreme limits of load factor and load factor squared. The

El Paso Electric Company
2021 Analysis of System Losses

relationship between load factor and loss factor has become an industry standard and is as follows:

$$(3)\ F_{LS} \cong H*F_{LD}^2 + (1-H)*F_{LD}$$

where: F_{LS} = Loss Factor
F_{LD} = Load Factor
H = Hoebel Coefficient

As noted in the attached article, the suggested value for H (the Hoebel coefficient) is 0.7. The exact value of H will vary as a function of the shape of the utility's load duration curve. In recent years, values of H have been computed directly for a number of utilities based on EEI load data. It appears on this basis, the suggested value of 0.7 should be considered a lower bound and that values approaching unity may be considered a reasonable upper bound. Based on experience, values of H have ranged from approximately 0.85 to 0.95. The standard default value of 0.9 is generally used.

Inserting the Hoebel coefficient estimate gives the following loss factor relationship using Equation (3):

$$(4)\ F_{LS} \cong 0.90*F_{LD}^2 + 0.10*F_{LD}$$

Once the Hoebel constant has been estimated and the load factor and peak losses associated with a piece of equipment have been estimated, one can calculate the average, or energy losses as follows:

$$(5)\ A_{LS} \cong P_{LS} * [H*F_{LD}^2 + (1-H)*F_{LD}]$$

where: A_{LS} = Average Losses
P_{LS} = Peak Losses
H = Hoebel Coefficient
F_{LD} = Load Factor

Loss studies use this equation to calculate energy losses at each major voltage level in the analysis.

FOOTNOTES:
(A) Unadjusted and Adjusted Base Rate and FPPCAC & RPS Revenues exclude unbilled, deferred fuel and RPS revenues, and customer dedicated solar facility capacity charges.
(B) Proposed Base Rate Revenues as shown in Schedule O-2 Proof of Revenues, tab Proposed Rates (Ph 2).
(C) FPPCAC & RPS related costs are allocated to each rate class under the assumption of dollar for dollar cost recovery.
(D) No changes in the FPPCAC and RPS are proposed in this rate case. Same as Adjusted Fuel Revenues in column (f).
(E) Fuel revenue related to non-firm is included in the corresponding firm service rate class.
(F) Revenues for NM Rate 42 – Electric Vehicle Charging Service are included in NM Rate 01 – Residential, NM Rate 03 – Small General Service, and NM Rate 07 – City and County Lighting.

Amounts may not add or tie to other schedules due to rounding.

GENERAL

In each of the listed explanations of the proposed changes to the rate schedules below, the revision number referenced in a rate schedule title is the proposed revision number.

Pursuant to Rule 210 (17.1.210 NMAC), Section 11.A(1), when any change is made in a rate schedule, attention shall be directed to the changes on the revised rate schedule by placing an "X" at the right-hand border on the line which contains the change. When all or most of the rate schedule is to be changed, the "X" may be placed near the top of the page below the schedule name with a notation to that effect.

To make the rate schedules more inviting to read, minor additions or deletions of language (e.g., "without written approval . . ." is modified to read "without the written approval . . .") or typo graphics have been made within rate schedule provisions. Changes of this nature are denoted by the required "X" in the proposed rate schedules but are not individually described in Schedule O-4 unless the change impacts the intent or substance of a specific rate schedule provision.

Please refer to Schedule O-3 for the rates that are included in the proposed rate schedules. EPE witness Manuel Carrasco provides the justification and support for the proposed change in rates, except for certain rate schedules included below and discussed by EPE witness Rene F. Gonzalez.

A redline version of the proposed rate schedule is provided for reference as a workpaper to Schedule O-4.

1. 15TH REVISED RATE NO. 01 – RESIDENTIAL SERVICE RATE

Due to numerous changes to this rate schedule, a single "X" has been placed in each page of this schedule to notate that most of the content within it has changed.

In the ‘Applicability’ language section, TOD language related to the timing of the first bills for usage of TOD rates and reprogramming of associated meters is removed. This language was specific to NMPRC Case No. 20-00104-UT and no longer applicable.

Language related to the ‘Monthly Minimum Charge’ is revised to more clearly reflect its application.

The ‘Fuel and Purchased Power’ (“FPPCAC”) provision is revised to address Distributed Generation (“DG”) customers to establish TOD periods.

A new ‘Low Income Rider’ is added to the tariff with supporting testimony included within the direct testimonies of EPE witnesses Gonzalez and Carrasco.

The ‘Other Applicable Riders’ provision is modified to address the inclusion of Distributed Generation (DG) customers as it relates to net energy metering and how TOD is applied.

The now eliminated 'Voluntary Renewable Energy' ("VRE") Program Rate No. 32 notation is removed from the tariff.

Finally, clarifying language related to the program description is added to the 'Whole House Electric Vehicle (WHEV) Rate Rider Incentive Credit'.

2. 17TH REVISED RATE NO. 03 – SMALL GENERAL SERVICE RATE

Due to numerous changes to this rate schedule, a single "X" has been placed in each page of this schedule to notate that most of the content within it has changed.

In the 'Applicability' language section, TOD language related to the timing of the first bills for usage of TOD rates and reprogramming of associated meters is removed. This language was specific to NMPRC Case No. 20-00104-UT and no longer applicable.

Clarifying language regarding billing applicability in the Alternative Service Rate and the Alternate Time of Day Rate is added.

Language related to the 'Monthly Minimum Charge' is revised to more clearly reflect its application.

An Experimental Off-Peak Demand Rate is added to this tariff. Please refer to Mr. Carrasco's Direct Testimony for a discussion of the rate and structure of this new option.

The 'Fuel and Purchased Power' ("FPPCAC") provision is revised to address Distributed Generation ("DG") customers to establish TOD periods.

The 'Other Applicable Riders' provision is modified to address the inclusion of Distributed Generation (DG) customers as it relates to net energy metering and how TOD is applied.

The now eliminated 'Voluntary Renewable Energy' ("VRE") Program Rate No. 32 notation is removed from the tariff.

Clarifying language related to the program description is added to the 'Whole House Electric Vehicle (WSEV) Rate Rider Incentive Credit'.

Finally, the 'Terms and Conditions' section is modified to simplify the language regarding billing applicability.

3. 17TH REVISED RATE NO. 04 – GENERAL SERVICE RATE

Due to numerous changes to this rate schedule, a single "X" has been placed in each page of this schedule to notate that most of the content within it has changed.

In the 'Applicability' language section, TOD language related to the timing of the first bills for usage of TOD rates and reprogramming of associated meters is removed. This language was specific to NMPRC Case No. 20-00104-UT and no longer applicable.

A 'Reserved Distribution Capacity Service Charge' is added to this tariff. Please refer to Mr. Gonzalez's Direct Testimony for a discussion of this new option.

Language related to the 'Monthly Minimum Charge' is revised to more clearly reflect its application.

An Experimental Off-Peak Demand Rate and an Experimental TOD Demand Rate is added to this tariff. Please refer to Mr. Carrasco's Direct Testimony for a discussion of the rate and structure of this new option.

The 'Fuel and Purchased Power' ("FPPCAC") provision is revised to address Distributed Generation ("DG") customers to establish TOD periods.

The 'Other Applicable Riders' provision is modified to address the inclusion of Distributed Generation (DG) customers as it relates to net energy metering and how TOD is applied.

The now eliminated 'Voluntary Renewable Energy' ("VRE") Program Rate No. 32 notation is removed from the tariff.

Clarifying language related to the program description is added to the 'Whole House Electric Vehicle (WSEV) Rate Rider Incentive Credit'.

Finally, the 'Terms and Conditions' section is modified to simplify the language regarding billing applicability.

4. 17TH RATE NO. 05 – IRRIGATION SERVICE RATE

Due to numerous changes to this rate schedule, a single "X" has been placed in each page of this schedule to notate that most of the content within it has changed.

In the 'Applicability' language section, TOD language related to the timing of the first bills for usage of TOD rates and reprogramming of associated meters is removed. This language was specific to NMPRC Case No. 20-00104-UT and no longer applicable.

Language related to the 'Monthly Minimum Charge' is revised to more clearly reflect its application.

The 'Fuel and Purchased Power' ("FPPCAC") provision is revised to address Distributed Generation ("DG") customers to establish TOD periods.

The 'Other Applicable Riders' provision is modified to address the inclusion of Distributed Generation (DG) customers as it relates to net energy metering and how TOD is applied.

5. 14th RATE NO. 07 – CITY AND COUNTY SERVICE RATE

An "X" has been placed on each change being made on this rate schedule.

A 'Reserved Distribution Capacity Service Charge' is added to this tariff. Please refer to Mr. Gonzalez's Direct Testimony for a discussion of this new option.

Language related to the 'Monthly Minimum Charge' is revised to more clearly reflect its application.

The 'Fuel and Purchased Power' ("FPPCAC") provision is revised to address Distributed Generation ("DG") customers to establish TOD periods.

The 'Other Applicable Riders' provision is modified to address the inclusion of Distributed Generation (DG) customers as it relates to net energy metering and how TOD is applied.

Clarifying language related to the program description is added to the 'Whole House Electric Vehicle (WSEV) Rate Rider Incentive Credit'.

6. 14TH RATE NO. 08 – WATER, SEWAGE, STORM SEWAGE PUMPING AND SEWAGE DISPOSAL RATE

An "X" has been placed on each change being made on this rate schedule.

In the 'Applicability' language section, TOD language related to the timing of the first bills for usage of TOD rates and reprogramming of associated meters is removed. This language was specific to NMPRC Case No. 20-00104-UT and no longer applicable.

Language related to the 'Monthly Minimum Charge' is revised to more clearly reflect its application.

The 'Fuel and Purchased Power' ("FPPCAC") provision is revised to address Distributed Generation ("DG") customers to establish TOD periods.

The 'Other Applicable Riders' provision is modified to address the inclusion of Distributed Generation (DG) customers as it relates to net energy metering and how TOD is applied.

7. 14TH RATE NO. 09 – LARGE POWER SERVICE RATE

Due to numerous changes to this rate schedule, a single "X" has been placed in each page of this schedule to notate that most of the content within it has changed.

In the 'Applicability' language section, TOD language related to the timing of the first bills for usage of TOD rates and reprogramming of associated meters is removed. This language was specific to NMPRC Case No. 20-00104-UT and no longer applicable.

A 'Reserved Distribution Capacity Service Charge' is added to this tariff. Please refer to Mr. Gonzalez's Direct Testimony for a discussion of this new option.

Language related to the 'Monthly Minimum Charge' is revised to more clearly reflect its application.

The 'Fuel and Purchased Power' ("FPPCAC") provision is revised to address Distributed Generation ("DG") customers to establish TOD periods.

The 'Other Applicable Riders' provision is modified to address the inclusion of Distributed Generation (DG) customers as it relates to net energy metering and how TOD is applied.

The now eliminated 'Voluntary Renewable Energy' ("VRE") Program Rate No. 32 notation is removed from the tariff.

Finally, the 'Terms and Conditions' section is modified to simplify the language regarding billing applicability.

8. 16TH RATE NO. 10 – MILITARY RESEARCH AND DEVELOPMENT POWER RATE

Due to numerous changes to this rate schedule, a single "X" has been placed in each page of this schedule to notate that most of the content within it has changed.

Language related to the 'Monthly Minimum Charge' is revised to more clearly reflect its application.

The 'Fuel and Purchased Power' ("FPPCAC") provision is revised to address Distributed Generation ("DG") customers to establish TOD periods.

The 'Other Applicable Riders' provision is modified to address the inclusion of Distributed Generation (DG) customers as it relates to net energy metering and how TOD is applied.

9. 15TH RATE NO. 11 – MUNICIPAL STREET LIGHTING RATE

Due to numerous changes to this rate schedule, a single "X" has been placed in each page of this schedule to notate that most of the contents within it has changed.

In the 'Applicability' section, new language allowing municipalities to add certain types of safety equipment with related commentary on associated cost recovery is added to the tariff.

In the Monthly Rates provision, a new 'Operated & Maintained' service option for non-company owned LED is added, as are new LED lamp type and charges are added to certain tables.

The 'Fuel and Purchased Power' ("FPPCAC") provision is revised to address Distributed Generation ("DG") customers to establish TOD periods.

The 'Other Applicable Riders' provision is modified to address the inclusion of Distributed Generation (DG) customers as it relates to net energy metering and how TOD is applied.

10. 15TH RATE NO. 12 – PRIVATE AREA LIGHTING RATE

Due to numerous changes to this rate schedule, a single "X" has been placed in each page of this schedule to notate that most of the contents within it has changed.

In the 'Applicability' section, new language allowing municipalities to add certain types of safety equipment with related commentary on associated cost recovery is added to the tariff.

In the Monthly Rates provision, new LED lamp type and charges are added to certain tables.

The 'Fuel and Purchased Power' ("FPPCAC") provision is revised to address Distributed Generation ("DG") customers to establish TOD periods.

The 'Other Applicable Riders' provision is modified to address the inclusion of Distributed Generation (DG) customers as it relates to net energy metering and how TOD is applied.

11. 13TH RATE NO. 15 – MISCELLANEOUS SERVICE CHARGES

Due to numerous changes to this rate schedule, a single "X" has been placed in each page of this schedule to notate that most of the contents within it has changed.

The primary changes to this rate schedule are the deletion of two charges, and the proposed implementation of four new charges. Deleted charge are removed as their presentation is now redundant as provided by the remaining charges. Additionally, description language within the titles of the two remaining "non-Pay" charges is modified to remove the language related to amperage and AC power phases as it is no longer necessary.

Eliminated Charges: (Proposed)

Description of Charge	Rate
Non-Pay Reconnect Charge @ Meter (up to 200 amps or three-phase)	$22.50
Non-Pay Reconnect Charge @ Pole (over 200 amps or single-phase)	$157.00

Proposed New Charges:

Description of Charge	Rate
Facility Plus Rental Charge (Monthly)	1.2193% of cost

Transmission Facilities Charge (Monthly)	1.0946% of cost
Customer Initiated Lighting Reconnect/Disconnect	$205.75
Customer Initiated Lighting Reconnect/Disconnect Additional Time	$139.75

Language describing each of the proposed charges discussed above has been added to the Miscellaneous Charge Descriptions sections of the rate schedule.

12. 45TH RATE NO. 16 – PURCHASED POWER SERVICE

An "X" has been placed on each change being made on this rate schedule.

Note that the proposed revisions to this rate schedule is for the language contained within it. No energy payment rates are proposed in this filing as those are calculated and filed annually in accordance to 17.9.570 NMAC (Rule 570).

Under the Common Provisions section, the Interconnection Charge, the annual charge provision percentages are updated in conjunction with the rate design studies produced in this rate case.

13. 21ST RATE NO. 18 – FIXED FUEL FACTOR

An "X" has been placed on each change being made on this rate schedule.

Under the FPPCAC provision, the values by voltage level for both the Line Losses and Voltage Factor columns are revised to reflect the energy from the proposed Line Loss Study.

14. 13TH RATE NO. 19 – SEASONAL AGRICULTURE PROCESSING SERVICE RATE

An "X" has been placed on each change being made on this rate schedule.

Language related to the ‘Monthly Minimum Charge’ is revised to more clearly reflect its application.

The ‘Fuel and Purchased Power’ (“FPPCAC”) provision is revised to address Distributed Generation (“DG”) customers to establish TOD periods.

The ‘Other Applicable Riders’ provision is modified to address the inclusion of Distributed Generation (DG) customers as it relates to net energy metering and how TOD is applied.

15. 12TH RATE NO. 21 – SUPPLEMENTARY POWER SERVICE COGENERATION AND SMALL POWER PRODUCTION FACILITIES

An "X" has been placed on each change being made on this rate schedule.

Under the Common Provisions section, the Interconnection Charge, the annual charge provision percentages are updated in conjunction with the rate design studies produced in this rate case.

16. 13TH RATE NO. 22 – BACKUP POWER SERVICE COGENERATION AND SMALL POWER PRODUCTION FACILITIES

An "X" has been placed on each change being made on this rate schedule.

Under the Common Provisions section, the Interconnection Charge, the annual charge provision percentages are updated in conjunction with the rate design studies produced in this rate case.

17. 13TH RATE NO. 23 – MAINTENANCE POWER SERVICE COGENERATION AND SMALL POWER PRODUCTION FACILITIES

An "X" has been placed on each change being made on this rate schedule.

Under the Common Provisions section, the Interconnection Charge, the annual charge provision percentages are updated in conjunction with the rate design studies produced in this rate case.

18. 13TH RATE NO. 24 – INTERRUPTIBLE POWER SERVICE COGENERATION AND SMALL POWER PRODUCTION FACILITIES

An "X" has been placed on each change being made on this rate schedule.

Under the Common Provisions section, the Interconnection Charge, the annual charge provision percentages are updated in conjunction with the rate design studies produced in this rate case.

19. 11TH RATE NO. 25 – OUTDOOR RECREATIONAL LIGHTING SERVICE RATE

Due to numerous changes to this rate schedule, a single "X" has been placed in each page of this schedule to notate that most of the content within it has changed.

Language related to the ‘Monthly Minimum Charge’ is revised to more clearly reflect its application.

The ‘Fuel and Purchased Power’ (“FPPCAC”) provision is revised to address Distributed Generation (“DG”) customers to establish TOD periods.

The ‘Other Applicable Riders’ provision is modified to address the inclusion of Distributed Generation (DG) customers as it relates to net energy metering and how TOD is applied.

20. 10TH RATE NO. 26 – STATE UNIVERSITY SERVICE RATE

Due to numerous changes to this rate schedule, a single "X" has been placed in each page of this schedule to notate that most of the content within it has changed.

Language related to the 'Monthly Minimum Charge' is revised to more clearly reflect its application.

The 'Fuel and Purchased Power' ("FPPCAC") provision is revised to address Distributed Generation ("DG") customers to establish TOD periods.

The 'Other Applicable Riders' provision is modified to address the inclusion of Distributed Generation (DG) customers as it relates to net energy metering and how TOD is applied.

The 'Terms and Conditions' section is modified to simplify the language regarding billing applicability.

21. 8TH RATE NO. 29 – NOTICED INTERRUPTIBLE SERVICE RATE FOR LARGE POWER SERVICE

An "X" has been placed on each change being made on this rate schedule.

The Applicability provision is revised with some clarifying language to align with EPE's proposal to open the tariff to new customers.

The 'Fuel and Purchased Power' ("FPPCAC") provision is revised to address Distributed Generation ("DG") customers to establish TOD periods.

The 'Other Applicable Riders' provision is modified to address the inclusion of Distributed Generation (DG) customers as it relates to net energy metering and how TOD is applied.

22. 8TH RATE NO. 30 – LOAD RETENTION RATE

An "X" has been placed on each change being made on this rate schedule.

The 'Fuel and Purchased Power' ("FPPCAC") provision is revised to address Distributed Generation ("DG") customers to establish TOD periods.

The 'Other Applicable Riders' provision is modified to address the inclusion of Distributed Generation (DG) customers as it relates to net energy metering and how TOD is applied.

23. 2ND RATE NO. 39 – ECONOMIC DEVELOPMENT RATE

No changes are being made to this rate schedule.

24. 2ND RATE NO. 42 – EXPERIMENTAL ELECTIC VEHICLE CHARGING RATE

Due to numerous changes to this rate schedule, a single "X" has been placed in each page of this schedule to notate that most of the content within it has changed.

The Type of Service provision is revised to remove the voltage eligibility (“operating at 120V and up to 480V”) and the addition of clarifying language. This change is intended to provide flexibility that ensures that not only EV chargers but also supporting infrastructure for EV chargers is allowed. Additionally, a newly proposed Time-of-Day Rate with Charging Demand for customers where maximum demand exceeds 15kW is now included in this tariff.

25. Original RATE NO. 50 - HIGH LOAD FACTOR POWER SERVICE RATE

This is a newly proposed rate schedule described in the direct testimony of EPE witness Carrasco.

26. Original RATE NO. 51 – LARGE LOAD POWER SERVICE RATE

This is a newly proposed rate schedule described in the direct testimony of EPE witness Carrasco.

27. Original RATE NO. 52 – PEAK TIME REBATE PILOT RATE

This is a newly proposed rate schedule described in the direct testimony of EPE witness Carrasco.

EL PASO ELECTRIC COMPANY SCHEDULE P-1
2026 NEW MEXICO RATE CASE FILING
SCHEDULE P-1: PEAK DEMAND INFORMATION
SPONSOR: ENEDINA SOTO
PREPARER: SINAI RAMOS
FOR THE BASE PERIOD ENDED SEPTEMBER 30, 2025

(a) Coincident demand by Jurisdiction

(b) Annual and monthly Coincident and Maximum Diversified Demand by rate class.

(c) Four years of historical coincident demand by jurisdiction.

(d) Five years of forecasted coincident demand by jurisdiction.

June	2025	0	0	469	502
July	2025	0	0	480	575
August	2025	0	0	507	499
September	2025	0	4	279	309
2025 Test Year Total		2,641	2,609	2,106	2,228

Note: Weather data is in calendar month form and has not been adjusted for billing cycles.
Normal weather is calculated using the ten year period 2014-2023 & 2015-2024.
Degree Days are calculated using the daily average temperatures and a 65 degree base.
September 2024 data is included because it is used to calculate October weather that has been adjusted for billing cycles.
Exhibit ES-7 has more detail on the weather data used to support the proposed weather adjustment.

Outage Type	Description
PO	Planned Outage
FO	Forced Outage
MO	Maintenance Outage

EPE Notes:

(1) Reason for outage is defined by NERC Generating Availability Data System (GADS)
(2) For more details, refer to P-7(a) and the direct testimony of Jeff Hughes
(3) Palo Verde Unit 3, Rio Grande Unit 6 and Newman Unit 6 are excluded from rate base

EL PASO ELECTRIC COMPANY
2026 NEW MEXICO RATE CASE FILING
SCHEDULE P-7(b)1: SCHEDULED MAINTENANCE BY UNIT
SPONSOR: JEFF HUGHES\VICTOR MARTINEZ
PREPARER: KARA RANDLE
FOR THE TEST YEAR PERIOD ENDING SEPTEMBER 30, 2025

Outage Type	Description
PO	Planned Outage
FO	Forced Outage
MO	Maintenance Outage

EPE Notes:

(1) Reason for outage is defined by NERC Generating Availability Data System (GADS)
(2) For more details, refer to P-7(a) and the direct testimony of Jeff Hughes
(3) Palo Verde Unit 3, Rio Grande Unit 6 and Newman Unit 6 are excluded from rate base
(4) Rio Grande Unit 6 was retired September 16, 2025

Oct. 01, 2020 -- Sep. 30, 2021

DATE	CIRCUIT/LOCATION	DURATION (minutes)	DESCRIPTION
5/15/2021	SHE10	72	Equipment failure (arrestor) on Shearman substation transformer T2 locked out substation transformer.
	SHE11	73	
	SHE12	123	

Energy Loss Factors from the 2021 Analysis of System Losses Study as provided in Schedule M-3 to EPE Witness Enedina Soto's testimony, conducted by Management Applications Consulting, Inc. are applied to EPE's Sales at Meter to derive Total System Sales (TSS) at Source. Net Energy, as stated in EPE's System Operations Report, is composed of TSS at Source. Demand loss factors from the Study are also used to derive at Coincident and Maximum Diversified Demand at Source.

The Loss Factors from the 2021 Analysis of System Losses Study are also applied to Annualized Sales and Demand data to develop Adjusted Sales and Adjusted Demand at Source by Rate Class and Voltage Level.

(i) Total company losses for total company can be found herein on Page 2.

(ii) New Mexico losses are the same as the total company losses which can be found herein on Page 2.

(iii) Total company losses for multi jurisdictional systems by demand, energy and voltage can be found herein on Page 2.

(iv) Line Losses for the four years prior to the test year are shown herein on Page 3.

(v) The Line Losses for the twelve months of the test period are contained herein on Page 2.

(vi) Line Losses for the five years beyond the test year are shown herein on Page 4.

LINE NO.	SERVICE LEVEL	ENERGY LOSSES: SERVICE LEVEL LOSS FACTORS	ENERGY LOSSES: TOTAL % LOSS AT SERVICE LEVEL	DEMAND LOSSES: SERVICE LEVEL LOSS FACTORS	DEMAND LOSSES: TOTAL % LOSS AT SERVICE LEVEL

2026 NEW MEXICO RATE CASE FILING
SCHEDULE P-11(a)(c): RESERVE MARGIN INFORMATION
SPONSOR: VICTOR MARTINEZ
PREPARER: KRISTIAN SCHNITTKER
FOR THE TEST YEAR PERIOD ENDED SEPTEMBER 30, 2025

FOR THE FOUR YEARS PRIOR TO THE TEST YEAR
2021 - 2024

YEAR	INSTALLED CAPACITY (1) MW	UNAVAILABLE CAPACITY (2) MW	AVAILABLE CAPACITY (3) MW	TOTAL DEMAND (4) MW	RESERVE MARGIN (5) MW	RESERVE MARGIN (6) %
2021	2,475	148	2,327	2,134	193	9
2022	2,625	198	2,427	2,314	113	5
2023	3,035	285	2,750	2,719	31	1
2024	3,314	337	2,977	2,777	200	7

Notes:
1. Installed capacity at time of total system peak. Includes firm and non-firm purchases.
2. Unavailable capacity consist of partial and forced outages and scheduled maintenance.
3. Available capacity consists of the net of Installed Capacity and Unavailable Capacity.
4. Total demand consists of native system demand, firm and non-firm sales and line losses.
5. Reserve Margin is the difference between the installed capacity (less unavailable capacity) and the total demand.
6. Reserve Margin % is the quotient of the Reserve Margin divided by the Total Demand.

SCHEDULE P-11(b): RESERVE MARGIN INFORMATION
SPONSOR: VICTOR MARTINEZ
PREPARER: JAIME REYES
FOR THE TEST YEAR PERIOD ENDED SEPTEMBER 30, 2025

The reserve margin data is not calculated based on a jurisdictional basis.

SCHEDULE P-11(a)(e): RESERVE MARGIN INFORMATION
SPONSOR: VICTOR MARTINEZ
PREPARER: YIFAN WANG/KHIMANI SMITH/RONDA RICHARDS-GRIFFIN
FOR THE TEST YEAR PERIOD ENDED SEPTEMBER 30, 2025

FOR THE FIVE YEARS BEYOND THE TEST YEAR PERIOD
2026 - 2030

PROJECTED					
YEAR	ACCREDITED CAPACITY [1] MW	UNAVAILABLE CAPACITY [2] MW	TOTAL DEMAND [3] MW	RESERVE MARGIN [4] MW	RESERVE MARGIN [5] %
2026	2,393	0	2,642	238	9
2027	2,480	0	2,859	257	9
2028	2,672	0	3,035	273	9
2029	2,797	0	3,135	282	9
2030	3,536	0	3,185	350	11

Notes:

(1) Accredited Capacity presented in the table are based on installed capacity and factor in Effective Load Carrying Capability (ELCC). ELCC is expressed as a percentage of the generator's installed capacity rating which is the contribution to reliably serve load.

(2) Unavailable Capacity consists of scheduled maintenance only. EPE does not perform maintenance on its units during peak period.

(3) EPE's Projected Total Demand consists of Native System Demand, Distributed Generation, Energy Efficiency, Electric Vehicles, and New Large Load Customers.

(4) The Reserve Margin (MW) is calculated based on the product of the Total Projected Demand and EPE's reserve margin %.

(5) EPE's Reserve Margin of 9% through 2029 and 11% in 2030 was determined in a Planning Reserve Margin (PRM) and ELCC study performed by Energy and Environmental Economics Inc. (external consultants) for EPE's 2025 Integrated Resource Plan.

SCHEDULE P-12
PAGE 4 OF 4

SCHEDULE Q-1: LOAD RESEARCH PROGRAM
SPONSOR: ENEDINA SOTO
PREPARER: JUAN P. CARDENAS
FOR THE TEST YEAR PERIOD ENDED SEPTEMBER 30, 2025

El Paso Electric Company's (EPE) Load Research Program (LRP) uses interval demand (or load) data to support various requirements within the Company. The main responsibilities of the Load Research section are as follows:

1) Providing data and developing the jurisdictional and class demand and energy allocators used in cost of service studies (i.e., production, transmission and distribution "input" or external allocators),
2) Providing data and support for rate design and rate analysis,
3) Providing data and support for the load forecasting function,
4) Evaluating load management, engineering design and operating strategies,
5) Providing data and assisting with fuel factor and fuel reconciliation filings,
6) Providing data and support for detailed hourly, half-hourly consumption data for a customer and/or rate class to facilitate energy conservation and economic optimization of load.

Interval data from EPE's Advanced Metering System ("AMS") are used to estimate monthly energy, coincident peak demand, maximum class demand, non-coincident peak demand, and on-peak/off-peak quantities at the strata and class levels. This data help EPE determine the generation capacity and size of the transmission and distribution system necessary to serve EPE's customers. The class load is also used for allocating costs to rate classes and developing tariffs based on energy and demand usage. The Load Research Program conducts sample and census load studies to gather data to support these analyses.

Stratified sample studies are designed for rate classes that have a large number of customers. All sample studies are estimated using data from EPE's AMS metering, which are read every 15 minutes, and commercial meters are read every 5 minutes. Results from EPE's sample studies are estimated at the hour-interval and are representative of a typical customer for the entire class. El Paso Electric currently has the following sample load studies in progress based on jurisdictionally-specific stratified random sample:

<u>Texas</u>

- Schedule No. 01 Residential Service Rate
- Schedule No. 02 Small General Service Rate
- Schedule No. 07 Outdoor Recreational Lighting Service Rate
- Schedule No. 11 Time-of-day Municipal Pumping Service Rate
- Schedule No. 22 Irrigation Service Rate
- Schedule No. 24 General Service Rate
- Schedule No. 41 City and County Service Rate

<u>New Mexico</u>

- Rate No. 01 Residential Service Rate
- Rate No. 03 Small General Service Rate
- Rate No. 04 General Service Rate
- Rate No. 05 Irrigation Service Rate
- Rate No. 07 City and County Service Rate
- Rate No. 08 Water, Sewage, Storm Sewage Pumping or Sewage Disposal Rate

- Rate No. 19 Seasonal Agricultural Processing Service Rate
- Rate No. 25 Outdoor Recreational Lighting Service Rate

Census studies are performed by completely metering rate classes that usually have high usage and few customers. This indicates that every customer in that rate class is being measured with an Interval Data Recorder ("IDR") meter or through EPE's AMS. IDR meters are read every 30 minutes. These rate classes are totalized and, where applicable, also separated by voltage level: secondary, primary and transmission. EPE currently has the following census studies in progress:

Texas

- Schedule No. 15 Electrolytic Refining Service Rate
- Schedule No. 25 Large Power Service Rate
- Schedule No. 26 Petroleum Refinery Service Rate
- Schedule No. 30 Electric Furnace Rate
- Schedule No. 31 Military Reservation Service Rate
- Schedule No. 34 Cotton Gin Service Rate
- Schedule No. 38 Noticed Interruptible Power Service

New Mexico

- Rate No. 09 Large Power Service Rate
- Rate No. 10 Military Research and Development Power Rate
- Rate No. 26 State University Service Rate
- Rate No. 29 Noticed Interruptible Service Rate for Large Power Service

SCHEDULE Q-2: DESCRIPTION OF COMPANY
SPONSOR: GEORGE NOVELA
PREPARER: GEORGE NOVELA
FOR THE BASE PERIOD ENDED SEPTEMBER 30, 2025

El Paso Electric Company (the "Company") is an investor-owned utility engaged in the generation, transmission and distribution of electricity in an area of approximately 10,000 square miles in west Texas and southern New Mexico. The Company also serves full requirements wholesale customers in Texas. The Company owns or has significant ownership interests in several electrical generating facilities providing it with a net generating capacity of approximately 2,085 megawatts ("MW"). For the year ended December 31, 2024, the Company's energy sources consisted of approximately 44% nuclear fuel, 44% natural gas, 12% purchased power and less than 1% generated by Company-owned solar photovoltaic panels. As of December 31, 2024, the Company had power purchase agreements for 107 MW from solar photovoltaic generation facilities and continues to expand its portfolio of renewable energy sources, particularly solar photovoltaic generation.

The Company serves approximately 472,927 residential, commercial, industrial, public authority and wholesale customers. The Company distributes electricity to retail customers principally in Las Cruces, New Mexico and El Paso, Texas. Total retail sales for 2024 were 8,001,660 MWh. EPE serves one full requirements wholesale customer in Texas, with annual sales in 2024 of 61,815 MWh. Principal industrial, public authority and other large retail customers of the Company include U.S. military installations, including White Sands Missile Range ("White Sands") and Holloman Air Force Base ("HAFB") in New Mexico and Fort Bliss U.S. Army Post ("Fort Bliss") in Texas, an oil refinery, several medical centers, two large universities and a steel production facility.

The Company's principal offices are located at the Stanton Tower, 100 North Stanton Street, El Paso, Texas 79901 (telephone: 915-543-5711). The Company was incorporated in Texas in 1901. As of September 30, 2025, the Company employed approximately 1,233 individuals, 35% of whom are covered by a collective bargaining agreement.

FERC FORM 1 – DECEMBER 31, 2024

THIS FILING IS
Item 1: ☑ An Initial (Original) Submission OR ☐ Resubmission No.

FERC FINANCIAL REPORT
FERC FORM No. 1: Annual Report of Major Electric Utilities, Licensees and Others and Supplemental Form 3-Q: Quarterly Financial Report

These reports are mandatory under the Federal Power Act, Sections 3, 4(a), 304 and 309, and 18 CFR 141.1 and 141.400. Failure to report may result in criminal fines, civil penalties and other sanctions as provided by law. The Federal Energy Regulatory Commission does not consider these reports to be of confidential nature

Exact Legal Name of Respondent (Company)	Year/Period of Report
El Paso Electric Company	End of: 2024/ Q4

INSTRUCTIONS FOR FILING FERC FORM NOS. 1 and 3-Q

GENERAL INFORMATION

Purpose

FERC Form No. 1 (FERC Form 1) is an annual regulatory requirement for Major electric utilities, licensees and others (18 C.F.R. § 141.1). FERC Form No. 3-Q (FERC Form 3-Q) is a quarterly regulatory requirement which supplements the annual financial reporting requirement (18 C.F.R. § 141.400). These reports are designed to collect financial and operational information from electric utilities, licensees and others subject to the jurisdiction of the Federal Energy Regulatory Commission. These reports are also considered to be non-confidential public use forms.

Who Must Submit

Each Major electric utility, licensee, or other, as classified in the Commission's Uniform System of Accounts Prescribed for Public Utilities, Licensees, and Others Subject To the Provisions of The Federal Power Act (18 C.F.R. Part 101), must submit FERC Form 1 (18 C.F.R. § 141.1), and FERC Form 3-Q (18 C.F.R. § 141.400).

Note: Major means having, in each of the three previous calendar years, sales or transmission service that exceeds one of the following:

one million megawatt hours of total annual sales,

100 megawatt hours of annual sales for resale,

500 megawatt hours of annual power exchanges delivered, or

500 megawatt hours of annual wheeling for others (deliveries plus losses).

What and Where to Submit

Submit FERC Form Nos. 1 and 3-Q electronically through the eCollection portal at https://eCollection.ferc.gov, and according to the specifications in the Form 1 and 3-Q taxonomies.

The Corporate Officer Certification must be submitted electronically as part of the FERC Forms 1 and 3-Q filings.

Submit immediately upon publication, by either eFiling or mail, two (2) copies to the Secretary of the Commission, the latest Annual Report to Stockholders. Unless eFiling the Annual Report to Stockholders, mail the stockholders report to the Secretary of the Commission at:
Secretary
Federal Energy Regulatory Commission 888 First Street, NE
Washington, DC 20426

For the CPA Certification Statement, submit within 30 days after filing the FERC Form 1, a letter or report (not applicable to filers classified as Class C or Class D prior to January 1, 1984). The CPA Certification Statement can be either eFiled or mailed to the Secretary of the Commission at the address above.

The CPA Certification Statement should:

Attest to the conformity, in all material aspects, of the below listed (schedules and pages) with the Commission's applicable Uniform System of Accounts (including applicable notes relating thereto and the Chief Accountant's published accounting releases), and

Be signed by independent certified public accountants or an independent licensed public accountant certified or licensed by a regulatory authority of a State or other political subdivision of the U. S. (See 18 C.F.R. §§ 41.10-41.12 for specific qualifications.)

Schedules	Pages
Comparative Balance Sheet	110-113
Statement of Income	114-117
Statement of Retained Earnings	118-119
Statement of Cash Flows	120-121
Notes to Financial Statements	122-123

The following format must be used for the CPA Certification Statement unless unusual circumstances or conditions, explained in the letter or report, demand that it be varied. Insert parenthetical phrases only when exceptions are reported.

"In connection with our regular examination of the financial statements of [COMPANY NAME] for the year ended on which we have reported separately under date of [DATE], we have also reviewed schedules [NAME OF SCHEDULES] of FERC Form No. 1 for the year filed with the Federal Energy Regulatory Commission, for conformity in all material respects with the requirements of the Federal Energy Regulatory Commission as set forth in its applicable Uniform System of Accounts and published accounting releases. Our review for this purpose included such tests of the accounting records and such other auditing procedures as we considered necessary in the circumstances.

Based on our review, in our opinion the accompanying schedules identified in the preceding paragraph (except as noted below) conform in all material respects with the accounting requirements of the Federal Energy Regulatory Commission as set forth in its applicable Uniform System of Accounts and published accounting releases." The letter or report must state which, if any, of the pages above do not conform to the Commission's requirements. Describe the discrepancies that exist.

Filers are encouraged to file their Annual Report to Stockholders, and the CPA Certification Statement using eFiling. Further instructions are found on the Commission's website at https://www.ferc.gov/ferc-online/ferc-online/frequently-asked-questions-faqs-efilingferc-online.

Federal, State, and Local Governments and other authorized users may obtain additional blank copies of FERC Form 1 and 3-Q free of charge from https://www.ferc.gov/general-information-0/electric-industry-forms.

When to Submit

Complete each question fully and accurately, even if it has been answered in a previous report. Enter the word "None" where it truly and completely states the fact.

For any page(s) that is not applicable to the respondent, omit the page(s) and enter "NA," "NONE," or "Not Applicable" in column (d) on the List of Schedules, pages 2 and 3.

Enter the month, day, and year for all dates. Use customary abbreviations. The "Date of Report" included in the header of each page is to be completed only for resubmissions (see VII. below).

Generally, except for certain schedules, all numbers, whether they are expected to be debits or credits, must be reported as positive. Numbers having a sign that is different from the expected sign must be reported by enclosing the numbers in parentheses.

For any resubmissions, please explain the reason for the resubmission in a footnote to the data field.

Do not make references to reports of previous periods/years or to other reports in lieu of required entries, except as specifically authorized.

Wherever (schedule) pages refer to figures from a previous period/year, the figures reported must be based upon those shown by the report of the previous period/year, or an appropriate explanation given as to why the different figures were used.

Schedule specific instructions are found in the applicable taxonomy and on the applicable blank rendered form.

Definitions for statistical classifications used for completing schedules for transmission system reporting are as follows:

FNS - Firm Network Transmission Service for Self. "Firm" means service that can not be interrupted for economic reasons and is intended to remain reliable even under adverse conditions. "Network Service" is Network Transmission Service as described in Order No. 888 and the Open Access Transmission Tariff. "Self" means the respondent.

FNO - Firm Network Service for Others. "Firm" means that service cannot be interrupted for economic reasons and is intended to remain reliable even under adverse conditions. "Network Service" is Network Transmission Service as described in Order No. 888 and the Open Access Transmission Tariff.

LFP - for Long-Term Firm Point-to-Point Transmission Reservations. "Long-Term" means one year or longer and" firm" means that service cannot be interrupted for economic reasons and is intended to remain reliable even under adverse conditions. "Point-to-Point Transmission Reservations" are described in Order No. 888 and the Open Access Transmission Tariff. For all transactions identified as LFP, provide in a footnote the termination date of the contract defined as the earliest date either buyer or seller can unilaterally cancel the contract.

OLF - Other Long-Term Firm Transmission Service. Report service provided under contracts which do not conform to the terms of the Open Access Transmission Tariff. "Long-Term" means one year or longer and "firm" means that service cannot be interrupted for economic reasons and is intended to remain reliable even under adverse conditions. For all transactions identified as OLF, provide in a footnote the termination date of the contract defined as the earliest date either buyer or seller can unilaterally get out of the contract.

SFP - Short-Term Firm Point-to-Point Transmission Reservations. Use this classification for all firm point-to-point transmission reservations, where the duration of each period of reservation is less than one-year.

NF - Non-Firm Transmission Service, where firm means that service cannot be interrupted for economic reasons and is intended to remain reliable even under adverse conditions.

OS - Other Transmission Service. Use this classification only for those services which can not be placed in the above-mentioned classifications, such as all other service regardless of the length of the contract and service FERC Form. Describe the type of service in a footnote for each entry.

AD - Out-of-Period Adjustments. Use this code for any accounting adjustments or "true-ups" for service provided in prior reporting periods. Provide an explanation in a footnote for each adjustment.

DEFINITIONS

Commission Authorization (Comm. Auth.) -- The authorization of the Federal Energy Regulatory Commission, or any other Commission. Name the commission whose authorization was obtained and give date of the authorization.

Respondent -- The person, corporation, licensee, agency, authority, or other Legal entity or instrumentality in whose behalf the report is made.

EXCERPTS FROM THE LAW

Federal Power Act, 16 U.S.C. § 791a-825r

Sec. 3. The words defined in this section shall have the following meanings for purposes of this Act, to with:

'Corporation' means any corporation, joint-stock company, partnership, association, business trust, organized group of persons, whether incorporated or not, or a receiver or receivers, trustee or trustees of any of the foregoing. It shall not include 'municipalities, as hereinafter defined;

'Person' means an individual or a corporation;

'Licensee, means any person, State, or municipality Licensed under the provisions of section 4 of this Act, and any assignee or successor in interest thereof;

'municipality means a city, county, irrigation district, drainage district, or other political subdivision or agency of a State competent under the Laws thereof to carry and the business of developing, transmitting, unitizing, or distributing power; .....

"project' means. a complete unit of improvement or development, consisting of a power house, all water conduits, all dams and appurtenant works and structures (including navigation structures) which are a part of said unit, and all storage, diverting, or fore bay reservoirs directly connected therewith, the primary line or lines transmitting power there from to the point of junction with the distribution system or with the interconnected primary transmission system, all miscellaneous structures used and useful in connection with said unit or any part thereof, and all water rights, rights-of-way, ditches, dams, reservoirs, Lands, or interest in Lands the use and occupancy of which are necessary or appropriate in the maintenance and operation of such unit;

"Sec. 4. The Commission is hereby authorized and empowered

FERC Forms 1 and 3-Q must be filed by the following schedule:

FERC Form 1 for each year ending December 31 must be filed by April 18th of the following year (18 CFR § 141.1), and

FERC Form 3-Q for each calendar quarter must be filed within 60 days after the reporting quarter (18 C.F.R. § 141.400).

Where to Send Comments on Public Reporting Burden.

The public reporting burden for the FERC Form 1 collection of information is estimated to average 1,168 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data-needed, and completing and reviewing the collection of information. The public reporting burden for the FERC Form 3-Q collection of information is estimated to average 168 hours per response.

Send comments regarding these burden estimates or any aspect of these collections of information, including suggestions for reducing burden, to the Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426 (Attention: Information Clearance Officer); and to the Office of Information and Regulatory Affairs, Office of Management and Budget, Washington, DC 20503 (Attention: Desk Officer for the Federal Energy Regulatory Commission). No person shall be subject to any penalty if any collection of information does not display a valid control number (44 U.S.C. § 3512 (a)).

GENERAL INSTRUCTIONS

Prepare this report in conformity with the Uniform System of Accounts (18 CFR Part 101) (USofA). Interpret all accounting words and phrases in accordance with the USofA.

Enter in whole numbers (dollars or MWH) only, except where otherwise noted. (Enter cents for averages and figures per unit where cents are important. The truncating of cents is allowed except on the four basic financial statements where rounding is required.) The amounts shown on all supporting pages must agree with the amounts entered on the statements that they support. When applying thresholds to determine significance for reporting purposes, use for balance sheet accounts the balances at the end of the current reporting period, and use for statement of income accounts the current year's year to date amounts.

'To make investigations and to collect and record data concerning the utilization of the water 'resources of any region to be developed, the water-power industry and its relation to other industries and to interstate or foreign commerce, and concerning the location, capacity, development costs, and relation to markets of power sites; ... to the extent the Commission may deem necessary or useful for the purposes of this Act."

"Sec. 304.

Every Licensee and every public utility shall file with the Commission such annual and other periodic or special* reports as the Commission may by rules and regulations or other prescribe as necessary or appropriate to assist the Commission in the proper administration of this Act. The Commission may prescribe the manner and FERC Form in which such reports shall be made, and require from such persons specific answers to all questions upon which the Commission may need information. The Commission may require that such reports shall include, among other things, full information as to assets and Liabilities, capitalization, net investment, and reduction thereof, gross receipts, interest due and paid, depreciation, and other reserves, cost of project and other facilities, cost of maintenance and operation of the project and other facilities, cost of renewals and replacement of the project works and other facilities, depreciation, generation, transmission, distribution, delivery, use, and sale of electric energy. The Commission may require any such person to make adequate provision for currently determining such costs and other facts. Such reports shall be made under oath unless the Commission otherwise specifies*.10

"Sec. 309.

The Commission shall have power to perform any and all acts, and to prescribe, issue, make, and rescind such orders, rules and regulations as it may find necessary or appropriate to carry out the provisions of this Act. Among other things, such rules and regulations may define accounting, technical, and trade terms used in this Act; and may prescribe the FERC Form or FERC Forms of all statements, declarations, applications, and reports to be filed with the Commission, the information which they shall contain, and the time within which they shall be field..."

GENERAL PENALTIES

The Commission may assess up to $1 million per day per violation of its rules and regulations. See FPA § 316(a) (2005), 16 U.S.C. § 825o(a).

GENERAL INFORMATION

1. Provide name and title of officer having custody of the general corporate books of account and address of office where the general corporate books are kept, and address of office where any other corporate books of account are kept, if different from that where the general corporate books are kept.

Cynthia S. Prieto

Vice President & Controller

Stanton Tower, 100 North Stanton StreetEl Paso, Texas 79901

2. Provide the name of the State under the laws of which respondent is incorporated, and date of incorporation. If incorporated under a special law, give reference to such law. If not incorporated, state that fact and give the type of organization and the date organized.

State of Incorporation: TX

Date of Incorporation: 1901-08-30

Incorporated Under Special Law:

3. If at any time during the year the property of respondent was held by a receiver or trustee, give (a) name of receiver or trustee, (b) date such receiver or trustee took possession, (c) the authority by which the receivership or trusteeship was created, and (d) date when possession by receiver or trustee ceased.

(a) Name of Receiver or Trustee Holding Property of the Respondent:

(b) Date Receiver took Possession of Respondent Property:

(c) Authority by which the Receivership or Trusteeship was created:

(d) Date when possession by receiver or trustee ceased:

4. State the classes or utility and other services furnished by respondent during the year in each State in which the respondent operated.

Electric power generation, transmission and distribution for sale at retail in the states of Texas and New Mexico; and wholesale sales including sales for resale to other electric utilities primarily in the states of Texas, New Mexico and Arizona and sales for resale to power marketers, which includes participating in the Western Energy Imbalance Market.

5. Have you engaged as the principal accountant to audit your financial statements an accountant who is not the principal accountant for your previous year's certified financial statements?

(1) ☐ Yes

(2) ☑ No

Name of Respondent: El Paso Electric Company	This report is: (1) ☑ An Original (2) ☐ A Resubmission	Date of Report: 04/03/2025	Year/Period of Report End of: 2024/ Q4

CONTROL OVER RESPONDENT

1. If any corporation, business trust, or similar organization or a combination of such organizations jointly held control over the respondent at the end of the year, state name of controlling corporation or organization, manner in which control was held, and extent of control. If control was in a holding company organization, show the chain of ownership or control to the main parent company or organization. If control was held by a trustee(s), state name of trustee(s), name of beneficiary or beneficiaries for whom trust was maintained, and purpose of the trust.

El Paso Electric Company ("EPE") is wholly owned by Sun Jupiter Holdings LLC, a Delaware limited liability company.

Name of Respondent: El Paso Electric Company	This report is: (1) ☑ An Original (2) ☐ A Resubmission	Date of Report: 04/03/2025	Year/Period of Report End of: 2024/ Q4

CORPORATIONS CONTROLLED BY RESPONDENT

1. Report below the names of all corporations, business trusts, and similar organizations, controlled directly or indirectly by respondent at any time during the year. If control ceased prior to end of year, give particulars (details) in a footnote.
2. If control was by other means than a direct holding of voting rights, state in a footnote the manner in which control was held, naming any intermediaries involved.
3. If control was held jointly with one or more other interests, state the fact in a footnote and name the other interests.

Definitions

1. See the Uniform System of Accounts for a definition of control.
2. Direct control is that which is exercised without interposition of an intermediary.
3. Indirect control is that which is exercised by the interposition of an intermediary which exercises direct control.
4. Joint control is that in which neither interest can effectively control or direct action without the consent of the other, as where the voting control is equally divided between two holders, or each party holds a veto power over the other. Joint control may exist by mutual agreement or understanding between two or more parties who together have control within the meaning of the definition of control in the Uniform System of Accounts, regardless of the relative voting rights of each party.

El Paso Electric Company	(1) ☑ An Original (2) ☐ A Resubmission	04/03/2025	End of: 2024/ Q4

FOOTNOTE DATA

(a) Concept: DescriptionOfFiling

The 2024 annual update is to the cost-based formula rate included in the Power Sales Agreement under ER19-2893.

(b) Concept: DescriptionOfFiling

The 2024 annual update is to the formula rate included in the Informational Filing for Attachment H-1 Open Access Transmission Tariff under ER22-282.

Name of Respondent: El Paso Electric Company	This report is: (1) ☑ An Original (2) ☐ A Resubmission	Date of Report: 04/03/2025	Year/Period of Report End of: 2024/ Q4

INFORMATION ON FORMULA RATES - Formula Rate Variances

1. If a respondent does not submit such filings then indicate in a footnote to the applicable Form 1 schedule where formula rate inputs differ from amounts reported in the Form 1.
2. The footnote should provide a narrative description explaining how the "rate" (or billing) was derived if different from the reported amount in the Form 1.
3. The footnote should explain amounts excluded from the ratebase or where labor or other allocation factors, operating expenses, or other items impacting formula rate inputs differ from amounts reported in Form 1 schedule amounts.
4. Where the Commission has provided guidance on formula rate inputs, the specific proceeding should be noted in the footnote.

IMPORTANT CHANGES DURING THE QUARTER/YEAR

Give particulars (details) concerning the matters indicated below. Make the statements explicit and precise, and number them in accordance with the inquiries. Each inquiry should be answered. Enter "none," "not applicable," or "NA" where applicable. If information which answers an inquiry is given elsewhere in the report, make a reference to the schedule in which it appears.

1. Changes in and important additions to franchise rights: Describe the actual consideration given therefore and state from whom the franchise rights were acquired. If acquired without the payment of consideration, state that fact.
2. Acquisition of ownership in other companies by reorganization, merger, or consolidation with other companies: Give names of companies involved, particulars concerning the transactions, name of the Commission authorizing the transaction, and reference to Commission authorization.
3. Purchase or sale of an operating unit or system: Give a brief description of the property, and of the transactions relating thereto, and reference to Commission authorization, if any was required. Give date journal entries called for by the Uniform System of Accounts were submitted to the Commission.
4. Important leaseholds (other than leaseholds for natural gas lands) that have been acquired or given, assigned or surrendered: Give effective dates, lengths of terms, names of parties, rents, and other condition. State name of Commission authorizing lease and give reference to such authorization.
5. Important extension or reduction of transmission or distribution system: State territory added or relinquished and date operations began or ceased and give reference to Commission authorization, if any was required. State also the approximate number of customers added or lost and approximate annual revenues of each class of service. Each natural gas company must also state major new continuing sources of gas made available to it from purchases, development, purchase contract or otherwise, giving location and approximate total gas volumes available, period of contracts, and other parties to any such arrangements, etc.
6. Obligations incurred as a result of issuance of securities or assumption of liabilities or guarantees including issuance of short-term debt and commercial paper having a maturity of one year or less. Give reference to FERC or State Commission authorization, as appropriate, and the amount of obligation or guarantee.
7. Changes in articles of incorporation or amendments to charter: Explain the nature and purpose of such changes or amendments.
8. State the estimated annual effect and nature of any important wage scale changes during the year.
9. State briefly the status of any materially important legal proceedings pending at the end of the year, and the results of any such proceedings culminated during the year.
10. Describe briefly any materially important transactions of the respondent not disclosed elsewhere in this report in which an officer, director, security holder reported on Pages 104 or 105 of the Annual Report Form No. 1, voting trustee, associated company or known associate of any of these persons was a party or in which any such person had a material interest.
11. (Reserved.)
12. If the important changes during the year relating to the respondent company appearing in the annual report to stockholders are applicable in every respect and furnish the data required by Instructions 1 to 11 above, such notes may be included on this page.
13. Describe fully any changes in officers, directors, major security holders and voting powers of the respondent that may have occurred during the reporting period.
14. In the event that the respondent participates in a cash management program(s) and its proprietary capital ratio is less than 30 percent please describe the significant events or transactions causing the proprietary capital ratio to be less than 30 percent, and the extent to which the respondent has amounts loaned or money advanced to its parent, subsidiary, or affiliated companies through a cash management program(s). Additionally, please describe plans, if any to regain at least a 30 percent proprietary ratio.

On February 15, 2024, EPE issued a $180.0 million Series C 6.02% Senior Notes with a maturity date of February 15, 2054. This debt issuance was authorized in New Mexico Public Regulation Commission Case No. 23-00004-UT and Federal Energy Regulatory Commission Docket No. ES23-11-0000. See Note G of "Notes to Financial Statements".

On January 16, 2025, EPE issued a $150.0 million term loan with a maturity date of January 15, 2026.

None.

The annual merit award process increased base salaries for non-union employees, including officers, by 4.0% and 3.9%, effective February 24, 2025 and February 26, 2024, respectively, compared to the previous levels. The annual effect of these increases to base salaries for non-union employees and officers was approximately $2.8 million and $2.7 million, respectively.

Base salaries for union employees under contract were increased by 4.0% and 5.0%, effective February 24, 2025 and February 26, 2024, respectively, compared to the previous levels. The annual effect of these increases to base salaries for union employees was approximately $1.6 million and $1.8 million, respectively.

See Note I of "Notes to Financial Statements".

None.

See response to items 1 to 11 and 13 to 14 and Note D of "Notes to Financial Statements".

On January 1, 2024, David C. Hawkins was appointed Vice President, Operations and Support. On January 13, 2025, David C. Hawkins was appointed Vice President, System Planning and Operations Support.

On January 1, 2024, Omar A. Gallegos was appointed Vice President, Energy Delivery.

On January 1, 2024, Cheryl Mele was appointed Vice President, Employee and Customer Services. On January 13, 2025, Cheryl Mele was appointed Chief Technology Officer.

On January 1, 2024, Jessica Christianson was appointed Vice President, Energy Solutions and Business Development. On January 13, 2025, Jessica Christianson was appointed Vice President, Business Development.

On January 31, 2024, Victor F. Rueda, Vice President, Human Resources and Safety, retired from EPE.

On January 1, 2024, James A. Schichtl was appointed Vice President, Regulatory and Resource Strategy. On January 13, 2025, James A. Schichtl was appointed Vice President, Customer and Regulatory Solutions.

On January 1, 2024, David Rodriguez was appointed Vice President, Energy Supply. On January 13, 2025, David Rodriguez was appointed Vice President, Energy Supply and Distribution Operations.

On February 6, 2024, Lisa D. Budtke was appointed Chief Financial Officer.

On February 6, 2024, Richard S. Gonzalez was appointed Treasurer.

On April 24, 2024, Andrew Gilbert's term with the Board of Directors ended.

On April 24, 2024, Michael Karp was appointed as a member of the Board of Directors.

On July 29, 2024, Raymond Palacios, Jr.'s term with the Board of Directors ended.

On January 1, 2025, Patricia Sullivan was appointed as a member of the Board of Directors.

On January 1, 2025, Rudolph Wynter was appointed as a member of the Board of Directors.

None.

FOOTNOTE DATA

(a) Concept: NuclearFuelNet

All of EPE's nuclear fuel financing is accomplished through the RGRT that has amounts borrowed through the issuance of senior notes and borrowings under a revolving credit facility. The assets and liabilities of the RGRT are reported on EPE's regulatory basis balance sheet. The total amount borrowed for nuclear fuel by the RGRT at December 31, 2024 was $127.4 million, of which $16.2 million had been borrowed under the revolving credit facility, accrued interest of $1.2 million, and $110.0 million was borrowed through senior notes.

(b) Concept: StoresExpenseUndistributed

Account 163 total activity for 2024 was $(45,712):

Balance at Beginning of Year	Balance at End of Year	2024 Activity
$ 62,497	$ 16,785	$ (45,712)

Debits and Credits to Account 163 for 2023 and 2024 were as follow:

2023

Debits	Credits	Activity
$ 2,612,826	$ (2,585,338)	$ 27,488

2024

Debits	Credits	Activity
$ 3,789,442	$ (3,835,154)	$ (45,712)

Credits to Stores Expense Undistributed (Account 163) were debited as follows:

Name of Respondent: El Paso Electric Company	This report is: (1) ☑ An Original (2) ☐ A Resubmission	Date of Report: 04/03/2025	Year/Period of Report End of: 2024/ Q4

STATEMENT OF INCOME

Quarterly

1. Report in column (c) the current year to date balance. Column (c) equals the total of adding the data in column (g) plus the data in column (i) plus the data in column (k). Report in column (d) similar data for the previous year. This information is reported in the annual filing only.
2. Enter in column (e) the balance for the reporting quarter and in column (f) the balance for the same three month period for the prior year.
3. Report in column (g) the quarter to date amounts for electric utility function; in column (i) the quarter to date amounts for gas utility, and in column (k) the quarter to date amounts for other utility function for the current year quarter.
4. Report in column (h) the quarter to date amounts for electric utility function; in column (j) the quarter to date amounts for gas utility, and in column (l) the quarter to date amounts for other utility function for the prior year quarter.
5. If additional columns are needed, place them in a footnote.

Annual or Quarterly if applicable

Do not report fourth quarter data in columns (e) and (f)
Report amounts for accounts 412 and 413, Revenues and Expenses from Utility Plant Leased to Others, in another utility column in a similar manner to a utility department. Spread the amount(s) over Lines 2 thru 26 as appropriate. Include these amounts in columns (c) and (d) totals.
Report amounts in account 414, Other Utility Operating Income, in the same manner as accounts 412 and 413 above.
Use page 122 for important notes regarding the statement of income for any account thereof.
Give concise explanations concerning unsettled rate proceedings where a contingency exists such that refunds of a material amount may need to be made to the utility's customers or which may result in material refund to the utility with respect to power or gas purchases. State for each year effected the gross revenues or costs to which the contingency relates and the tax effects together with an explanation of the major factors which affect the rights of the utility to retain such revenues or recover amounts paid with respect to power or gas purchases.
Give concise explanations concerning significant amounts of any refunds made or received during the year resulting from settlement of any rate proceeding affecting revenues received or costs incurred for power or gas purchases, and a summary of the adjustments made to balance sheet, income, and expense accounts.
If any notes appearing in the report to stockholders are applicable to the Statement of Income, such notes may be included at page 122.
Enter on page 122 a concise explanation of only those changes in accounting methods made during the year which had an effect on net income, including the basis of allocations and apportionments from those used in the preceding year. Also, give the appropriate dollar effect of such changes.
Explain in a footnote if the previous year's/quarter's figures are different from that reported in prior reports.
If the columns are insufficient for reporting additional utility departments, supply the appropriate account titles report the information in a footnote to this schedule.

STATEMENT OF RETAINED EARNINGS

1. Do not report Lines 49-53 on the quarterly report.
2. Report all changes in appropriated retained earnings, unappropriated retained earnings, and unappropriated undistributed subsidiary earnings for the year.
3. Each credit and debit during the year should be identified as to the retained earnings account in which recorded (Accounts 433, 436-439 inclusive). Show the contra primary account affected in column (b).
4. State the purpose and amount for each reservation or appropriation of retained earnings.
5. List first Account 439, Adjustments to Retained Earnings, reflecting adjustments to the opening balance of retained earnings. Follow by credit, then debit items, in that order.
6. Show dividends for each class and series of capital stock.
7. Show separately the State and Federal income tax effect of items shown for Account 439, Adjustments to Retained Earnings.
8. Explain in a footnote the basis for determining the amount reserved or appropriated. If such reservation or appropriation is to be recurrent, state the number and annual amounts to be reserved or appropriated as well as the totals eventually to be accumulated.
9. If any notes appearing in the report to stockholders are applicable to this statement, attach them at page 122.

STATEMENT OF CASH FLOWS

1. Codes to be used:(a) Net Proceeds or Payments;(b)Bonds, debentures and other long-term debt; (c) Include commercial paper; and (d) Identify separately such items as investments, fixed assets, intangibles, etc.
2. Information about noncash investing and financing activities must be provided in the Notes to the Financial statements. Also provide a reconciliation between "Cash and Cash Equivalents at End of Period" with related amounts on the Balance Sheet.
3. Operating Activities - Other: Include gains and losses pertaining to operating activities only. Gains and losses pertaining to investing and financing activities should be reported in those activities. Show in the Notes to the Financials the amounts of interest paid (net of amount capitalized) and income taxes paid.
4. Investing Activities: Include at Other (line 31) net cash outflow to acquire other companies. Provide a reconciliation of assets acquired with liabilities assumed in the Notes to the Financial Statements. Do not include on this statement the dollar amount of leases capitalized per the USofA General Instruction 20; instead provide a reconciliation of the dollar amount of leases capitalized with the plant cost.

NOTES TO FINANCIAL STATEMENTS

1. Use the space below for important notes regarding the Balance Sheet, Statement of Income for the year, Statement of Retained Earnings for the year, and Statement of Cash Flows, or any account thereof. Classify the notes according to each basic statement, providing a subheading for each statement except where a note is applicable to more than one statement.
2. Furnish particulars (details) as to any significant contingent assets or liabilities existing at end of year, including a brief explanation of any action initiated by the Internal Revenue Service involving possible assessment of additional income taxes of material amount, or of a claim for refund of income taxes of a material amount initiated by the utility. Give also a brief explanation of any dividends in arrears on cumulative preferred stock.
3. For Account 116, Utility Plant Adjustments, explain the origin of such amount, debits and credits during the year, and plan of disposition contemplated, giving references to Commission orders or other authorizations respecting classification of amounts as plant adjustments and requirements as to disposition thereof.
4. Where Accounts 189, Unamortized Loss on Reacquired Debt, and 257, Unamortized Gain on Reacquired Debt, are not used, give an explanation, providing the rate treatment given these items. See General Instruction 17 of the Uniform System of Accounts.
5. Give a concise explanation of any retained earnings restrictions and state the amount of retained earnings affected by such restrictions.
6. If the notes to financial statements relating to the respondent company appearing in the annual report to the stockholders are applicable and furnish the data required by instructions above and on pages 114-121, such notes may be included herein.
7. For the 3Q disclosures, respondent must provide in the notes sufficient disclosures so as to make the interim information not misleading. Disclosures which would substantially duplicate the disclosures contained in the most recent FERC Annual Report may be omitted.
8. For the 3Q disclosures, the disclosures shall be provided where events subsequent to the end of the most recent year have occurred which have a material effect on the respondent. Respondent must include in the notes significant changes since the most recently completed year in such items as: accounting principles and practices; estimates inherent in the preparation of the financial statements; status of long-term contracts; capitalization including significant new borrowings or modifications of existing financing agreements; and changes resulting from business combinations or dispositions. However were material contingencies exist, the disclosure of such matters shall be provided even though a significant change since year end may not have occurred.
9. Finally, if the notes to the financial statements relating to the respondent appearing in the annual report to the stockholders are applicable and furnish the data required by the above instructions, such notes may be included herein.

A. Regulatory-Basis Financial Statements

The accompanying regulatory-basis financial statements are presented in accordance with the accounting requirements of the Federal Energy Regulatory Commission (the "FERC") as set forth in its applicable Uniform System of Accounts ("USoA") and published accounting releases which is a comprehensive basis of accounting other than United States of America ("U.S.") Generally Accepted Accounting Principles ("GAAP"). Notes A through N of the regulatory-basis financial statements are from the December 31, 2024 GAAP Financial Statements and have been revised where the presentation of regulatory-basis financial statements, in accordance with requirements under the USoA and published accounting releases of the FERC, result in different financial statement amounts or disclosures than under GAAP. Because many types of transactions are susceptible to varying interpretations, the amounts and classifications reported in the accompanying regulatory-basis financial statements may be subject to change at a later date upon final determination by the FERC. The information contained in Notes A through N is supplemented for additional regulatory-basis disclosures.

Regulatory-Basis Financial Statements Compared to GAAP

The significant differences between El Paso Electric Company's ("EPE") regulatory-basis financial statements and those prepared in accordance with GAAP include the application of fresh-start reporting to the GAAP financial statements and the discontinuance and subsequent re-application of the provisions of Financial Accounting Standards Board (the "FASB") accounting guidance for regulated operations. In 1996, EPE adopted fresh-start reporting for its GAAP financial statements in accordance with the FASB guidance related to financial reporting by entities in reorganization under the U.S. Bankruptcy Code. The adoption of fresh-start reporting resulted in the creation of a new reporting entity having no retained earnings or accumulated deficit and significantly altered, compromised, or modified EPE's historical capital structure.

In addition, certain items in the accompanying regulatory-basis financial statements are classified differently under FERC requirements than in EPE's GAAP financial statements. If GAAP were followed, items in the accompanying regulatory-basis financial statements would be increased (decreased) as follows (in thousands):

Line No.		2024	2023
	Assets and Other Debits (Pages 110-111)		
2	Utility plant	$ (926,633)	$ (914,415)

9	Other comprehensive income	$ (105)	$ (270)

Statement of Cash Flows

Cash and cash equivalents and amortization of other presented on the statement of cash flows for the years ended December 31, 2024 and 2023 consist of the following (in thousands):

	2024	2023
Cash and Cash Equivalents:		
Cash (131)	$ 9,220	$ 10,523
Special deposits (132-134)	500	500
Working funds (135)	52	45
Temporary cash investments (136)	13,340	280
Cash and cash equivalents at end of period	$ 23,112	$ 11,348
Amortization of Other:		
ARO depreciation (403.1)	$ (1,504)	$ (845)
Other utility plant (404)	21,886	14,681
Cloud computing arrangements (404)	7,702	5,085
Amort. property losses, unrecov plant & regulatory study costs (407)	2,122	383
Regulatory assets (407.3)	3,689	4,280
ARO accretion expense (411.10)	14,299	12,873
Debt expense (428)	1,263	1,167
Loss on reacquired debt (428.1)	950	950
Debt premium (429)	(170)	(162)
Debt expense on short term loan	89	179
Interest rate lock losses	837	784
Operating lease assets amortization	530	565
Nuclear fuel financing issuance costs	87	189
Dry cask storage amortization	2,072	3,852
Coal reclamation amortization	156	486
FERC transmission rate case amortization	240	—
Texas rate case amortization	2,700	938
New Mexico rate case amortization	326	326
	$ 57,274	$ 45,731

Summary of Significant Accounting Policies

General. EPE is a utility engaged in the generation, transmission and distribution of electricity in an area of approximately 10,000 square miles in west Texas and southern New Mexico. EPE also serves a full requirements wholesale customer in Texas. EPE is regulated by the Public Utility Commission of Texas ("PUCT"), the New Mexico Public Regulation Commission ("NMPRC"), and the FERC. EPE is a wholly owned subsidiary of Sun Jupiter Holdings, LLC ("Parent").

Basis of Presentation. EPE maintains its accounts in accordance with the accounting requirements of the FERC set forth in its applicable USoA and published accounting releases, and applies such principles in its regulatory books of account to the rate treatment as ordered by each of EPE's three regulators (PUCT, NMPRC, and FERC), which is a comprehensive basis of accounting other than GAAP.

Use of Estimates. The preparation of regulatory-basis financial statements in conformity with regulatory accounting principles requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and

disclosure of contingent assets and liabilities at the date of the regulatory-basis financial statements and the reported amounts of revenues and expenses during the reporting period. EPE evaluates its estimates on an ongoing basis, including those related to depreciation, unbilled revenue (or "Accrued Utility Revenues"), income taxes, fuel and purchased power costs, pension and other post-retirement obligations and asset retirement obligations ("ARO"). Actual results could differ from those estimates.

Utility Plant. Utility plant is reported at cost, less regulatory disallowances and impairments. Costs include direct and indirect labor, materials, construction overheads and allowance for funds used during construction ("AFUDC"). Depreciation is provided on a straight-line basis at annual rates which generally amortize the undepreciated cost of depreciable property over the estimated remaining lives of the assets (ranging in average from 5 to 60 years). The average composite depreciation rates utilized in 2024 and 2023 were 2.24% and 2.13%, respectively. When property subject to composite depreciation is retired or otherwise disposed of in the normal course of business, its cost together with the cost of removal, less salvage is charged to accumulated depreciation. For other property dispositions, the applicable cost and accumulated depreciation is removed from the balance sheet accounts and a gain or loss is recognized, if applicable. Long-lived assets are reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount of an asset may not be recoverable.

The cost of nuclear fuel is amortized to fuel expense on a units-of-production basis. EPE is also amortizing its share of costs associated with on-site spent fuel storage casks at Palo Verde Generating Station ("Palo Verde") over the burn period of the fuel that will necessitate the use of the storage casks. See Note E of Notes to Financial Statements for further discussion.

Cloud Computing. EPE capitalizes costs related to cloud computing arrangements that are service contracts based on the nature of the costs and the project's stage in which they are incurred by applying the existing guidance for internal use software implementation costs. Cloud computing costs are capitalized to Construction Work in Progress ("CWIP") and Utility Plant in the Regulatory-Basis Balance Sheet and are amortized to Amortization and Depletion of Utility Plant in the Regulatory-Basis Statement of Income, in accordance with FERC guidance. EPE generally earns a return on these costs when they are included in rate base. Costs are amortized on a straight-line basis over the life of the contract. The cloud computing costs for the years ended December 31, 2024 and 2023 are as follows (in thousands):

	Years Ended December 31,	
	2024	2023
Capitalized cloud computing costs	$ 19,135	$ 17,366
Amortization expense of capitalized cloud computing costs	7,702	5,085

	As of December 31,	
	2024	2023
Total gross capitalized cloud computing costs	$ 84,745	$ 65,610
Accumulated amortization of capitalized cloud computing costs	13,512	5,810

Allowance for Funds Used During Construction and Capitalized Interest. AFUDC is determined by applying an accrual rate to the balance of certain CWIP. The FERC has promulgated procedures for the computation (a prescribed formula) of the accrual rate. The average AFUDC rates used in 2024 and 2023 were 6.45% and 6.13%, respectively. EPE capitalizes interest on nuclear fuel in accordance with the FERC USoA as provided for in the FASB guidance for regulated operations.

Asset Retirement Obligations. EPE complies with FERC Order No. 631, "Accounting Financial Reporting and Rate Filing Requirements for Asset Retirement Obligations", which sets forth accounting requirements for the recognition and measurement of liabilities associated with the retirement of tangible long-lived assets. Under the FERC Order No. 631, these liabilities are recognized as incurred if a reasonable estimate of fair value can be established and are capitalized as part of the cost of the related tangible long-lived assets. EPE records the increase in the ARO due to the passage of time as an operating expense (accretion expense). If EPE incurs or assumes any liability in retiring any asset at the end of its useful life without a

legal obligation to do so, it will record such retirement costs as incurred. See Note F of Notes to Financial Statements for further discussion.

Cash and Cash Equivalents. Temporary cash investments with an original maturity of three months or less are considered cash equivalents. EPE's cash and cash equivalents do not include amounts held in trust by EPE's Palo Verde nuclear decommissioning trust funds ("NDT") or the pension and other post-retirement benefit trust funds.

Investments. EPE's marketable securities, included in decommissioning trust funds that are reflected in Other Special Funds in the Regulatory-Basis Balance Sheet, are reported at fair value and consist of cash and equity securities held in the NDT. Investments in equity securities are measured at fair market value. Changes in the fair market value for equity securities are recognized in the Regulatory-Basis Statement of Income, with the exception of the FERC jurisdictional portion which is still accounted for in Regulatory-Basis Other Comprehensive Income. See Note K of Notes to Financial Statements for further discussion.

Inventories. Inventories, primarily parts, materials, supplies, fuel oil and natural gas are stated at average cost, which does not exceed recoverable cost.

Operating Revenues. EPE accrues revenues for services rendered, including unbilled electric service revenues, which are reflected within Accrued Utility Revenues. EPE recognizes revenue associated with contracts with customers when performance obligations under the terms of the contract with the customer are satisfied. Revenue is measured as the amount of consideration received in exchange for transferring goods or providing services to the customer. Taxes collected concurrently with revenue producing activities are excluded from revenue. Accrued Utility Revenues are recorded for estimated amounts of energy delivered in the period following the customer's last billing cycle to the end of the reporting period. Accrued Utility Revenues are estimated based on monthly generation volumes and by applying an average revenue/kilowatt-hour ("kWh") to the number of estimated kWhs delivered but not billed. EPE recorded $26.2 million and $27.3 million of Accrued Utility Revenues as of December 31, 2024 and 2023, respectively. See Note C of Notes to Financial Statements for further discussion.

Texas retail customers are billed under base rates and a fixed fuel factor approved by the PUCT. New Mexico retail customers are billed under base rates and a fuel adjustment clause that is adjusted monthly, as approved by the NMPRC. A FERC wholesale full requirements customer is billed under formula base rates and fuel factors and a fuel adjustment clause that is adjusted monthly. Recovery of fuel and purchased power expenses is subject to periodic reconciliations of actual fuel and purchased power expenses incurred to actual fuel revenues collected. The difference between fuel and purchased power expenses incurred and fuel revenues charged to customers is reflected in the accompanying Regulatory-Basis Balance Sheet in Other Regulatory Assets and Other Regulatory Liabilities, as appropriate. See Note D of Notes to Financial Statements for further discussion.

Income Taxes. EPE accounts for federal and state income taxes under the asset and liability method of accounting for income taxes. Deferred income taxes are recognized for the estimated future tax consequences of "temporary differences" by applying enacted statutory tax rates for each taxable jurisdiction applicable to future years to differences between the financial statement carrying amounts and the tax basis of existing assets and liabilities. Certain temporary differences are accorded flow-through treatment by EPE's regulators and impact EPE's effective tax rate. The FASB guidance requires that rate-regulated companies record deferred income taxes for temporary differences accorded flow-through treatment at the direction of the regulatory commission. The resulting deferred tax assets and liabilities are recorded at the expected cash flow to be reflected in future rates. Because EPE's regulators have consistently permitted the recovery of tax effects previously flowed-through earnings, EPE has recorded regulatory liabilities and assets offsetting such deferred tax assets and liabilities. The effect on deferred tax assets and liabilities of a change in tax rate is recognized in income in the period that includes the enactment date, unless those deferred taxes will be collected from or returned to customers in which case they are recorded as a regulatory asset or liability. EPE recognizes tax assets and liabilities for uncertain tax positions in accordance with the recognition and measurement criteria of the FASB guidance for uncertainty in income taxes as modified by FERC Docket No. AI07-2-000. See Note H of Notes to Financial Statements for further discussion.

Pension and Post-retirement Benefit Accounting. See Note J of Notes to Financial Statements for a discussion of EPE's accounting policies for its employee benefits.

Credit Losses. EPE is exposed to credit losses as a result of recording customer receivables related to retail and wholesale electric sales and the provision of transmission services to customers. The allowance for credit losses represents EPE's estimate of existing accounts receivable that will ultimately be uncollectible. The allowance is calculated by applying estimated write-off factors to various classes of outstanding receivables. The write-off factors used to estimate uncollectible accounts are based upon consideration of both historical collections experience and management's best estimate of future collections success given the existing collections environment and qualitative forecasts of future conditions. During the years ended December 31, 2024, and 2023, EPE performed its assessment in accordance with Accounting Standards Update ("ASU") 2016-13, Financial Instruments - Credit Losses (Topic 326), which included consideration for the impact of Coronavirus Disease 2019 ("COVID-19") during 2023. Based on that assessment, EPE recorded a charge for anticipated uncollectible customer accounts. Additions, deductions and balances for the allowance for credit losses for the years ended December 31, 2024 and 2023 are as follows (in thousands):

	Years Ended December 31,	
	2024	2023
Balance at beginning of period	$ 13,561	$ 15,434
Additions:		
Increase to provision	4,622	2,305 (a)
Recovery of previous write-offs	1,086	1,160
Uncollectible receivables written off	(5,165)	(5,338)
Balance at end of period	$ 14,104	$ 13,561

(a) Includes a $2.2 million reduction for the estimated impact of COVID-19 which was charged to Regulatory Assets in EPE's Regulatory-Basis Balance Sheet. The reduction to the allowance for credit losses related to COVID-19 recorded was due to an update in the methodology used to estimate the COVID-19 impact.

Leases. EPE determines if an arrangement contains a lease and the classification of that lease at inception. Operating lease right-of-use ("ROU") assets represent EPE's right to use an underlying asset for the lease term and operating lease liabilities represent the obligation to make payments under the lease. ROU assets and lease liabilities are recognized at the lease commencement date based on the estimated present value of the minimum lease payments over the lease term. In determining lease terms, EPE considers any options to extend or terminate the lease that are reasonably certain of being exercised. As EPE's leases do not include an implicit rate, EPE uses an estimated incremental borrowing rate, at lease commencement, to determine the present value of the future lease payments. In calculating the incremental borrowing rate, EPE takes into consideration recent debt issuances and other data for instruments with similar characteristics. EPE's lease agreements do not contain residual value guarantees or restrictive covenants. For leases with lease and non-lease components, EPE has elected to account for the consideration as a single lease component. EPE has also elected not to record leases with a term of 12 months or less on the Regulatory-Basis Balance Sheet. The operating lease ROU assets are included as part of electric plant in service and lease liabilities are included as part of Current and Non-current Obligation Under Capital Lease in EPE's Regulatory-Basis Balance Sheet in accordance with FERC Docket No. AI19-1-000. As of December 31, 2024, EPE does not have any material operating leases.

Long-Term Incentive Compensation. EPE's Long-term incentive plan ("LTIP") is a liability-classified award in accordance with FASB guidance for deferred compensation arrangements. EPE measures the cost of employee services received in exchange for a cash performance award. Such costs are recognized using the graded attribution vesting method over the period during which an employee is required to provide service in exchange for the award (requisite service period). Compensation cost is not recognized for anticipated forfeitures prior to vesting of the awards. See Note J of the Notes to Financial Statements for further discussion.

Reclassification. Certain amounts included in the Nonutility Operating Income section of EPE's Regulatory-Basis Statement of Income for 2023 have been revised to correct an error in the classification of the unrealized gains attributable to EPE's NDT. Specifically, unrealized gains attributable to EPE's NDT of $45,161,202 have been reclassified from Other Deductions (Account 426.5) to Miscellaneous Nonoperating Income (Account 421). The Other Deductions (Account 426.5) and Miscellaneous Nonoperating Income (Account 421) included in EPE's Regulatory-Basis Statement of Income were previously reported as ($44,896,931) and $4,971,209, respectively, in the 2023 FERC Form 1.

B. New Accounting Standards

The new accounting standards discussed below are issued by the FASB and are to be applied to financial statements prepared in accordance with GAAP. Differences may occur between financial statements prepared in accordance with GAAP and financial statements prepared in accordance with the USoA when these standards are adopted.

New Accounting Standards to be Adopted in the Future

On June 29, 2023, the FERC issued Docket No. RM21-11-000, Order No. 898, final rule on Accounting and Reporting Treatment of Certain Renewable Energy Assets ("FERC Order No. 898"). FERC Order No. 898 changed the accounting and reporting treatment of certain renewable assets under the USoA and its effective date for final compliance is January 1, 2025. FERC Order No. 898 (1) creates new subfunctions and accounts for non-hydro renewables; (2) establishes a separate function for Energy Storage; (3) codifies accounting and reporting treatment for renewable energy credits; (4) creates new accounts for computer hardware, software, and communication equipment within existing functions that do not already include them; (5) and amends FERC Form Nos. 1, and 3-Q to include new subfunctions for Wind, Solar, and Other Non-Hydro Renewable, as well as a new Energy Storage function within the plant and operations expense sections of the forms. EPE will adopt FERC Order No. 898 effective January 1, 2025 and the adoption will not materially impact EPE's disclosures.

In December 2023, the FASB issued ASU 2023-09, Income Taxes (Topic 740), Improvements to Income Tax Disclosures, to enhance income tax disclosures for the effective tax rate reconciliation and income taxes paid to address investor requests for more information about the tax risks and opportunities. This update applies to all reporting entities subject to ASC 740: Income Tax. For non-public business entities, ASU 2023-09 requires qualitative disclosure about specific categories of reconciling items and individual jurisdictions that result in a significant difference between the statutory tax rate and the effective tax rate; disclosure of income taxes paid (net of refunds received), disaggregated by federal, state and foreign; and net amounts paid to an individual jurisdiction that are equal to or exceed 5% of the total income taxes paid (net of refunds received). In addition, ASU 2023-09 requires disclosure of income (or loss) from continuing operations before income tax expense (or benefit) disaggregated between domestic and foreign; and income tax expense (or benefit) from continuing operations disaggregated by federal, state, and foreign. ASU 2023-09 also provides guidance to eliminate certain disclosures related to unrecognized tax benefit balances. For non-public business entities, ASU 2023-09 will be effective for annual periods beginning after December 15, 2025. ASU 2023-09 will be applied on a prospective basis with the option to apply the standard retrospectively, and early adoption is permitted. EPE is currently assessing the future impact of ASU 2023-09.

C. Revenues

The following table disaggregates revenue from contracts with customers, for the years ended December 31, 2024 and 2023 (in thousands):

	Years Ended December 31,	
	2024	2023
Retail	$ 882,307	$ 892,635
Wholesale	203,117	263,055
Wheeling (transmission)	31,679	44,084
Total revenues from contracts with customers	1,117,103	1,199,774
Other	4,396	4,473
Total operating revenues	$ 1,121,499	$ 1,204,247

Retail. Retail contracts represent EPE's primary revenue source. EPE has determined that retail electric service to residential, commercial and industrial, and public authority customers represents an implied daily contract with the customer. The contract is comprised of an obligation to supply and distribute electricity and related capacity. Revenue is recognized, over time, equal to the product of the applicable tariff rates, as approved by the PUCT and the NMPRC, and the volume of the electricity delivered to the customer, or through the passage of time based upon providing the service of standing ready. Accrued Utility Revenues are recognized at month end based on estimated monthly generation volumes and by applying an average revenue per kWh to the number of estimated kWhs delivered but not billed to customers, and recorded as a receivable for the period following the last billing cycle to the end of the reporting period. Retail customers receive a bill monthly, with payment due sixteen days after issuance.

Wholesale. Wholesale contracts primarily include forward power sales into markets outside EPE's service territory when EPE has competitive generation capacity available, after meeting its regulated service obligations. Pricing is either fixed or based on an index rate with consideration potentially including variable components. Uncertainties regarding the variable consideration will be resolved when the transaction price is known at the point of delivering the energy. The obligation to deliver the electricity is satisfied over time as the customer receives and consumes the electricity. Wholesale customers are invoiced monthly on the 10th day of each month, with payment due by the 20th day of the month. Effective April 2023, wholesale includes power sales into the Western Energy Imbalance Market ("EIM"). EIM customers are invoiced monthly, with payment due within twenty days of receipt of the invoice. In the case of the sale of renewable energy certificates, the transaction price is allocated to the performance obligation to deliver the confirmed quantity of the certificates based on the stand alone selling price of each certificate. Revenue is recognized as control of the certificates is transferred to the customer. The customer is invoiced upon the completed transfer of the certificates, with payment due within ten business days. Wholesale also includes an annual agreement between EPE and one of its wholesale customers, Rio Grande Electric Cooperative ("RGEC"), which involves the provision of full requirements electric service from EPE to RGEC. The rates for this service are recalculated annually and require FERC approval.

Wheeling (transmission). Wheeling involves EPE providing point-to-point transmission service, which includes the receipt of capacity and energy at designated point(s) and the transfer of such capacity and energy to designated point(s) of delivery on either a firm or non-firm basis for periods of one year or less. The performance obligation to provide capacity and transmit energy is satisfied over time as EPE performs. Transmission customers are invoiced on a monthly basis, with payment due within twenty days of receipt of the invoice.

Accounts receivable. Accounts receivable is principally comprised of revenue from contracts with customers. EPE recognizes expense for accounts that are deemed uncollectible in operating expense. EPE recognized $4.7 million and $4.4 million of uncollectible expense for the years ended December 31, 2024 and 2023, respectively. See Note A of Notes to Financial Statement for a discussion of the COVID-19 impact on EPE's allowance for credit losses for 2023.

D. Regulation

General

The rates and services of EPE are regulated by incorporated municipalities in Texas, the PUCT, the NMPRC and the FERC. Municipal orders, ordinances and other agreements regarding rates and services adopted by Texas municipalities are subject to review and approval by the PUCT. The FERC has jurisdiction over EPE's wholesale (sales for resale) transactions, transmission service and compliance with federally-mandated reliability standards. The decisions of the PUCT, the NMPRC and the FERC are subject to judicial review.

Texas Regulatory Matters

2021 Texas Retail Rate Case Filing. On June 1, 2021, EPE filed in Docket No. 52195, a request for an increase of approximately $69.7 million, or $41.8 million after accounting for the Distribution Cost Recovery Factor ("DCRF") and the Transmission Cost Recovery Factor ("TCRF"), in non-fuel base revenues with the PUCT and those Texas municipalities that retained original jurisdiction.

On September 15, 2022, the PUCT issued the PUCT Final Order in Docket No. 52195 ("2021 PUCT Final Order"), which provides among other things, for the following: (i) an annual non-fuel base rate increase of $5.1 million net of revenue EPE is already recovering through the DCRF and TCRF, effective for electricity consumed on and after November 3, 2021; (ii) a return on equity of 9.35%; (iii) recovery of reasonable rate case expenses of $4.3 million over a four-year period; (iv) increased depreciation rates beginning with the effective date of November 3, 2021; (v) recovery of COVID-19 costs of $6.3 million over a four-year period; (vi) removal of retiring generation plants from base rates and recovery through a separate rider, effective for electricity consumed on and after November 3, 2021; and (vii) a refund of $24.1 million of excess deferred income taxes to Texas customers over a four-year period through a credit rider.

New base rates, including additional surcharges associated with COVID-19 expenses, certain generating unit costs, and rate case expenses were implemented in August 2022. Surcharges to reflect the relate-back of rates for consumption on and after November 3, 2021, through July 31, 2022, to be offset against the existing regulatory liability for the excess deferred income tax credit owed to Texas customers, were approved on February 7, 2023. EPE deferred any recognition of EPE's request in Docket No. 52195 until it received the 2021 PUCT Final Order on September 15, 2022. Accordingly, EPE reported the effect of the 2021 PUCT Final Order in 2022, a cumulative relate-back impact of $13.5 million, after-tax, for consumption from November 3, 2021, through July 31, 2022. The cumulative relate-back impact includes $3.2 million of bad debt expenses related to COVID-19 incurred through December 31, 2020, which were approved in the 2021 PUCT Final Order to be recovered from customers through a four-year period beginning August 2022. The impact recorded in 2022 was comprised of recurring and non-recurring items.

The 2021 PUCT Final Order also established filing requirements on additional COVID-19 costs and bad-debt costs after the test year and deferred under the PUCT's order filed in Docket No. 50664 on March 26, 2020. In compliance with the 2021 PUCT Final Order, EPE filed its initial annual filing with the PUCT on March 31, 2023, in Docket No. 54812 which included a true-up of $9.6 million for bad debt and other expenses related to COVID-19 that were incurred in the years 2021 and 2022. On April 29, 2024, a proposed decision recommending that EPE's application be granted was issued. On July 12, 2024, the PUCT issued a final order in Docket No. 54812 approving EPE's application consistent with the proposed decision.

EPE filed its second annual update filing with the PUCT on March 28, 2024, in Docket No. 56422 which included a net amount of $8.5 million for the four years 2020 to 2023 on a Texas jurisdictional basis for bad debt and other expenses related to COVID-19, after the reduction of revenues collected through the rider. On June 21, 2024, the City of El Paso, Texas ("City of El Paso"), requested a hearing, and on June 25, 2024, PUCT Staff requested a hearing. On September 18, 2024, EPE filed supplemental testimony updating the filing with actual recovery through August 2024. Intervenor testimony was filed on October 18, 2024, and PUCT Staff filed a statement that it would not be filing testimony. On November 14, 2024, the

Administrative Law Judges ("ALJ"), at the request of the parties, issued an order suspending the procedural order to allow settlement discussions. EPE cannot predict the outcome of this filing.

2025 Texas Retail Rate Case Filing. On January 27, 2025, EPE filed in Docket No. 57568, a request for an increase of approximately $129.0 million, in non-fuel base revenues with the PUCT and those Texas municipalities that retained original jurisdiction. The final rates approved in this case will relate back to July 1, 2025, and EPE will assess either a surcharge or issue a refund depending on the final order in this case. At this time, EPE cannot predict the outcome of this filing.

Fuel and Purchased Power Costs. EPE's actual fuel costs, including purchased power energy costs, net of the cost of off-system sales and related shared margins, are recovered from customers through a fixed fuel factor. The PUCT has adopted a fuel cost recovery rule ("Texas Fuel Rule") that allows EPE to seek periodic adjustments to its fixed fuel factor. EPE can seek to revise its fixed fuel factor based upon the approved formula at least four months after its last revision except in the month of December. The Texas Fuel Rule requires EPE to request to refund fuel costs in any month when the over-recovery balance exceeds a threshold material amount and when it expects fuel costs to continue to be materially over-recovered. The Texas Fuel Rule also permits EPE to seek to surcharge fuel under-recoveries in any month the balance exceeds a threshold material amount and when it expects fuel cost recovery to continue to be materially under-recovered. Fuel over- and under-recoveries are considered material when they exceed 4% of the previous twelve months' fuel costs. All such fuel revenue and expense activities are subject to periodic final review by the PUCT in periodic fuel reconciliation proceedings.

On January 17, 2023, EPE filed a request with the PUCT, which was assigned PUCT Docket No. 54572, to decrease the Texas fixed fuel factor by approximately 62.5% to reflect lower fuel expenses primarily related to a decrease in the price of natural gas used to generate power. On January 26, 2023, the ALJ found EPE's notice and application sufficient, and granted interim approval of the revision, effective February 1, 2023. Under the PUCT's rules, this fuel factor became final when no party requested a hearing within 30 days of EPE's filing of the application.

On May 17, 2023, EPE filed a request with the PUCT, which was assigned PUCT Docket No. 55019, to implement a Texas fixed fuel factor refund of $52.9 million over a four-month period beginning in June 2023. PUCT Docket No. 55019 reflects accumulation of significant levels of margins on off-system sales, which are required to be shared with retail customers. On May 30, 2023, EPE's refund was approved by the ALJ on an interim basis effective for the first billing cycle of June 2023. On July 18, 2023, a settlement was filed that called for approval of EPE's application, except that transmission level customers would get the remainder of their refund in August 2023. On August 30, 2023, the PUCT filed a Stamped Approved copy of the fuel refund tariff, effectively approving the settlement. On October 11, 2024, EPE filed a request with the PUCT, which was assigned PUCT Docket No. 57194 to implement a Texas fixed fuel factor refund of $21.1 million over a two-month period beginning November 2024. On October 29, 2024, the ALJ found EPE's notice and application sufficient, and granted interim approval of the refund, effective November 2024 and extending through December 2024. On January 16, 2025, a proposed order was issued recommending approval of the refund. EPE cannot predict the outcome of this filing. As of December 31, 2024, EPE had a net fuel over-recovery balance of approximately $29.4 million in Texas.

Fuel Reconciliation Proceeding. On September 23, 2022, EPE filed an application with the PUCT, which was assigned PUCT Docket No. 54142, to reconcile $342.3 million of Texas fuel and purchased power expenses incurred during the period April 1, 2019, through March 31, 2022. On April 6, 2023, EPE filed a joint motion to suspend the procedural schedule to pursue settlement, which was granted. EPE and the parties reached a partial settlement of all issues except one, the issue of cost recovery of joining the EIM as a special circumstances exception to fuel. On March 21, 2024, the PUCT issued a final order, denying EPE's special circumstances exception to fuel and approving the partial settlement including reconciliation of EPE's fuel costs through March 31, 2022.

On September 27, 2024, EPE filed an application with the PUCT, which was assigned PUCT Docket No. 57149, to reconcile $284.8 million of Texas fuel and purchased power expenses incurred during the period April 1, 2022, through March 31, 2024. The City of El Paso, Texas Industrial Energy Consumers, Freeport McMoran, the Office of Public Utility Council,

and Vinton Steel have moved to intervene in the proceeding. EPE filed a list of issues on October 21, 2024, and a public hearing has been set beginning June 5, 2025. EPE cannot predict the outcome of this filing.

The April 1, 2024 through December 31, 2024, Texas jurisdictional fuel and purchased power costs subject to a future prudence review by the PUCT total approximately $37.0 million.

Advanced Metering System ("AMS") Deployment Plan. On April 19, 2021, EPE filed an application with the PUCT for approval of its AMS deployment plan, AMS surcharge, and non-standard metering service fee. The case was assigned PUCT Docket No. 52040. EPE proposed to collect approximately $131.3 million for the Texas-jurisdictional deployment costs through an AMS surcharge over a 12-year period. On January 14, 2022, EPE filed an unopposed stipulation and settlement with the State Office of Administrative Hearings which was remanded back to the PUCT on January 20, 2022, for final disposition. The stipulation and settlement would authorize EPE to collect approximately $110.7 million over 12 years, with the opportunity to recover reasonable and necessary Texas deployment costs in excess of that amount through the PUCT AMS reconciliation process. On December 15, 2022, the PUCT issued its final order approving EPE's stipulated AMS deployment plan and surcharge, which became effective in customer billings beginning January 1, 2023. On January 17, 2023, EPE filed to revise the surcharges in Schedule No. AMS to reflect EPE's weighted average cost of capital approved in Docket No. 52195. On March 28, 2024, in PUCT Compliance Docket No. 53333, EPE filed its annual report for the period ending December 31, 2023, pursuant to the Final Order in PUCT Docket No. 52040, updating the cost information used in setting its AMS surcharge. EPE requested no update to its AMS surcharge which is designed to recover $58.0 million over a five-year period, or $11.6 million per year for the 2023-2027 period. EPE began its mass smart meter installations in Texas on May 15, 2023. EPE expects to complete the meter installations in 2025.

Generation Cost Recovery Rider ("GCRR"). In the 2021 PUCT Final Order, a GCRR baseline was adopted which would allow recovery of approximately 80% of the final capital costs of Newman Unit 6, representing approximately 228 Megawatt(s) ("MW") of the natural gas-fired generating unit, from Texas customers. On February 21, 2023, EPE filed an application with the PUCT, which was assigned PUCT Docket No. 54659, for approval of a GCRR designed to recover capital costs effective once Newman Unit 6 began commercial operation in 2023. On December 1, 2023, the PUCT issued a final order approving EPE's GCRR rates effective for usage on and after the commercial operation date ("COD"). Newman Unit 6 began commercial operation on December 27, 2023, and EPE began billing approved GCRR rates on February 1, 2024. The approved rates reflect 80% of Newman Unit 6 costs through December 31, 2022, and EPE had 60 days from the COD to file updated rates which reflect full facility costs through the COD. On February 23, 2024, EPE filed an application with the PUCT, which was assigned PUCT Docket No. 56225, to update the approved GCRR rates to reflect the full cost of Newman Unit 6 through COD to be recovered from its Texas customers. The application requested approval for interim rates while the application was being considered by the PUCT. Interim rates reflecting the Texas jurisdictional portion of the full cost for Newman Unit 6 were approved by the PUCT and were effective in billing on May 1, 2024. On July 11, 2024, the PUCT issued a preliminary order that determined that modifying the baseline jurisdictional allocation factors is beyond the scope of the GCRR update proceeding, effectively barring EPE from including any more than the Texas jurisdictional allocation of Newman Unit 6 in its GCRR. On August 7, 2024, EPE filed revised testimony reflecting the Texas jurisdictional allocation of Newman Unit 6. On August 30, 2024, the City of El Paso filed direct testimony recommending EPE's application be denied as untimely filed. On September 9, 2024, PUCT Staff filed direct testimony supporting EPE's application, and EPE filed rebuttal testimony on September 19, 2024. The parties agreed to conduct a paper hearing, and the ALJ granted the parties' request for a paper hearing. Initial briefs were filed on October 18, 2024, and reply briefs were filed on October 25, 2024. On December 4, 2024, the ALJ issued a Proposal for Decision ("PFD") recommending approval of EPE's application. On January 31, 2025, the PUCT adopted the PFD approving EPE's application based on its revised testimony.

Texas Electric Vehicle ("EV")-Ready Pilot Program and Tariffs. On January 1, 2023, EPE filed an application with the PUCT, which was assigned PUCT Docket No. 54614, for approval of rates and pilot programs designed for customers charging EVs at home or a business. On September 22, 2023, after EPE filed supplemental testimony, the PUCT issued an order requesting a list of issues from EPE by October 12, 2023. PUCT Staff and EPE each filed their list of issues in this case. The

hearing in the case was held on April 2, 2024. A PFD largely approving EPE's programs was issued by the ALJ on June 28, 2024. On October 24, 2024, the PUCT approved the PFD with additional ordering paragraphs to make clear that the PowerConnect and Take Charge TX program tariffs can only be used for public EV charging stations.

Energy Efficiency Cost Recovery Factor. On May 1, 2023, EPE filed its annual application with the PUCT, which was assigned PUCT Docket No. 54950, for the energy efficiency program cost recovery. The program included a performance bonus of $1.2 million based on EPE's energy efficiency program performance for 2022. On September 29, 2023, EPE filed the Stipulation and Settlement Agreement on behalf of the parties in this case, PUCT Staff filed a memorandum in support of the Stipulation and Settlement Agreement, and EPE filed a Joint Motion to Admit Evidence and Remand to the Commission. The Stipulation and Settlement Agreement in the case were approved by the PUCT on December 1, 2023.

On March 28, 2024, EPE filed its annual application with the PUCT, which was assigned PUCT Docket No. 56572, for the energy efficiency program cost recovery. The application includes a performance bonus of $1.6 million based on EPE's energy efficiency program performance for 2023. On November 14, 2024, EPE filed the Stipulation and Settlement Agreement on behalf of the parties in this case agreeing to approval of EPE's application with $0.1 million program budget reduction. The Stipulation and Settlement Agreement in the case were approved by the PUCT on December 12, 2024.

Texas Business Solar Program ("TXBSP"). On June 26, 2023, EPE filed an application with the PUCT, which was assigned PUCT Docket No. 55176, for approval of a TXBSP designed for EPE's mid to large commercial, industrial, educational, and non-military governmental customers. TXBSP would be supported by 50 MW of the 150 MW solar facility approved by the PUCT in Docket No. 54929. After EPE and the parties reached settlement in principle on all issues in the case approving TXBSP, on March 22, 2024, EPE and the parties filed a joint request to suspend the schedule, and the ALJ issued an order suspending the schedule on that day. On August 15, 2024, a settlement agreement was filed agreeing to approval of EPE's application, and on September 23, 2024, the ALJ issued a proposed order approving an uncontested settlement. On January 16, 2025, the PUCT issued a Final Order approving EPE's application.

Distribution Cost Recovery Factor. On March 28, 2024, EPE filed an application with the PUCT, which was assigned PUCT Docket No. 56425, for approval of a DCRF to recover distribution capital investments made since the end of the test year in the 2021 PUCT Final Order. The change in EPE's Texas Retail net distribution invested capital was $172.8 million. Adjusted for load growth, the requested Texas retail DCRF revenue requirement was $21.0 million. A PUCT order approving the requested rates was issued on June 13, 2024, and the rates became effective in customer billings beginning June 17, 2024.

Time-Varying Rate Pilot Program ("TVRP Program"). On May 24, 2024, EPE filed an application with the PUCT, which was assigned PUCT Docket No. 56658, to implement a TVRP Program in Texas for Residential and Small General Service customers, to test various rate options enabled by EPE's smart metering program. Hearings in the case, scheduled for January 7, 2025, have been abated for settlement discussions. EPE cannot predict the outcome of this application.

Other Required Approvals. EPE has obtained other required approvals for tariffs and other approvals required by the Texas Public Utility Regulatory Act and the PUCT.

New Mexico Regulatory Matters

2020 New Mexico Rate Case Filing. Pursuant to a NMPRC order in Case No. 15-00109-UT, on May 29, 2020, EPE filed its Application for Revision of Retail Electric Rates, requesting a base revenue requirement increase of $6.9 million. The application was assigned NMPRC Case No. 20-00104-UT. The NMPRC issued a final order on June 23, 2021, ordering a $3.8 million New Mexico base revenue reduction ("Rate Case Order"). On June 25, 2021, EPE filed a Notice of Appeal of the Rate Case Order with the New Mexico Supreme Court in Docket No. S-1-SC-38874. On May 1, 2023, the New Mexico Supreme Court issued a decision nullifying and vacating the Rate Case Order and remanding it back to the NMPRC for a further order in the matter consistent with its conclusion that the Rate Case Order violated EPE's due process rights. The NMPRC then issued a Final Order on Remand which denied EPE's request to record additional revenues, from the NMPRC's Rate Case Order's June 3, 2021 date to the New Mexico Supreme Court's May 1, 2023 decision, as a regulatory asset for recovery in EPE's next general

rate case on the basis of impermissible retroactive ratemaking. On February 9, 2024, EPE filed a Notice of Appeal of the Final Order on Remand with the New Mexico Supreme Court in Supreme Court Case No. S-1-SC-40286. EPE's initial brief was filed on July 12, 2024, and answer briefs were filed on August 29, 2024. EPE's reply brief was filed on October 18, 2024. EPE cannot predict the outcome of this appeal at this time.

Fuel and Purchased Power Costs. Pursuant to NMPRC Rule 550, fuel and purchased power costs, net of the cost of off-system sales and related shared margins, are reconciled to actual costs on a monthly basis and recovered or refunded to customers the second succeeding month through the New Mexico Fuel and Purchased Power Cost Adjustment Clause ("FPPCAC"). EPE must file an application for continued use of its FPPCAC no more than four years from the date its last FPPCAC was continued. On February 13, 2023, EPE filed its next required application with the NMPRC to continue use of its FPPCAC initiating Case No. 23-00046-UT. EPE filed an amended application with the NMPRC on December 18, 2023, and public hearings were held on June 25 through June 28, 2024. On December 23, 2024, the Hearing Examiner issued a recommended decision recommending approval of EPE's application. Exceptions to the recommended decision were filed on January 6, 2025, and EPE and NMPRC Staff filed replies to those exceptions on January 14, 2025. On February 20, 2025, the NMPRC issued a Final Order Adopting Recommended Decisions with Modifications approving EPE's amended application and requiring EPE to address the FPPCAC 12-month rolling methodology in EPE's next general rate case and conduct a limited audit on FPPCAC calculation and billing. As of December 31, 2024, EPE had a net fuel under-recovery balance of approximately $2.5 million related to the FPPCAC in New Mexico.

On March 17, 2021, EPE filed a Motion for Variance from the Approved FPPCAC Methodology ("Motion") docketing Case No. 21-00064-UT. The Motion requested a variance from EPE's approved FPPCAC methodology to authorize inclusion of $6.8 million of incremental fuel costs in the FPPCAC balancing account and the recovery of $0.6 million per month amortization for twelve months beginning with April 2021 bills. The $6.8 million of incremental fuel costs resulted from the extreme cold weather experienced by customers in EPE's service territory in February 2021. On March 31, 2021, the NMPRC issued an order setting a temporary FPPCAC adjustment and appointing a Hearing Examiner of the NMPRC for further proceedings, which excluded the $6.8 million of incremental fuel costs from EPE's FPPCAC and assigned the matter for further proceedings. The public hearing on EPE's Motion concluded on December 2, 2021. On December 28, 2022, the NMPRC issued a final order denying EPE's Motion and reopening the record to develop additional evidence. EPE filed a motion for rehearing of the final order on January 27, 2023, and that motion was denied by the tolling of the rehearing statute. On July 25, 2023, EPE filed a Motion for Procedural Order recommending the matter be assigned to a Hearing Examiner for a decision on the previously developed record which the NMPRC granted on August 24, 2023. On October 18, 2023, the NMPRC issued an order assigning a Hearing Examiner to the case. On May 20, 2024, the Hearing Examiner issued a recommended decision approving recovery of $5.7 million over a 12-month period through the FPPCAC. On August 22, 2024, the NMPRC issued a final order adopting the recommended decision. On October 3, 2024, the NMPRC issued orders denying the motions of City of Las Cruces, New Mexico ("City of Las Cruces") for rehearing and stay of the final order. On November 4, 2024, the City of Las Cruces appealed the final order adopting the recommended decision approving EPE's application to the New Mexico Supreme Court in Docket No. S-1-SC-40636. The City of Las Cruces' brief in chief was filed on February 6, 2025, and EPE's response brief was filed on March 24, 2025. EPE cannot predict the outcome of this appeal. EPE began recovering monthly amortization of the allowed $5.7 million from New Mexico customers in September 2024.

Amendments to the New Mexico Renewable Energy Act (the "REA"). On April 14, 2021, in Case No. 19-00269-UT, the NMPRC issued an order adopting rule amendments to implement the REA amendments, which Southwestern Public Service Company ("SPS") appealed to the New Mexico Supreme Court and was docketed as Case No. S-1-SC-38815. EPE intervened in that appeal, opening briefs were filed April 11, 2022, and oral arguments in the appeal were held on August 10, 2023. On March 18, 2024, the court entered an opinion affirming the NMPRC's order adopting rule amendments.

On August 8, 2022, the NMPRC reissued notice of further amendments in Case No. 20-00158-UT, and the NMPRC issued a final order promulgating further rule amendments on December 7, 2022. Those rule amendments include the establishment of an industry standard levelized cost of electricity methodology for the REA's reasonable cost threshold,

revisions to the rule's provision for utility financial incentives, and limiting the use of net metered, distributed generation renewable energy credits for Renewable Portfolio Standard ("RPS") compliance purposes. The December 7, 2022, final order also initiated a further rulemaking proceeding, which has not been docketed, to address required criteria for continued use of rate riders to recover REA costs. The NMPRC accepted EPE's 2021 Amended Integrated Resource Plan filed in NMPRC Case No. 21-00242-UT which models the long-term cost associated with complying with the REA. EPE is currently evaluating the impact that the REA may have on its operations.

New Mexico RPS. Effective January 1, 2018, pursuant to the final order in NMPRC Case No. 17-00090-UT, the RPS costs for New Mexico are recovered through a separate RPS Cost Rider and not through the FPPCAC. As of December 31, 2024, EPE had a net fuel over-recovery balance related to the RPS Cost Rider of approximately $2.9 million.

On October 3, 2022, EPE filed its 2022 REA Plan Application in Case No. 22-00093-UT seeking 2022 REA plan approval including procurement of a proposed purchased power and energy storage agreements for the 130 MW solar and 65 MW energy battery storage project ("Carne Project"). On May 17, 2023, the NMPRC issued a final order largely approving EPE's 2022 REA Plan, including the Carne Project. On April 16, 2023, the City of Las Cruces filed a notice of appeal of that final order with the New Mexico Supreme Court in Case No. S-1-SC-39967. The City of Las Cruces' brief was filed November 11, 2023, EPE and NMPRC answer briefs were filed December 21, 2023, and the City of Las Cruces' reply brief was filed January 16, 2024. Oral arguments scheduled for September 23, 2024, were vacated, and on October 10, 2024, the court issued a dispositional order affirming the NMPRC's final order approving the Carne Project. On October 25, 2024, the City of Las Cruces filed a Motion for Rehearing of Dispositional Order of Affirmance, and on January 1, 2025, the court issued an order denying the motion.

On July 29, 2022, EPE filed a Verified Motion for Expedited Approval of Amendments to Two Purchased Power Agreements in Case Nos. 19-00099-UT and 19-00348-UT, previously approved by the NMPRC in those dockets. EPE's motion sought NMPRC approval to amend the October 17, 2019, Buena Vista Energy Center, LLC purchased power agreement ("PPA") for 100 MW of solar energy and 50 MW of energy storage and the March 18, 2020, Buena Vista Energy Center LLC PPA for an additional 20 MW of solar energy to increase pricing by $3.50 per megawatt-hour and to extend COD to June 1, 2023. On September 9, 2022, EPE filed a Notice of Waiver of Condition Precedent, waiving regulatory approval as a condition precedent of the amended PPAs. On November 14, 2022, EPE filed an Amended Application for Approval of Amendments to Four Purchased Power Agreements seeking NMPRC approval to amend two additional PPAs previously approved by the NMPRC in those dockets, the October 17, 2019, Hecate PPA for 100 MW of solar energy and the March 2020 Hecate PPA for an additional 50 MW of solar energy, to extend the commercial operations date of those PPAs to June 1, 2024. On May 17, 2023, the NMPRC issued a final order in the case approving the proposed amendments and confirming recovery of PPA costs through the FPPCAC and RPS cost rider ("PPA Amendment Final Order"). On August 3, 2023, the City of Las Cruces filed a Notice of Appeal of the PPA Amendment Final Order with the New Mexico Supreme Court docketing Case No. S-1-SC-40048 and on September 5, 2023, the City of Las Cruces filed a statement of issues. EPE filed a motion to intervene in the appeal, which was granted. The City of Las Cruces' brief was filed February 1, 2024, EPE and NMPRC answer briefs were filed on March 5, 2024, and the City of Las Cruces' reply brief was filed on April 25, 2024. The oral arguments scheduled for November 4, 2024, were vacated by the court. On January 13, 2025, the court issued a dispositional order affirming the NMPRC's PPA Amendment Final Order.

On May 1, 2024, in Case No. 24-00176-UT, EPE filed its required application with the NMPRC for its 2024 RPS Plan for the 2025 plan year. In 2025, the New Mexico RPS requirement increases from 20% to 40%, and EPE's filed plan projects compliance with 40% requirement from existing resources. The application was unopposed. The assigned Hearing Examiner waived the public hearing and issued a Recommended Decision on September 20, 2024, recommending approval of EPE's application. On October 18, 2024, the NMPRC issued a Final Order Adopting the Recommended Decision with Modifications.

New Mexico Efficient Use of Energy Recovery Factor. On April 19, 2024, EPE filed for an eight-week extension of EPE's Application for Approval of its 2025-2027 Energy Efficiency and Load Management Plan initiating Case No. 24-00154-UT. The extension was granted, and on July 29, 2024, EPE filed the application, which seeks a $0.4 million baseline incentive. A

public hearing was held on November 18, 2024, and post hearing briefing was completed on December 30, 2024. EPE cannot predict the outcome of this case at this time.

AMS Application. On November 5, 2021, EPE filed an application with the NMPRC for approval of its Grid Modernization Project to Implement AMS, AMS rate rider, and non-standard metering service fee. The case was assigned NMPRC Case No. 21-00269-UT. EPE proposed to acquire and implement AMS at an estimated New Mexico AMS project cost of $35.5 million and to collect the project's actual capital expenditures and estimated annual operating expenditures through the AMS rate rider which will be reconciled through an annual filing with the NMPRC. EPE, NMPRC Staff and parties filed a stipulation resolving all issues with the NMPRC on April 29, 2022, which was subsequently opposed. The Hearing Examiner in the case issued a Certification of Stipulation recommending approval of EPE's stipulated AMS Project. The NMPRC approved the Certification of Stipulation and issued a final order approving EPE's AMS project on November 2, 2022. EPE filed pursuant to the settlement to update the monthly AMS rate rider for actual plant placed in service and reconciliation of 2022 costs and revenues. The new charge was effective April 1, 2023. EPE began its mass smart meter installations in New Mexico on September 5, 2023. On January 31, 2024, EPE filed to update the AMS rate rider for actual plant placed in service and reconciliation of 2023 costs and revenues, resulting in an expected 2024 collection of $2.6 million. The new charge was effective March 4, 2024. EPE expects to complete the meter installations in 2025.

NMPRC's Interconnection Rule. On November 11, 2022, in Case No. 21-00266-UT, the NMPRC issued a final order promulgating a replacement rule 17.9.568 New Mexico Administrative Code ("NMAC") governing interconnection of generating facilities up to 10 MW. The replacement rule adopts an Interstate Renewable Energy interconnection model, whereby EPE is required to update 71 distribution circuits located in New Mexico at an estimated cost of $1.0 million in order to comply with the new rule. EPE expects to complete the required updates by December 31, 2025, to meet the new rule's requirements. EPE filed an amended petition for partial variance in Case No. 23-00046-UT seeking additional time, until January 1, 2026, to implement the rule. The NMPRC issued an order granting EPE's request.

NMPRC's Community Solar Act (the "Act"). The Act, effective June 18, 2022, established a New Mexico Community Solar Program with an initial statewide capacity cap of 200 MW through December 31, 2024, allocated amongst the states three electric investor-owned utilities ("Qualifying Utilities"). The Act requires Qualifying Utilities to interconnect at the distribution level with unregulated subscriber organizations, sized no larger than 5 MW, and to take 100% of their solar energy for a required 20-year PPA term. The Act authorizes the subscriber organizations to resell community solar energy to EPE's customers at an unregulated subscription price. As payment for subscribed community solar generation, Qualifying Utilities are required to credit their customers who subscribe to the program a customer bill credit. The Act prohibits program subsidization by the utility and other utility customers and allows for up to a 3% program subsidy by other customers upon a NMPRC finding of public interest. On March 30, 2022, the NMPRC issued a final order promulgating Rule 17.9.573 NMAC ("Rule 573") which implements the Act and allocates 10 MW of the program's initial capacity to EPE. SPS filed a Notice of Appeal of the Final Order adopting Rule 573 with the New Mexico Supreme Court in Docket No. S-1-SC-39432, arguing due process and statutory conflicts including inadequate customer protections and unlawful program subsidization. EPE intervened in the appeal. SPS filed three other separate appeals with the New Mexico Supreme Court, and on January 24, 2022, the court issued an order consolidating all four appeals. Opening briefs were filed on March 27, 2023. Answer briefs were filed on May 12, 2023, and reply briefs were filed on May 31, 2023. Oral arguments were held on March 11, 2024, and the court issued an order affirming the final order adopting Rule 573.

On March 1, 2023, in Case No. 23-00071-UT, the NMPRC issued an order opening new docket for two-phase proceeding consolidating EPE, SPS, and Public Service Company of New Mexico ("PNM") dockets regarding Community Solar Program tariff implementation. Phase One is limited to subscriber organization agreements and customer consent forms. Phase Two concerns all other tariffs required to implement the New Mexico Community Solar Program, including Customer Bill Credit tariffs, which were required to be filed with the NMPRC by August 15, 2023. On August 10, 2023, NMPRC Staff and the parties filed an Uncontested Phase One Stipulation and testimony in support. The Phase One hearing was held on August 23, 2023. On September 21, 2023, the NMPRC issued an order approving the Phase One Stipulation. The Phase Two public

hearing concluded on January 19, 2024. On August 30, 2024, the assigned Hearing Examiner issued a Recommended Decision including a public interest finding required for the program to be subsidized by non-participating customers and deferring several contested issues to a future rulemaking proceeding. EPE and other parties have filed exceptions to the Recommended Decision and responses to the exceptions. On November 26, 2024, the Commission issued a final order adopting the Recommended Decision and requiring EPE to file compliance tariffs.

On March 21, 2024, the NMPRC issued an Initial Order Opening Docket and Requesting Information and Recommendations initiating Case No. 24, 00094-UT to consider expanding the 200 MW state-wide capacity cap of the New Mexico Community Solar program by an additional 300 MWs effective November 2024. On July 11, 2024, the NMPRC issued a Notice of Proposed Rulemaking, and on October 3, 2024, the NMPRC issued an Order Adopting Amendments to Rule expanding the program's statewide capacity cap by an additional 300 MW with EPE being allocated an additional 45 MW of the program.

NMPRC's Integrated Resource Plan Rule. On November 11, 2022, the NMPRC issued a Final Order Upon Reconsideration promulgating a replacement Rule 17.7.3 governing the integrated resource planning process for utilities which creates costly and inefficient resource and procurement rules which do not adequately address the circumstance of multi-state jurisdictional utilities. On December 1, 2022, EPE filed a Notice of Appeal with the New Mexico Supreme Court in Docket No. S-1-SC-39673. On December 2, 2022, SPS filed a Notice of Appeal with the New Mexico Supreme Court in Docket No. S-1-SC-39677, and PNM filed a Notice of Appeal with the New Mexico Supreme Court in Docket No. S-1-SC-39676. The New Mexico Supreme Court issued an order consolidating SPS and PNM's appeals with EPE's appeal, a joint opening brief was filed on June 5, 2023, and a joint answer brief was filed September 1, 2023. Oral arguments were held on May 14, 2024. On December 6, 2024, the court issued an opinion affirming the final order adopting Rule 17.7.3.

Revolving Credit Facility ("RCF") and Issuance of Short-Term Debt. On February 22, 2023, the NMPRC approved the recommended decision in Case No. 23-00004-UT approving EPE's January 6, 2023, filing to increase its maximum borrowing limit under its RCF from $400.0 million to $550.0 million and issue long-term debt in an amount not to exceed $180.0 million. Under this authorization, on May 1, 2023, and May 5, 2023, EPE issued a $150.0 million short-term loan and amended its RCF's commitments to $450.0 million, respectively. On January 19, 2024, and July 26, 2024, EPE further amended its RCF's commitments by $50.0 million increments, to $500.0 and $550.0 million, respectively. Additionally, on February 15, 2024, EPE issued $180.0 million Series C 6.02% Senior Unsecured Notes with a maturity date of February 15, 2054. On March 11, 2025, in Case No. 25-00018-UT, EPE filed an application with the NMPRC seeking authorization to issue new long-term debt in an amount not to exceed $778.0 million and to guarantee the issuance of up to $65.0 million of long-term debt by the Rio Grande Resources Trust II ("RGRT") to finance future nuclear fuel purchases. The application is currently pending NMPRC approval.See Note G of the Notes to the Financial Statements for further discussion.

New Mexico Transportation Electrification Plan for 2024 through 2026 ("NMTEP"). On June 29, 2023, in Case No. 23-00231-UT, EPE filed an application with the NMPRC for approval of its NMTEP. EPE's NMTEP proposes a portfolio of residential and commercial programs, new construction programs, partnerships, research and innovations program, rate options, and a Customer Outreach Program ("COP"). The COP is designed to expand transportation electrification in EPE's New Mexico service territory, including low-income and underserved communities and across multiple EV classes over the 2024 through 2026 plan years. A public hearing was scheduled to begin on December 11, 2023, but was delayed until January 2, 2024. The public hearing was held January 2 through January 4, 2024. The NMPRC issued an order approving EPE's application on March 28, 2024, including an additional program providing rebates for customers purchasing EVs.

New Mexico Abandonment Application. On December 5, 2023, in Case No. 23-00403-UT, EPE filed an application with the NMPRC for approval of abandonment of its Newman Unit 1 and Rio Grande Power Station Unit 7. The application seeks authorization to abandon these gas fired generation units no sooner than January 1, 2026, subject to confirmation by EPE that it has a sufficient planning reserve margin. A public hearing was held on August 6, 2024, and briefing was completed on September 30, 2024. On December 9, 2024, the Hearing Examiner issued a recommended decision approving EPE's abandonment request substantially as filed. EPE cannot predict the outcome of this application.

TVRP Program. On March 28, 2024, in Case No. 24-00113-UT, EPE filed an application to implement a TVRP Program in New Mexico for Residential and Small General Service customers, to test various rate options enabled by EPE's smart metering program. EPE and intervenors entered into an unopposed settlement, and a hearing on the settlement was held on August 22, 2024. On October 8, 2024, the NMPRC issued an order requesting supplemental evidence and briefing. A supplemental hearing was held on December 2, 2024, and the Hearing Examiner issued a certification of stipulation recommending approval of the uncontested settlement approving EPE's application. On February 6, 2025, the NMPRC issued a final order adopting the Certification of Stipulation approving EPE's application.

Other Required Approvals. EPE has obtained other required approvals for tariffs and other approvals as required by the New Mexico Public Utility Act and the NMPRC.

Federal Regulatory Matters

Energy Markets. EPE requested two authorizations from FERC to join the California Independent System Operator's EIM: (i) a change of status of its market-based rate authority; and (ii) EIM-related changes to EPE's Open Access Transmission Tariff ("OATT"). On March 24, 2023, FERC approved the market-based rate authority and EPE joined the EIM on April 5, 2023. On January 24, 2025, EPE announced its decision to join the Southwest Power Pool Markets+, a new energy market designed to provide enhanced grid reliability, increased customer savings and advancing sustainability efforts across the western U.S. The transition to this new market is expected in 2028.

Transmission Formula Rate Case. On October 31, 2021, EPE filed a request with FERC to update its wholesale transmission rates for the first time since 1998 and to transition to a formula rate, instead of a stated rate. The formula rate mechanism will enable EPE to timely update and recover its wholesale transmission costs on an annual basis. On December 30, 2021, the FERC issued an initial order setting the matter for hearing and settlement judge procedures. The FERC approved EPE's proposed rates on an interim basis, subject to refund for customer billing effective January 1, 2022. EPE, FERC Staff and all parties in the case have since reached a settlement, and the agreement was filed with FERC for approval on April 11, 2024. On August 2, 2024, FERC approved the settlement agreement. Based on the filed settlement, EPE estimated and recorded a reserve to Accumulated Provision for Rate Refund on its Regulatory-Basis Balance Sheet. As of December 31, 2024, EPE has recorded a reserve of $29.0 million for its wholesale transmission sales compared to interim rates, and EPE issued refunds on February 3, 2025.

RCF, Issuance of Short-Term and Long-Term Debt. On January 20, 2023, the FERC issued an order in Docket No. ES23-11-000 approving EPE's December 7, 2022, filing to increase its maximum borrowing limit under its RCF from $400.0 million to $550.0 million, issue short-term debt in an amount not to exceed $300.0 million, and issue long-term debt in an amount not to exceed $180.0 million. The authorization is effective from January 20, 2023, to January 19, 2025. Under this authorization, on May 1, 2023, and May 5, 2023, EPE issued a $150.0 million short-term loan and amended its RCF's commitments to $450.0 million, respectively. On January 19, 2024, and July 26, 2024, EPE further amended its RCF's commitments by $50.0 million increments, to $500.0 and $550.0 million, respectively. Additionally, on February 15, 2024, EPE issued $180.0 million Series C 6.02% Senior Unsecured Notes with a maturity date of February 15, 2054. On December 30, 2024, FERC issued an order in Docket No. ES24-63-000 re-authorizing EPE to continue to issue securities through its RCF up to the same limit of $550.0 million. The authorization expires January 19, 2027. On January 31, 2025, in Docket No. ES25-32-000, EPE filed an application with the FERC seeking authorization to issue new long-term debt in an amount not to exceed $778.0 million and to guarantee the issuance of up to $65.0 million of long-term debt by the RGRT to finance future nuclear fuel purchases. FERC approved the application on March 28, 2025 and the authorization is effective from April 1, 2025 through March 31, 2027. See Note G of the Notes to Financial Statements for further discussion.

Other Required Approvals. EPE has obtained required approvals for rates, tariffs and other approvals as required by the Federal Power Act and the FERC.

U.S. Department of Energy ("DOE"). The DOE regulates EPE's exports of power to Mexico pursuant to a DOE grant of export authorization. In addition, EPE is the holder of two presidential permits issued by the DOE under which EPE constructed and operates border crossing facilities at the U.S./Mexico border.

Pursuant to the Nuclear Waste Policy Act of 1982, as amended in 1987, the DOE is legally obligated to accept and dispose of all spent nuclear fuel and other high-level radioactive waste generated by all domestic power reactors by 1998. See Note E of Notes to Financial Statements for further discussion of spent fuel storage and disposal costs.

Sales for Resale and Network Transmission Service to RGEC

EPE provides firm capacity and associated energy to the RGEC pursuant to an ongoing contract with a two-year notice to terminate provision. EPE also provides network integrated transmission service to the RGEC pursuant to EPE's OATT. The contract includes a formula-based rate that is updated annually to recover non-fuel generation costs and a fuel adjustment clause designed to recover all eligible fuel and purchased power costs allocable to the RGEC. EPE's service to RGEC is regulated by FERC.

E. Utility Plant, Palo Verde and Other Jointly-Owned Utility Plant

The tables below present the balance of each major class of depreciable assets at December 31, 2024 and 2023 (in thousands):

	December 31, 2024		
	Gross Plant (a)	Accumulated Depreciation	Net Plant
Nuclear production	$ 2,128,680	$ (1,385,063)	$ 743,617
Steam and other	1,608,365	(445,747)	1,162,618
Total production	3,737,045	(1,830,810)	1,906,235
Transmission	735,918	(284,382)	451,536
Distribution	1,958,290	(512,590)	1,445,700
General	299,423	(114,121)	185,302
Intangible	186,926	(78,246)	108,680
Total	$ 6,917,602	$ (2,820,149)	$ 4,097,453

	December 31, 2023		
	Gross Plant (a)	Accumulated Depreciation	Net Plant
Nuclear production	$ 2,098,616	$ (1,361,437)	$ 737,179
Steam and other	1,503,960	(417,342)	1,086,618
Total production	3,602,576	(1,778,779)	1,823,797
Transmission	712,897	(272,485)	440,412
Distribution	1,734,635	(472,768)	1,261,867
General	315,449	(128,978)	186,471
Intangible	237,669	(120,190)	117,479
Total	$ 6,603,226	$ (2,773,200)	$ 3,830,026

(a) Gross Plant excludes Capitalized Operating Leases of $3.2 million and Property Held for Future Development of $3.7 million as of December 31, 2024 and Capitalized Operating Leases of $3.8 million and Property Held for Future Development of $8.2 million as of December 31, 2023.

EPE owns a 15.8% interest in each of the three nuclear generating units and common facilities ("Common Facilities") at Palo Verde, in Wintersburg, Arizona. The operation of Palo Verde and the relationship among EPE and six other utilities: Arizona Public Service Company ("APS"), Southern California Edison Company, PNM, Southern California Public Power Authority, Salt River Project Agricultural Improvement and Power District and the Los Angeles Department of Water and Power ("Palo Verde Participants") is governed by the Arizona Nuclear Power Project Participation Agreement dated August 23, 1973, as amended ("ANPP Participation Agreement"). The Palo Verde Participants share in power and energy entitlements, and bear certain allocated costs, with respect to Palo Verde pursuant to the ANPP Participation Agreement.

A summary of EPE's investment in jointly-owned utility plant, excluding fuel inventories, at December 31, 2024 and 2023 is as follows (in thousands):

	December 31, 2024		December 31, 2023	
	Palo Verde	Other (a)	Palo Verde	Other (a)
Electric plant in service	$ 2,128,680	$ 119,928	$ 2,098,616	$ 114,971
Accumulated depreciation	(1,385,063)	(76,298)	(1,361,437)	(74,322)
Construction work in progress	46,376	2,812	41,410	1,671
Total	$ 789,993	$ 46,442	$ 778,589	$ 42,320

(a) Includes three jointly-owned transmission lines.

Amortization of intangible plant (software) is provided on a straight-line basis over the estimated useful life of the asset (ranging from 3 to 15 years). The table below presents the actual and estimated amortization expense for intangible plant for 2023, 2024 and the next five years (in thousands):

2023	$ 19,766
2024	29,588
2025 (estimated)	25,332
2026 (estimated)	22,373
2027 (estimated)	20,298
2028 (estimated)	14,514
2029 (estimated)	8,876

In accordance with FERC guidance, cloud computing arrangements are capitalized to Plant in Service in the Regulatory-Basis Balance Sheet and are amortized to Depreciation and Amortization in the Regulatory-Basis Statement of Income, therefore, amounts presented in this table include the amortization of cloud computing arrangements. See Note A of Notes to Financial Statements for further discussion.

Palo Verde

The operation of Palo Verde and the relationship among the Palo Verde Participants is governed by the ANPP Participation Agreement. APS serves as operating agent for Palo Verde, and under the ANPP Participation Agreement, EPE has limited ability to influence operations and costs at Palo Verde. Pursuant to the ANPP Participation Agreement, the Palo Verde Participants share costs and generating entitlements in the same proportion as their percentage interests in the generating units, and each participant is required to fund its share of fuel, operations and maintenance ("O&M") expense, and capital costs. EPE's share of direct expenses in Palo Verde is reflected in fuel expense, O&M expense, miscellaneous other deductions, and taxes other than income taxes in EPE's Regulatory-Basis Statement of Income. The ANPP Participation Agreement provides that if a participant fails to meet its payment obligations, each non-defaulting participant shall pay its proportionate share of the payments owed by the defaulting participant. Because it is impracticable to predict defaulting participants, EPE cannot estimate the maximum potential amount of future payment, if any, which could be required under this provision.

Nuclear Regulatory Commission. The NRC regulates the operation of all commercial nuclear power reactors in the U.S., including Palo Verde. The NRC periodically conducts inspections of nuclear facilities and monitors performance indicators to enable the agency to arrive at objective conclusions about a licensee's safety performance.

Palo Verde Operating Licenses. Operation of each of the three Palo Verde units requires an operating license from the NRC. The NRC issued full power operating licenses for Unit 1 in June 1985, Unit 2 in April 1986, and Unit 3 in November 1987, and issued renewed operating licenses for each of the three units in April 2011, which extended the licenses for Units 1, 2 and 3 to June 2045, April 2046, and November 2047, respectively.

Decommissioning. Pursuant to the ANPP Participation Agreement and federal law, EPE funds its share of the estimated costs to decommission Palo Verde Units 1, 2 and 3, including the Common Facilities, through the term of their respective operating licenses and is required to maintain a minimum accumulation and funding level in its decommissioning account at the end of each annual reporting period during the life of the plant. EPE has established the NDT with an independent trustee, which enables EPE to record a current deduction for federal income tax purposes for most of the amounts funded. At December 31, 2024, the NDT had a balance of $439.8 million, which is above its minimum funding level. EPE monitors the status of the NDT and adjusts contributions accordingly.

Decommissioning costs are estimated every three years based upon engineering cost studies performed by outside engineers retained by APS. On December 19, 2023, the Palo Verde Participants approved the 2023 Palo Verde Decommissioning Study (the "2023 Study"). The 2023 Study estimated that EPE must fund approximately $602.6 million (stated in 2023 dollars) to cover its share of decommissioning costs which was an increase in decommissioning costs of $59.3 million (stated in 2023 dollars) from the 2019 Palo Verde Decommissioning Study (the "2019 Study"). The effect of this change increased the ARO by $5.0 million, which was recorded in 2023, and will increase annual expenses starting in January 2024. Although the 2023 Study was based on the latest available information, there can be no assurance that decommissioning cost estimates will not increase in the future or that regulatory requirements will not change. In addition, until a new low-level radioactive waste repository opens and operates for a number of years, estimates of the cost to dispose of low-level radioactive waste are subject to uncertainty. As provided in the ANPP Participation Agreement, the Palo Verde Participants are required to conduct a new decommissioning study every three years. While EPE attempts to seek amounts in rates to meet its decommissioning obligations, it is not able to conclude given the evidence available to it now that it is probable these costs will continue to be collected over the period until decommissioning begins, which is expected to be in 2045. EPE is ultimately responsible for these costs and its future actions combined with future decisions from regulators will determine how successful EPE is in this effort.

Spent Fuel and Waste Disposal. Pursuant to the Nuclear Waste Policy Act of 1982, as amended in 1987, the DOE is legally obligated to accept and dispose of all spent nuclear fuel and other high-level radioactive waste generated by all domestic power reactors by 1998. The DOE's obligations are reflected in a contract for Disposal of Spent Nuclear Fuel and/or High-Level Radioactive Waste with each nuclear power plant. The DOE failed to begin accepting spent nuclear fuel by 1998. On December 19, 2012, APS, acting on behalf of itself and the Palo Verde Participants, filed a second breach of contract lawsuit against the DOE. This lawsuit sought to recover damages incurred due to the DOE's failure to accept Palo Verde's spent nuclear fuel for the period beginning January 1, 2007. Pursuant to the terms of the August 18, 2014 settlement agreement, and as amended with the DOE, APS files annual claims for the period July 1 of the then-previous year to June 30 of the then-current year on behalf of itself and those utilities that share in power and energy entitlements, and bear certain allocated costs, with respect to Palo Verde based upon the ANPP Participation Agreement dated August 23, 1973. The settlement agreement, as amended, provides APS with a method for submitting claims and receiving recovery for costs incurred through December 31, 2025. EPE's share of costs recovered in 2023 and 2022, respectively are presented below (in thousands):

Costs Recovery Period	Amount Refunded	Amount Credited to Customers through Fuel Adjustment Clauses	Period Credited to Customers
July 2022 - June 2023	$ 2,906	$ 2,715	July 2024
July 2021 - June 2022	2,252	2,151	April 2023

On October 31, 2024, APS filed a $18.1 million claim for the period July 1, 2023 through June 30, 2024. In February 2025, the DOE approved $17.6 million of this claim. EPE is expected to receive its share of this claim of approximately $2.8 million in the second quarter of 2025. The majority of the reimbursement is anticipated to be credited to customers through the applicable fuel adjustment clauses in the second quarter of 2025.

Palo Verde has sufficient capacity at its on-site independent spent fuel storage installation ("ISFSI") to store all of the nuclear fuel that will be irradiated during the initial operating license period, which ends in December 2027. Additionally, Palo Verde has sufficient capacity at its on-site ISFSI to store a portion of the fuel that will be irradiated during the period of extended operation, which ends in November 2047. If uncertainties regarding the U.S. government's obligation to accept and store spent fuel are not favorably resolved, APS will evaluate alternative storage solutions that may obviate the need to expand the ISFSI to accommodate all of the fuel that will be irradiated during the period of extended operation.

Liability and Insurance Matters. The Palo Verde Participants have insurance for public liability resulting from nuclear energy hazards to the full limit of liability under federal law, which is currently at $16.3 billion. This potential liability is covered by primary liability insurance provided by commercial insurance carriers in the amount of $500.0 million, and the balance is covered by an industry-wide retrospective assessment program. If a loss at a nuclear power plant covered by the programs exceeds the accumulated funds in the primary level of protection, EPE could be assessed retrospective premium adjustments on a per incident basis. Under federal law, the maximum assessment per reactor under the program for each nuclear incident is approximately $165.9 million, subject to an annual limit of $24.7 million. Based upon EPE's 15.8% interest in the three Palo Verde units, EPE's maximum potential assessment per incident for all three units is approximately $78.6 million, with an annual payment limitation of approximately $11.7 million.

The Palo Verde Participants maintain $2.8 billion of "all risk" nuclear property insurance. The insurance provides coverage for property damage and decontamination at Palo Verde. For covered incidents involving property damage not accompanied by a release of radioactive material, the policy's coverage limit is $2.3 billion. EPE has also secured insurance against portions of any increased cost of generation or purchased power and business interruption resulting from a sudden and unforeseen outage of any of the three units. The insurance coverage discussed in this and the previous paragraph is subject to certain policy conditions and exclusions. A mutual insurance company whose members are utilities with nuclear facilities issues these policies. If losses at any nuclear facility covered by this mutual insurance company were to exceed the accumulated funds for these insurance programs, EPE could be assessed retrospective premium adjustments of up to $10.0 million for the current policy period.

Palo Verde Operations & Maintenance Expense. EPE's 15.8% share of Palo Verde's O&M expense was $110.7 million and $95.5 million for the years ended December 31, 2024 and 2023, respectively. These expenses were included in Operations and Maintenance in EPE's Regulatory-Basis Statement of Income.

F. Accounting for Asset Retirement Obligations

FERC Order No. 631 affects the accounting for the decommissioning of Palo Verde and the method used to report the decommissioning obligation. EPE records ARO obligations associated with the decommissioning of Palo Verde and for conditional AROs, which primarily affects the accounting for the disposal obligations of EPE's fuel oil storage tanks, water wells, evaporative ponds and asbestos found at EPE's gas-fired generating plants.

The ARO liability for Palo Verde is based upon the estimated cost of decommissioning the plant from the 2023 Study, as discussed in Note E of Notes to Financial Statements. The ARO liability is calculated by adjusting the estimated decommissioning costs for spent fuel storage and a profit margin and market-risk premium factor. The resulting costs are escalated over the remaining life of the plant and finally discounted using a credit-risk adjusted discount rate. As Palo Verde approaches the end of its estimated useful life, the difference between the ARO liability and future current cost estimates will narrow over time due to the accretion of the ARO liability. Because the DOE is obligated to assume responsibility for the permanent disposal of spent fuel, such costs have not been included in the ARO calculation. EPE maintains six external trust funds with an independent trustee that are legally restricted to settling its ARO at Palo Verde. The fair value of the funds at December 31, 2024, is $439.8 million.

FERC Order No. 631 requires EPE to revise its previously recorded ARO for any changes in estimated cash flows including changes in estimated probabilities related to timing of settlements. Any changes that result in an upward revision to estimated cash flows shall be treated as a new liability. Any downward revisions to the estimated cash flows result in a reduction to the previously recorded ARO. The 2023 Study resulted in an upward revision of approximately $5.0 million which was recorded in 2023. EPE implemented the results of the 2023 Study and revised its ARO related to Palo Verde to increase its estimated cash flows from the 2019 Study to the 2023 Study, as discussed in Note E of Notes to Financial Statements. The assumptions used to calculate the Palo Verde ARO liability are as follows:

	Escalation Rate	Credit-Risk Adjusted Discount Rate
Original ARO liability	3.60 %	9.50 %
Incremental ARO liability (2010)	3.60 %	6.20 %
Incremental ARO liability (2016)	3.25 %	4.34 %
Incremental ARO liability (2023)	3.94 %	5.80 %

An analysis of the activity of EPE's total ARO liabilities for all plants (Newman, Rio Grande Power Station, Montana Power Station, Copper Power Station, and Palo Verde) for the years ended December 31, 2024 and 2023, including the effects of each year's estimate revisions, is presented below (in thousands).

	2024	2023
ARO liability at beginning of year	$ 160,676	$ 142,081
Liabilities incurred	—	4,968
Liabilities settled	(3)	(8)
Revisions to estimate	—	762
Accretion expense	14,299	12,873
ARO liability at end of year	$ 174,972	$ 160,676

EPE has transmission and distribution lines which are operated under various land rights agreements. Upon the expiration of any non-perpetual land rights agreement, EPE may have a legal obligation to remove the lines; however, EPE has assessed the likelihood of this occurring as remote. The majority of these agreements are perpetual or include renewal options that EPE routinely exercises. The amount of cost of removal collected in rates for non-legal liabilities has not been material.

G. Long-Term Debt, Financing Obligations and Capital Lease Obligations

Outstanding long-term debt, financing obligations, and capital lease obligations, are as follows:

	December 31, 2024	December 31, 2023
	(In thousands)	
Bonds (Account 221):		
Pollution Control Bonds (1):		
3.60% 2009 Series A refunding bonds, due 2040 (3.82% effective interest rate)	$ 63,500	$ 63,500
3.60% 2009 Series B refunding bonds, due 2040 (3.84% effective interest rate)	37,100	37,100
4.50% 2012 Series A refunding bonds, due 2042 (4.63% effective interest rate)	59,235	59,235
Total Bonds (Account 221)	$ 159,835	$ 159,835
Other Long-Term Debt (Accounts 224, 225, and 226):		
Senior Notes (2):		
Senior Notes-Public:		
6.00% Senior Notes, net of discount, due 2035 (6.58% effective interest rate)	400,000	400,000
7.50% Senior Notes, net of discount, due 2038 (7.67% effective interest rate)	150,000	150,000
5.00% Senior Notes, net of premium, due 2044 (4.93% effective interest rate)	300,000	300,000
Senior Notes-Private Placement:		
4.22% Senior Notes, net of discount, due 2028 (4.31% effective interest rate)	125,000	125,000
2.91% Senior Notes, net of discount, due 2032 (2.98% effective interest rate)	150,000	150,000
3.54% Senior Notes, net of discount, due 2052 (3.57% effective interest rate)	200,000	200,000
6.02% Senior Notes, net of discount, due 2054 (6.05% effective interest rate)	180,000	—
Total Other Long-Term (Account 224)	$ 1,505,000	$ 1,325,000
Unamortized premium on Long-Term Debt Account 225	5,778	5,947
Unamortized discount on Long-Term Debt Account 226	(2,659)	(2,796)
Total Long-Term Debt (Accounts 221, 224, 225 and 226)	$ 1,667,954	$ 1,487,986
Obligations Under Capital Lease-Noncurrent (Account 227):		
4.07% Senior Guaranteed Notes, due 2025 (4.18% effective interest rate) (3)	$ —	$ 65,000
2.35% Senior Guaranteed Notes, due 2031 (2.45% effective interest rate) (3)	45,000	45,000
Capitalized Operating Leases (4)	3,097	3,443
Total Capital Lease Obligations Noncurrent (Account 227)	$ 48,097	$ 113,443
Obligations Under Capital Lease - Current (Account 243):		
4.07% Senior Guaranteed Notes, due 2025 (4.18% effective interest rate) (3)	$ 65,000	$ —
Revolving Credit Facility (5)	82,393	16,532
Capitalized Operating Leases (4)	402	572
Total Capital Lease Obligations Current (Account 243)	$ 82,795	$ 17,104

(1) Pollution Control Bonds ("PCBs")

EPE has three series of tax exempt unsecured PCBs in aggregate principal amount of $159.8 million as of December 31, 2024. The 2012 Series A PCBs have a fixed interest rate of 4.50% per annum until maturity on August 1, 2042. The 2012 Series A PCBs were subject to optional redemption at a redemption price of par on or after August 1, 2022. EPE has decided not to exercise the option given the current market conditions. The 2009 Series A and the 2009 Series B PCBs have a fixed interest rate of 3.60% per annum until maturity on February 1, 2040 and April 1, 2040, respectively. The 2009 Series A and the 2009 Series B PCBs are subject to optional redemption at a redemption price of par on or after June 1, 2029.

(2) Senior Notes

The Senior Notes are unsecured obligations of EPE. The Senior Notes were issued under agreements with contractual covenants that provide limitations on EPE's ability to enter into certain transactions. The 6.00% Senior Notes have an aggregate principal amount of $400.0 million and were issued in May 2005. EPE amortizes the loss associated with a cash flow hedge recorded in Accumulated Other Comprehensive Income ("AOCI") to earnings as interest expense over the life of the 6.00% Senior Notes. See Note K of Notes to Financial Statements. This amortization is included in the effective interest rate of the 6.00% Senior Notes.

The 7.50% Senior Notes due 2038 have an aggregate principal amount of $150.0 million and were issued in June 2008.

In December 2014, EPE issued 5.00% Senior Notes with an aggregate principal amount of $150.0 million. In March 2016, EPE issued additional 5.00% Senior Notes with an aggregate principal amount of $150.0 million. After the March 2016 issuance, EPE's 5.00% Senior Notes due 2044 have an aggregate principal balance amount of $300.0 million.

The 4.22% Senior Notes issued in June 2018 have an aggregate principal amount of $125.0 million and are due August 15, 2028. EPE pays interest on the notes semi-annually on February 15 and August 15 of each year until maturity, beginning on February 15, 2019. EPE may redeem the notes, in whole or in part, at any time at a redemption price equal to 100% of the principal amount to be redeemed together with the interest on such principal amount accrued to the date of redemption, plus a make-whole amount based on the prevailing market interest rates. The issuance and sale of these senior notes was made in reliance on a private placement exemption from the registration provisions of the Securities Act of 1933, as amended (the "Securities Act").

On February 15, 2022, EPE issued 2.91% Senior Unsecured Notes with an aggregate principal amount of $150.0 million and a maturity date of September 1, 2032, and 3.54% Senior Unsecured Notes with an aggregate principal amount of $200.0 million and a maturity date of February 15, 2052. The 3.54% Senior Unsecured Notes were funded on February 15, 2022 and the 2.91% Senior Unsecured Notes were funded on September 1, 2022. EPE pays interest on the notes semi-annually on February 15 and August 15 of each year until maturity, with the first payment on August 15, 2022 and February 15, 2023, respectively. EPE used the proceeds from the sale of these senior notes for the repayment of existing indebtedness and for general corporate purposes.

On February 15, 2024, EPE issued 6.02% Senior Unsecured Notes with an aggregate principal amount of $180.0 million and a maturity date of February 15, 2054. EPE pays interest on the note semiannually on April 15 and October 15 of each year until maturity, with the first payment on October 15, 2024. EPE used the proceeds from the sale of these senior notes for the repayment of existing indebtedness and for general corporate purposes.

(3) RGRT Guaranteed Senior Notes

In 2018, EPE and the RGRT, a Texas grantor trust through which EPE finances its portion of fuel for Palo Verde, entered into a note purchase agreement with several institutional purchasers under which the RGRT issued and sold $65.0 million aggregate principal amount of 4.07% Senior Guaranteed Notes due August 15, 2025 ("RGRT Senior Notes"). RGRT pays interest on the Senior Notes on February 15 and August 15 of each year until maturity, beginning on February 15, 2019.

On September 22, 2021, the RGRT and EPE entered into a Note Purchase Agreement (the "RGRT Agreement") with one institutional purchaser. Under the terms of the RGRT Agreement, the RGRT issued and sold $45.0 million aggregate principal amount of 2.35% Senior Guaranteed Notes due September 22, 2031 (the "RGRT Senior Guaranteed Notes"). The net proceeds from the RGRT Senior Guaranteed Notes were used to repay outstanding short-term borrowings under the RCF to finance nuclear fuel purchases. The RGRT pays interest on the RGRT Senior Guaranteed Notes semi-annually on April 15 and October 15 of each year until maturity, beginning on April 15, 2022.

EPE guaranteed the payment of principal and interest on the RGRT Senior Notes and Senior Guaranteed Notes. RGRT's assets, liabilities and operations are consolidated in EPE's regulatory-basis financial statements and the RGRT Senior Notes and Senior Guaranteed Notes are included as Obligations Under Capital Lease - Noncurrent on the Regulatory-Basis Balance Sheet. RGRT may redeem the RGRT Senior Notes and Senior Guaranteed Notes, in whole or in part, at any time at a redemption price equal to 100% of the principal amount to be redeemed together with the interest on such principal amount accrued to the date of redemption, plus a make-whole amount based on the prevailing market interest rates. The sale of the RGRT Senior Notes and Senior Guaranteed Notes were made in reliance on a private placement exemption from the registration provisions of the Securities Act.

(4) Capitalized Operating Leases

See Note A of Notes to Financial Statements "Leases" section for further discussion.

(5) Revolving Credit Facility

In 2018, EPE and The Bank of New York Mellon Trust Company, N.A., as trustee of the RGRT, entered into a third amended and restated credit agreement ("RCF Agreement") with MUFG Union Bank, N.A., as administrative agent and as syndication agent, various issuing banks and lending banks party thereto. Under the terms of the RCF Agreement, EPE had available a $400.0 million RCF with a $50.0 million subfacility for the issuance of letters of credit. On May 5, 2023, EPE and The Bank of New York Mellon Trust Company, N.A., as trustee of the RGRT, entered into a second amendment to the RCF Agreement with MUFG Bank, LTD., as administrative agent, various issuing banks party thereto. Under the term of the second amendment, EPE had available a $450.0 million RCF with a $60.0 million subfacility for the issuance of letters of credit. EPE extended the term of the RCF from September 13, 2024 to May 5, 2028 ("Maturity Date"), increased the borrowing commitments under the RCF by $50.0 million to $450.0 million, with two additional $50.0 million options to increase the borrowing commitments to a total of $550.0 million and replaced the RCF's reference rate from London Interbank Offered Rate to Secured Overnight Financing Rate. On January 19, 2024, and July 26, 2024, EPE exercised its option to increase the borrowing commitments under the RCF by $50.0 million increments, to $500.0 and $550.0 million, respectively, with a $60.0 million subfacility for the issuance of letters of credit. EPE also has the option to extend the Maturity Date of the facility by two additional one-year terms, upon the satisfaction of certain conditions set forth in the RCF Agreement, including requisite lender approval.

The RCF Agreement provides that amounts borrowed by EPE may be used for, among other things, working capital and general corporate purposes. Any amounts borrowed by the RGRT may be used, among other things, to finance the acquisition and cost to process nuclear fuel. Amounts borrowed by the RGRT are guaranteed by EPE and the balance borrowed under the RCF Agreement is recorded as a capital lease of nuclear fuel on the Regulatory-Basis Balance Sheet. Quarterly lease payments are made based upon units of heat production used by the plant. The RCF Agreement is unsecured. EPE also issues letters of credit utilizing the RCF. As of December 31, 2024, $418.0 million of borrowings were outstanding under the RCF for working capital and general corporate purposes. Additionally, as of December 31, 2024, the total amount borrowed by the RGRT under the RCF for nuclear fuel was $16.2 million, which excludes accrued interest of $1.2 million, and issued letters of credit utilizing the RCF totaling $0.2 million, with an additional $115.6 million available to borrow. The weighted average interest rate on the RCF was 5.7% as of December 31, 2024.

As of December 31, 2024, the principal amount of scheduled maturities for the next five years of long-term debt are as follows (in thousands):

2025	$ 65,000
2026	—
2027	—
2028	125,000
2029	—

Pursuant to the debt agreements, EPE is required to comply with various covenants and restrictions, including a total debt to capitalization ratio as required by each one of EPE's and RGRT's private placement debt securities and the RCF. EPE is in compliance with all of its debt covenants and restrictions.

H. Income Taxes

The tax effects of temporary differences that give rise to significant portions of the deferred tax assets and liabilities at December 31, 2024 and 2023 are presented below (in thousands):

	December 31, 2024	December 31, 2023
Deferred tax assets:		
Plant, principally due to capitalized costs	$ 62,268	$ 53,982
Pensions and benefits	15,994	20,445
Regulatory liabilities related to income taxes	56,647	60,384
Asset retirement obligations	36,831	33,241
Strategic transaction cost	3,389	3,353
Other	16,441	11,403
Total gross deferred tax assets	191,570	182,808
Deferred tax liabilities:		
Plant, principally related to depreciation and basis differences	(496,779)	(471,974)
Regulatory assets related to income taxes	(34,306)	(37,941)
Decommissioning	(51,517)	(47,486)
Other	(8,012)	(11,721)
Total gross deferred tax liabilities	(590,614)	(569,122)
Net accumulated deferred income taxes	$ (399,044)	$ (386,314)

Based on the average annual earnings before taxes for the prior two years, and excluding the effects of unusual or infrequent items, EPE believes that the deferred tax assets will be fully realized.

EPE recognized income tax expense for the years ended December 31, 2024 and 2023 as follows (in thousands):

	Years Ended December 31, 2024	Years Ended December 31, 2023
Income tax expense (benefit):		
Federal:		
Current	$ 37,905	$ 20,904
Deferred	(4,513)	24,641
Investment tax credit	(1,856)	(1,535)
Total federal income tax	31,536	44,010
State:		
Current	4,508	2,227
Deferred	5,046	2,659
Total state income tax	9,554	4,886
Total income tax expense	$ 41,090	$ 48,896
Effective income tax rate	19.3 %	19.0 %

Federal income tax provisions differ from amounts computed by applying the statutory federal income tax rate of 21% for all periods to book income before federal income tax as follows (in thousands):

	Years Ended December 31, 2024	Years Ended December 31, 2023
Federal income tax expense computed on income at statutory rate	$ 44,755	$ 54,073
Difference due to:		
State income taxes (federal effect)	(2,006)	(1,026)
Investment tax credit, net of deferred taxes	(1,466)	(1,213)
Allowance for equity funds used during construction	511	1,060
Amortization of excess deferred taxes	(9,368)	(7,656)
Amortization of regulatory assets and liabilities	(390)	(322)
Permanent tax differences	(500)	(906)
Total federal income tax expense	$ 31,536	$ 44,010

EPE files its income tax returns as a consolidated group in the U.S. federal jurisdiction and in the states of Texas, New Mexico and Arizona. EPE's financial statements are presented on EPE's stand-alone basis. EPE made tax payments to affiliates of $28.7 million and $53.0 million in 2024 and 2023, respectively. As of December 31, 2024, EPE does not have any tax payments due to affiliates. EPE is no longer subject to tax examination by the taxing authorities in the federal, Arizona and New Mexico jurisdictions for years prior to 2020.

The FASB guidance prescribes a recognition threshold and measurement attribute for the financial statement recognition and measurement of a tax position taken or expected to be taken in a tax return. There were no changes to the recognized tax positions for the years ended December 31, 2024 and 2023.

EPE recognizes interest and penalties related to tax positions that are uncertain in interest and penalty expense accounts. EPE recognized a tax expense of $0.1 million and $0.2 million for the years ended December 31, 2024 and 2023, respectively. EPE had approximately $0.6 million and $0.5 million accrued for the payment of interest and penalties at December 31, 2024 and 2023, respectively.

I. Commitments, Contingencies and Uncertainties

Litigation

EPE is involved in various legal, environmental, tax and regulatory proceedings before various courts, regulatory commissions and governmental agencies regarding matters arising in the ordinary course of business. In many of these matters, EPE has excess casualty liability insurance that covers the various claims, actions and complaints. EPE regularly analyzes current information and, as necessary, makes provisions in its regulatory-basis financial statements for probable liabilities for the eventual disposition of these matters. While the outcome of these matters cannot be predicted with certainty, based upon a review of the matters and applicable insurance coverage, EPE believes that none of these matters will have a material adverse effect on the financial position, results of operations or cash flows of EPE. EPE typically expenses legal costs, including expenses related to loss contingencies, as they are incurred.

Power Purchase and Sale Contracts

To supplement its own generation and operating reserve requirements and to meet its RPS requirements, EPE engages in power purchase arrangements that may vary in duration and amount based on an evaluation of EPE's resource needs, the economics of the transactions and specific RPS requirements. See Note D of Notes to Financial Statements for further discussion. EPE has entered into the following significant agreements with various counterparties for the purchase and sale of electricity:

Type of Contract	Counterparty	Quantity		Term	Commercial Operation Date
Power Purchase and Sale Agreement	Freeport	25	MW	December 2008 through December 2025	N/A
Power Purchase and Sale Agreement	Freeport	100	MW	June 2006 through December 2026	N/A
Power Purchase Agreement	Hatch Solar Energy Center I, LLC	5	MW	July 2011 through July 2036	July 2011
Power Purchase Agreement	Solar Roadrunner, LLC	20	MW	August 2011 through August 2031	August 2011
Power Purchase Agreement	SunE EPE1, LLC	10	MW	June 2012 through June 2037	June 2012
Power Purchase Agreement	SunE EPE2, LLC	12	MW	May 2012 through May 2037	May 2012
Power Purchase Agreement	Macho Springs Solar, LLC	50	MW	May 2014 through May 2034	May 2014
Power Purchase Agreement	Newman Solar, LLC	10	MW	December 2014 through December 2044	December 2014
Power Purchase Agreement	Buena Vista Energy Center, LLC	150	MW	July 2023 through July 2043	July 2023
Power Purchase Agreement	Buena Vista Energy Center II, LLC	20	MW	July 2023 through July July 2043	July 2023
Power Purchase Agreement	Carne Energy Storage, LLC	195	MW	Twenty years from Commercial Operation	Anticipated August 2025
Power Purchase Agreement	Milagro Solar I, LLC	150	MW	Twenty years from Commercial Operation	Anticipated October 2025
Power Purchase Agreement	Milagro Solar I, LLC	75	MW	Twenty years from Commercial Operation	Anticipated October 2025
Power Purchase Agreement	Santa Teresa Solar, LLC	150	MW	Twenty years from Commercial Operation	Anticipated June 2026
Power Purchase Agreement	Santa Teresa Storage, LLC	150	MW	Twenty years from Commercial Operation	Anticipated September 2026
Power Sale Agreement	Salt River Project Agricultural Improvement and Power District	40	MW	January 2024 through December 2028	N/A
Power Purchase and Sale Agreement	Tenaska Power Services Co.	150	MW	January 2025 through December 2025	N/A
Power Purchase and Sale Agreement	Tenaska Power Services Co.	150	MW	January 2026 through December 2026	N/A
Power Purchase and Sale Agreement	Dynasty Power Inc.	75	MW	January 2025 through December 2025	N/A

EPE has a firm 100 MW Power Purchase and Sale Agreement ("Power Purchase and Sale Agreement") with Freeport-McMoRan Copper & Gold Energy Services, LLC ("Freeport") that provides for Freeport to deliver energy to EPE from the Luna Energy Facility (a natural gas-fired combined cycle generation facility located in Luna County, New Mexico) and for EPE to deliver a like amount of energy at Greenlee, Arizona. EPE may purchase the quantities noted in the table above at a specified price at times when energy is not exchanged under the Power Purchase and Sale Agreement. The Power Purchase and Sale Agreement was approved by the FERC and was set to continue through its initial term ending December 31, 2021, with subsequent rollovers until terminated. Upon mutual agreement, the Power Purchase and Sale Agreement allows the parties to

increase the amount of energy that is purchased and sold under the agreement. The parties have agreed to increase the amount up to 125 MW through December 31, 2025.

EPE has entered into several power purchase agreements to help meet its RPS requirements. Namely, EPE has a 25-year purchase power agreement with Hatch Solar Energy Center I, LLC to purchase all of the output from a solar photovoltaic plant located in southern New Mexico, which began commercial operation in July 2011. In June 2015, EPE entered into a consent agreement with Hatch Solar Energy Center I, LLC to provide for additional or replacement photovoltaic modules. EPE also has a 20-year contract with Solar Roadrunner, LLC, a subsidiary of Global Infrastructure Partners, (formerly known as NRG Solar Roadrunner, LLC) to purchase all of the output of a solar photovoltaic plant built in southern New Mexico, which began commercial operation in August 2011. In addition, EPE has 25-year purchase power agreements to purchase all of the output of two additional solar photovoltaic plants located in southern New Mexico, SunE EPE1, LLC and SunE EPE2, LLC, which began commercial operation in June 2012 and May 2012, respectively. In September 2017, Longroad Solar Portfolio Holdings, LLC purchased SunE EPE1, LLC, and in October 2017, Silicon Ranch Corporation purchased SunE EPE2, LLC with EPE's consent per the terms of both power purchase agreements.

EPE has a 20-year power purchase agreement with Macho Springs Solar, LLC to purchase the entire generation output delivered from the 50 MW Macho Springs solar photovoltaic plant located in Luna County, New Mexico, which began commercial operation in May 2014. Additionally, EPE has a 30-year power purchase agreement with Newman Solar, LLC to purchase the total output of approximately 10 MW from a solar photovoltaic plant on land subleased from EPE in proximity to Newman. This solar photovoltaic plant began commercial operation in December 2014.

EPE also has seven other purchase power agreements: (i) a 20-year power purchase agreement with Buena Vista Energy Center, LLC to purchase up to 100 MW plus up to 50 MW of battery storage from the Buena Vista Energy solar photovoltaic plant located in Otero County, New Mexico, which began commercial operation in July 2023; (ii) a 20-year power purchase agreement with Buena Vista Energy Center II, LLC to purchase up to 20 MW from the Buena Vista Energy II, LLC photovoltaic plant located in Otero County, New Mexico, which began commercial operation in July 2023; (iii) a 20-year power purchase agreement with Carne Energy Storage, LLC to purchase up to 130 MW plus up to 65 MW of energy storage, from the Carne Energy Storage, LLC photovoltaic plant located in Luna County, New Mexico, with an anticipated COD of August 2025; (iv and v) two 20-year power purchase agreements with Milagro Solar I, LLC to purchase up to 150 MW and 75 MW from the Milagro Solar I, LLC photovoltaic plant located in Doña Ana County, New Mexico, with an anticipated COD of October 2025; (vi) a 20-year purchase power agreement with Santa Teresa Solar, LLC to purchase up to 150 MW from the Santa Teresa photovoltaic facility located in Santa Teresa, New Mexico, which has an anticipated COD of June 1, 2026; and (vii) a 20-year power purchase agreement with Santa Teresa Energy, LLC, to purchase up to 150 MW of energy storage from the Santa Teresa facility located in Santa Teresa, New Mexico, which has an anticipated COD of September 30, 2026. In October 2024, upon mutual agreements, EPE terminated the 20-year purchase power agreements with Hecate Energy Santa Teresa, LLC and Hecate Energy Santa Teresa 2, LLC of purchase up to 100 MW and 50 MW, respectively, from the Hecate photovoltaic plant located in Santa Teresa, New Mexico, which had an original anticipated COD of May 1, 2022, and an amended anticipated COD of June 2024.

In September 2022, EPE entered into a unit contingent sale with PNM, effective January 1, 2023 through December 31, 2023, for 40 MW of Palo Verde Unit 3 that is approximately equal to the portion allocated to its New Mexico jurisdiction in response to the NMPRC final order in Case No. 20-00104-UT, which did not set a market proxy price for recovery of the costs of Palo Verde Unit 3. In December 2023, a similar contingent sale agreement for 40 MW of Palo Verde Unit 3 was entered with Salt River Project Agricultural Improvement and Power District, effective January 1, 2024 through December 31, 2028.

EPE has also engaged in three exchange transactions: (i) with Tenaska Power Services Co., whereby EPE delivers up to 150 MW at Palo Verde and receives an equal amount at the Palo Verde, San Juan or Four Corners delivery point from January 1, 2025 to December 31, 2025; and (ii) with Tenaska Power Services Co., whereby EPE delivers up to 150 MW at Palo Verde and receives an equal amount at the Palo Verde, San Juan or Four Corners delivery point from January 1, 2026 to December 31, 2026; and (iii) with Dynasty Power Inc., whereby EPE delivers up to 75 MW at Palo Verde and receives an equal amount at the

Palo Verde delivery point from January 1, 2025 to December 31, 2025. On October 24, 2023, EPE filed requests with FERC in Docket No.s ER24-198-000 and ER24-198-001, to extend its approved exchange agreement with Dynasty Power Inc. or another unaffiliated entity through December 2026. EPE's request was accepted by FERC and became effective in December 2023. EPE also entered into monthly/quarterly sale and purchase transactions for 2025 of various energy products, such as firm energy up to 100 MW and unit contingent energy up to 60 MW.

Environmental Matters

EPE is subject to extensive laws, regulations and permit requirements with respect to air and greenhouse gas ("GHG") emissions, water discharges, soil and water quality, waste management and disposal, natural resources and other environmental matters by federal, state, regional, tribal and local authorities. Failure to comply with such laws, regulations and requirements can result in actions by authorities or other third parties that might seek to impose on EPE administrative, civil and/or criminal penalties or other sanctions. In addition, releases of pollutants or contaminants into the environment can result in costly cleanup liabilities. These laws, regulations and requirements are subject to change through modification or reinterpretation, or the introduction of new laws and regulations and, as a result, EPE may face additional capital and operating costs to comply.

National Ambient Air Quality Standards ("NAAQS"). Under the U.S. Clean Air Act, the U.S. Environmental Protection Agency ("EPA") sets NAAQS for six criteria pollutants considered harmful to public health and the environment, including particulate matter ("$PM_{2.5}$"), nitrogen oxide, carbon monoxide, ozone sulfur dioxide, and lead. In June 2018, the EPA designated El Paso County, Texas, as "attainment/unclassifiable" under the 2015 ozone NAAQS and designated a section of southern Doña Ana County, New Mexico, as "nonattainment."

On November 30, 2021, the EPA revised the initial air quality designation of the 2015 NAAQS for El Paso County, Texas to nonattainment. The EPA's modification of the initial attainment designation expands the boundary of the Doña Ana County, New Mexico nonattainment area to include multiple counties and thus, becomes a multi-state nonattainment area. On February 28, 2022, the Texas Commission on Environmental Quality ("TCEQ") submitted a demonstration to the EPA showing that El Paso County would have attained the 2015 eight hour ozone NAAQS by the marginal attainment date of August 3, 2021, "but for" international contributions from neighboring Ciudad Juárez, in México. In March 2023, EPA proposed to approve that determination and the proposed rule is currently under review. If the proposed rule is finalized, the TCEQ would not be required by the EPA to create new rules to reduce emissions in El Paso County. Tied to the same ozone attainment status, in June 2023, the U.S. Court of Appeals for the DC Circuit reversed EPA's designation of nonattainment for El Paso County, arguing that the nonattainment designation that was set back in November 30, 2021, by the EPA, "folded City of El Paso into an existing nonattainment area three months after that area's August 2021 attainment deadline had passed". Texas never had the opportunity to reach timely attainment in this matter. The court remanded it back to EPA to decide whether to provide a new attainment date, or just leave the reversal. EPE will continue to monitor the finalization of the above mentioned proposals and will evaluate any potential impacts on its operations, as any nonattainment designations may require the installation of additional equipment to control emissions at its facilities.

On March 15, 2021, the EPA finalized the Revised Cross-State Air Pollution Rule Update for the 2008 ozone NAAQS. Starting with the 2021 ozone season, the rule required additional emissions reductions of nitrogen oxides from power plants in 12 states in the eastern portion of the U.S. Although Texas was not part of the 12 state's group, the implementation of the rule beginning with the 2021 ozone season emissions had a direct impact on the availability and price of allowances in the market. To further continue reducing pollution that significantly contributes to problems attaining and maintaining the 2015 ozone NAAQS in downwind states, the EPA proposed the "Good Neighbor" Plan on February 28, 2022 and finalized it on March 15, 2023. Under this plan, several states, including Texas, became part of a strengthened Group 3 Trading Program, setting state allowance budgets that decline over time. The rule is currently under a judicial stay in Texas, therefore, EPE remains in the Group 2 trading program. EPE expects the availability and price of allowances in the market to continue to be impacted.

On February 7, 2024, the EPA signed a final rule to reduce the primary annual fine $PM_{2.5}$ standard from its current level of 12.0 $\mu g/m^3$ to 9.0 $\mu g/m^3$. The final rule was published in the Federal Register on March 6, 2024, with an effective date of May

6, 2024. While the City of El Paso is currently in attainment for $PM_{2.5}$, the EPA will have two years to designate areas as being in attainment or nonattainment with the revised standard, potentially changing the City of El Paso's current attainment status. The new standard, along with any potential changes in designation status for the City of El Paso may have an impact on any air permitting actions moving forward. EPE will continue to monitor the effects of this new designation.

On December 13, 2024, the EPA published a proposed rule to revise the New Source Performance Standard for new, modified, or reconstructed combustion turbines. If finalized, these changes would impose significantly more stringent standards including a corresponding level of best system of emission reduction and emission standard for nitrogen oxides based on the size of the combustion turbine (large combustion turbines with a heat input rating greater than 850 MMBtu/hr; medium combustion turbines with a heat input rating greater than 250 MMBtu/hr, but less than or equal to 850 MMBtu/hr; and small combustion turbines with a heat input less than or equal to 250 MMBtu/hr) and level of operation (high load for a capacity factor greater than 40%, intermediate load for a capacity factor greater than 20% and less than or equal to 40%, and low load for a capacity factor less than or equal to 20%). If the proposal becomes a rule, EPE will need to evaluate its applicability on the construction of new generation, or the modification of existing units.

Climate Change. The federal government has considered, proposed and/or finalized legislation or regulations to address climate change and limit GHG emissions, including carbon dioxide. In particular, the Biden Administration in January 2021, issued an Executive Order broadly addressing means to tackle climate change, including the proposition of decarbonizing the power sector by 2035.

On April 24, 2024, the EPA issued its final rule, titled "New Sources Performance Standards for Greenhouse Gas Emissions from New, Modified, and Reconstructed Fossil Fuel-Fired Electric Generating Units; Emissions Guidelines for Greenhouse Gas Emissions from Existing Fossil Fuel-Fired Electric Generating Units; and Repeal of the Affordable Clean Energy Rule." The final rule impacts new gas-fired combustion turbines, existing coal, oil, and gas-fired steam generating units, and certain existing gas-fired combustion turbines. The requirements vary depending on type of unit, and its operation (base load vs peaking unit). Final requirements and standards are based on technologies such as carbon capture and sequestration/storage, low-GHG hydrogen co-firing, and natural gas co-firing, which can be applied directly to power plants that use fossil fuels to generate electricity. EPE is currently assessing the impact of this final rule.

New legislation, regulations or international agreements could result in increased costs to operate and maintain our facilities, capital expenditures to install new emission controls at EPE's facilities, and costs to administer and manage any potential GHG emissions or carbon trading or tax programs. These costs and capital expenditures could be material. The potential impact of the agreement among 195 nations at the 21st Conference of the Parties in Paris with an overarching goal of preventing global temperatures from rising more than 2 degrees Celsius, the Paris Agreement, GHG regulations, and climate initiatives on EPE is unknown at this time, but could result in significant costs, limitations on operating hours, and/or changes in construction schedules for future generating units. Although the current Presidential Administration has decided to withdraw the U.S. from participating in the Paris Agreement, future administrations may decide to join again, so EPE will continue to track any future changes.

Union Matters

EPE employs approximately 1,100 individuals, about 36% of which are covered by a collective bargaining agreement. The International Brotherhood of Electrical Workers Local 960 ("Local 960") represents EPE's employees working primarily in power generation, transmission and distribution, communications, material services, fleet services, facilities services, customer services, meter reading, and field services. On February 23, 2023, EPE reached agreement on the terms of a new collective bargaining agreement with Local 960, effective March 3, 2023, for a five-year term ending March 3, 2028. The agreement provides for pay increases for bargaining unit employees of 8.0% on March 3, 2023; 5.0% on March 3, 2024; 4.0% on March 3, 2025 and 2026; and 3.0% on March 3, 2027.

Franchises

EPE operates under franchise agreements with several cities in its service territory, including one with the City of El Paso, Texas, the largest city it serves. The franchise agreement allows EPE to utilize public rights-of-way necessary to serve its customers within the City of El Paso. Pursuant to the El Paso franchise agreement, EPE pays to the City of El Paso, on a quarterly basis, a fee equal to 5.00% of gross revenues EPE receives for the generation, transmission and distribution of electrical energy and other services within the City of El Paso. The El Paso franchise agreement expires on July 31, 2060.

EPE does not have a written franchise agreement with the City of Las Cruces, the second largest city in its service territory. EPE utilizes public rights-of-way necessary to service its customers within the City of Las Cruces under an implied franchise pursuant to state law by satisfying all obligations under the franchise agreement that expired on April 30, 2009. EPE pays the City of Las Cruces a franchise fee of 2.00% of gross revenues EPE receives from services within the City of Las Cruces.

EPE also maintains franchise agreements with other municipalities, and applicable counties, within its service territories.

Significant Customers - Military Installations

EPE serves Holloman Air Force Base ("HAFB"), White Sands Missile Range ("White Sands") and Fort Bliss U.S. Army Post ("Fort Bliss"). These military installations represent approximately 2.80% of EPE's annual retail revenues in 2024. In July 2014, EPE signed an agreement with Fort Bliss under which Fort Bliss takes retail electric service from EPE under the applicable Texas tariffs. EPE serves White Sands under the applicable New Mexico tariffs. In August 2016, EPE signed a contract with HAFB under which EPE provides retail electric service and limited wheeling services to HAFB under the applicable New Mexico tariffs. Pursuant to the contract, HAFB purchases the full output of an EPE-owned 5-MW solar facility. HAFB's other power requirements are provided under the applicable New Mexico tariffs with limited wheeling services under the contract.

J. Employee Benefits

Retirement Plans

EPE's Retirement Income Plan ("Retirement Plan") is a qualified noncontributory defined benefit plan. Upon retirement or death of a vested plan participant, assets of the Retirement Plan are used to pay benefit obligations under the Retirement Plan. Contributions from EPE are based on various factors, such as the minimum funding amounts required by the U.S. Internal Revenue Service, state and federal regulatory requirements, amounts requested from customers in EPE's Texas and New Mexico jurisdictions, and the annual net periodic benefit cost of the Retirement Plan, as actuarially calculated. The assets of the Retirement Plan are primarily invested in common collective trusts which hold equity securities, debt securities, real estate assets, and cash equivalents and are managed by a professional investment manager appointed by EPE. EPE has two non-qualified retirement plans that are non-funded defined benefit plans. EPE's Supplemental Retirement Plan was adopted in 1986 and covers certain former employees and directors of EPE. The Excess Benefit Plan was adopted in 2004 and covers certain active and former employees of EPE. The net periodic benefit cost for the non-qualified retirement plans are based on substantially the same actuarial methods and economic assumptions as those used for the Retirement Plan.

The Retirement Plan was amended effective April 1, 2014 to offer a cash balance pension benefit as an alternative to its existing final average pay pension benefit for employees hired prior to January 1, 2014. Employees hired after January 1, 2014 are automatically enrolled in the cash balance pension benefit.

Prior to December 31, 2013, employees who completed one year of service with EPE and worked at least a minimum number of hours each year were covered by the final average pay formula of the Retirement Plan. For participants that continue to be covered by the final average pay formula, retirement benefits are based on the employee's final average pay and years of service. The cash balance pension benefit covers employees beginning on their employment commencement date or re-

employment commencement date. Retirement benefits under the cash balance pension benefit are based on the employee's cash balance account, consisting of pay credits and interest credits.

The obligations and funded status of the plans are presented below (in thousands):

	December 31,			
	2024		2023	
	Retirement Income Plan	Non-Qualified Retirement Plans	Retirement Income Plan	Non-Qualified Retirement Plans
Change in projected benefit obligation:				
Benefit obligation at end of prior year	$ 320,274	$ 20,568	$ 309,388	$ 21,319
Service cost	6,959	179	4,949	192
Interest cost	15,564	1,007	16,252	1,063
Actuarial (gain) loss	(17,600)	(1,951)	9,581	167
Benefits paid	(20,541)	(2,035)	(19,896)	(2,173)
Benefit obligation at end of year	304,656	17,768	320,274	20,568
Change in plan assets:				
Fair value of plan assets at end of prior year	277,810	—	271,671	—
Actual return on plan assets	15,934	—	27,079	—
Employer contribution	5,000	2,035	1,700	2,173
Benefits paid	(20,541)	(2,035)	(19,896)	(2,173)
Administrative and investment expenses	(1,166)	—	(2,744)	—
Fair value of plan assets at end of year	277,037	—	277,810	—
Funded status at end of year	$ (27,619)	$ (17,768)	$ (42,464)	$ (20,568)

Amounts recognized in EPE's Regulatory-Basis Balance Sheet consist of the following (in thousands):

	December 31,			
	2024		2023	
	Retirement Income Plan	Non-Qualified Retirement Plans	Retirement Income Plan	Non-Qualified Retirement Plans
Current liabilities	$ —	$ (1,925)	$ —	$ (2,011)
Noncurrent liabilities	(27,619)	(15,843)	(42,464)	(18,557)
Total	$ (27,619)	$ (17,768)	$ (42,464)	$ (20,568)

The accumulated benefit obligation in excess of the plans' assets is as follows (in thousands):

	December 31,			
	2024		2023	
	Retirement Income Plan	Non-Qualified Retirement Plans	Retirement Income Plan	Non-Qualified Retirement Plans
Projected benefit obligation	$ (304,656)	$ (17,768)	$ (320,274)	$ (20,568)
Accumulated benefit obligation	(296,616)	(17,437)	(306,847)	(20,514)
Fair value of plan assets	277,037	—	277,810	—

Pre-tax amounts for the plans recognized in AOCI consist of the following (in thousands):

	Years Ended December 31,			
	2024		2023	
	Retirement Income Plan	Non-Qualified Retirement Plans	Retirement Income Plan	Non-Qualified Retirement Plans
Net loss	$ 79,775	$ 2,135	$ 93,953	$ 4,535
Total	$ 79,775	$ 2,135	$ 93,953	$ 4,535

The plans' actuarial gains were primarily attributable to updated census information (Non-Qualified Retirement Plans only) and increases in the discount rate assumptions used for the year ended 2024. These gains were offset by the actual return on the fair value of plan assets since the prior measurement date was less than assumed.

The following are the weighted-average actuarial assumptions used to determine the benefit obligations under the plans:

	December 31,					
	2024			2023		
		Non-Qualified			Non-Qualified	
	Retirement Income Plan	Supplemental Retirement Plan	Excess Benefit Plan	Retirement Income Plan	Supplemental Retirement Plan	Excess Benefit Plan
Discount rate	5.70 %	5.38 %	5.62 %	5.21 %	5.07 %	5.14 %
Rate of compensation increase	Graded Scale	N/A	Graded Scale	Graded Scale	N/A	Graded Scale

EPE reassesses various actuarial assumptions at least on an annual basis. The discount rate is reviewed and updated at each measurement date. The discount rate used to measure the fiscal year end obligation is based on a segmented spot rate yield curve that matches projected future payments with the appropriate interest rate applicable to the timing of the projected future benefit payments. Effective December 31, 2023, the assumed rate of compensation increase was updated to a graded scale to more closely align with the results of the experience study conducted during 2023. As of December 31, 2024, the rate of compensation assumed is a weighted average increase of approximately 4.74%.

The cash balance interest crediting rate is based on the daily 30-year Treasury rate as of the December 31, 2024 measurement date, since the plan credits interest to cash balance accounts using the 30-year Treasury rate, but with a minimum interest crediting rate of 3.80%. At December 31, 2024, the assumed cash balance interest crediting rate was 4.78%.

The components of net periodic benefit cost (income) for the plans are presented below (in thousands):

	Years Ended December 31,			
	2024		2023	
	Retirement Income Plan	Non-Qualified Retirement Plans	Retirement Income Plan	Non-Qualified Retirement Plans
Service cost (a)	$ 8,125	$ 179	$ 7,693	$ 192
Interest cost	15,564	1,007	16,252	1,063
Expected return on plan assets	(21,221)	—	(23,616)	—
Amortization of:				
Net loss	1,864	449	—	412
Prior service benefit	—	—	(3,074)	—
Net periodic benefit cost (income)	$ 4,332	$ 1,635	$ (2,745)	$ 1,667

(a) Service cost for the Retirement Plan includes estimated expenses of $1.7 million and $1.1 million for 2024 and 2023, respectively, for administrative and investment expenses paid from plan assets during the year.

The changes in benefit obligations and plan assets recognized in other comprehensive income for the plans are presented below (in thousands):

	Years Ended December 31,			
	2024		2023	
	Retirement Income Plan	Non-Qualified Retirement Plans	Retirement Income Plan	Non-Qualified Retirement Plans
Net (gain) loss	$ (12,313)	$ (1,951)	$ 6,118	$ 167
Amortization of:				
Net loss	(1,864)	(449)	—	(412)
Prior service benefit	—	—	3,074	—
Total recognized in other comprehensive income	$ (14,177)	$ (2,400)	$ 9,192	$ (245)

The total amount recognized in net periodic benefit costs and other comprehensive income for the plans are presented below (in thousands):

	Years Ended December 31,			
	2024		2023	
	Retirement Income Plan	Non-Qualified Retirement Plans	Retirement Income Plan	Non-Qualified Retirement Plans
Total recognized in net periodic benefit cost and other comprehensive income	$ (9,845)	$ (765)	$ 6,446	$ 1,422

The following are the weighted-average actuarial assumptions used to determine the net periodic benefit cost for the plans for the years ended December 31:

	2024			2023		
		Non-Qualified			Non-Qualified	
	Retirement Income Plan	Supplemental Retirement Plan	Excess Benefit Plan	Retirement Income Plan	Supplemental Retirement Plan	Excess Benefit Plan
Discount rate						
Benefit obligation	5.20 %	5.07 %	5.15 %	5.54 %	5.42 %	5.49 %
Service cost	5.35 %	N/A	5.15 %	5.69 %	N/A	5.44 %
Interest cost	5.10 %	5.04 %	5.08 %	5.41 %	5.31 %	5.38 %
Expected long-term return on plan assets	7.0 %	N/A	N/A	7.0 %	N/A	N/A
Rate of compensation increase	Graded Scale	N/A	Graded Scale	4.5 %	N/A	4.5 %

EPE's overall expected long-term rate of return on plan assets is 7.0%, which is both a pre-tax and after-tax rate as pension funds are generally not subject to income tax. The expected long-term rate of return is based on the weighted average of the expected returns on investments based upon the target asset allocation of the plans.

EPE's target allocations for the Retirement Plan assets are presented below:

	December 31, 2024
Equity securities	55.0 %
Fixed income	40.0 %
Alternative investments	5.0 %
Total	100.0 %

The Retirement Plan invests the majority of its plan assets in common collective trusts which includes a diversified portfolio of domestic and international equity securities and fixed income securities. The Retirement Plan also utilizes an investment manager to invest in individual long credit fixed income securities. The alternative investments of the Retirement Plan reflect an investment in a real asset fund which holds a mix of sector-specific equity securities (real estate investment trusts, infrastructure companies, natural resource companies), a commodity index fund, and inflation-linked bonds. The expected rate of returns for the funds are assessed annually and are based on long-term relationships among major asset classes and the level of incremental returns that can be earned by the successful implementation of different active investment management strategies. Equity returns are based on estimates of long-term inflation rate, real rate of return, 10-year Treasury bond premium over cash, an expected equity risk premium, as well as other economic factors. Fixed income returns are based on maturity, long-term inflation, real rate of return and credit spreads. These assumptions also capture the expected correlation of returns between these asset classes over the long term.

Fair Value Measurements. The FASB requires EPE to provide expanded quantitative disclosures for financial assets and liabilities recorded on the Regulatory-Basis Balance Sheet at fair value. To increase consistency and comparability in fair value measurements, the FASB guidance on fair value measurements established a fair value hierarchy that prioritizes the inputs to valuation techniques used to measure fair value into three levels as follows:

- Level 1 – Observable inputs that reflect quoted market prices for identical assets and liabilities in active markets. Financial assets utilizing Level 1 input include investments that are in a highly liquid and active market. These prices are based on observable market data.
- Level 2 – Inputs other than quoted market prices included in Level 1 that are observable for the asset or liability either directly or indirectly. The fair value of these investments is based on evaluated prices that reflect observable market information, such as actual trade information of similar securities, adjusted for observable differences.
- Level 3 – Unobservable inputs using data that is not corroborated by market data and primarily based on internal company analysis using models and various other analysis.

The fair value of EPE's Retirement Plan assets at December 31, 2024 and 2023, and the level within the three levels of the fair value hierarchy defined by the FASB guidance on fair value measurements are presented in the table below (in thousands):

Description of Securities	Fair Value as of December 31, 2024	Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)
Cash and Cash Equivalents	$ 11,924	$ 11,924	$ —	$ —
Fixed Income Securities	55,480	—	55,480	—
Common Collective Trusts (a)				
Equity funds	157,982	—	157,982	—
Fixed income funds	23,555	—	23,555	—
Multi asset funds	14,163	—	14,163	—
Real asset funds	13,933	—	13,933	—
Total Common Collective Trusts	209,633	—	209,633	—
Total Plan Investments	$ 277,037	$ 11,924	$ 265,113	$ —

Description of Securities	Fair Value as of December 31, 2023	Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)
Cash and Cash Equivalents	$ 3,571	$ 3,571	$ —	$ —
Fixed Income Securities	57,889	—	57,889	—
Common Collective Trusts (a)				
Equity funds	166,987	—	166,987	—
Fixed income funds	28,005	—	28,005	—
Multi asset funds	13,501	—	13,501	—
Real asset funds	7,857	—	7,857	—
Total Common Collective Trusts	216,350	—	216,350	—
Total Plan Investments	$ 277,810	$ 3,571	$ 274,239	$ —

(a) The Common Collective Trusts are invested in equity and fixed income securities, or a combination thereof. The investment objective of each fund is to produce returns in excess of, or commensurate with, its predefined index and were primarily invested in underlying securities with Level 1 inputs, although the funds themselves are not publicly traded.

There were no purchases, issuances, and settlements related to the assets in the Level 3 fair value measurement category during the twelve-month periods ended December 31, 2024 and 2023.

EPE and the fiduciaries responsible for the Retirement Plan adhere to the traditional capital market pricing theory which maintains that over the long term, the risk of owning equities should be rewarded with a greater return than available from fixed income investments. EPE and the fiduciaries responsible for the Retirement Plan seek to minimize the risk of owning equity securities by investing in funds that pursue risk minimization strategies and by diversifying its investments to limit its risks during falling markets. The investment manager has full discretionary authority to direct the investment of plan assets held in trust within the guidelines prescribed by EPE and the fiduciaries responsible for the Retirement Plan through the plan's investment policy statement including the ability to hold cash equivalents. The investment guidelines of the investment policy statement are in accordance with the Employee Retirement Income Security Act of 1974 ("ERISA") and U.S. Department of Labor ("DOL") regulations.

EPE contributes at least the minimum funding amount required by the IRS for its Retirement Plan, as actuarially calculated. EPE expects to contribute $9.0 million to its Retirement Plan in 2025.

The following benefit payments, which reflect expected future service, as appropriate, are expected to be paid from the Retirement Plan and non-qualified retirement plans are presented in the table below (in thousands):

	Retirement Income Plan	Non-Qualified Retirement Plans
2025	$ 21,700	$ 1,971
2026	21,953	1,952
2027	22,356	1,846
2028	23,161	1,829
2029	23,593	1,744
2030-2034	122,785	7,539

401(k) Defined Contribution Plans

EPE sponsors a 401(k) defined contribution plan covering substantially all employees. EPE provides a 50 percent matching contribution up to 6 percent of the employee's compensation for employees who are enrolled in the final average pay pension benefit of the Retirement Plan and a 100 percent matching contribution up to 6 percent of the employee's compensation for employees who are enrolled in the cash balance pension benefit of the Retirement Plan, subject to certain other limits and exclusions. Annual matching contributions made to the savings plans for the years 2024 and 2023 were $6.4 million and $6.2 million, respectively.

Other Post-Retirement Benefits

EPE provides certain other post-retirement benefits, including health care benefits for retired employees and their eligible dependents and life insurance benefits for retired employees only ("OPEB Plan"). EPE's OPEB Plan's Voluntary Employee Benefit Association ("VEBA") trust fund has four separate VEBA trust funds to minimize federal income tax on the OPEB Plan's unrelated business income. On September 7, 2022, EPE resolved to discontinue the post-retirement medical and life insurance benefits to retirees who are hired or rehired on or after January 1, 2023. Substantially all of EPE's employees who are hired or rehired prior to January 1, 2023, may become eligible for those benefits if they retire while working for EPE.

Contributions from EPE are based on various factors, such as the OPEB Plan's funded status, tax deductibility of contributions to the OPEB Plan, state and federal regulatory requirements, amounts requested from customers in EPE's Texas and New Mexico jurisdictions, and the annual net periodic benefit cost of the OPEB Plan, as actuarially calculated. The assets of the OPEB Plan are primarily invested in institutional funds which hold equity securities, debt securities and cash equivalents and are managed by a professional investment manager appointed by EPE.

The following table contains a reconciliation of the change in the benefit obligation, the fair value of plan assets and the funded status of the OPEB Plan (in thousands):

	December 31, 2024	December 31, 2023
Change in benefit obligation:		
Benefit obligation at end of prior year	$ 35,754	$ 39,014
Service cost	1,625	1,926
Interest cost	1,725	1,993
Amendments (a)	—	(1,945)
Actuarial loss (gain)	3,055	(2,384)
Benefits paid from plan assets	(2,466)	(3,624)
Benefits paid from corporate assets	(405)	(206)
Retiree contributions	912	980
Benefit obligation at end of year	40,200	35,754
Change in plan assets:		
Fair value of plan assets at end of prior year	43,975	40,197
Actual return on plan assets	3,684	5,344
Employer contribution	1,200	1,200
Benefits paid from plan assets	(2,466)	(3,624)
Retiree contributions	912	980
Administrative and investment expenses	(17)	(122)
Fair value of plan assets at end of year	47,288	43,975
Funded status at end of year	$ 7,088	$ 8,221

(a) During 2023, EPE approved and communicated a plan amendment that resulted in a remeasurement of EPE's OPEB. Effective January 1, 2024, retirees and dependents are no longer offered the $1,000 deductible plan. The plan amendment resulted in a $1.9 million prior service benefit.

Amounts below are recognized as Other Special Funds in EPE's Regulatory-Basis Balance Sheet, for 2024 and 2023, respectively, and consist of the following (in thousands):

	December 31, 2024	December 31, 2023
Noncurrent assets	$ 7,088	$ 8,221
Total	$ 7,088	$ 8,221

Pre-tax amounts recognized in AOCI consist of the following (in thousands):

	December 31, 2024	December 31, 2023
Net gain	$ (50,859)	$ (56,909)
Prior service benefit	(9,803)	(13,053)
Total	$ (60,662)	$ (69,962)

The following are the weighted-average actuarial assumptions used to determine the accrued benefit obligations of the OPEB Plan:

	December 31, 2024	December 31, 2023
Discount rate at end of year	5.78 %	5.26 %
Health care cost trend rates:		
Initial		
Pre-65 medical	7.00 %	6.25 %
Post-65 medical	7.00 %	6.25 %
Pre-65 drug	7.00 %	6.25 %
Post-65 drug	7.00 %	6.25 %
Ultimate	4.50 %	4.50 %
Year ultimate reached	2030	2028

EPE reassesses various actuarial assumptions at least on an annual basis. The discount rate is reviewed and updated at each measurement date. The discount rate used to measure the fiscal year end obligation is based on a segmented spot rate yield curve that matches projected future payments with the appropriate interest rate applicable to the timing of the projected future benefit payments.

Net periodic benefit cost is made up of the components listed below (in thousands):

	Years Ended December 31, 2024	Years Ended December 31, 2023
Service cost (a)	$ 1,642	$ 2,048
Interest cost	1,725	1,993
Expected return on plan assets	(2,917)	(2,944)
Amortization of:		
Prior service benefit	(3,250)	(3,085)
Net gain	(3,762)	(3,522)
Net periodic benefit credit	$ (6,562)	$ (5,510)

(a) Service cost includes estimated expenses of $17 thousand and $161 thousand for 2024 and 2023, respectively, for administrative and investment expenses paid from plan assets during the year.

The changes in benefit obligations and plan assets recognized in other comprehensive income are presented below (in thousands):

	Years Ended December 31, 2024	Years Ended December 31, 2023
Net loss (gain)	$ 2,288	$ (4,784)
Prior service benefit	—	(1,945)
Amortization of:		
Prior service benefit	3,250	3,085
Net gain	3,762	3,522
Total recognized in other comprehensive income	$ 9,300	$ (122)

The total amount recognized in net periodic benefit cost and other comprehensive income are presented below (in thousands):

	Years Ended December 31,	
	2024	2023
Total recognized in net periodic benefit cost and other comprehensive income	$ 2,738	$ (5,632)

The OPEB Plan's actuarial loss was primarily attributable to changes in demographic assumptions for the year ended 2024. The significant reason for this change is updates of the medical claims assumption driven by unfavorable claims experience. This loss was offset by gains due to updated census data, increases in discount rates, and greater than expected asset returns since the prior measurement date.

The following are the weighted-average actuarial assumptions used to determine the net periodic benefit cost of the OPEB Plan for the years ended December 31:

	Years Ended December 31,	
	2024	2023
Discount rate:		
Benefit obligation	5.26 %	5.59 %
Service cost	5.39 %	5.73 %
Interest cost	5.12 %	5.43 %
Expected long-term return on plan assets	6.72 %	7.45 %
Health care cost trend rates:		
Initial		
Pre-65 medical	6.25 %	6.50 %
Post-65 medical	6.25 %	— %
Pre-65 drug	6.25 %	6.50 %
Post-65 drug	6.25 %	— %
Ultimate	4.50 %	4.50 %
Year ultimate reached	2028	2028

Effective January 1, 2024, the OPEB Plan's overall expected long-term rate of return on assets was 7.00%, on a pre-tax basis. The expected weighted average long-term rate of return on assets on an after-tax basis is 6.63% as of January 1, 2025. The expected long-term rate of return on an after-tax basis for the non-collective bargaining retirees VEBA is 4.90%, which is the only funding vehicle subject to taxation. The non-collective bargaining retirees VEBA trust's tax rate was assumed to be 30% at January 1, 2025. The expected long-term rate of return is based on the after-tax weighted average of the expected returns on investments based upon the target asset allocation.

EPE's target allocations for the OPEB Plan's assets are presented below:

	December 31, 2024	
	Tax-Exempt VEBAs	Taxable VEBA
Equity securities	50.0 %	55.0 %
Fixed income	40.0 %	45.0 %
Alternative investments	10.0 %	— %
Total	100.0 %	100.0 %

The OPEB Plan invests the majority of its plan assets in institutional funds which includes a diversified portfolio of domestic and international equity securities and fixed income securities. The alternative investments of the OPEB Plan reflect an investment in a real asset fund which holds a mix of sector-specific equity securities (real estate investment trusts, infrastructure companies, natural resource companies), a commodity index fund, and inflation-linked bonds. The underlying allocations to various asset classes in this portfolio will shift over time, but the overall strategic allocation for the tax-exempt VEBA is as follows: 50% equity, 40% fixed income, and 10% alternative investments. The overall strategic allocation for the taxable VEBA is 55% equity and 45% fixed income. The expected rates of return for the funds are assessed annually and are based on long-term relationships among major asset classes and the level of incremental returns that can be earned by the successful implementation of different active investment management strategies. Equity returns are based on estimates of long-term inflation rate, real rate of return, 10-year Treasury bond premium over cash, an expected equity risk premium, as well as other economic factors. Fixed income returns are based on maturity, long-term inflation, real rate of return and credit spreads. These assumptions also capture the expected correlation of returns between these asset classes over the long term.

The fair value of EPE's OPEB Plan assets at December 31, 2024 and 2023, and the level within the three levels of the fair value hierarchy defined by the FASB guidance on fair value measurements are presented in the table below (in thousands):

Description of Securities	Fair Value as of December 31, 2024	Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)
Cash and Cash Equivalents	$ 3,934	$ 3,934	$ —	$ —
Equity - Exchange Traded Funds	4,778	4,778	—	—
Fixed Income - Exchange Traded Funds	3,484	3,484	—	—
Common Trust Funds (a)				
Equity funds	19,532	—	19,532	—
Fixed income funds	9,871	—	9,871	—
Multi asset funds	1,924	—	1,924	—
Real asset funds	3,765	—	3,765	—
Total Common Collective Trust Funds	35,092	—	35,092	—
Total Plan Investments	$ 47,288	$ 12,196	$ 35,092	$ —

Description of Securities	Fair Value as of December 31, 2023	Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)
Cash and Cash Equivalents	$ 962	$ 962	$ —	$ —
Equity - Exchange Traded Funds	4,585	4,585	—	—
Fixed Income - Exchange Traded Funds	3,394	3,394	—	—
Common Trust Funds (a)				
Equity funds	20,458	—	20,458	—
Fixed income funds	10,090	—	10,090	—
Multi asset funds	1,737	—	1,737	—
Real asset funds	2,749	—	2,749	—
Total Common Collective Trust Funds	35,034	—	35,034	—
Total Plan Investments	$ 43,975	$ 8,941	$ 35,034	$ —

(a) The Common Trust Funds are invested in equity or fixed income securities, or a combination thereof. The investment objective of each fund is to produce returns in excess of, or commensurate with, its predefined index and were primarily invested in underlying securities with Level 1 inputs, although the funds themselves are not publicly traded.

There were no purchases, issuances and settlements related to the OPEB Plan assets in the Level 3 fair value measurement category during the twelve-month periods ended December 31, 2024 and 2023.

EPE and the fiduciaries responsible for the OPEB Plan adhere to the traditional capital market pricing theory, which maintains that over the long term, the risk of owning equities should be rewarded with a greater return than available from fixed income investments. EPE and the fiduciaries responsible for the OPEB Plan seek to minimize the risk of owning equity securities by investing in funds that pursue risk minimization strategies and by diversifying its investments to limit its risks during falling markets. The investment manager has full discretionary authority to direct the investment of plan assets held in trust within the investment policy guidelines prescribed by EPE. The investment guidelines of the investment policy statement are in accordance with the ERISA and DOL regulations.

EPE contributes at least the minimum funding amounts required by the IRS for its OPEB Plan, actuarially calculated. EPE expects to contribute $1.2 million to its OPEB Plan in 2025.

The following benefit payments, which reflect expected future service, as appropriate, are expected to be paid on the OPEB Plan (in thousands):

2025	$ 2,256
2026	2,290
2027	2,283
2028	2,400
2029	2,527
2030-2034	15,075

Long-Term Incentive Plan

EPE's LTIP provides for the payment of cash awards to eligible EPE employees, including each of its executive officers, and is reviewed and awards are granted annually. Measurement of awards is based on the achievement of performance measures, primarily based on the net asset value of EPE as of the end of each calendar quarter during the performance period. The performance period is measured as a period of three years, and the retention period as a period of two years that begins immediately after the performance period. The LTIP amounts vest in three equal installments beginning on the first day of the retention period. Any unvested long-term cash awards are forfeited if the participant is no longer employed by EPE.

The expenses related to the LTIP in 2024 and 2023 are presented below (in thousands):

	Years Ended December 31,	
LTIP Awards	**2024**	**2023**
2021-2023 awards	$ (2,063)	(a) $ 5,517
2022-2024 awards	1,689	2,570
2023-2025 awards	2,740	1,236
2024-2026 awards	1,067	N/A
Total	**$ 3,433**	**$ 9,323**

(a) Represents adjustment to 2021-2023 awards based on actual payouts.

Annual Short-Term Incentive Plan

The Annual Short-Term Incentive Plan ("Incentive Plan") provides for the payment of cash awards to eligible EPE employees, including each of its named executive officers. Payment of awards is based on the achievement of performance measures reviewed and approved by the People and Remuneration Committee of the Board ("PARCO"). Generally, these performance measures are based on meeting certain financial, operational, and individual performance criteria. The financial performance goals are based on specified levels of earnings and certain O&M expenses. The operational performance goals are based on reliability and customer satisfaction. If a minimum level of earnings is not attained, no amounts will be paid under the Incentive Plan, unless the PARCO determines otherwise. For the 2024 and 2023 plan year, EPE reached the required level of earnings and other performance measures for incentive payments under the Incentive Plan of $12.1 million and $13.1 million, respectively.

K. Financial Instruments and Investments

The FASB guidance requires EPE to disclose estimated fair values for its financial instruments. EPE has determined that cash and temporary investments, investment in debt securities, accounts receivable, NDT that are reflected in Other Special Funds in the Regulatory-Basis Balance Sheet, long-term debt, financing obligations and capital lease obligations, short-term borrowings under the term loan, the RCF, accounts payable and customer deposits meet the definition of financial instruments. The carrying amounts of cash and temporary investments, accounts receivable, accounts payable, customer deposits, and the term loan approximate fair value because of the short maturity of these items. Investments in debt securities and NDT are carried at estimated fair value.

Long-Term Debt, Financing Obligations, Capital Lease Obligations and Short-Term Borrowings Under the Term Loan and the RCF. The fair values of EPE's long-term debt, financing obligations, capital lease obligations including the current portion thereof, and short-term borrowings under the term loan and the RCF are based on estimated market prices for similar issues and are presented below (in thousands):

	December 31,			
	2024		2023	
	Carrying Amount	Estimated Fair Value	Carrying Amount	Estimated Fair Value
Pollution Control Bonds	$ 159,835	$ 147,932	$ 159,835	$ 150,514
Senior Notes	1,508,119	1,376,696	1,328,151	1,207,395
RGRT Senior Notes	110,000	101,465	110,000	99,865
RCF	435,393	435,259	401,532	401,532
Term Loan	—	—	150,000	150,000
Capitalized Operating Leases	3,499	3,499	4,015	4,015
Total	$ 2,216,846	$ 2,064,851	$ 2,153,533	$ 2,013,321

Treasury Rate Locks. EPE entered into treasury rate lock agreements in 2005 to hedge against potential movements in the treasury reference interest rate pending the issuance of the 6% Senior Notes. The treasury rate lock agreements met the criteria for hedge accounting and were designated as a cash flow hedge. In accordance with cash flow hedge accounting, EPE recorded the loss associated with the fair value of the cash flow hedge, net of tax, as a component of accumulated other comprehensive loss and amortizes the accumulated comprehensive loss to earnings as interest expense over the life of the 6% Senior Notes. As of December 31, 2024, the unamortized loss associated with the fair value of the cash flow hedge was $12.8 million. In 2025, approximately $0.9 million of this accumulated other comprehensive loss item will be reclassified to interest expense.

Contracts and Derivative Accounting. EPE uses commodity contracts to manage its exposure to price and availability risks for fuel purchases and power sales and purchases and these contracts generally have the characteristics of derivatives. EPE does not trade or use these instruments with the objective of earning financial gains on commodity price fluctuations. EPE has determined that all such contracts outstanding at December 31, 2024, except for certain natural gas commodity contracts with optionality features, that had the characteristics of derivatives met the "normal purchases and normal sales" exception provided in the FASB guidance for accounting for derivative instruments and hedging activities, and, as such, were not required to be accounted for as derivatives.

Marketable Securities. EPE's marketable securities, included in the NDT that are reflected in Other Special Funds in the Regulatory-Basis Balance Sheet, are reported at fair value, which was $439.8 million and $398.3 million at December 31, 2024 and 2023, respectively.

The investments in EPE's NDT are classified as equity securities and temporary cash and cash equivalents restricted solely for investment in the NDT. These investments are recorded at their estimated fair value in accordance with FASB guidance for certain investments in equity securities which requires entities to recognize changes in fair value for these securities in net income as reported in EPE's Regulatory-Basis Statement of Income.

EPE records changes in fair market value for equity securities held in the NDT in EPE's Regulatory-Basis Statement of Income. The unrealized gains and losses recognized during the years ended December 31, 2024 and 2023 and related effects on pre-tax income are as follows (in thousands):

	2024	2023
Net gains (losses) recognized on equity securities	$ 34,704	$ 45,482
Less: Net gains (losses) recognized on equity securities sold	17,038	321
Unrealized gains (losses) recognized on equity securities still held at reporting date	$ 17,666	$ 45,161

Fair Value Measurements. The fair value of the NDT and investments in debt securities at December 31, 2024 and 2023, and the level within the three levels of the fair value hierarchy, as defined by the FASB guidance and summarized in Note J of the Notes to the Financial Statements, are presented in the table below (in thousands):

Description of Securities	Fair Value as of December 31, 2024	Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)
Trading Securities:				
Investments in Debt Securities	$ 1,674	$ —	$ —	$ 1,674
Equity Securities:				
Domestic (a)	368,062	368,062	—	—
International	67,429	67,429	—	—
Total Equity Securities	435,491	435,491	—	—
Cash and Cash Equivalents	4,352	4,352	—	—
Total	$ 439,843	$ 439,843	$ —	$ —

Description of Securities	Fair Value as of December 31, 2023	Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)
Trading Securities:				
Investments in Debt Securities	$ 1,654	$ —	$ —	$ 1,654
Equity Securities:				
Domestic (a)	361,369	361,369	—	—
International	35,233	35,233	—	—
Total Equity Securities	396,602	396,602	—	—
Cash and Cash Equivalents	1,704	1,704	—	—
Total	$ 398,306	$ 398,306	$ —	$ —

(a) Includes $191.5 million and $184.4 million, as of December 31, 2024 and 2023, respectively, held in exchange traded funds with underlying investments in debt securities that meet the definition of equity securities with readily determinable fair values.

Below is a reconciliation of the beginning and ending balance of the fair value of the investment in debt securities classified as trading securities (in thousands):

	2024	2023
Balance at January 1	$ 1,654	$ 1,657
Net unrealized gains (losses) in fair value recognized in income (a)	20	(3)
Balance at December 31	$ 1,674	$ 1,654

(a) These amounts are reflected in EPE's Regulatory-Basis Statement of Income as other income.

There were no purchases, sales, issuances and settlements related to the assets in the Level 3 fair value measurement category during the year ended December 31, 2024 and 2023.

L. Supplemental Statements of Cash Flows Disclosures

	Years Ended December 31,	
	2024	2023
	(In thousands)	
Cash paid for:		
Interest on long-term debt and borrowing under the revolving credit facility	$ 104,334	$ 94,184
Interest on term loan	3,960	5,547
Income tax paid, net	34,165	57,421
Non-cash investing and financing activities:		
Changes in accrued plant additions	(28,994)	29,056

M. Equity Contributions and Dividends

Equity Contributions. For the years ended December 31, 2024 and 2023, Parent made equity contributions to EPE in the amount of $365.0 million and of $167.0 million, respectively.

Dividends. EPE's dividend policy is based on regulatory commitments and requires compliance with EPE debt covenants, and provides that no later than 45 days following the end of each quarter, EPE shall distribute to its sole shareholder, Parent, an amount equal to EPE's net income adjusted to exclude the impact of changes in fair value of EPE's equity securities and realized gains and losses from the sale of both equity and fixed income securities held in EPE's NDT for such calendar quarter, provided that if that adjusted amount for a quarter is below zero, no dividend shall be paid. For the years ended December 31, 2024 and 2023, EPE paid cash dividends to Parent of $149.0 million and $180.1 million, respectively.

N. Subsequent Events

$150.0 million Term Loan. On January 16, 2025, EPE issued a $150.0 million term loan with a maturity date of January 15, 2026.

Equity Contributions. On March 3, 2025, Parent made equity contributions to EPE in the amount of $215.0 million.

Dividends. On February 4, 2025, EPE's Board of Directors declared a quarterly cash dividend to Parent in the amount of $9.9 million, which was paid on February 14, 2025.

EPE has evaluated subsequent events through April 3, 2025, the date at which the financial statements were available to be issued, and determined there are no other items to disclose.

Name of Respondent: El Paso Electric Company	This report is: (1) ☑ An Original (2) ☐ A Resubmission	Date of Report: 04/03/2025	Year/Period of Report End of: 2024/ Q4

STATEMENTS OF ACCUMULATED COMPREHENSIVE INCOME, COMPREHENSIVE INCOME, AND HEDGING ACTIVITIES

1. Report in columns (b),(c),(d) and (e) the amounts of accumulated other comprehensive income items, on a net-of-tax basis, where appropriate.
2. Report in columns (f) and (g) the amounts of other categories of other cash flow hedges.
3. For each category of hedges that have been accounted for as "fair value hedges", report the accounts affected and the related amounts in a footnote.
4. Report data on a year-to-date basis.

FOOTNOTE DATA

(a) Concept: AccumulatedOtherComprehensiveIncomeLossOtherAdjustmentsToComprehensiveIncomeLossBalance

In accordance with the FERC Guidance Letter AI07-1-000 related to FASB guidance for employers' accounting for defined benefit pension and other postretirement plans, this amount includes reclassification adjustments of accumulated other comprehensive income as a result of gains or losses, prior service costs or credits and transition assets or obligations related to pension and other postretirement benefit plans.

(b) Concept: AccumulatedOtherComprehensiveIncomeLossOtherCashFlowHedgesBalance

During the first quarter of 2005, EPE entered into treasury rate lock agreements to hedge against potential movements in the treasury reference interest rate pending the issuance of 6% Senior Notes. These treasury rate locks were terminated on May 11, 2005. The treasury rate lock agreements met the criteria for hedge accounting and were designated as a cash flow hedge. In accordance with cash flow hedge accounting, EPE recorded the loss associated with the fair value of the cash flow hedge of approximately $14.5 million, net of tax, as a component of accumulated other comprehensive income. Beginning in May 2005, and through May 2035, EPE will recognize in earnings (as additional interest expense) the accumulated other comprehensive income associated with the cash flow hedge. During the next twelve-month period, approximately $0.9 million pre-tax of this accumulated other comprehensive income item will be reclassified to interest expense.

FOOTNOTE DATA

(a) Concept: NuclearFuelUnderCapitalLeasesAdditions

During 2024, EPE capitalized approximately $4.7 million of costs, including interest on RGRT borrowings, accrued interest on the RGRT Senior Notes and other fees, in connection with the financing of nuclear fuel through the RGRT. Information on quantities of nuclear fuel materials is not available.

(b) Concept: AccumulatedProvisionForAmortizationOfNuclearFuelAssembliesAdditions

Dry cask storage costs allocated to Palo Verde Units 1, 2 and 3.

(c) Concept: NuclearFuelUnderCapitalLeasesOtherReductions

Retirement of fully amortized nuclear fuel in connection with the 2024 reloads for Palo Verde Units 2 and 3.

(d) Concept: AccumulatedProvisionForAmortizationOfNuclearFuelAssembliesOtherReductions

Retirement of fully amortized nuclear fuel in connection with the 2024 reloads for Palo Verde Units 2 and 3.

(e) Concept: NuclearFuelNet

All of EPE's nuclear fuel financing is accomplished through the RGRT that has amounts borrowed through the issuance of senior notes and borrowings under a revolving credit facility. The assets and liabilities of the RGRT are reported on EPE's regulatory basis balance sheet. The total amount borrowed for nuclear fuel by the RGRT at December 31, 2024 was $127.4 million, of which $16.2 million had been borrowed under the revolving credit facility, accrued interest of $1.2 million, and $110.0 million was borrowed through senior notes.

Name of Respondent: El Paso Electric Company	This report is: (1) ☑ An Original (2) ☐ A Resubmission	Date of Report: 04/03/2025	Year/Period of Report End of: 2024/ Q4

ELECTRIC PLANT IN SERVICE (Account 101, 102, 103 and 106)

1. Report below the original cost of electric plant in service according to the prescribed accounts.
2. In addition to Account 101, Electric Plant in Service (Classified), this page and the next include Account 102, Electric Plant Purchased or Sold; Account 103, Experimental Electric Plant Unclassified; and Account 106, Completed Construction Not Classified-Electric.
3. Include in column (c) or (d), as appropriate, corrections of additions and retirements for the current or preceding year.
4. For revisions to the amount of initial asset retirement costs capitalized, included by primary plant account, increases in column (c) additions and reductions in column (e) adjustments.
5. Enclose in parentheses credit adjustments of plant accounts to indicate the negative effect of such accounts.
6. Classify Account 106 according to prescribed accounts, on an estimated basis if necessary, and include the entries in column (c). Also to be included in column (c) are entries for reversals of tentative distributions of the prior year reported in column (b). Likewise, if the respondent has a significant amount of plant retirements which have not been classified to primary accounts at the end of the year, include in column (d) a tentative distribution of such retirements, on an estimated basis, with appropriate contra entry to the account for accumulated depreciation provision. Include also in column (d) distributions of these tentative classifications in columns (c) and (d), including the reversals of the prior years tentative account distributions of these amounts. Careful observance of the above instructions and the texts of Accounts 101 and 106 will avoid serious omissions of the reported amount of respondent's plant actually in service at end of year.
7. Show in column (f) reclassifications or transfers within utility plant accounts. Include also in column (f) the additions or reductions of primary account classifications arising from distribution of amounts initially recorded in Account 102, include in column (e) the amounts with respect to accumulated provision for depreciation, acquisition adjustments, etc., and show in column (f) only the offset to the debits or credits distributed in column (f) to primary account classifications.
8. For Account 399, state the nature and use of plant included in this account and if substantial in amount submit a supplementary statement showing subaccount classification of such plant conforming to the requirement of these pages.
9. For each amount comprising the reported balance and changes in Account 102, state the property purchased or sold, name of vendor or purchase, and date of transaction. If proposed journal entries have been filed with the Commission as required by the Uniform System of Accounts, give also date.

ELECTRIC PLANT HELD FOR FUTURE USE (Account 105)

1. Report separately each property held for future use at end of the year having an original cost of $250,000 or more. Group other items of property held for future use.
2. For property having an original cost of $250,000 or more previously used in utility operations, now held for future use, give in column (a), in addition to other required information, the date that utility use of such property was discontinued, and the date the original cost was transferred to Account 105.

ACCUMULATED PROVISION FOR DEPRECIATION OF ELECTRIC UTILITY PLANT (Account 108)

1. Explain in a footnote any important adjustments during year.
2. Explain in a footnote any difference between the amount for book cost of plant retired, Line 12, column (c), and that reported for electric plant in service, page 204, column (d), excluding retirements of non-depreciable property.
3. The provisions of Account 108 in the Uniform System of Accounts require that retirements of depreciable plant be recorded when such plant is removed from service. If the respondent has a significant amount of plant retired at year end which has not been recorded and/or classified to the various reserve functional classifications, make preliminary closing entries to tentatively functionalize the book cost of the plant retired. In addition, include all costs included in retirement work in progress at year end in the appropriate functional classifications.
4. Show separately interest credits under a sinking fund or similar method of depreciation accounting.

INVESTMENTS IN SUBSIDIARY COMPANIES (Account 123.1)

1. Report below investments in Account 123.1, Investments in Subsidiary Companies.
2. Provide a subheading for each company and list thereunder the information called for below. Sub-TOTAL by company and give a TOTAL in columns (e), (f), (g) and (h). (a) Investment in Securities - List and describe each security owned. For bonds give also principal amount, date of issue, maturity, and interest rate. (b) Investment Advances - Report separately the amounts of loans or investment advances which are subject to repayment, but which are not subject to current settlement. With respect to each advance show whether the advance is a note or open account. List each note giving date of issuance, maturity date, and specifying whether note is a renewal.
3. Report separately the equity in undistributed subsidiary earnings since acquisition. The TOTAL in column (e) should equal the amount entered for Account 418.1.
4. For any securities, notes, or accounts that were pledged designate such securities, notes, or accounts in a footnote, and state the name of pledgee and purpose of the pledge.
5. If Commission approval was required for any advance made or security acquired, designate such fact in a footnote and give name of Commission, date of authorization, and case or docket number.
6. Report column (f) interest and dividend revenues from investments, including such revenues from securities disposed of during the year.
7. In column (h) report for each investment disposed of during the year, the gain or loss represented by the difference between cost of the investment (or the other amount at which carried in the books of account if different from cost) and the selling price thereof, not including interest adjustment includible in column (f).
8. Report on Line 42, column (a) the TOTAL cost of Account 123.1.

Allowances (Accounts 158.1 and 158.2)

1. Report below the particulars (details) called for concerning allowances.
2. Report all acquisitions of allowances at cost.
3. Report allowances in accordance with a weighted average cost allocation method and other accounting as prescribed by General Instruction No. 21 in the Uniform System of Accounts.
4. Report the allowances transactions by the period they are first eligible for use: the current year's allowances in columns (b)-(c), allowances for the three succeeding years in columns (d)-(i), starting with the following year, and allowances for the remaining succeeding years in columns (j)-(k).
5. Report on Line 4 the Environmental Protection Agency (EPA) issued allowances. Report withheld portions Lines 36-40.
6. Report on Line 5 allowances returned by the EPA. Report on Line 39 the EPA's sales of the withheld allowances. Report on Lines 43-46 the net sales proceeds and gains/losses resulting from the EPA's sale or auction of the withheld allowances.
7. Report on Lines 8-14 the names of vendors/transferors of allowances acquired and identify associated companies (See "associated company" under "Definitions" in the Uniform System of Accounts).
8. Report on Lines 22 - 27 the name of purchasers/ transferees of allowances disposed of and identify associated companies.
9. Report the net costs and benefits of hedging transactions on a separate line under purchases/transfers and sales/transfers.
10. Report on Lines 32-35 and 43-46 the net sales proceeds and gains or losses from allowance sales.

FOOTNOTE DATA

(a) Concept: AllowanceInventoryNumber
The Balance-Beginning of the Year 2024 reflects allowances from the Acid Rain Program ("ARP") accounts for the Newman, Montana, and Rio Grande Generating Stations as well as the TX SO2 program applicable to only Newman Units 2, 3, and 4 (GT1 & GT2).
(b) Concept: AllowancesIssuedLessWithheldAllowancesNumber
Represents Texas SO2 program allowances allocated for 2024 as well as the ARP allowances issued in prior years.
(c) Concept: AllowanceInventoryNumber
Represents allowances allocated to EPE by the EPA based on our current electric generation and the current regulatory framework.
(d) Concept: AllowanceInventoryNumber
Represents allowances allocated to EPE by the EPA based on our current electric generation and the current regulatory framework.
(e) Concept: AllowanceInventoryNumber
Represents allowances allocated to EPE by the EPA based on our current electric generation and the current regulatory framework.
(f) Concept: AllowanceInventoryNumber
Represents allowances allocated to EPE by the EPA based on our current electric generation and the current regulatory framework. Allowances for future years include allowances for each year beginning in 2028 through 2054.
(g) Concept: AllowanceInventoryNumber
Represents allowances banked by EPE through December 31, 2024. EPE has not purchased any allowances, therefore, there is no amount in column (m). At December 31, 2024, SO2 allowances were trading at approximately $0.40 per ton (allowance) under the ARP.

Name of Respondent: El Paso Electric Company	This report is: (1) ☑ An Original (2) ☐ A Resubmission	Date of Report: 04/03/2025	Year/Period of Report End of: 2024/ Q4

Allowances (Accounts 158.1 and 158.2)

1. Report below the particulars (details) called for concerning allowances.
2. Report all acquisitions of allowances at cost.
3. Report allowances in accordance with a weighted average cost allocation method and other accounting as prescribed by General Instruction No. 21 in the Uniform System of Accounts.
4. Report the allowances transactions by the period they are first eligible for use: the current year's allowances in columns (b)-(c), allowances for the three succeeding years in columns (d)-(i), starting with the following year, and allowances for the remaining succeeding years in columns (j)-(k).
5. Report on Line 4 the Environmental Protection Agency (EPA) issued allowances. Report withheld portions Lines 36-40.
6. Report on Line 5 allowances returned by the EPA. Report on Line 39 the EPA's sales of the withheld allowances. Report on Lines 43-46 the net sales proceeds and gains/losses resulting from the EPA's sale or auction of the withheld allowances.
7. Report on Lines 8-14 the names of vendors/transferors of allowances acquired and identify associated companies (See "associated company" under "Definitions" in the Uniform System of Accounts).
8. Report on Lines 22 - 27 the name of purchasers/ transferees of allowances disposed of and identify associated companies.
9. Report the net costs and benefits of hedging transactions on a separate line under purchases/transfers and sales/transfers.
10. Report on Lines 32-35 and 43-46 the net sales proceeds and gains or losses from allowance sales.

FOOTNOTE DATA

(a) Concept: DescriptionAndPurposeOfOtherRegulatoryAssets

Amortization is based on a pro rata relationship with nuclear fuel amortization.

(b) Concept: DescriptionAndPurposeOfOtherRegulatoryAssets

Final coal mine reclamation costs are related to EPE's previous ownership interest in the Four Corners Generation Station ("Four Corners"), and represent the cost to reclaim the land disturbed during the coal mining that was not previously reclaimed while the mine was in operation.

Pursuant to the final order in NMPRC Case No. 15-00109-UT, the New Mexico jurisdiction portion of the final coal reclamation costs are to be recovered through the Fuel and Purchased Power Cost Adjustment Clause ("FPPCAC") over a seven-year period beginning with the rate case to be filed after closing the sale of EPE's interest in Four Corners on July 6, 2016.

In accordance with the order in Case No. 15-00109-UT, EPE requested recovery of the final coal reclamation costs in its 2020 New Mexico rate case filing, Case No. 20-00104-UT. On June 23, 2021, the NMPRC issued its final order in the 2020 New Mexico Rate Case, which did not alter EPE s request for recovery of the coal reclamation costs. The seven-year recovery period for the coal reclamation costs began in July 2021.

(c) Concept: DescriptionAndPurposeOfOtherRegulatoryAssets

The 2017 PUCT Final Order in Docket No. 46831 approved the recovery of approximately $5.5 million representing the Texas portion to decommission Four Corners, over a seven year period which ended July 2024. The NMPRC in Case No. 15-00109-UT also approved EPE's request for an accounting order establishing $1.4 million of costs related to the decommissioning of Four Corners as a regulatory asset to be recovered over a seven-year period beginning in the rate case to be filed after closing the sale of EPE's interest in Four Corners on July 6, 2016. The recovery was requested in EPE's 2020 New Mexico rate case filing, Case No. 20-00104-UT. On June 23, 2021, the NMPRC issued its final order in the 2020 New Mexico Rate Case, which approved EPE's request for recovery of decommissioning costs. The seven-year recovery period for decommissioning costs began in July 2021.

(d) Concept: DescriptionAndPurposeOfOtherRegulatoryAssets

Represents rate case costs incurred after August 1, 2017 related to EPE's 2017 rate case, Docket No. 46831. In accordance with the Final Order in Docket No. 46831, EPE requested recovery of these costs in EPE's 2021 Texas base rate case filing, Docket No. 52195 ("2021 Texas Retail Rate Case Filing"). On September 15, 2022, the PUCT issued the PUCT Final Order in Docket No. 52195 ("2021 PUCT Final Order") which allowed recovery of these costs over a four-year recovery period which began in August 2022.

(e) Concept: DescriptionAndPurposeOfOtherRegulatoryAssets

Represents rate case costs approved in the 2021 Texas Retail Rate Case Filing. The 2021 PUCT Final Order approved the recovery of rate case expenses incurred before April 1, 2022 over a four-year recovery period which began in August 2022. The PUCT ordered costs incurred April 2022 and later to be requested for recovery in it's next base rate case filing.

(f) Concept: DescriptionAndPurposeOfOtherRegulatoryAssets

Represents costs associated with EPE's 2025 Texas Retail Rate Case Filing in PUCT Docket No. 57568.

(g) Concept: DescriptionAndPurposeOfOtherRegulatoryAssets

Represents costs associated with EPE's Demand Response Pilot Program. This program provides an incentive for customers to switch to eSmart Thermostats, giving EPE the ability to slightly modify the eSmart Thermostats during peak times. The 2021 PUCT Final Order allowed recovery of these costs through base rates beginning in August 2022.

(h) Concept: DescriptionAndPurposeOfOtherRegulatoryAssets

This item relates to a relate-back surcharge pursuant to the 2021 PUCT Final Order. Pursuant to the order, EPE will recover a portion of the base rate increase for the period of November 3, 2021 through July 31, 2022 through a relate-back surcharge that will partially offset the corresponding excess deferred tax credits by customer class. The net excess deferred tax credits are being credited to customers over a four-year recovery period which began in August 2022.
Additionally, in the 2021 PUCT Final Order, a GCRR baseline was adopted which would allow recover of Newman Unit 6 from Texas customers. EPE began billing approved GCRR rates on February 1, 2024, after COD of Newman Unit 6.

(i) Concept: DescriptionAndPurposeOfOtherRegulatoryAssets

Represents costs associated with EPE's filing of a proposed refund tariff with the PUCT in Docket No. 48124. The tariff is designed to reduce Texas base rate charges for the decrease in federal income tax expense resulting from the TCJA. The 2021 PUCT Final Order allowed recovery of these costs through base rates beginning in August 2022 which ended in October 2024.

(j) Concept: DescriptionAndPurposeOfOtherRegulatoryAssets

In accordance with the Final Order in Docket No. 37690, EPE began recovering Energy Efficiency Program costs effective July 2010 through a tariff rider approved by the PUCT via Texas Rate 97. The rate is updated annually.

(k) Concept: DescriptionAndPurposeOfOtherRegulatoryAssets

Represents costs associated with EPE's filing for its voluntary business solar program for its Texas jurisdiction with the PUCT in Docket No. 55176. EPE will request recovery of these costs in a future base rate case proceeding.

(l) Concept: DescriptionAndPurposeOfOtherRegulatoryAssets

Represents costs associated with EPE's filing for its Transportation Electrification Plan ("TEP"), including approval of four electric vehicle-ready pilot programs and tariffs for its Texas jurisdiction with the PUCT in Docket No. 54614. EPE will request recovery of these costs in a future base rate case proceeding

(m) Concept: DescriptionAndPurposeOfOtherRegulatoryAssets

Represents costs associated with EPE's AMS filing for its Texas jurisdiction with the PUCT in Docket No. 52040. EPE requested recovery of the filing costs in the 2021 Texas Retail Rate Case Filing. The 2021 PUCT Final Order approved the recovery of these expenses incurred before April 1, 2022 over a four-year recovery period which began in August 2022. The PUCT ordered costs incurred April 2022 and later to be requested for recovery in it's next base rate case filing.

On December 15, 2022, the PUCT approved EPE's application for the AMS deployment plan, AMS surcharge, and non-standard metering service fees. Pursuant to the final order in PUCT Docket No. 52040, EPE will recover its AMS project planning costs over a three-year period starting March 2023. The balance also includes an under-recovery of the AMS net revenue requirement through each corresponding year.

(n) Concept: DescriptionAndPurposeOfOtherRegulatoryAssets

Represents costs associated with EPE's filing to establish its Transmission Cost Recovery Factor ("TCRF") with the PUCT in Docket No. 49148. EPE requested recovery of these costs in the 2021 Texas Retail Rate Case Filing. The 2021 PUCT Final Order allowed recovery of these costs over a four-year recovery period which began in August 2022.

(o) Concept: DescriptionAndPurposeOfOtherRegulatoryAssets

Represents costs associated with EPE's filing to establish its Distribution Cost Recovery Factor ("DCRF") with the PUCT in Docket No. 49395. EPE requested recovery of these costs in the 2021 Texas Retail Rate Case Filing. The 2021 PUCT Final Order allowed recovery of these costs over a four-year recovery period which began in August 2022. It also includes costs associated with EPE's filing to establish its 2024 Texas DCRF with the PUCT in Docket No. 56425. EPE will request recovery of these costs in a future base rate case proceeding.

(p) Concept: DescriptionAndPurposeOfOtherRegulatoryAssets

Represents filing costs related to the 2019 Texas Fuel Reconciliation Filing in PUCT Docket No. 50058. EPE requested recovery of these costs in the 2021 Texas Retail Rate Case Filing. The 2021 PUCT Final Order allowed recovery of these costs over a four-year recovery period which began in August 2022.

(q) Concept: DescriptionAndPurposeOfOtherRegulatoryAssets

Represents filing costs related to the 2022 Texas Fuel Reconciliation Filing in PUCT Docket No. 54142. EPE will request recovery of these costs in a future base rate case filing.

(r) Concept: DescriptionAndPurposeOfOtherRegulatoryAssets

Represents costs associated with EPE's filing to establish its GCRR related to Newman Unit 6 in PUCT Docket No. 54659. EPE will request recovery of these costs in a future base rate case proceeding.

(s) Concept: DescriptionAndPurposeOfOtherRegulatoryAssets

Represents filing costs related to the 2024 Texas Fuel Reconciliation Filing in PUCT Docket No. 57149. EPE will request recovery of these costs in a future base rate case filing.

(t) Concept: DescriptionAndPurposeOfOtherRegulatoryAssets
In NMPRC Case No.15-00127-UT, the NMPRC approved EPE's request to recover costs related to renewable energy certificates and procurement plan costs over a six-year period beginning July 1, 2016. EPE requested costs incurred after December 31, 2014 as a component of base rates in EPE's 2020 New Mexico rate case filing, Case No. 20-00104-UT. On June 23, 2021, the NMPRC issued its final order in the 2020 New Mexico rate case allowing recovery of these costs. Pursuant to the final order in Case No. 20-00104-UT, the recovery period for costs incurred prior to December 31, 2014 was extended five years beginning March 2021. The five-year recovery period for costs incurred after December 31, 2014 began in July 2021.
(u) Concept: DescriptionAndPurposeOfOtherRegulatoryAssets
EPE requested recovery of these costs in EPE's 2020 New Mexico rate case filing, Case No. 20-00104-UT. On June 23, 2021, the NMPRC issued its final order in the 2020 New Mexico rate case allowing recovery of these costs. The five-year recovery period of these costs began in July 2021.
(v) Concept: DescriptionAndPurposeOfOtherRegulatoryAssets
On February 22, 2017, the NMPRC approved, in Case No. 17-00016-UT, EPE's request to implement a Demand Response Pilot Program pursuant to its proposed Original Rate No. 37. This program provides an incentive for customers to switch to eSmart Thermostats, giving EPE the ability to slightly modify the eSmart Thermostats during peak times. Program costs incurred as of December 31, 2019 were requested in EPE's 2020 New Mexico Rate Case, Case No. 20-00104-UT. On June 23, 2021, the NMPRC issued its final order in the 2020 New Mexico rate case allowing recovery of these costs. The five-year recovery of these costs began in July 2021.
(w) Concept: DescriptionAndPurposeOfOtherRegulatoryAssets
Represents costs associated with EPE's New Mexico Transportation Electrification Plan ("NMTEP") filed with the NMPRC under Case No. 20-00241-UT. The NMPRC approved EPE's request to recover costs related to the NMTEP and EPE began recovering NMTEP costs effective March 2023 through a rider approved by the NMPRC through New Mexico Rate 44. The rate is updated annually.
(x) Concept: DescriptionAndPurposeOfOtherRegulatoryAssets
On November 2, 2022, the NMPRC approved, in Case No. 21-00269-UT, EPE's request to recover costs associated with EPE's AMS filing for its New Mexico jurisdiction. Filing costs associated with the New Mexico AMS project will be recovered in a future regulatory filing. The balance also includes an under-recovery of the AMS net revenue requirement through December of each corresponding year.
(y) Concept: DescriptionAndPurposeOfOtherRegulatoryAssets
On September 15, 2021 the NMPRC granted, in Case No. 21-00180-UT, EPE's request to recover non-capitalized EIM implementation costs on a New Mexico jurisdictional basis. EPE will request recovery of these costs in a future base rate case proceeding.
(z) Concept: DescriptionAndPurposeOfOtherRegulatoryAssets
On November 30, 2023, the NMPRC issued a Final Order on Remand to the NMPRC Case No. 20-00104-UT, which approved EPE's updated filed rates effective January 1, 2024. The updated rates include approximately $0.6 million in additional annual base revenue requirement related to amounts found to be unlawfully excluded by the NMPRC's prior order in the case. The Final Order on Remand also approved EPE's request to record additional revenue from the date of the Supreme Court remand to December 31, 2023, as a regulatory asset for recovery in EPE's next rate case. EPE will request recovery of these revenues in a future base rate case proceeding.
(aa) Concept: DescriptionAndPurposeOfOtherRegulatoryAssets
Represents New Mexico portion of Buena Vista Battery capacity charges that were approved by the NMPRC in Case No. 19-00348-UT as a system resource. EPE will request recovery of these costs in a future base rate case proceeding.
(ab) Concept: DescriptionAndPurposeOfOtherRegulatoryAssets
Represents costs incurred for the FERC transmission rate case for its FERC jurisdiction. EPE requested these costs in its FERC rate case filing in Docket No. ER22-282-000. The 2024 FERC Final Order allowed recovery of these costs over a three-year period which began in August 2024.
(ac) Concept: DescriptionAndPurposeOfOtherRegulatoryAssets
In NMPRC Case No. 09-00171-UT, the NMPRC extended the depreciable life of Palo Verde an additional 20 years for New Mexico rate making purposes, reducing the depreciation expense collected from New Mexico customers in rates, effective January 2010. In April 2011, the Nuclear Regulatory Commission renewed the operating license for all three units at Palo Verde for an additional 20 years; therefore, the incremental difference in Palo Verde depreciation for the New Mexico jurisdiction is being amortized to account 407.3 over the remaining life of Palo Verde.
(ad) Concept: DescriptionAndPurposeOfOtherRegulatoryAssets
On March 26, 2020, the PUCT issued an order authorizing regulated utility companies the ability to use an accounting mechanism and subsequent process to seek future recovery of expenses resulting from the effects of COVID-19. EPE requested recovery of these costs in the 2021 Texas Retail Rate Case Filing. The 2021 PUCT Final Order allowed recovery of $6.3 million in deferred COVID-19 costs, incurred through December 31, 2020, over a four-year recovery period which began in August 2022. An annual true-up filing of any changes in bad debt and additional COVID-19 related expenses incurred during the previous year, as directed by the 2021 PUCT Final Order, is due by March 31 annually. In compliance with the 2021 PUCT Final Order, EPE filed its initial annual filing with the PUCT on March 31, 2023, in Docket No. 54812 which included a true-up of $9.6 million for bad debt and other expenses related to COVID-19 that were incurred in the years 2021 and 2022. On July 12, 2024, the PUCT issued a final order in Docket No. 54812 approving the requested expenses for the years 2021 and 2022. EPE filed its second annual filing with the PUCT on March 28, 2024, in Docket No. 56422 which requested a net amount of $8.5 million in COVID-19 related costs for the four years 2020 to 2023 on a Texas jurisdictional basis after the reduction of revenues collected through the rider. EPE cannot predict the outcome of this annual true-up filing. As of December 31, 2024, EPE has recorded $4.0 million as a regulatory asset related to the New Mexico portion of bad debt expense and other COVID-19 expenses. EPE also recorded a regulatory liability of $0.7 million related to the New Mexico portion of potential cost savings. EPE will request recovery of New Mexico portion of bad debt expense and other COVID-19 expense net of potential cost savings in a future New Mexico rate case filing. EPE offset the regulatory asset and regulatory liability with a reserve, so there was no impact to the balance sheet or income statement.
(ae) Concept: OtherRegulatoryAssets
This item relates to (i) the regulatory treatment of the equity portion of AFUDC which is recovered in rate base by an offset with the related accumulated deferred income tax liability, and (ii) excess deferred state income taxes which are recovered through amortization to tax expense in cost of service. The amortization period for the excess deferred state income taxes is 15 years as established in the PUCT Final Order in Docket No. 44941 and the NMPRC Final Order in Case No. 15-00127-UT ("NMPRC Case No. 15-00127 Final Order").

CAPITAL STOCKS (Account 201 and 204)

1. Report below the particulars (details) called for concerning common and preferred stock at end of year, distinguishing separate series of any general class. Show separate totals for common and preferred stock. If information to meet the stock exchange reporting requirement outlined in column (a) is available from the SEC 10-K Report Form filing, a specific reference to report form (i.e., year and company title) may be reported in column (a) provided the fiscal years for both the 10-K report and this report are compatible.
2. Entries in column (b) should represent the number of shares authorized by the articles of incorporation as amended to end of year.
3. Give details concerning shares of any class and series of stock authorized to be issued by a regulatory commission which have not yet been issued.
4. The identification of each class of preferred stock should show the dividend rate and whether the dividends are cumulative or noncumulative.
5. State in a footnote if any capital stock that has been nominally issued is nominally outstanding at end of year.
6. Give particulars (details) in column (a) of any nominally issued capital stock, reacquired stock, or stock in sinking and other funds which is pledged, stating name of pledgee and purpose of pledge.

Other Paid-in Capital

1. Report below the balance at the end of the year and the information specified below for the respective other paid-in capital accounts. Provide a subheading for each account and show a total for the account, as well as a total of all accounts for reconciliation with the balance sheet, page 112. Explain changes made in any account during the year and give the accounting entries effecting such change.

Donations Received from Stockholders (Account 208) - State amount and briefly explain the origin and purpose of each donation.
Reduction in Par or Stated Value of Capital Stock (Account 209) - State amount and briefly explain the capital changes that gave rise to amounts reported under this caption including identification with the class and series of stock to which related.
Gain or Resale or Cancellation of Reacquired Capital Stock (Account 210) - Report balance at beginning of year, credits, debits, and balance at end of year with a designation of the nature of each credit and debit identified by the class and series of stock to which related.
Miscellaneous Paid-In Capital (Account 211) - Classify amounts included in this account according to captions that, together with brief explanations, disclose the general nature of the transactions that gave rise to the reported amounts.

LONG-TERM DEBT (Account 221, 222, 223 and 224)

1. Report by Balance Sheet Account the details concerning long-term debt included in Accounts 221, Bonds, 222, Reacquired Bonds, 223, Advances from Associated Companies, and 224, Other Long-Term Debt.
2. For bonds assumed by the respondent, include in column (a) the name of the issuing company as well as a description of the bonds, and in column (b) include the related account number.
3. For Advances from Associated Companies, report separately advances on notes and advances on open accounts. Designate demand notes as such. Include in column (a) names of associated companies from which advances were received, and in column (b) include the related account number.
4. For receivers' certificates, show in column (a) the name of the court and date of court order under which such certificates were issued, and in column (b) include the related account number.
5. In a supplemental statement, give explanatory details for Accounts 223 and 224 of net changes during the year. With respect to long-term advances, show for each company: (a)principal advanced during year (b) interest added to principal amount, and (c) principal repaid during year. Give Commission authorization numbers and dates.
6. If the respondent has pledged any of its long-term debt securities, give particulars (details) in a footnote, including name of the pledgee and purpose of the pledge.
7. If the respondent has any long-term securities that have been nominally issued and are nominally outstanding at end of year, describe such securities in a footnote.
8. If interest expense was incurred during the year on any obligations retired or reacquired before end of year, include such interest expense in column (m). Explain in a footnote any difference between the total of column (m) and the total Account 427, Interest on Long-Term Debt and Account 430, Interest on Debt to Associated Companies.
9. Give details concerning any long-term debt authorized by a regulatory commission but not yet issued.

RECONCILIATION OF REPORTED NET INCOME WITH TAXABLE INCOME FOR FEDERAL INCOME TAXES

1. Report the reconciliation of reported net income for the year with taxable income used in computing Federal income tax accruals and show computation of such tax accruals. Include in the reconciliation, as far as practicable, the same detail as furnished on Schedule M-1 of the tax return for the year. Submit a reconciliation even though there is no taxable income for the year. Indicate clearly the nature of each reconciling amount.
2. If the utility is a member of a group which files a consolidated Federal tax return, reconcile reported net income with taxable net income as if a separate return were to be field, indicating, however, intercompany amounts to be eliminated in such a consolidated return. State names of group member, tax assigned to each group member, and basis of allocation, assignment, or sharing of the consolidated tax among the group members.
3. A substitute page, designed to meet a particular need of a company, may be used as Long as the data is consistent and meets the requirements of the above instructions. For electronic reporting purposes complete Line 27 and provide the substitute Page in the context of a footnote.

TAXES ACCRUED, PREPAID AND CHARGES DURING YEAR

1. Give particulars (details) of the combined prepaid and accrued tax accounts and show the total taxes charged to operations and other accounts during the year. Do not include gasoline and other sales taxes which have been charged to the accounts to which the taxed material was charged. If the actual, or estimated amounts of such taxes are known, show the amounts in a footnote and designate whether estimated or actual amounts.
2. Include on this page, taxes paid during the year and charged direct to final accounts, (not charged to prepaid or accrued taxes.) Enter the amounts in both columns (g) and (h). The balancing of this page is not affected by the inclusion of these taxes.
3. Include in column (g) taxes charged during the year, taxes charged to operations and other accounts through (a) accruals credited to taxes accrued, (b)amounts credited to proportions of prepaid taxes chargeable to current year, and (c) taxes paid and charged direct to operations or accounts other than accrued and prepaid tax accounts.
4. List the aggregate of each kind of tax in such manner that the total tax for each State and subdivision can readily be ascertained.
5. If any tax (exclude Federal and State income taxes) covers more than one year, show the required information separately for each tax year, identifying the year in column (d).
6. Enter all adjustments of the accrued and prepaid tax accounts in column (i) and explain each adjustment in a foot- note. Designate debit adjustments by parentheses.
7. Do not include on this page entries with respect to deferred income taxes or taxes collected through payroll deductions or otherwise pending transmittal of such taxes to the taxing authority.
8. Report in columns (l) through (o) how the taxes were distributed. Report in column (o) only the amounts charged to Accounts 408.1 and 409.1 pertaining to electric operations. Report in column (l) the amounts charged to Accounts 408.1 and 409.1 pertaining to other utility departments and amounts charged to Accounts 408.2 and 409.2. Also shown in column (o) the taxes charged to utility plant or other balance sheet accounts.
9. For any tax apportioned to more than one utility department or account, state in a footnote the basis (necessity) of apportioning such tax.

FOOTNOTE DATA

(a) Concept: DescriptionAndPurposeOfOtherRegulatoryLiabilities

A portion of this balance is related to Four Peaks renewable energy credits for the period of November 2019 through July 2021. As a result of the Final Order in NMPRC Case No. 21-00111-UT and the Supreme Court of New Mexico Case No. S-1-SC-37458, the amount collected from customers and applicable carrying costs are being returned to customers through the RPS rider, beginning in February 2022.

(b) Concept: DescriptionAndPurposeOfOtherRegulatoryLiabilities

The balance represents an overcollection of relate-back revenue associated with EPE's 2019 TCRF rate filing in PUCT Docket No. 49148. The relate-back period was from July 30, 2019 through December 31, 2019 and the recovery period was over a period of 12 months beginning on April 1, 2020. This item will be addressed in a future TCRF rate proceeding.

(c) Concept: DescriptionAndPurposeOfOtherRegulatoryLiabilities

Texas Public Utility Regulatory Act Section 36.354 requires that each electric utility provide Military Base Rate discounts to military bases in areas where customers choice is not available. In accordance with the Final Order in PUCT Docket No. 37690, the Military Base Discount Recovery Factor allows EPE to recover the total base rate discount provided to military base facilities from non-military base customers through a recovery factor. The rate is updated annually.

(d) Concept: DescriptionAndPurposeOfOtherRegulatoryLiabilities

In accordance with the final order in PUCT Docket No. 37690, EPE began recovering Energy Efficiency Program costs through a tariff rider approved by the PUCT via Texas Rate 97, effective July 2010. The rate is updated annually.

(e) Concept: DescriptionAndPurposeOfOtherRegulatoryLiabilities

In accordance with the final order in NMPRC Case No. 06-0065-UT, EPE started collecting Energy Efficiency costs, effective May 2009, through a tariff rider approved by the NMPRC via New Mexico Rate 17. The rate is updated annually.

(f) Concept: OtherRegulatoryLiabilities

This item primarily relates to the reduction in the federal corporate income tax rate from 35% to 21% as enacted by the TCJA. The amortization period for the excess TCJA portion is based on the average rate assumption method ("ARAM") for protected assets in both jurisdictions, Texas and New Mexico, in accordance with the 2021 PUCT Final Order and the 2020 NMPRC Final Order. Unprotected assets are amortized over a four year period in Texas per the 2021 PUCT Final Order and a three year period in New Mexico per the 2020 NMPRC Final Order.

Name of Respondent: El Paso Electric Company	This report is: (1) ☑ An Original (2) ☐ A Resubmission	Date of Report: 04/03/2025	Year/Period of Report End of: 2024/ Q4

Electric Operating Revenues

1. The following instructions generally apply to the annual version of these pages. Do not report quarterly data in columns (c), (e), (f), and (g). Unbilled revenues and MWH related to unbilled revenues need not be reported separately as required in the annual version of these pages.
2. Report below operating revenues for each prescribed account, and manufactured gas revenues in total.
3. Report number of customers, columns (f) and (g), on the basis of meters, in addition to the number of flat rate accounts; except that where separate meter readings are added for billing purposes, one customer should be counted for each group of meters added. The average number of customers means the average of twelve figures at the close of each month.
4. If increases or decreases from previous period (columns (c),(e), and (g)), are not derived from previously reported figures, explain any inconsistencies in a footnote.
5. Disclose amounts of $250,000 or greater in a footnote for accounts 451, 456, and 457.2.
6. Commercial and industrial Sales, Account 442, may be classified according to the basis of classification (Small or Commercial, and Large or Industrial) regularly used by the respondent if such basis of classification is not generally greater than 1000 Kw of demand. (See Account 442 of the Uniform System of Accounts. Explain basis of classification in a footnote.)
7. See page 108, Important Changes During Period, for important new territory added and important rate increase or decreases.
8. For Lines 2,4,5,and 6, see Page 304 for amounts relating to unbilled revenue by accounts.
9. Include unmetered sales. Provide details of such Sales in a footnote.

Public Street and Highway Lighting Fuel	$	666,681
Deferred Fuel		(448,530)
Total	$	218,151

(e) Concept: OtherSalesToPublicAuthorities

Estimated Fuel Clause Revenues included in Other Sales to Public Authorities:

Other Sales to Public Authorities Fuel	$	23,672,244
Deferred Fuel		(11,885,821)
Total	$	11,786,423

(f) Concept: MiscellaneousServiceRevenues

Below is the detail of Miscellaneous Service Revenues recorded in account 451:

		December 31, 2024
Non Pay Reconnect Charges	$	788,465
New Service Charges/Name Change/Cut in Charge		1,374,274
Overhead/Underground Connection Charges		544,498
New Mexico Energy Efficiency Incentive		1,179,711
Texas and New Mexico Energy Efficiency Cost Recovery		9,011,141
Misc Other		1,127,355
Total	$	14,025,444

(g) Concept: OtherElectricRevenue

Includes $521,345 related to EPE's 15.8% share of Palo Verde other electric revenues from APS.
Includes $6,537,944 related to the sale of renewable energy certificates.

(h) Concept: MiscellaneousServiceRevenues

Below is the detail of Miscellaneous Service Revenues recorded in account 451:

		December 31, 2023
Non Pay Reconnect Charges	$	330,518
New Service Charges/Name Change/Cut in Charge		1,638,367
Overhead/Underground Connection Charges		689,551
New Mexico Energy Efficiency Incentive		1,234,168
Texas and New Mexico Energy Efficiency Cost Recovery		10,114,632
Misc Other		673,474
Total	$	14,680,710

(i) Concept: OtherElectricRevenue

Includes $530,065 related to EPE's 15.8% share of Palo Verde other electric revenues from APS.
Includes $618,336 related to the sale of renewable energy certificates.

(j) Concept: MegawattHoursSoldSalesForResale
Includes 937,820 MWhs related to EPE's Power Purchase and Sales Agreement with Freeport-McMoRan dated December 16, 2005. EPE commenced transacting in the EIM administered by California Independent System Operator ("CAISO") on April 5, 2023. Includes 1,373,041 MWhs related to EPE's Merchant and Transmission Agreement with CAISO dated July 11, 2022.
(k) Concept: MegawattHoursSoldSalesForResale
Includes 963,367 MWhs related to EPE's Power Purchase and Sales Agreement with Freeport-McMoRan dated December 16, 2005. EPE commenced transacting in the EIM administered by CAISO on April 5, 2023. Includes 994,519 MWhs related to EPE's Merchant and Transmission Agreement with CAISO dated July 11, 2022.

SALES OF ELECTRICITY BY RATE SCHEDULES

1. Report below for each rate schedule in effect during the year the MWH of electricity sold, revenue, average number of customer, average Kwh per customer, and average revenue per Kwh, excluding date for Sales for Resale which is reported on Page 310.
2. Provide a subheading and total for each prescribed operating revenue account in the sequence followed in "Electric Operating Revenues," Page 300. If the sales under any rate schedule are classified in more than one revenue account, List the rate schedule and sales data under each applicable revenue account subheading.
3. Where the same customers are served under more than one rate schedule in the same revenue account classification (such as a general residential schedule and an off peak water heating schedule), the entries in column (d) for the special schedule should denote the duplication in number of reported customers.
4. The average number of customers should be the number of bills rendered during the year divided by the number of billing periods during the year (12 if all billings are made monthly).
5. For any rate schedule having a fuel adjustment clause state in a footnote the estimated additional revenue billed pursuant thereto.
6. Report amount of unbilled revenue as of end of year for each applicable revenue account subheading.

(a) Concept: OtherSalesToPublicAuthorities

Estimated Fuel Clause Revenues included in Other Sales to Public Authorities:

Other Sales to Public Authorities Fuel	$	23,672,244
Deferred Fuel		(11,885,821)
Total	$	11,786,423

Name of Respondent: El Paso Electric Company	This report is: (1) ☑ An Original (2) ☐ A Resubmission	Date of Report: 04/03/2025	Year/Period of Report End of: 2024/ Q4

SALES OF ELECTRICITY BY RATE SCHEDULES

1. Report below for each rate schedule in effect during the year the MWH of electricity sold, revenue, average number of customer, average Kwh per customer, and average revenue per Kwh, excluding date for Sales for Resale which is reported on Page 310.
2. Provide a subheading and total for each prescribed operating revenue account in the sequence followed in "Electric Operating Revenues," Page 300. If the sales under any rate schedule are classified in more than one revenue account, List the rate schedule and sales data under each applicable revenue account subheading.
3. Where the same customers are served under more than one rate schedule in the same revenue account classification (such as a general residential schedule and an off peak water heating schedule), the entries in column (d) for the special schedule should denote the duplication in number of reported customers.
4. The average number of customers should be the number of bills rendered during the year divided by the number of billing periods during the year (12 if all billings are made monthly).
5. For any rate schedule having a fuel adjustment clause state in a footnote the estimated additional revenue billed pursuant thereto.
6. Report amount of unbilled revenue as of end of year for each applicable revenue account subheading.

FOOTNOTE DATA

(a) Concept: AverageNumberOfCustomersPerMonthSalesOfElectricityByRateSchedulesIncludingUnbilledRevenue

There were less than 1,310 duplicate customers for all rates schedules combined in 2024.

Name of Respondent: El Paso Electric Company	This report is: (1) ☑ An Original (2) ☐ A Resubmission	Date of Report: 04/03/2025	Year/Period of Report End of: 2024/ Q4

SALES FOR RESALE (Account 447)

1. Report all sales for resale (i.e., sales to purchasers other than ultimate consumers) transacted on a settlement basis other than power exchanges during the year. Do not report exchanges of electricity (i.e., transactions involving a balancing of debits and credits for energy, capacity, etc.) and any settlements for imbalanced exchanges on this schedule. Power exchanges must be reported on the Purchased Power schedule (Page 326).
2. Enter the name of the purchaser in column (a). Do note abbreviate or truncate the name or use acronyms. Explain in a footnote any ownership interest or affiliation the respondent has with the purchaser.
3. In column (b), enter a Statistical Classification Code based on the original contractual terms and conditions of the service as follows:

   RQ - for requirements service. Requirements service is service which the supplier plans to provide on an ongoing basis (i.e., the supplier includes projected load for this service in its system resource planning). In addition, the reliability of requirements service must be the same as, or second only to, the supplier's service to its own ultimate consumers.

   LF - for tong-term service. "Long-term" means five years or Longer and "firm" means that service cannot be interrupted for economic reasons and is intended to remain reliable even under adverse conditions (e.g., the supplier must attempt to buy emergency energy from third parties to maintain deliveries of LF service). This category should not be used for Long-term firm service which meets the definition of RQ service. For all transactions identified as LF, provide in a footnote the termination date of the contract defined as the earliest date that either buyer or setter can unilaterally get out of the contract.

   IF - for intermediate-term firm service. The same as LF service except that "intermediate-term" means longer than one year but Less than five years.

   SF - for short-term firm service. Use this category for all firm services where the duration of each period of commitment for service is one year or less.

   LU - for Long-term service from a designated generating unit. "Long-term" means five years or Longer. The availability and reliability of service, aside from transmission constraints, must match the availability and reliability of designated unit.

   IU - for intermediate-term service from a designated generating unit. The same as LU service except that "intermediate-term" means Longer than one year but Less than five years.

   OS - for other service. use this category only for those services which cannot be placed in the above-defined categories, such as all non-firm service regardless of the Length of the contract and service from designated units of Less than one year. Describe the nature of the service in a footnote.

   AD - for Out-of-period adjustment. Use this code for any accounting adjustments or "true-ups" for service provided in prior reporting years. Provide an explanation in a footnote for each adjustment.

4. Group requirements RQ sales together and report them starting at line number one. After listing all RQ sales, enter "Subtotal - RQ" in column (a). The remaining sales may then be listed in any order. Enter "Subtotal-Non-RQ" in column (a) after this Listing. Enter "Total" in column (a) as the Last Line of the schedule. Report subtotals and total for columns (g) through (k).
5. In Column (c), identify the FERC Rate Schedule or Tariff Number. On separate Lines, List all FERC rate schedules or tariffs under which service, as identified in column (b), is provided.
6. For requirements RQ sales and any type of-service involving demand charges imposed on a monthly (or Longer) basis, enter the average monthly billing demand in column (d), the average monthly non-coincident peak (NCP) demand in column (e), and the average monthly coincident peak (CP) demand in column (f). For all other types of service, enter NA in columns (d), (e) and (f). Monthly NCP demand is the maximum metered hourly (60-minute integration) demand in a month. Monthly CP demand is the metered demand during the hour (60-minute integration) in which the supplier's system reaches its monthly peak. Demand reported in columns (e) and (f) must be in megawatts. Footnote any demand not stated on a megawatt basis and explain.
7. Report in column (g) the megawatt hours shown on bills rendered to the purchaser.
8. Report demand charges in column (h), energy charges in column (i), and the total of any other types of charges, including out-of-period adjustments, in column (j). Explain in a footnote all components of the amount shown in column (j). Report in column (k) the total charge shown on bills rendered to the purchaser.
9. The data in column (g) through (k) must be subtotaled based on the RQ/Non-RQ grouping (see instruction 4), and then totaled on the Last -line of the schedule. The "Subtotal - RQ" amount in column (g) must be reported as Requirements Sales For Resale on Page 401, line 23. The "Subtotal - Non-RQ" amount in column (g) must be reported as Non-Requirements Sales For Resale on Page 401,line 24.
10. Footnote entries as required and provide explanations following all required data.

Name of Respondent: El Paso Electric Company	This report is: (1) ☑ An Original (2) ☐ A Resubmission	Date of Report: 04/03/2025	Year/Period of Report End of: 2024/ Q4

FOOTNOTE DATA

(a) Concept: NuclearFuelExpense

Includes a U.S. Department of Energy ("DOE") refund of $2,848,457.

(b) Concept: NuclearFuelExpense

Includes a DOE refund of $2,177,177.

Name of Respondent: El Paso Electric Company	This report is: (1) ☑ An Original (2) ☐ A Resubmission	Date of Report: 04/03/2025	Year/Period of Report End of: 2024/ Q4

PURCHASED POWER (Account 555)

1. Report all power purchases made during the year. Also report exchanges of electricity (i.e., transactions involving a balancing of debits and credits for energy, capacity, etc.) and any settlements for imbalanced exchanges.
2. Enter the name of the seller or other party in an exchange transaction in column (a). Do not abbreviate or truncate the name or use acronyms. Explain in a footnote any ownership interest or affiliation the respondent has with the seller.
3. In column (b), enter a Statistical Classification Code based on the original contractual terms and conditions of the service as follows:

   RQ - for requirements service. Requirements service is service which the supplier plans to provide on an ongoing basis (i.e., the supplier includes projects load for this service in its system resource planning). In addition, the reliability of requirement service must be the same as, or second only to, the supplier's service to its own ultimate consumers.

   LF - for long-term firm service. "Long-term" means five years or longer and "firm" means that service cannot be interrupted for economic reasons and is intended to remain reliable even under adverse conditions (e.g., the supplier must attempt to buy emergency energy from third parties to maintain deliveries of LF service). This category should not be used for long-term firm service firm service which meets the definition of RQ service. For all transaction identified as LF, provide in a footnote the termination date of the contract defined as the earliest date that either buyer or seller can unilaterally get out of the contract.

   IF - for intermediate-term firm service. The same as LF service expect that "intermediate-term" means longer than one year but less than five years.

   SF - for short-term service. Use this category for all firm services, where the duration of each period of commitment for service is one year or less.

   LU - for long-term service from a designated generating unit. "Long-term" means five years or longer. The availability and reliability of service, aside from transmission constraints, must match the availability and reliability of the designated unit.

   IU - for intermediate-term service from a designated generating unit. The same as LU service expect that "intermediate-term" means longer than one year but less than five years.

   EX - For exchanges of electricity. Use this category for transactions involving a balancing of debits and credits for energy, capacity, etc. and any settlements for imbalanced exchanges.

   OS - for other service. Use this category only for those services which cannot be placed in the above-defined categories, such as all non-firm service regardless of the Length of the contract and service from designated units of Less than one year. Describe the nature of the service in a footnote for each adjustment.

   AD - for out-of-period adjustment. Use this code for any accounting adjustments or "true-ups" for service provided in prior reporting years. Provide an explanation in a footnote for each adjustment.

4. In column (c), identify the FERC Rate Schedule Number or Tariff, or, for non-FERC jurisdictional sellers, include an appropriate designation for the contract. On separate lines, list all FERC rate schedules, tariffs or contract designations under which service, as identified in column (b), is provided.
5. For requirements RQ purchases and any type of service involving demand charges imposed on a monnthly (or longer) basis, enter the monthly average billing demand in column (d), the average monthly non-coincident peak (NCP) demand in column (e), and the average monthly coincident peak (CP) demand in column (f). For all other types of service, enter NA in columns (d), (e) and (f). Monthly NCP demand is the maximum metered hourly (60-minute integration) demand in a month. Monthly CP demand is the metered demand during the hour (60-minute integration) in which the supplier's system reaches its monthly peak. Demand reported in columns (e) and (f) must be in megawatts. Footnote any demand not stated on a megawatt basis and explain.
6. Report in column (g) the megawatthours shown on bills rendered to the respondent, excluding purchases for energy storage. Report in column (h) the megawatthours shown on bills rendered to the respondent for energy storage purchases. Report in columns (i) and (j) the megawatthours of power exchanges received and delivered, used as the basis for settlement. Do not report net exchange.
7. Report demand charges in column (k), energy charges in column (l), and the total of any other types of charges, including out-of-period adjustments, in column (m). Explain in a footnote all components of the amount shown in column (m). Report in column (n) the total charge shown on bills received as settlement by the respondent. For power exchanges, report in column (n) the settlement amount for the net receipt of energy. If more energy was delivered than received, enter a negative amount. If the settlement amount (m) include credits or charges other than incremental generation expenses, or (2) excludes certain credits or charges covered by the agreement, provide an explanatory footnote.
8. The data in columns (g) through (n) must be totaled on the last line of the schedule. The total amount in columns (g) and (h) must be reported as Purchases on Page 401, line 10. The total amount in column (i) must be reported as Exchange Received on Page 401, line 12. The total amount in column (j) must be reported as Exchange Delivered on Page 401, line 13.
9. Footnote entries as required and provide explanations following all required data.

Contingent purchases.
(al) Concept: RateScheduleTariffNumber
MBR = market-based rate Seller sold power to EPE pursuant to the WSPP Agreement, an individually negotiated Edison Electric Institute Agreement, or an individually negotiated Purchased Power Agreement.
(am) Concept: RateScheduleTariffNumber
OATT = Open Access Transmission Tariff.
(an) Concept: RateScheduleTariffNumber
SRSG = Southwest Reserve Sharing Group Participation Agreement, end date April 30th, 2024.
(ao) Concept: RateScheduleTariffNumber
NWPP RSG = Northwest Power Pool Reserve Sharing Group Participation Agreement effective May 1st, 2024.
(ap) Concept: RateScheduleTariffNumber
New Mexico Rate No. 16.
(aq) Concept: RateScheduleTariffNumber
New Mexico Rate No. 33.
(ar) Concept: RateScheduleTariffNumber
MBR (WEIM) = Market-Based Rate WEIM EPE filed a notice of change in status with an accompanying market power analysis, and requested authorization to transact at market-based rates in the WEIM administered by CAISO. EPE commenced transacting in the WEIM on April 5, 2023.
(as) Concept: RateScheduleTariffNumber
Texas Rate No. 48.
(at) Concept: MegawattHoursPurchasedOtherThanStorage
The 937,820 MWhs relate to purchases from Freeport-McMoran Copper & Gold Energy Services LLC ("Freeport") related to EPE's Power Purchase and Sales Agreement with Freeport dated December 16, 2005.
(au) Concept: OtherChargesOfPurchasedPower
Represents amount paid to various New Mexico customers for excess renewable energy generated by customers and bought by EPE.
(av) Concept: OtherChargesOfPurchasedPower
Spinning Reserve purchases.
(aw) Concept: OtherChargesOfPurchasedPower
Represents amount paid for renewable energy certificates related to renewable energy generated by various New Mexico customers.

(ax) Concept: OtherChargesOfPurchasedPower
Represents amount paid to various retail Texas customers for excess distributed renewable energy generated by customers and bought by EPE.
(ay) Concept: OtherChargesOfPurchasedPower
Reverses the penalty credits associated with the terminated Hecate Purchased Power Agreement, as this resource was approved in New Mexico but not in Texas.
(az) Concept: MegawattHoursPurchasedOtherThanStorage
Includes 937,820 MWhs related to purchases to Freeport-McMoRan related to EPE's Power Purchase and Sales Agreement with Freeport-McMoRan dated December 16, 2005.

Name of Respondent: El Paso Electric Company	This report is: (1) ☑ An Original (2) ☐ A Resubmission	Date of Report: 04/03/2025	Year/Period of Report End of: 2024/ Q4

TRANSMISSION OF ELECTRICITY FOR OTHERS (Account 456.1) (Including transactions referred to as "wheeling")

1. Report all transmission of electricity, i.e., wheeling, provided for other electric utilities, cooperatives, other public authorities, qualifying facilities, non-traditional utility suppliers and ultimate customers for the quarter.
2. Use a separate line of data for each distinct type of transmission service involving the entities listed in column (a), (b) and (c).
3. Report in column (a) the company or public authority that paid for the transmission service. Report in column (b) the company or public authority that the energy was received from and in column (c) the company or public authority that the energy was delivered to. Provide the full name of each company or public authority. Do not abbreviate or truncate name or use acronyms. Explain in a footnote any ownership interest in or affiliation the respondent has with the entities listed in columns (a), (b) or (c).
4. In column (d) enter a Statistical Classification code based on the original contractual terms and conditions of the service as follows: FNO - Firm Network Service for Others, FNS - Firm Network Transmission Service for Self, LFP - "Long-Term Firm Point to Point Transmission Service, OLF - Other Long-Term Firm Transmission Service, SFP - Short-Term Firm Point to Point Transmission Reservation, NF - non-firm transmission service, OS - Other Transmission Service and AD - Out-of-Period Adjustments. Use this code for any accounting adjustments or "true-ups" for service provided in prior reporting periods. Provide an explanation in a footnote for each adjustment. See General Instruction for definitions of codes.
5. In column (e), identify the FERC Rate Schedule or Tariff Number, On separate lines, list all FERC rate schedules or contract designations under which service, as identified in column (d), is provided.
6. Report receipt and delivery locations for all single contract path, "point to point" transmission service. In column (f), report the designation for the substation, or other appropriate identification for where energy was received as specified in the contract. In column (g) report the designation for the substation, or other appropriate identification for where energy was delivered as specified in the contract.
7. Report in column (h) the number of megawatts of billing demand that is specified in the firm transmission service contract. Demand reported in column (h) must be in megawatts. Footnote any demand not stated on a megawatts basis and explain.
8. Report in column (i) and (j) the total megawatthours received and delivered.
9. In column (k) through (n), report the revenue amounts as shown on bills or vouchers. In column (k), provide revenues from demand charges related to the billing demand reported in column (h). In column (l), provide revenues from energy charges related to the amount of energy transferred. In column (m), provide the total revenues from all other charges on bills or vouchers rendered, including out of period adjustments. Explain in a footnote all components of the amount shown in column (m). Report in column (n) the total charge shown on bills rendered to the entity Listed in column (a). If no monetary settlement was made, enter zero (0) in column (n). Provide a footnote explaining the nature of the non-monetary settlement, including the amount and type of energy or service rendered.
10. The total amounts in columns (i) and (j) must be reported as Transmission Received and Transmission Delivered for annual report purposes only on Page 401, Lines 16 and 17, respectively.
11. Footnote entries and provide explanations following all required data.

FOOTNOTE DATA

(a) Concept: StatisticalClassificationCode

Network Integration Transmission Service. Evergreen contract may expire on March 31st of the applicable year with a prior two year notice.

(b) Concept: StatisticalClassificationCode

Firm transmission contracts of 125 and 125MW, expiration January 1, 2026.

(c) Concept: StatisticalClassificationCode

Firm transmission contracts of 80, 4 and 31 MW, expiration January 1, 2025, January 1, 2026 and October 1 2026, respectively.

(d) Concept: StatisticalClassificationCode

Firm transmission contract, expiration August 1, 2029.

(e) Concept: StatisticalClassificationCode

Firm transmission contracts of 111 and 30 MW, expiration January 1, 2029. Includes 111 MW generation dependent firm transmission service per executed service agreement.

(f) Concept: StatisticalClassificationCode

Firm transmission contract, expiration May 1, 2027.

(g) Concept: StatisticalClassificationCode

Firm transmission contract, expiration January 1, 2025.

(h) Concept: StatisticalClassificationCode

Firm transmission contract, expiration July 1, 2028.

(i) Concept: StatisticalClassificationCode

True up to November 2023 to credit the Hourly Non-Firm rate and charge the Daily Non-Firm rate.

(j) Concept: StatisticalClassificationCode

Firm grandfathered transmission contracts, expiration January 1, 2026.

(k) Concept: StatisticalClassificationCode

Firm transmission contract, expiration January 1, 2026. Service was redirected to another yearly service.

(l) Concept: StatisticalClassificationCode

Firm transmission contract, expiration January 1, 2026. Service was redirected to another yearly service.

(m) Concept: StatisticalClassificationCode

Firm transmission contracts of 185 and 65MW, expiration January 1, 2026.

(n) Concept: StatisticalClassificationCode

Firm transmission contract, expiration January 1, 2025.

(o) Concept: StatisticalClassificationCode

Firm transmission contract, expiration November 1, 2029.

(p) Concept: StatisticalClassificationCode

Firm transmission contract, expiration November 1, 2029. Service was redirected to monthly services.

(q) Concept: StatisticalClassificationCode

Firm transmission contract, expiration October 1, 2029.

(r) Concept: RateScheduleTariffNumber

OATT = Open Access Transmission Tariff.

TRANSMISSION OF ELECTRICITY BY ISO/RTOs

1. Report in Column (a) the Transmission Owner receiving revenue for the transmission of electricity by the ISO/RTO.
2. Use a separate line of data for each distinct type of transmission service involving the entities listed in Column (a).
3. In Column (b) enter a Statistical Classification code based on the original contractual terms and conditions of the service as follows: FNO – Firm Network Service for Others, FNS – Firm Network Transmission Service for Self, LFP – Long-Term Firm Point-to-Point Transmission Service, OLF – Other Long-Term Firm Transmission Service, SFP – Short-Term Firm Point-to-Point Transmission Reservation, NF – Non-Firm Transmission Service, OS – Other Transmission Service and AD- Out-of-Period Adjustments. Use this code for any accounting adjustments or "true-ups" for service provided in prior reporting periods. Provide an explanation in a footnote for each adjustment. See General Instruction for definitions of codes.
4. In column (c) identify the FERC Rate Schedule or tariff Number, on separate lines, list all FERC rate schedules or contract designations under which service, as identified in column (b) was provided.
5. In column (d) report the revenue amounts as shown on bills or vouchers.
6. Report in column (e) the total revenues distributed to the entity listed in column (a).

Line No.	Payment Received by (Transmission Owner Name) (a)	Statistical Classification (b)	FERC Rate Schedule or Tariff Number (c)	Total Revenue by Rate Schedule or Tariff (d)	Total Revenue (e)

TRANSMISSION OF ELECTRICITY BY OTHERS (Account 565)

1. Report all transmission, i.e. wheeling or electricity provided by other electric utilities, cooperatives, municipalities, other public authorities, qualifying facilities, and others for the quarter.
2. In column (a) report each company or public authority that provided transmission service. Provide the full name of the company, abbreviate if necessary, but do not truncate name or use acronyms. Explain in a footnote any ownership interest in or affiliation with the transmission service provider. Use additional columns as necessary to report all companies or public authorities that provided transmission service for the quarter reported.
3. In column (b) enter a Statistical Classification code based on the original contractual terms and conditions of the service as follows:
   FNS - Firm Network Transmission Service for Self, LFP - Long-Term Firm Point-to-Point Transmission Reservations. OLF - Other Long-Term Firm Transmission Service, SFP - Short-Term Firm Point-to- Point Transmission Reservations, NF - Non-Firm Transmission Service, and OS - Other Transmission Service. See General Instructions for definitions of statistical classifications.
4. Report in column (c) and (d) the total megawatt hours received and delivered by the provider of the transmission service.
5. Report in column (e), (f) and (g) expenses as shown on bills or vouchers rendered to the respondent. In column (e) report the demand charges and in column (f) energy charges related to the amount of energy transferred. On column (g) report the total of all other charges on bills or vouchers rendered to the respondent, including any out of period adjustments. Explain in a footnote all components of the amount shown in column (g). Report in column (h) the total charge shown on bills rendered to the respondent. If no monetary settlement was made, enter zero in column (h). Provide a footnote explaining the nature of the non-monetary settlement, including the amount and type of energy or service rendered.
6. Enter ""TOTAL"" in column (a) as the last line.
7. Footnote entries and provide explanations following all required data.

Depreciation and Amortization of Electric Plant (Account 403, 404, 405)

1. Report in section A for the year the amounts for: (b) Depreciation Expense (Account 403); (c) Depreciation Expense for Asset Retirement Costs (Account 403.1); (d) Amortization of Limited-Term Electric Plant (Account 404); and (e) Amortization of Other Electric Plant (Account 405).
2. Report in Section B the rates used to compute amortization charges for electric plant (Accounts 404 and 405). State the basis used to compute charges and whether any changes have been made in the basis or rates used from the preceding report year.
3. Report all available information called for in Section C every fifth year beginning with report year 1971, reporting annually only changes to columns (c) through (g) from the complete report of the preceding year.
   Unless composite depreciation accounting for total depreciable plant is followed, list numerically in column (a) each plant subaccount, account or functional classification, as appropriate, to which a rate is applied. Identify at the bottom of Section C the type of plant included in any sub-account used.
   In column (b) report all depreciable plant balances to which rates are applied showing subtotals by functional Classifications and showing composite total. Indicate at the bottom of section C the manner in which column balances are obtained. If average balances, state the method of averaging used.
   For columns (c), (d), and (e) report available information for each plant subaccount, account or functional classification listed in column (a). If plant mortality studies are prepared to assist in estimating average service Lives, show in column (f) the type of mortality curve selected as most appropriate for the account and in column (g), if available, the weighted average remaining life of surviving plant. If composite depreciation accounting is used, report available information called for in columns (b) through (g) on this basis.
4. If provisions for depreciation were made during the year in addition to depreciation provided by application of reported rates, state at the bottom of section C the amounts and nature of the provisions and the plant items to which related.

FOOTNOTE DATA

(a) Concept: OtherRegulatoryAssetsRegulatoryCommissionExpenses

Represents costs incurred for the FERC transmission rate case for its FERC jurisdiction. EPE requested these costs in its FERC rate case filing in Docket No. ER22-282-000. The 2024 FERC Final Order allowed recovery of these costs over a three-year period which began in August 2024.

(b) Concept: OtherRegulatoryAssetsRegulatoryCommissionExpenses

Represents rate case costs incurred after August 1, 2017 related to EPE's 2017 rate case, Docket No. 46831. In accordance with the Final Order in Docket No. 46831, EPE requested recovery of these costs in EPE's 2021 Texas base rate case filing, Docket No. 52195 ("2021 Texas Retail Rate Case Filing"). On September 15, 2022, the PUCT issued the PUCT Final Order in Docket No. 52195 ("2021 PUCT Final Order") which allowed recovery of these costs over a four-year recovery period which began in August 2022.

(c) Concept: OtherRegulatoryAssetsRegulatoryCommissionExpenses

Represents filing costs related to the 2019 Texas Fuel Reconciliation Filing in Docket No. 50058. EPE requested recovery of these costs in the 2021 Texas Retail Rate Case Filing. The 2021 PUCT Final Order allowed recovery of these costs over a four-year recovery period which began in August 2022.

(d) Concept: OtherRegulatoryAssetsRegulatoryCommissionExpenses

Represents costs associated with EPE's Texas Automated Metering System filing, Docket No. 52040. EPE requested recovery of these costs in the 2021 Texas Retail Rate Case Filing, Docket No. 52195. The 2021 PUCT Final Order approved the recovery of these expenses incurred before April 1, 2022 over a four-year recovery period which began in August 2022. The PUCT ordered costs incurred April 2022 and later to be requested for recovery in it's next base rate case filing.

(e) Concept: OtherRegulatoryAssetsRegulatoryCommissionExpenses

Represents rate case costs approved in the 2021 Texas Retail Rate Case Filing. The 2021 PUCT Final Order approved the recovery of rate case expenses incurred before April 1, 2022 over a four-year recovery period which began in August 2022. The PUCT ordered costs incurred August 2022 and later to be requested for recovery in it's next base rate case filing.

(f) Concept: OtherRegulatoryAssetsRegulatoryCommissionExpenses

Represents costs associated with EPE's filing to establish its Transmission Cost Recovery Factor ("TCRF") with the PUCT in Docket No. 49148. EPE requested recovery of these costs in the 2021 Texas Retail Rate Case Filing. The 2021 PUCT Final Order allowed recovery of these costs over a four-year recovery period which began in August 2022.

(g) Concept: OtherRegulatoryAssetsRegulatoryCommissionExpenses

Represents costs associated with EPE's filing to establish its Distribution Cost Recovery Factor ("DCRF") with the PUCT in Docket No. 49395. EPE requested recovery of these costs in the 2021 Texas Retail Rate Case Filing. The 2021 PUCT Final Order allowed recovery of these costs over a four-year recovery period which began in August 2022.

(h) Concept: OtherRegulatoryAssetsRegulatoryCommissionExpenses

EPE requested recovery of these costs in EPE's 2020 New Mexico rate case filing, Case No. 20-00104-UT. On June 23, 2021, the NMPRC issued its final order in the 2020 New Mexico rate case allowing recovery of these costs. The five-year recovery period of these costs began in July 2021.

Name of Respondent: El Paso Electric Company	This report is: (1) ☑ An Original (2) ☐ A Resubmission	Date of Report: 04/03/2025	Year/Period of Report End of: 2024/ Q4

RESEARCH, DEVELOPMENT, AND DEMONSTRATION ACTIVITIES

1. Describe and show below costs incurred and accounts charged during the year for technological research, development, and demonstration (R, D and D) project initiated, continued or concluded during the year. Report also support given to others during the year for jointly-sponsored projects.(Identify recipient regardless of affiliation.) For any R, D and D work carried with others, show separately the respondent's cost for the year and cost chargeable to others (See definition of research, development, and demonstration in Uniform System of Accounts).
2. Indicate in column (a) the applicable classification, as shown below:
   Classifications:

   Electric R, D and D Performed Internally:
   - Generation
     - hydroelectric
       - Recreation fish and wildlife
       - Other hydroelectric
     - Fossil-fuel steam
     - Internal combustion or gas turbine
     - Nuclear
     - Unconventional generation
     - Siting and heat rejection
   - Transmission
     - Overhead
     - Underground
   - Distribution
   - Regional Transmission and Market Operation
   - Environment (other than equipment)
   - Other (Classify and include items in excess of $50,000.)
   - Total Cost Incurred

   Electric, R, D and D Performed Externally:
   - Research Support to the electrical Research Council or the Electric Power Research Institute
   - Research Support to Edison Electric Institute
   - Research Support to Nuclear Power Groups
   - Research Support to Others (Classify)
   - Total Cost Incurred
3. Include in column (c) all R, D and D items performed internally and in column (d) those items performed outside the company costing $50,000 or more, briefly describing the specific area of R, D and D (such as safety, corrosion control, pollution, automation, measurement, insulation, type of appliance, etc.). Group items under $50,000 by classifications and indicate the number of items grouped. Under Other, (A (6) and B (4)) classify items by type of R, D and D activity.
4. Show in column (e) the account number charged with expenses during the year or the account to which amounts were capitalized during the year, listing Account 107, Construction Work in Progress, first. Show in column (f) the amounts related to the account charged in column (e).
5. Show in column (g) the total unamortized accumulating of costs of projects. This total must equal the balance in Account 188, Research, Development, and Demonstration Expenditures, Outstanding at the end of the year.
6. If costs have not been segregated for R, D and D activities or projects, submit estimates for columns (c), (d), and (f) with such amounts identified by ""Est.""
7. Report separately research and related testing facilities operated by the respondent.

Line No.	Classification (a)	Description (b)	Costs Incurred Internally Current Year (c)	Costs Incurred Externally Current Year (d)	AMOUNTS CHARGED IN CURRENT YEAR		Unamortized Accumulation (g)
					Amounts Charged In Current Year: Account (e)	Amounts Charged In Current Year: Amount (f)

DISTRIBUTION OF SALARIES AND WAGES

Report below the distribution of total salaries and wages for the year. Segregate amounts originally charged to clearing accounts to Utility Departments, Construction, Plant Removals, and Other Accounts, and enter such amounts in the appropriate lines and columns provided. In determining this segregation of salaries and wages originally charged to clearing accounts, a method of approximation giving substantially correct results may be used.

COMMON UTILITY PLANT AND EXPENSES

1. Describe the property carried in the utility's accounts as common utility plant and show the book cost of such plant at end of year classified by accounts as provided by Electric Plant Instruction 13, Common Utility Plant, of the Uniform System of Accounts. Also show the allocation of such plant costs to the respective departments using the common utility plant and explain the basis of allocation used, giving the allocation factors.
2. Furnish the accumulated provisions for depreciation and amortization at end of year, showing the amounts and classifications of such accumulated provisions, and amounts allocated to utility departments using the common utility plant to which such accumulated provisions relate, including explanation of basis of allocation and factors used.
3. Give for the year the expenses of operation, maintenance, rents, depreciation, and amortization for common utility plant classified by accounts as provided by the Uniform System of Accounts. Show the allocation of such expenses to the departments using the common utility plant to which such expenses are related. Explain the basis of allocation used and give the factors of allocation.
4. Give date of approval by the Commission for use of the common utility plant classification and reference to the order of the Commission or other authorization.

Name of Respondent: El Paso Electric Company	This report is: (1) ☑ An Original (2) ☐ A Resubmission	Date of Report: 04/03/2025	Year/Period of Report End of: 2024/ Q4

AMOUNTS INCLUDED IN ISO/RTO SETTLEMENT STATEMENTS

1. The respondent shall report below the details called for concerning amounts it recorded in Account 555, Purchase Power, and Account 447, Sales for Resale, for items shown on ISO/RTO Settlement Statements. Transactions should be separately netted for each ISO/RTO administered energy market for purposes of determining whether an entity is a net seller or purchaser in a given hour. Net megawatt hours are to be used as the basis for determining whether a net purchase or sale has occurred. In each monthly reporting period, the hourly sale and purchase net amounts are to be aggregated and separately reported in Account 447, Sales for Resale, or Account 555, Purchased Power, respectively.

Line No.	Description of Item(s) (a)	Balance at End of Quarter 1 (b)	Balance at End of Quarter 2 (c)	Balance at End of Quarter 3 (d)	Balance at End of Year (e)
1	Energy				
2	Net Purchases (Account 555)

PURCHASES AND SALES OF ANCILLARY SERVICES

Report the amounts for each type of ancillary service shown in column (a) for the year as specified in Order No. 888 and defined in the respondents Open Access Transmission Tariff.
In columns for usage, report usage-related billing determinant and the unit of measure.

1. On Line 1 columns (b), (c), (d), and (e) report the amount of ancillary services purchased and sold during the year.
2. On Line 2 columns (b), (c), (d), and (e) report the amount of reactive supply and voltage control services purchased and sold during the year.
3. On Line 3 columns (b), (c), (d), and (e) report the amount of regulation and frequency response services purchased and sold during the year.
4. On Line 4 columns (b), (c), (d), and (e) report the amount of energy imbalance services purchased and sold during the year.
5. On Lines 5 and 6, columns (b), (c), (d), and (e) report the amount of operating reserve spinning and supplement services purchased and sold during the period.
6. On Line 7 columns (b), (c), (d), and (e) report the total amount of all other types ancillary services purchased or sold during the year. Include in a footnote and specify the amount for each type of other ancillary service provided.

		Amount Purchased for the Year			Amount Sold for the Year		
		Usage - Related Billing Determinant			Usage - Related Billing Determinant		
Line No.	Type of Ancillary Service (a)	Number of Units (b)	Unit of Measure (c)	Dollar (d)	Number of Units (e)	Unit of Measure (f)	Dollars (g)
1	Scheduling, System Control and Dispatch	9,261,368	MWh	[a]965,035	[b]5,982,358	MWh	[c]1,018,376

8	Total (Lines 1 thru 7)	18,522,736		1,520,717	10,680,140		1,388,062

Name of Respondent: El Paso Electric Company	This report is: (1) ☑ An Original (2) ☐ A Resubmission	Date of Report: 04/03/2025	Year/Period of Report End of: 2024/ Q4

FOOTNOTE DATA

(a) Concept: AncillaryServicesPurchasedAmount

Ancillary Services Purchased represents service to Native Load that EPE self-provides from its own facilities. The dollar values are imputed as though EPE took these services under its own tariff.

(b) Concept: AncillaryServicesSoldNumberOfUnits

The Number of Units includes 2,179,381 MWh from hourly services (of which 37,559 MWh were sold to EPE's Resource Management Department); 4,410 MWh from daily services; 50 MWh from weekly services; 1,122 MWh from monthly services and 3,797,395 MWh from yearly contracts (of which 78,025 MWh were sold to Rio Grande Electric Co-Op, a network customer of the EPE).

(c) Concept: AncillaryServicesSoldAmount

$189,381 pertains to hourly services (of which $3,348 pertains to EPE's Resource Management Department). $7,973 pertains to daily services. $500 pertains to weekly services. $67,821 pertains to monthly services and $752,701 pertains to yearly contracts (of which $6,645 pertains to Rio Grande Electric Co-Op, a network customer of EPE).

(d) Concept: AncillaryServicesPurchasedAmount

Ancillary Services Purchased represents service to Native Load that EPE self-provides from its own facilities. The dollar values are imputed as though EPE took these services under its own tariff.

(e) Concept: AncillaryServicesSoldNumberOfUnits

The Number of Units includes 902,243 MWh from hourly services (of which 35,126 MWh were sold to EPE's Resource Management Department); 3,195 MWh from daily services; 50 MWh from weekly services; 983 MWh from monthly services and 3,791,311 MWh from yearly contracts (of which 78,025 MWh were sold to Rio Grande Electric Co-Op, a network customer of EPE).

(f) Concept: AncillaryServicesSoldAmount

$53,353 pertains to hourly services (of which $2,108 pertains to EPE's Resource Management Department). $4,675 pertains to daily services. $510 pertains to weekly services. $43,252 pertains to monthly services and $267,896 pertains to yearly contracts (of which $5,020 pertains to Rio Grande Electric Co-Op, a network customer of EPE).

Name of Respondent: El Paso Electric Company	This report is: (1) ☑ An Original (2) ☐ A Resubmission	Date of Report: 04/03/2025	Year/Period of Report End of: 2024/ Q4

MONTHLY TRANSMISSION SYSTEM PEAK LOAD

1. Report the monthly peak load on the respondent's transmission system. If the respondent has two or more power systems which are not physically integrated, furnish the required information for each non-integrated system.
2. Report on Column (b) by month the transmission system's peak load.
3. Report on Columns (c) and (d) the specified information for each monthly transmission - system peak load reported on Column (b).
4. Report on Columns (e) through (j) by month the system' monthly maximum megawatt load by statistical classifications. See General Instruction for the definition of each statistical classification.

FOOTNOTE DATA

(a) Concept: MegawattHoursSoldNonRequirementsSales

Includes 937,820 MWhs related to purchases to Freeport-McMoRan related to EPE's Power Purchase and Sales Agreement with Freeport-McMoRan dated December 16, 2005.

(b) Concept: EnergyLosses

Includes a net 41,749 MWhs related to timing differences on sales for resale and purchased power, including EIM transactions, as EPE records actual sales for resale and purchased power on a one-month lag.

(c) Concept: DispositionOfEnergy

Includes 937,820 MWhs related to purchases to Freeport-McMoRan related to EPE's Power Purchase and Sales Agreement with Freeport-McMoRan dated December 16, 2005.

(d) Concept: MegawattHoursPurchasedOtherThanStorage

Includes 937,820 MWhs related to purchases to Freeport-McMoRan related to EPE's Power Purchase and Sales Agreement with Freeport-McMoRan dated December 16, 2005.

(e) Concept: SourcesOfEnergy

Includes 937,820 MWhs related to purchases to Freeport-McMoRan related to EPE's Power Purchase and Sales Agreement with Freeport-McMoRan dated December 16, 2005.

Name of Respondent: El Paso Electric Company	This report is: (1) ☑ An Original (2) ☐ A Resubmission	Date of Report: 04/03/2025	Year/Period of Report End of: 2024/ Q4

MONTHLY PEAKS AND OUTPUT

1. Report the monthly peak load and energy output. If the respondent has two or more power which are not physically integrated, furnish the required information for each non- integrated system.
2. Report in column (b) by month the system's output in Megawatt hours for each month.
3. Report in column (c) by month the non-requirements sales for resale. Include in the monthly amounts any energy losses associated with the sales.
4. Report in column (d) by month the system's monthly maximum megawatt load (60 minute integration) associated with the system.
5. Report in column (e) and (f) the specified information for each monthly peak load reported in column (d).

Line No.	Month (a)	Total Monthly Energy (b)	Monthly Non-Requirement Sales for Resale & Associated Losses (c)	Monthly Peak - Megawatts (d)	Monthly Peak - Day of Month (e)	Monthly Peak - Hour (f)

Steam Electric Generating Plant Statistics

1. Report data for plant in Service only.
2. Large plants are steam plants with installed capacity (name plate rating) of 25,000 Kw or more. Report in this page gas-turbine and internal combustion plants of 10,000 Kw or more, and nuclear plants.
3. Indicate by a footnote any plant leased or operated as a joint facility.
4. If net peak demand for 60 minutes is not available, give data which is available, specifying period.
5. If any employees attend more than one plant, report on line 11 the approximate average number of employees assignable to each plant.
6. If gas is used and purchased on a therm basis report the Btu content or the gas and the quantity of fuel burned converted to Mcf.
7. Quantities of fuel burned (Line 38) and average cost per unit of fuel burned (Line 41) must be consistent with charges to expense accounts 501 and 547 (Line 42) as show on Line 20.
8. If more than one fuel is burned in a plant furnish only the composite heat rate for all fuels burned.
9. Items under Cost of Plant are based on USofA accounts. Production expenses do not include Purchased Power, System Control and Load Dispatching, and Other Expenses Classified as Other Power Supply Expenses.
10. For IC and GT plants, report Operating Expenses, Account Nos. 547 and 549 on Line 25 "Electric Expenses," and Maintenance Account Nos. 553 and 554 on Line 32, "Maintenance of Electric Plant." Indicate plants designed for peak load service. Designate automatically operated plants.
11. For a plant equipped with combinations of fossil fuel steam, nuclear steam, hydro, internal combustion or gas-turbine equipment, report each as a separate plant. However, if a gas-turbine unit functions in a combined cycle operation with a conventional steam unit, include the gas-turbine with the steam plant.
12. If a nuclear power generating plant, briefly explain by footnote (a) accounting method for cost of power generated including any excess costs attributed to research and development; (b) types of cost units used for the various components of fuel cost; and (c) any other informative data concerning plant type fuel used, fuel enrichment type and quantity for the report period and other physical and operating characteristics of plant.

FOOTNOTE DATA

(a) Concept: PlantKind

EPE owns a 15.8% interest in each of the three nuclear generating units and common facilities at Palo Verde. The Palo Verde participants include Arizona Public Service Company which serves as operating agent for Palo Verde, Southern California Edison Company, Public Service Company of New Mexico, Southern California Public Power Authority, Salt River Project Agricultural Improvement and Power District and the Los Angeles Department of Water and Power. EPE is entitled to 15.8% of the energy generated by Palo Verde.

(b) Concept: InstalledCapacityOfPlant

Data on lines 5,6,8,9,10,11 and 12 represents EPE's 15.8% share of Palo Verde.

(c) Concept: PlantHoursConnectedToLoad

Line 7 (applies to Rio Grande, Rio Grande Unit 9, Newman, Newman Unit 6, Montana, and Copper plants) is reported as any hour in which a unit at a plant was connected to load. Partial hours are rounded up to a full hour.

(d) Concept: PlantAverageNumberOfEmployees

Average number of employees for Copper is included in the average number of employees for Newman plant.

(e) Concept: PlantAverageNumberOfEmployees

Average number of employees for Newman Unit 6 is included in the average number of employees for Newman plant.

(f) Concept: PlantAverageNumberOfEmployees

Average number of employees for Rio Grande Unit 9 is included in the average number of employees for Rio Grande plant.

(g) Concept: FuelSteamPowerGeneration

Excludes a DOE refund of $2,848,457.

Pumped Storage Generating Plant Statistics

1. Large plants and pumped storage plants of 10,000 Kw or more of installed capacity (name plate ratings).
2. If any plant is leased, operating under a license from the Federal Energy Regulatory Commission, or operated as a joint facility, indicate such facts in a footnote. Give project number.
3. If net peak demand for 60 minutes is not available, give that which is available, specifying period.
4. If a group of employees attends more than one generating plant, report on Line 8 the approximate average number of employees assignable to each plant.
5. The items under Cost of Plant represent accounts or combinations of accounts prescribed by the Uniform System of Accounts. Production Expenses do not include Purchased Power System Control and Load Dispatching, and Other Expenses classified as "Other Power Supply Expenses."
6. Pumping energy (Line 10) is that energy measured as input to the plant for pumping purposes.
7. Include on Line 36 the cost of energy used in pumping into the storage reservoir. When this item cannot be accurately computed leave Lines 36, 37 and 38 blank and describe at the bottom of the schedule the company's principal sources of pumping power, the estimated amounts of energy from each station or other source that individually provides more than 10 percent of the total energy used for pumping, and production expenses per net MWH as reported herein for each source described. Group together stations and other resources which individually provide less than 10 percent of total pumping energy. If contracts are made with others to purchase power for pumping, give the supplier contract number, and date of contract.

GENERATING PLANT STATISTICS (Small Plants)

1. Small generating plants are steam plants of, less than 25,000 Kw; internal combustion and gas turbine-plants, conventional hydro plants and pumped storage plants of less than 10,000 Kw installed capacity (name plate rating).
2. Designate any plant leased from others, operated under a license from the Federal Energy Regulatory Commission, or operated as a joint facility, and give a concise statement of the facts in a footnote. If licensed project, give project number in footnote.
3. List plants appropriately under subheadings for steam, hydro, nuclear, internal combustion and gas turbine plants. For nuclear, see instruction 11, Page 402.
4. If net peak demand for 60 minutes is not available, give the which is available, specifying period.
5. If any plant is equipped with combinations of steam, hydro internal combustion or gas turbine equipment, report each as a separate plant. However, if the exhaust heat from the gas turbine is utilized in a steam turbine regenerative feed water cycle, or for preheated combustion air in a boiler, report as one plant.

ENERGY STORAGE OPERATIONS (Large Plants)

1. Large Plants are plants of 10,000 Kw or more.
2. In columns (a) (b) and (c) report the name of the energy storage project, functional classification (Production, Transmission, Distribution), and location.
3. In column (d), report Megawatt hours (MWH) purchased, generated, or received in exchange transactions for storage.
4. In columns (e), (f) and (g) report MWHs delivered to the grid to support production, transmission and distribution. The amount reported in column (d) should include MWHs delivered/provided to a generator's own load requirements or used for the provision of ancillary services.
5. In columns (h), (i), and (j) report MWHs lost during conversion, storage and discharge of energy.
6. In column (k) report the MWHs sold.
7. In column (l), report revenues from energy storage operations. In a footnote, disclose the revenue accounts and revenue amounts related to the income generating activity.
8. In column (m), report the cost of power purchased for storage operations and reported in Account 555.1, Power Purchased for Storage Operations. If power was purchased from an affiliated seller specify how the cost of the power was determined. In columns (n) and (o), report fuel costs for storage operations associated with self-generated power included in Account 501 and other costs associated with self-generated power.
9. In columns (q), (r) and (s) report the total project plant costs including but not exclusive of land and land rights, structures and improvements, energy storage equipment, turbines, compressors, generators, switching and conversion equipment, lines and equipment whose primary purpose is to integrate or tie energy storage assets into the power grid, and any other costs associated with the energy storage project included in the property accounts listed.

TRANSMISSION LINE STATISTICS

1. Report information concerning transmission lines, cost of lines, and expenses for year. List each transmission line having nominal voltage of 132 kilovolts or greater. Report transmission lines below these voltages in group totals only for each voltage. If required by a State commission to report individual lines for all voltages, do so but do not group totals for each voltage under 132 kilovolts.
2. Transmission lines include all lines covered by the definition of transmission system plant as given in the Uniform System of Accounts. Do not report substation costs and expenses on this page.
3. Exclude from this page any transmission lines for which plant costs are included in Account 121, Nonutility Property.
4. Indicate whether the type of supporting structure reported in column (e) is: (1) single pole wood or steel; (2) H-frame wood, or steel poles; (3) tower; or (4) underground construction If a transmission line has more than one type of supporting structure, indicate the mileage of each type of construction by the use of brackets and extra lines. Minor portions of a transmission line of a different type of construction need not be distinguished from the remainder of the line.
5. Report in columns (f) and (g) the total pole miles of each transmission line. Show in column (f) the pole miles of line on structures the cost of which is reported for the line designated; conversely, show in column (g) the pole miles of line on structures the cost of which is reported for another line. Report pole miles of line on leased or partly owned structures in column (g). In a footnote, explain the basis of such occupancy and state whether expenses with respect to such structures are included in the expenses reported for the line designated.
6. Do not report the same transmission line structure twice. Report Lower voltage Lines and higher voltage lines as one line. Designate in a footnote if you do not include Lower voltage lines with higher voltage lines. If two or more transmission line structures support lines of the same voltage, report the pole miles of the primary structure in column (f) and the pole miles of the other line(s) in column (g).
7. Designate any transmission line or portion thereof for which the respondent is not the sole owner. If such property is leased from another company, give name of lessor, date and terms of Lease, and amount of rent for year. For any transmission line other than a leased line, or portion thereof, for which the respondent is not the sole owner but which the respondent operates or shares in the operation of, furnish a succinct statement explaining the arrangement and giving particulars (details) of such matters as percent ownership by respondent in the line, name of co-owner, basis of sharing expenses of the Line, and how the expenses borne by the respondent are accounted for, and accounts affected. Specify whether lessor, co-owner, or other party is an associated company.
8. Designate any transmission line leased to another company and give name of Lessee, date and terms of lease, annual rent for year, and how determined. Specify whether lessee is an associated company.
9. Base the plant cost figures called for in columns (j) to (l) on the book cost at end of year.

Line No.	DESIGNATION		VOLTAGE (KV) - (Indicate where other than 60 cycle, 3 phase)		Type of Supporting Structure	LENGTH (Pole miles) - (In the case of underground lines report circuit miles)		Number of Circuits	Size of Conductor and Material	COST OF LINE (Include in column (j) Land, Land rights, and clearing right-of-way)			EXPENSES, EXCEPT DEPRECIATION AND TAXES

TRANSMISSION LINES ADDED DURING YEAR

1. Report below the information called for concerning Transmission lines added or altered during the year. It is not necessary to report minor revisions of lines.
2. Provide separate subheadings for overhead and under- ground construction and show each transmission line separately. If actual costs of competed construction are not readily available for reporting columns (l) to (o), it is permissible to report in these columns the costs. Designate, however, if estimated amounts are reported. Include costs of Clearing Land and Rights-of-Way, and Roads and Trails, in column (l) with appropriate footnote, and costs of Underground Conduit in column (m).
3. If design voltage differs from operating voltage, indicate such fact by footnote; also where line is other than 60 cycle, 3 phase, indicate such other characteristic.

SUBSTATIONS

1. Report below the information called for concerning substations of the respondent as of the end of the year.
2. Substations which serve only one industrial or street railway customer should not be listed below.
3. Substations with capacities of Less than 10 MVA except those serving customers with energy for resale, may be grouped according to functional character, but the number of such substations must be shown.
4. Indicate in column (b) the functional character of each substation, designating whether transmission or distribution and whether attended or unattended. At the end of the page, summarize according to function the capacities reported for the individual stations in column (f).
5. Show in columns (I), (j), and (k) special equipment such as rotary converters, rectifiers, condensers, etc. and auxiliary equipment for increasing capacity.
6. Designate substations or major items of equipment leased from others, jointly owned with others, or operated otherwise than by reason of sole ownership by the respondent. For any substation or equipment operated under lease, give name of lessor, date and period of lease, and annual rent. For any substation or equipment operated other than by reason of sole ownership or lease, give name of co-owner or other party, explain basis of sharing expenses or other accounting between the parties, and state amounts and accounts affected in respondent's books of account. Specify in each case whether lessor, co-owner, or other party is an associated company.

TRANSACTIONS WITH ASSOCIATED (AFFILIATED) COMPANIES

1. Report below the information called for concerning all non-power goods or services received from or provided to associated (affiliated) companies.
2. The reporting threshold for reporting purposes is $250,000. The threshold applies to the annual amount billed to the respondent or billed to an associated/affiliated company for non-power goods and services. The good or service must be specific in nature. Respondents should not attempt to include or aggregate amounts in a nonspecific category such as "general".
3. Where amounts billed to or received from the associated (affiliated) company are based on an allocation process, explain in a footnote.

On September 21, 2023, FERC issued an order in Docket Nos. ER20-2705-001, *et al* . (184 FERC ¶ 61,170). The order determined that EPE is an indirect subsidiary of IIF US Holding 2 LP ("IIF US Holding 2"), which is part of the Infrastructure Investments Fund. FERC also determined that IIF US Holding 2 is affiliated with J.P. Morgan Investment Management Inc. and its affiliates. Accordingly, EPE is treating JPMorgan Chase Bank as an affiliate.

INDEPENDENT ACCOUNTANTS' REVIEW REPORT

The Independent Accountants' Review Report for EPE for the calendar year 2024 is presented on pages 2 and 3 of this schedule. As agreed to by the Commission in Docket No. 25-00082-UT, EPE will file the Company's audit report for calendar year 2025 when it becomes available.

Report of Independent Auditors

To the Board of Directors and Management of El Paso Electric Company

Opinion

We have audited the accompanying financial statements of El Paso Electric Company (the "Company"), which comprise the balance sheets as of December 31, 2024 and 2023, and the related statements of operations, comprehensive operations, changes in common stock equity and cash flows for the years then ended, including the related notes (collectively referred to as the "financial statements").

In our opinion, the accompanying financial statements present fairly, in all material respects, the financial position of the Company as of December 31, 2024 and 2023, and the results of its operations and its cash flows for the years then ended in accordance with accounting principles generally accepted in the United States of America.

Basis for Opinion

We conducted our audit in accordance with auditing standards generally accepted in the United States of America (US GAAS). Our responsibilities under those standards are further described in the Auditors' Responsibilities for the Audit of the Financial Statements section of our report. We are required to be independent of the Company and to meet our other ethical responsibilities, in accordance with the relevant ethical requirements relating to our audit. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Responsibilities of Management for the Financial Statements

Management is responsible for the preparation and fair presentation of the financial statements in accordance with accounting principles generally accepted in the United States of America, and for the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, management is required to evaluate whether there are conditions or events, considered in the aggregate, that raise substantial doubt about the Company's ability to continue as a going concern for one year after the date the financial statements are available to be issued.

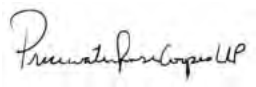
Auditors' Responsibilities for the Audit of the Financial Statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditors' report that includes our opinion. Reasonable assurance is a high level of assurance but is not absolute assurance and therefore is not a guarantee that an audit conducted in accordance with US GAAS will always detect a material misstatement when it exists. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control. Misstatements are considered material if there is a substantial likelihood that, individually or in the aggregate, they would influence the judgment made by a reasonable user based on the financial statements.

In performing an audit in accordance with US GAAS, we:

- Exercise professional judgment and maintain professional skepticism throughout the audit.
- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, and design and perform audit procedures responsive to those risks. Such procedures include examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control. Accordingly, no such opinion is expressed.
- Evaluate the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluate the overall presentation of the financial statements.
- Conclude whether, in our judgment, there are conditions or events, considered in the aggregate, that raise substantial doubt about the Company's ability to continue as a going concern for a reasonable period of time.

We are required to communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit, significant audit findings, and certain internal control-related matters that we identified during the audit.



Houston, Texas

Steam Electric Generating Plant Statistics

1. Report data for plant in Service only.
2. Large plants are steam plants with installed capacity (name plate rating) of 25,000 Kw or more. Report in this page gas-turbine and internal combustion plants of 10,000 Kw or more, and nuclear plants.
3. Indicate by a footnote any plant leased or operated as a joint facility.
4. If net peak demand for 60 minutes is not available, give data which is available, specifying period.
5. If any employees attend more than one plant, report on line 11 the approximate average number of employees assignable to each plant.
6. If gas is used and purchased on a therm basis report the Btu content or the gas and the quantity of fuel burned converted to Mcf.
7. Quantities of fuel burned (Line 38) and average cost per unit of fuel burned (Line 41) must be consistent with charges to expense accounts 501 and 547 (Line 42) as show on Line 20.
8. If more than one fuel is burned in a plant furnish only the composite heat rate for all fuels burned.
9. Items under Cost of Plant are based on USofA accounts. Production expenses do not include Purchased Power, System Control and Load Dispatching, and Other Expenses Classified as Other Power Supply Expenses.
10. For IC and GT plants, report Operating Expenses, Account Nos. 547 and 549 on Line 25 "Electric Expenses," and Maintenance Account Nos. 553 and 554 on Line 32, "Maintenance of Electric Plant." Indicate plants designed for peak load service. Designate automatically operated plants.
11. For a plant equipped with combinations of fossil fuel steam, nuclear steam, hydro, internal combustion or gas-turbine equipment, report each as a separate plant. However, if a gas-turbine unit functions in a combined cycle operation with a conventional steam unit, include the gas-turbine with the steam plant.
12. If a nuclear power generating plant, briefly explain by footnote (a) accounting method for cost of power generated including any excess costs attributed to research and development; (b) types of cost units used for the various components of fuel cost; and (c) any other informative data concerning plant type fuel used, fuel enrichment type and quantity for the report period and other physical and operating characteristics of plant.

1	Long-Term Debt	2,027,489,483	44.4765%	5.4263%	(3)	2.4134%
2	Common Stockholder's Equity	2,531,079,053	55.5235%	10.7000%	(2)	5.9410%
3	Total	4,558,568,536	100.0000%			8.3544%
	Base Period:					
4	Long-Term Debt	1,854,489,493	42.9560%	5.3332%		2.2909%
5	Common Stockholder's Equity	2,462,690,053	57.0440%	8.2206%	(1)	4.6895%
6	Total	4,317,179,546	100.0000%			6.9604%
	Test Year Period Adjustments:					
7	Long-Term Debt [3]	173,000,000				
8	Common Stockholder's Equity [4]	68,389,000				

[1] Please refer to Schedule G-1, Workpaper.
[2] Refer to the Direct Testimony of EPE witness Richard Gonzalez for discussion and support for EPE's proposed Test Year Period capital structure, cost of debt, and weighted cost of capital. Refer to the Direct Testimony of EPE witness Jennifer Nelson for support for EPE's proposed return on common stock equity.
[3] Amount reflects 6.41% Senior Notes of $173M long-term debt issuance received on October 15, 2025.
[4] Amount reflects an equity infusion of $170M received 10/28/25 less $101.6M of dividends paid on 10/30/25.

13	NM Depreciation Rate	2.7846%	3.1025%	1.7300%	
14	Calculation:				
15	Requested Cost of Captial	8.3544%	8.3544%	8.3544%	Ln 15 = ln 2
16	Less: Weighted Cost of Long Term Debt	-2.4134%	-2.4134%	-2.4134%	Ln 16 = - ln 3
17	Weighted Cost of Common Equity	5.9410%	5.9410%	5.9410%	Ln 17 = ln 14 + ln 15
18	Combined Effect of NM SIT and FIT Rates	22.3167%	22.3167%	22.3167%	Ln 18 = ln 4 / (1 - ln 5)
19	Income Tax Escalation Factor	1.28728	1.28728	1.28728	Ln 19 = 1 / (1 - ln 18)
20	Pre-Tax Weighted Cost of Equity	7.6477%	7.6477%	7.6477%	Ln 20 = ln 17 X ln 19
21	Pre-Tax Cost of Capital	10.0611%	10.0611%	10.0611%	Ln 21 = ln 3 + ln 20
22	Revenue Related Costs	0.3523%	0.3523%	0.3523%	Ln 22 = ln 6 + ln 7
23	Revenue Related Cost Escalator	1.003536	1.003536	1.003536	Ln 24 = 1 / (1 - ln 22)
24	**Fixed Charge Factor excluding Property Tax and O&M Expense**	**10.0967%**	10.0967%	10.0967%	Ln 24 = ln 21 X ln 23
25	Fixed Charge Rate including Property Tax and excluding O&M Expense	10.7809%	10.7809%	10.7809%	Ln 25 = ln 9 + ln 24
26	**O&M Expense as Percent of Net Plant**	**1.0655%**	2.3747%	0.6247%	Ln 26 = ln 10 / (ln 8 - ln 11)
27	Fixed Charge Rate including Property Tax and O&M Expense	11.8464%	13.1557%	11.4057%	Ln 27 = ln 25 + ln 26
28	Fixed Charge Rate including Property Tax and O&M Expense and Depreciation Expense	14.6310%	16.2582%	13.1357%	Ln 28 = ln 27 + ln 12 / ln 8
29	**Monthly Fixed Charge to use in Facilities Charge**	**1.2193%**	**1.3548%**	**1.0946%**	Ln 29 = ln 28 / 12
30	**Annual Fixed Charge to use in Interconnection Charge**	4.2247%	**5.4414%**	2.7951%	Ln 30 = (ln 9 + ln 10 / ln 8 + ln 12 / ln 8) X ln 23
31	Monthly Fixed Charge to use in Interconnection Charge	0.3521%	0.4534%	0.2329%	Ln 31 = ln 30 / 12

NOTE: Use Fixed Charge Factor excluding Property Tax and O&M Expense for Lighting since 'Demand Revenue Requirement' already includes a property tax component. Use Monthly Fixed Charge to use in Facilities Charge for Rental Charge and use Annual Fixed Charge to use in Interconnection Charge for Interconnection Charge.

Notes:

(1) From the EPE Miscellaneous Service Charges Tariff (15th Revised No. 15, Advice Notice 310, effective 07/12/2025).

(2) From the proposed EPE Miscellaneous Service Charges Tariff (15th Revised Rate No. 15) and associated workpapers.

[A] Charge is assessed monthly on the facility's reproduction cost as determined at the initiation date.

[B] Charge is assessed on the Company's cost of the requested maintenance activity.

[C] Charge is the minimum amount or the Company's cost, whichever is greater.

EL PASO ELECTRIC COMPANY

FIFTEENTH~~OURTEENTH~~ REVISED RATE NO. 01
CANCELLING ~~THIRTEENTH~~ FOURTEENTH REVISED RATE NO. 01

RESIDENTIAL SERVICE RATE
X

APPLICABILITY

This rate schedule is available for electric service used in single family residences or individually metered apartments for primarily domestic or home use, and other non-commercial uses located on the same property and used in connection with the main residence.

~~For customers currently taking service under the time of day (TOD) rates of this schedule, the TOD rates will be applicable beginning the first billing cycle after re-programing of the customer meter for the TOD period ordered in NMPRC Case No. 20-00104-UT Final Order.~~

TERRITORY

Areas served by the Company in Doña Ana, Sierra, Otero and Luna Counties.

TYPE OF SERVICE

Service available under this rate schedule will normally be 120/240 volt, single phase, supplied at a single point of delivery designated by the Company. Electric energy will be measured by a single meter, or other measuring device, of each kind needed.

Single phase or three phase motor operation is permitted under this service when the size of the individual motor does not exceed 10 horse power (HP). Single or three phase motors shall not exceed 10 HP of capacity without the written approval of the Company.

EL PASO ELECTRIC COMPANY

FIFTEENTHOURTEENTH REVISED RATE NO. 01
CANCELLING THIRTEENTH FOURTEENTH REVISED RATE NO. 01

RESIDENTIAL SERVICE RATE
X

The On-Peak Period shall be from 3:00 P.M. to 7:00 P.M., Mountain Daylight Time, Monday through Friday, for the Summer months. There is no On-Peak Period for the Non-Summer months. The Off-Peak Period shall be all other hours not covered in the On-Peak Period. For Distributed Generation (DG) customers, the net energy metering provision will be applied by TOD period.

The Customer that elects to take service under the Time-Of-Day (TOD) Rate, must do so for a minimum of twelve (12) months. For all customers that enroll, if, at the conclusion of that initial twelve (12) month period of service under the TOD Rate, the total billings for the 12-month period exceed billings for the same period under the Standard Service Rate, the Company will credit the customer for the difference in billings and the Customer may opt to revert to the Standard Service Rate.

MONTHLY MINIMUM CHARGE

The Monthly Minimum Charge is the Customer Charge, Other Non-Consumption Based Applicable Riders, and Tax Adjustment.

FUEL AND PURCHASED POWER COST ADJUSTMENT CLAUSE (FPPCAC)

All service taken under this rate schedule is subject to the provisions of the Company's Rate No. 18 (FPPCAC). For Distributed Generation (DG) customers, the net energy metering provision will be applied by TOD period.

LOW INCOME RIDER

Upon qualification under the below defined Low Income Rider ("LIR") criteria, the Customer Charge will not be applicable to the Residential Customer's monthly billing. All other provisions of this rate schedule remain unchanged.

1. The LIR is available to qualified residential customers identified by the New Mexico Human Services Department New Mexico Health Care Authority ("HCA") client database as authorized to receive Supplemental Nutrition Assistance Program ("SNAP") benefits for a period of time pursuant to the eligibility and assistance requirements of the SNAP or are eligible for the Low-Income Home Energy Assistance Program (LIHEAP)program.

EL PASO ELECTRIC COMPANY

FIFTEENTH~~OURTEENTH~~ REVISED RATE NO. 01
CANCELLING ~~THIRTEENTH~~ FOURTEENTH REVISED RATE NO. 01

RESIDENTIAL SERVICE RATE
X

2. On a monthly basis, the Company will compare the names and addresses in its New Mexico residential customer database with those in the HCA client database. The HCA client must be the Company customer of record or an authorized individual on the account. All matching customers will be certified to receive the LIR through the time period in which they are authorized for SNAP or LIHEAP assistance, or for twelve (12) months, whichever is less. However, a Customer's eligibility for the LIR will terminate if the Customer is removed from the HCA database when HCA annually purges its client database and removes the client, or if the Customer changes his or her service address and the address no longer matches the HCA database. The Company may extend the LIR to a Customer when the Customer's SNAP or LIHEAP assistance is re-authorized or extended by HCA for an additional period of time.

~~The LIR is also available to qualified residential customers identified by a Company-recognized public assistance agency ("Agency") operating in Doña Ana, Sierra, Otero and Luna Counties as meeting the Agency's assistance requirements. The Agency or the Customer must provide the Company documentation of Agency eligibility. Qualifying Customers will receive the LIR for the authorized assistance time period or, if the Agency does not state an authorized time period, for twelve (12) months. The Company may extend the LIR to a Customer when the Customer is re-authorized or extended by the Agency for an additional period of time. Additionally, the Company may qualify a customer, in the future, using criteria as defined by the eligibility requirements of any future adoption by the state of New Mexico of a Low-Income Home Energy Assistance Program (LIHEAP).~~

OTHER APPLICABLE RIDERS

All service taken under this rate schedule is subject to the provisions of other Company riders that may apply to this rate schedule and shall be billed pursuant to the provisions of those riders. For Distributed Generation (DG) customers, the net energy metering provision will be applied by TOD period.

Billings under this rate schedule may be increased by an amount equal to the sum of taxes payable under the Gross Receipts and Compensating Tax Act and of all other taxes, fees or charges (exclusive of ad valorem, state and federal income taxes) payable by the utility and levied or assessed by any governmental authority on the public utility service rendered, or on the right or privilege of rendering the service, or on any object or event incidental to the rendition of the service.

~~**VOLUNTARY RENEWABLE ENERGY (VRE)**~~

~~This rate schedule is subject to the provisions of the Company's Rate No. 32 (VRE).~~

WHOLE HOUSE ELECTRIC VEHICLE (WHEV) RATE RIDER INCENTIVE CREDIT

INCENTIVE CREDIT: $0.04740 / kWh

SUPER OFF-PEAK HOURS: 12:00 am to 8:00 am, Monday – Sunday, Year Round

PROGRAM DESCRIPTION: Energy usage during the hours listed above, but not exceeding the total energy usage billed, will be multiplied by the Incentive Credit rate to calculate the incentive credit presented on the monthly bill. Energy usage for all hours will be charged at the applicable Rate No. 01 rate.

RATE QUALIFICATIONS: Customers must have a qualifying plug-in electric vehicle that is registered with the New Mexico Motor Vehicle Division using the same service address as the EPE residential account. Qualifying accounts must provide proof of EV registration.

LIMITATION: The incentive credit shall not cause the customer bill to fall below the Monthly Minimum Charge Provision applicable on this rate, excluding Purchase Power and Fuel (FPPCAC).

TERMS OF PAYMENT

All bills under this rate schedule are due and payable when rendered and become delinquent twenty (20) calendar days thereafter. If the twentieth day falls on a holiday or weekend, the next Company business day will apply.

Service supplied under this rate schedule is subject to the Company's Rules and Regulations on file with the New Mexico Public Regulation Commission and available for inspection at Company offices.

This rate schedule is available under the following conditions:

1. When it is evident, either visually or electrically, that activity of a business or professional character is being conducted in the residence, service will be supplied on the appropriate non-residential rate schedule; however, the portion used as living quarters may be wired and metered separately and served on this rate schedule.

2. For separately metered living quarters recognized as single-family living quarters for domestic home use.

3. Single-phase and three-phase motors shall not exceed 10 (HP) of capacity without prior written approval of the Company. The use of all single or three-phase motors over 5 HP must be approved by the Company concerning the motor's lock rotor amperes.

4. If three-phase service is supplied, motor size and other loads will be subject to Company approval. Three-phase service is only available from lines existing at the location or if the Company determines it is economically feasible to bring service to the location.

5. Wiring may be extended from the residence circuit to private garages, barns and similar structures and/or wells which are located on the same property as the residence and used exclusively for domestic purposes in connection with the residence.

6. For residences where rooms are rented or meals are served to boarders if this is incidental to the maintenance of a private residence.

PRORATION ADJUSTMENTS

Charges for service supplied under this rate schedule, except the Customer Charge, are subject to proration adjustments.

APPLICABILITY

This rate schedule is available to all Customers for lighting, power, and heating service and where facilities of adequate capacity and suitable voltage are adjacent to the premises to be served. Service under this rate schedule shall be limited to Customers who otherwise do not qualify for service under the Company's other rate schedules and whose Maximum Demand for any two (2) consecutive months during the current month and previous eleven (11) month period did not exceed 50 kilowatts (kW).

~~For customers currently taking service under the time of day (TOD) rates of this schedule, the TOD rates will be applicable beginning the first billing cycle after re-programing of the customer meter for the TOD period ordered in NMPRC Case No. 20-00104-UT Final Order.~~

TERRITORY

Areas served by the Company in Doña Ana, Sierra, Otero and Luna Counties.

TYPE OF SERVICE

Service available under this rate schedule will be determined by the Company and will either be single or three phase at the option of the Company and at a standard Company approved voltage. All service will be taken at a single point of delivery designated by the Company. Electric energy will be measured by a single meter, or measuring device, of each kind needed.

X

On-Peak Period	$0.~~3224~~26052	----------
Off-Peak Period	$0.~~06885~~10552	$0.~~07483~~07507

The On-Peak Period shall be from 3:00 P.M. to 7:00 P.M., Mountain Daylight Time, Monday through Friday, for the Summer months. There is no On-Peak Period for the Non-Summer months. The Off-Peak Period shall be all other hours not covered in the On-Peak Period. For Distributed Generation (DG) customers, the net energy metering provision will be applied by TOD period.

If a Customer on the Alternative TOD Rate meets or exceeds 7,000 kWh or 15 kW during any billing month, the Customer will ~~immediately~~ be transferred to and remain in the Standard TOD Rate, starting with the following billing month, and shall not be eligible for service under the Alternative TOD Rate for a period of twelve (12) consecutive months thereafter.

The Customer that elects to take service under a TOD rate, must do so for a minimum of twelve (12) consecutive months. For all customers that enroll, if, at the conclusion of that initial twelve (12) month period of service under the TOD rate, the total billings for the 12-month period exceed billings for the same period under the corresponding non-TOD rate, the Company will credit the customer for the difference in billings and the Customer may opt to revert to the corresponding non-TOD rate.

MONTHLY MINIMUM CHARGE

The Monthly Minimum Charge is the Customer Charge plus Demand Charge (if applicable), Other Non-Consumption Based Applicable Riders, and Tax Adjustment.

DETERMINATION OF BILLING DEMAND

Maximum Demand is defined as the highest measured thirty (30) minute ~~average~~ interval kW load.

The billing demand (in kW) will be the highest of:

(a) the Maximum Demand; or
(b) the demand ratchet of 60% of the Maximum Demand established during the billing months of June through September in the preceding twelve (12) month period; or

Advice Notice No. 317

X

(c) 15 kW.

The Company will reset the demand ratchet for customers installing Distributed Generation (DG) and/or storage following interconnection of the DG and/or storage, restarting the historical demand used for purposes of applying (b) above.

EXPERIMENTAL OFF-PEAK DEMAND RATE

This off-peak demand rate is available to all Customers for lighting, power, and heating service pursuant to the provisions of the Company's Small General Service Rate currently in effect and otherwise applicable to the Customer, but limited to those Customers whose average load factor, during the current month and previous eleven (11) month period, did not exceed thirty percent. This off-peak demand rate is not available for standby, temporary, resale, or interruptible service. Participation may be limited by the Company at its own discretion during this experimental phase or suspended indefinitely after evaluating the revenue impact of the off-peak demand rate and providing no less than thirty (30) day notification to participants before such suspension becomes effective.

Service under this off-peak demand rate will be available by calendar year beginning on January 1 of each year. A Customer requesting service under this off-peak demand rate must provide a signed agreement for service to EPE prior to January 1 of the initial year of taking service under the agreement. After the initial calendar year, the agreement will automatically renew for the subsequent calendar year unless the Customer provides written notice to the Company of their cancellation of service under this off-peak demand rate on or before December 1 prior to the renewal year. A Customer taking service under this off-peak demand rate whose average load factor during the current month and previous eleven (11) month period is greater than 30 percent for two (2) consecutive months shall be declared ineligible for this off-peak demand rate and will be billed for the current month and thereafter under the retail rate schedule currently in effect and otherwise applicable to the Customer. The Customer shall again qualify for service under this off-peak demand rate in the first month after its average load factor during the current month and previous eleven (11) month period remains below 30 percent.

The Company, at its option, may request payment for any special metering installation costs required for the Customer to take service under this off-peak demand rate.

APPLICABILITY

This rate schedule is available to all Customers for lighting, power, and heating service and where facilities of adequate capacity and suitable voltage are adjacent to the premises to be served. Service under this rate schedule shall be limited to Customers who otherwise do not qualify for service under the Company's other rate schedules and whose Maximum Demand for any two (2) consecutive months during the current month and previous eleven (11) month period was (i) not less than 50 kilowatts (kW) and (ii) did not exceed 799 kW.

~~For customers currently taking service under the time of day (TOD) rates of this schedule, the TOD rates will be applicable beginning the first billing cycle after re-programing of the customer meter for the TOD period ordered in NMPRC Case No. 20-00104-UT Final Order.~~

TERRITORY

Areas served by the Company in Doña Ana, Sierra, Otero and Luna Counties.

TYPE OF SERVICE

Service available under this rate schedule will be determined by the Company and will either be single or three phase at the option of the Company and at a standard Company approved voltage. All service will be taken at a single point of delivery designated by the Company. Electric energy will be measured by a single meter, or measuring device, of each kind needed.

DEMAND ADJUSTMENT RIDER

This rider is available to qualifying separately metered Transportation Electrification (TE) Public Charging sites and is an adjustment to the billing demand. In the event the Maximum Demand for the billing period results in a load factor (LF) less than a 15%, based on the same billing period's energy consumption (kWh), the billing demand (kW) for the billing period will be calculated as follows:

BD = kWh / (LF * 24 * Days)
Where,
BD = Billing Demand
kWh = Monthly energy consumption
LF = 15%
24 = Hours in a day
Days = Days in billing period

If the Maximum Demand for the billing month results in a LF equal to or greater than 15%, based on the same billing month's energy consumption (kWh), the billing demand (kW) will be calculated pursuant to the Determination of Billing Demand.

EXPERIMENTAL OFF-PEAK DEMAND RATE

This off-peak demand rate is available to all secondary voltage Customers for lighting, power, and heating service pursuant to the provisions of the Company's General Service Rate currently in effect and otherwise applicable to the Customer, but limited to those Customers whose average load factor, during the current month and previous eleven (11) month period, did not exceed thirty percent. This off-peak demand rate is not available for standby, temporary, resale, or interruptible service. Participation may be limited by the Company at its own discretion during this experimental phase or suspended indefinitely after evaluating the revenue impact of the off-peak demand rate and providing no less than thirty (30) day notification to participants before such suspension becomes effective.

Service under this off-peak demand rate will be available by calendar year beginning on January 1 of each year. A Customer requesting service under this off-peak demand rate must provide a signed agreement for service to EPE prior to January 1 of the initial year of taking service under the agreement. Service supplied under this rate schedule is subject to the Company's Rules and Regulations on file with the New Mexico Public Regulation Commission and available for inspection at Company offices.

The Customer and the Company will determine whether a new Customer qualifies under this rate schedule.

If the Customer's Maximum Demand exceeds 799 kW in ~~any two (2) consecutive months during~~ the current month and previous ~~eleven (11)~~ month ~~period~~, the Customer shall no longer be eligible for service under this rate schedule and shall be placed on Rate No. 09 – Large Power Service ~~for a minimum of twelve (12) consecutive months~~ starting with the following billing month. After a minimum of twelve (12) months on Rate No. 09 – Large Power Service ~~Upon completion of the minimum twelve (12) consecutive month period~~, a determination will be made by the Company for the Customer's applicable rate schedule.

If the Customer's Maximum Demand falls below 50 kW in ~~any two (2) consecutive months during~~ the current month and previous ~~eleven (11)~~ month ~~period~~, the Customer shall no longer be eligible for service under this rate schedule and shall be placed on Rate No. 03 – Small General Service Rate starting with the following billing month. After a minimum of twelve (12) months on Rate No. 03 – Small General Service Rate, s~~S~~hould the Customer's Maximum Demand exceed 50 kW in any two (2) consecutive months thereafter, the Customer shall be returned to Rate No. 04 – General Service.

Any new Customer that has not established a prior service history with the Company shall be classified under the appropriate rate schedule in accordance with a demand estimate performed by the Company.

THERMAL ENERGY STORAGE (TES) RIDER

This rider is available to Customers with separately metered TES Systems whose Maximum Demand does not exceed the Maximum Demand of the building after completion of the necessary contract arrangements and installation of the necessary metering equipment. The billing demand for this separately metered load will be the Maximum Demand established during the On-Peak Period.

The On-Peak Period shall be from 3:00 P.M. to 7:00 P.M., Mountain Daylight Time, Monday through Friday, June through September. The Off-Peak Period shall be all other hours not covered in the On-Peak Period.

No other options or riders are applicable to consumption covered under this rider. Both separately metered TES systems and total building loads must be served under this rate.

The Company reserves the right to close this rider to additional customers if, in the Company's judgment, system load characteristics no longer warrant such a rider.

DETERMINATION OF BILLING DEMAND

Maximum Demand is defined as the highest measured thirty (30) minute ~~average~~ interval kW load.

The billing demand (in kW) will be the highest of:

(a) the Maximum Demand, adjusted by the Meter Voltage Adjustment, if applicable; or

Advice Notice No. 317

Signature/Title */s/ James Schichtl*
James Schichtl
Vice President – Customer and Regulatory Solutions

EL PASO ELECTRIC COMPANY

~~THIRTEENTH~~ FOURTEENTH REVISED RATE NO. 09 X
CANCELLING ~~TWELFTH~~ THIRTEENTH REVISED RATE NO. 09 X

LARGE POWER SERVICE RATE

(b) the demand ratchet of 65% of the Maximum Demand established during the billing months of June through September in the preceding twelve (12) month period; or
(c) 800 kW.

The Company will reset the demand ratchet for customers installing Distributed Generation (DG) and/or storage following interconnection of the DG and/or storage, restarting the historical demand used for purposes of applying (b) above. This Determination of Billing Demand is not applicable to customers eligible under the Demand Adjustment Rider of this rate schedule.

POWER FACTOR ADJUSTMENT

If the power factor at the time of Maximum Demand is below 90% lagging, a power factor adjustment shall be calculated as follows:

ADJ = ((kW x .95 / PF) – kW) x DC, where
ADJ = Increase to applicable Demand Charge,
kW = Maximum Demand,
PF = Monthly measured Power Factor, and
DC = Demand Charge.

DEMAND ADJUSTMENT RIDER

This rider is available to qualifying separately metered Transportation Electrification (TE) Public Charging sites and is an adjustment to the billing demand. In the event the Maximum Demand for the billing period results in a load factor (LF) less than a 15%, based on the same billing period's energy consumption (kWh), the billing demand (kW) for the billing period will be calculated as follows:

BD = kWh / (LF * 24 * Days)
Where,
BD = Billing Demand
kWh = Monthly energy consumption
LF = 15%
24 = Hours in a day
Days = Days in billing period

CANCELLING ~~TWELFTH~~ THIRTEENTH REVISED RATE NO. 09 X

LARGE POWER SERVICE RATE

If the Maximum Demand for the billing month results in a LF equal to or greater than 15%, based on the same billing month's energy consumption (kWh), the billing demand (kW) will be calculated pursuant to the Determination of Billing Demand.

METER VOLTAGE ADJUSTMENT

If electric service is delivered on the high voltage side of a Customer-supplied transformer and is metered on the low voltage side of the transformer, the following meter adjustments shall be made:

Adjusted Maximum Demand = Maximum Demand multiplied by 1.0143~~3~~ X
Billing kilowatt-hours = Metered kilowatt-hours multiplied by 1.022

If electric service is delivered on the low voltage side of a Company-owned transformer and is metered on the high voltage side of the transformer, the following meter adjustments shall be made:

Adjusted Maximum Demand = Maximum Demand divided by 1.0143~~3~~ X
Billing kilowatt-hours = Metered kilowatt-hours divided by 1.022

FUEL AND PURCHASED POWER COST ADJUSTMENT CLAUSE (FPPCAC)

All service taken under this rate schedule is subject to the provisions of the Company's Rate No. 18 (FPPCAC). For Distributed Generation (DG) customers, the net energy metering X
provision will be applied by TOD period." X

OTHER APPLICABLE RIDERS

All service taken under this rate schedule is subject to the provisions of other Company riders that may apply to this rate schedule and shall be billed pursuant to provisions of those riders.
For Distributed Generation (DG) customers, the net energy metering provision will be applied by X
TOD period. X

TAX ADJUSTMENT

Billings under this rate schedule may be increased by an amount equal to the sum of taxes payable under the Gross Receipts and Compensating Tax Act and of all other taxes, fees or charges (exclusive of ad valorem, state and federal income taxes) payable by the utility and levied

X
~~This rate schedule is subject to the provisions of the Company's Rate No. 32 (VRE).~~ X

TERMS OF PAYMENT

All bills under this rate schedule are due and payable when rendered and become delinquent twenty (20) calendar days thereafter. If the twentieth day falls on a holiday or weekend, the next Company business day will apply.

TERMS AND CONDITIONS

Service supplied under this rate schedule is subject to the Company's Rules and Regulations on file with the New Mexico Public Regulation Commission and available for inspection at Company offices. Any contract provisions shall also apply to service under this rate schedule.

The Customer and the Company will determine whether a new Customer qualifies for this rate schedule.

If the Customer's Maximum Demand falls below 800 kW in ~~any two (2) consecutive months during~~ X
the current month and previous ~~eleven (11)~~ month ~~period~~, the Customer shall no longer be eligible X
for service under this rate schedule and shall be placed on Rate No. 04 – General Service Rate or Rate No. 03 – Small General Service, as applicable, starting with the following billing month. X
After a minimum of twelve (12) months on the applicable rate schedule, ~~S~~should the Customer's X
Maximum Demand exceed 799 kW in any two (2) consecutive months thereafter, the Customer shall be returned to Rate No. 09 – Large Power Service.

Any new Customer that has not established a prior service history with the Company shall be classified under the appropriate rate schedule in accordance with a demand estimate performed by the Company.

Charges for service supplied under this rate schedule, except the Customer Charge, are subject to proration adjustments.

THERMAL ENERGY STORAGE (TES) RIDER

This rider is available to Customers with separately metered TES Systems whose Maximum Demand does not exceed the Maximum Demand of the building after completion of the necessary contract arrangements and installation of the necessary metering equipment. The billing demand for this separately metered load will be the Maximum Demand established during the On-Peak Period.

The On-Peak Period shall be from 3:00 P.M. to 7:00 P.M., Mountain Daylight Time, Monday through Friday, June through September. The Off-Peak period shall be all other hours not covered in the On-Peak Period.

No other options or riders are applicable to consumption covered under this rider. Both separately metered TES and total building loads must be served under this rate schedule.

The Company reserves the right to close this rider to additional customers if, in the Company's judgment, system load characteristics no longer warrant such a rider.

MILITARY RESEARCH AND DEVELOPMENT POWER RATE
X

APPLICABILITY

This rate schedule is available only to military installations whose primary mission is research and development, and who contract for a minimum billing demand of 6,000 kilowatts (kW) for a period of not less than ten (10) years.

TERRITORY

Areas served by the Company in Doña Ana, Sierra, Otero and Luna Counties.

TYPE OF SERVICE

Service available under this rate schedule will be determined by the Company. All service will be taken at a single point of delivery designated by the Company.

MILITARY RESEARCH AND DEVELOPMENT POWER RATE
X

DETERMINATION OF BILLING DEMAND

Maximum Demand is defined as the highest measured thirty (30) minute ~~average~~ interval kW load. If service is taken at more than one point, Maximum Demand shall be determined conjunctively.

The billing demand (in kW) will be the highest of:

(a) the Maximum Demand, adjusted by the Metering Adjustment provision, if applicable; or
(b) the demand ratchet of 65% of the Maximum Demand established during the billing months of June through September in the preceding twelve (12) month period; or
(c) 6,000 kW.

TEMPORARY OFF-PEAK DEMAND

If the Customer requires off-peak demand above the current annual peak for the installation, and if,

(1) The increase in demand (defined as the amount the required demand exceeds the current annual demand peak) is coordinated with the Company, and
(2) The increase in demand is for a short term only (not to exceed ten (10) days in any one billing period), and
(3) The increase in demand does not exceed the Company's capabilities or require changes in the Company's service facilities, and
(4) The required increase in demand will fall outside of the Company's daily peak load period of 3:00 P.M. to 7:00 P.M., Mountain Daylight Time, Monday through Friday, during the months of June through September, unless mutually agreeable otherwise, and
(5) The Company is given reasonable advance written notice of the required increase in demand, then

That portion of the increase in demand that does not exceed 25 percent of the previous annual demand peak shall be waived by the Company for billing purposes. However, any demand above 125 percent of the current annual demand peak shall be included in the bill for the appropriate billing period. In no case will the demand established by the short-term increase be used by the Company in applying the demand ratchet. As used herein, "annual demand peak" is the Maximum Demand established by the Customer over the past twelve (12) months, ending with the current month.

CANCELLING ~~FOURTEENTH~~ FIFTEENTH REVISED RATE NO. 10

MILITARY RESEARCH AND DEVELOPMENT POWER RATE
X

POWER FACTOR ADJUSTMENT

If the power factor at the time of Maximum Demand is below 90% lagging, a power factor adjustment shall be calculated as follows:

ADJ = ((kW x .95 / PF) – kW) x DC, where
ADJ = Increase to applicable Demand Charge,
kW = Maximum Demand,
PF = Monthly measured Power Factor, and
DC = Demand Charge.

METERING ADJUSTMENT

The Company may, at its option, meter the Customer's electrical usage on the low side of the substation transformer, in which case the metered quantities will be increased for each meter location as follows:

White Sands Missile Range	
Post Area	kW 1.001423 kWh 18608 + (metered kWh x 1.001423)
AMRAD	kW 1.000307 kWh 12253 + (metered kWh x 1.000307)
MAR	kW 1.000723 kWh 22448 + (metered kWh x 1.000723)
ALA-5	Primary Metering
Communications Support Facility	Primary Metering
EMRLD	kW 1.00008398 kWh 6059 + (metered kWh x 1.00008398)
Holloman	Adjusted as required for scheduled delivery WAPA energy and demand

PROTECTIVE EQUIPMENT

Customer shall provide, at the Customer's expense, suitable relaying equipment and devices as specified by the Company so as to protect the Company's system and its service to other electric users from disturbance or faults that may occur on Customer's system and equipment.

or assessed by any governmental authority on the public utility service rendered, or on the right or privilege of rendering the service, or on any object or event incidental to the rendition of the service.

SPECIAL CONDITIONS

The maximum mounting height of Company owned or Company maintained fixtures of less than 45,000 lumens shall not exceed 30 feet; the maximum mounting height of Company owned or Company maintained fixtures of 45,000 lumens shall not exceed 40 feet; and the maximum mounting height of fixtures of 60,000 lumens shall not exceed 50 feet. The charges listed are for standard fixtures. Charges for ornamental fixtures will be negotiated. Sizes shown are nominal lumen rating.

A. Installation and Ownership of Facilities:

Street lighting systems are installed, owned and maintained by the Company. The service to each location is not to exceed 150 feet. Only Company specified standard street lighting components are used in the installations. In areas with overhead electric distribution lines, street lights are installed on existing wood poles. Alternatively, the Company will install one additional pole for each street light. The Company will install street lighting standards which are served underground only on main thoroughfares that are paved and have curbs and gutters.

Street lighting facilities will be relocated for the benefit or convenience of a Customer only when written approval of the new location is received from proper county or municipal authority, and the Customer making the request bears all relocation costs. In franchised areas, the Company may contract with the city, town or village to operate and maintain street lighting installed and owned by the State. In some cases, the Company may contract with a county for Interstate Highway lighting only. In the absence of such a contract, electric service for state-owned street lighting systems shall be provided under the Company's standard practice for metered services and billed under the applicable rate schedule.

B. Operation and Maintenance:

Company-owned system: The Company will perform normal operation and maintenance of the lighting system which includes routine maintenance, periodic lamp replacement and fixture servicing.

It shall be the duty of the Customer to report to the Company the failure of any lamp to burn, or to burn adequately, and it shall thereafter be the obligation of the Company to restore such lamp to service. Any lamp so reported as failing to burn, or to burn adequately, shall be replaced or repaired (refer to the Mercury Vapor Replacement Schedule) and returned to regular operation within a reasonable period of time after notice of such failure to the Company.

C. Conversions:

Conversions of Mercury Vapor to High Pressure Sodium Vapor Street Lighting Service (refer to the Mercury Vapor Fixture Replacement Schedule):

Upon request by customer that Company-owned mercury vapor street lighting be converted to high pressure sodium street lighting, the following conditions will prevail:

1. The Customer will be advised by the Company that under such conversions where the lights have not reached their normal expected average service life (24 years) the Customer will be expected to pay the losses sustained by the Company due to the conversion, including current labor, engineering, transportation, supervision and fringe benefits for converting.

2. These charges will be a one-time lump sum charge to the Customer to be paid in advance and therefore will not be included in the rate structure for the new lights installed.

3. When conversions are performed and the Company-owned pole does not have to be replaced or moved, the monthly charge for the pole only is included in the total fixture cost per month. If poles have to be replaced or moved, new fixture costs will apply.

4. Mercury Vapor Closed To New Installations

   Mercury Vapor lamp categories are closed to new installations. Customers with existing fixtures which are non-repairable and must be replaced will have the option to convert their service to high pressure sodium vapor lamps or may cancel their service. However, a Customer request for conversion or replacement of existing, non-defective mercury vapor fixtures will be subject to all applicable costs of such conversion or replacement.

APPLICABILITY

This rate schedule is available to all customers with overhead outdoor lighting service under the conditions specified herein.

Incidental usage for auxiliary devices, including cameras, sensors, gunshot detection technology and other public safety equipment, is permitted under this rate schedule only for municipality private area lighting accounts, providing the installations are approved by the Company in advance and will have only incidental usage. Costs for consumption for such additions are anticipated to be captured on metered service accounts. Costs for additions to non-metered accounts will be subject to update in a subsequent general rate case.

TERRITORY

Areas served by the Company in Doña Ana, Sierra, Otero and Luna Counties.

TYPE OF SERVICE

Available for outdoor, all-night lighting service contracted for by the Customer for overhead service, automatically controlled, Mercury Vapor (MV) or High Pressure Sodium Vapor (HPSV) or Light Emitting Diode (LED) or Metal Halide (MH) lamps.

MONTHLY MINIMUM CHARGE

The Monthly Minimum Charge is the Lamp Charge, Other Non-Consumption Based Applicable Riders, and Tax Adjustment.

FUEL AND PURCHASE POWER COST ADJUSTMENT CLAUSE (FPPCAC)

All service taken under this rate schedule is subject to the provisions of the Company's Rate No. 18 (FPPCAC). For Distributed Generation (DG) customers, the net energy metering provision will be applied by TOD period.

OTHER APPLICABLE RIDERS

All service taken under this rate schedule is subject to the provisions of other Company riders that may apply to this rate schedule and shall be billed pursuant to the provisions of those riders. For Distributed Generation (DG) customers, the net energy metering provision will be applied by TOD period.

TAX ADJUSTMENT

Billings under this rate schedule may be increased by an amount equal to the sum of taxes payable under the Gross Receipts and Compensating Tax Act and of all other taxes, fees or charges (exclusive of ad valorem, state and federal income taxes) payable by the utility and levied or assessed by any governmental authority on the public utility service rendered, or on the right or privilege of rendering the service, or on any object or event incidental to the rendition of the service.

FACILITIES PROVIDED

The Company will install the appropriate pole, luminaire or other lighting fixture, and necessary equipment and extend overhead secondary wiring up to 125 feet where necessary and the Company will own, operate and maintain the installation. Underground service for area lighting is available at a cost equal to the differential between supplied overhead facilities and the actual cost of underground facilities. Facilities necessary in addition to above will be paid for by the Customer. All facilities installed by the Company will remain the property of the Company. The Company has the option not to install poles and luminaries inaccessible to trucks.

MERCURY VAPOR CLOSED TO NEW INSTALLATIONS

Mercury Vapor lamp categories are closed to new installations. Customers with existing fixtures which are non-repairable and must be replaced will have the option to convert their service to high pressure sodium vapor lamps or may cancel their service. However, a Customer request for conversion or replacement of existing, non-defective mercury vapor fixtures will be subject to all applicable costs of such conversion or replacement.

MERCURY FIXTURE REPLACEMENT SCHEDULE

For Company owned lights, when existing mercury vapor fixtures require replacement, the Company will make such replacements with comparable high pressure sodium vapor lighting at no cost, as specified below.

Existing Mercury Vapor Lighting			Sodium Vapor Replacement		
Lamp Wattage	Lamp Lumens	kWh	Lamp Wattage	Lamp Lumens	kWh
195W	7,000	70	124W	8,500	44
275W	11,000	98	124W	8,500	44
430W	20,000	153	313W	23,200	112

At the time of the replacement, the Customer will be billed at the applicable rate schedule charge and associated kWh usage for the high-pressure sodium vapor replacement lighting.

MISCELLANEOUS SERVICE CHARGES
X

The charge for a new service account setup or name change at a service location with an existing meter due to a change of responsible party, tenant or owner where the Company determines that a field activity, e.g., meter reading, is required or that the meter must be reconnected.

NEW SERVICE START – NO EXISTING METER (STANDARD RATE)

The charge for a new service account setup and service wires and a meter are installed for the first time to a new premise or point of service to initiate a new electric service account. The Standard Rate is charged when a Customer requests that the service installation be scheduled during normal Company work hours. Normal Company work hours shall be 7:00 a.m. to 8:00 p.m., Monday through Friday, and 7:00 a.m. to 3:30 p.m. on Saturday, excluding holidays.

NEW SERVICE START – NO EXISTING METER (NON-STANDARD RATE)

The charge for a new service account setup and service wires and meter are installed for the first time to a new premise or point of service to initiate a new electric service account. The Non-Standard Rate is charged when a Customer requests same-day connection, or outside of normal Company work hours. Normal Company work hours shall be 7:00 a.m. to 8:00 p.m., Monday through Friday, and 7:00 a.m. to 3:30 p.m. on Saturday, excluding holidays.

MONTHLY FEE FOR OPTING-OUT OF ADVANCED METERING SERVICE

The fee will be charged monthly to all customers who are opted out of advanced metering service pursuant to Form No. 42.

ONE-TIME FEE FOR OPTING-OUT OF ADVANCED METERING SERVICE (KEEP EXISTING METER)

The one-time fee will be charged to all customers who are opted out of advanced metering service pursuant to Form No. 42 and who keep their existing meter. Payment for this one-time fee must be received within 60 days of receiving a utility notice for this service.

ONE-TIME FEE FOR OPTING-OUT OF ADVANCED METERING SERVICE (DIGITAL NON-COMMUNICATING METER BEFORE ADVANCED METER INSTALLED)

The one-time fee will be charged to all customers who are opted out of advanced metering service pursuant to Form No. 42 and who request a new non-communicating metering device or whose

current meter fails a safety and/or accuracy test and is replaced with a new non-communicating metering device. Payment for this one-time fee must be received within 60 days of receiving a utility notice for this service.

ONE-TIME FEE FOR OPTING-OUT OF ADVANCED METERING SERVICE (DIGITAL NON-COMMUNICATING METER AFTER ADVANCED METER INSTALLED)

The one-time fee will be charged to all customers who are opted out of advanced metering service pursuant to Form No. 42 after an advanced meter was installed and is replaced with a new non-communicating metering device.

ENERGY DIVERSION CHARGE

The charge for the detection and confirmation of any incidence of tampering or interference with a meter installation, or by other means that prevent the proper operation thereof. This includes theft of service by any person on the Customer's premises, or the evidence of such tampering, interfering, or theft of service (energy diversion). The Company will maintain evidence as required and a notice will be left at the Customer's premise when possible.

In addition, the Customer will pay the disconnect charge and the estimated cost of power and energy not recorded on the meter by reason of energy diversion at the applicable rate using the Company's best estimated data.

ENERGY DIVERSION WITH DAMAGE CHARGE

The minimum charge for the detection and confirmation of any incidence of tampering or interference with a meter installation, or by other means that prevent the proper operation thereof, resulting in damage to the Company's equipment which requires replacement. This includes theft of service by any person on the Customer's premises, or the evidence of such tampering, interfering, or theft of service (energy diversion). The Company will maintain evidence as required and a notice will be left at the Customer's premise when possible.

In addition, the Customer will pay the disconnect charge and the estimated cost of power and energy not recorded on the meter by reason of energy diversion at the applicable rate using the Company's best estimated data.

The Customer shall be responsible for any additional cost incurred by the Company.

MISCELLANEOUS SERVICE CHARGES
X

METER SEAL REPLACEMENT CHARGE

The charge for the replacement of the Company's meter seal on the meter at the Customer's premises when the seal has been broken or removed.

NO ACCESS TO EQUIPMENT CHARGE – FIELD ACTIVITY

The charge for the Customer's failure to provide access to the Company's equipment, e.g., the meter, and Company service personnel must be sent back to the premise to access the Company's equipment, e.g., to obtain a physical meter reading.

NO ACCESS TO EQUIPMENT CHARGE – ENHANCED FIELD ACTIVITY

The minimum charge for the Customer's failure to provide access to the Company's equipment, e.g., the meter, and additional Company service personnel must be sent back to the premise access the Company's equipment, e.g., to obtain a physical meter reading.

The Customer shall be responsible for any additional cost incurred by the Company.

"NO LIGHT" SERVICE CALL CHARGE (STANDARD RATE)

The charge when a Customer calls the Company to report "No Lights" and requests Company service personnel be dispatched to the Customer premises and it is determined that the "No Light" condition was caused by a problem in the Customer-owned wiring or equipment on the Customer's side of the point of delivery. The Standard Rate is charged when a Customer requests that the "No Light" service call be scheduled during normal Company work hours. Normal Company work hours shall be 7:00 a.m. to 8:00 p.m., Monday through Friday, and 7:00 a.m. to 3:30 p.m. on Saturday, excluding holidays.

"NO LIGHT" SERVICE CALL CHARGE (NON-STANDARD RATE)

The charge when a Customer calls the Company to report "No Lights" and requests Company service personnel be dispatched to the Customer premises and it is determined that the "No Light" condition was caused by a problem in the Customer-owned wiring or equipment on the Customer's side of the point of delivery. The Non-Standard Rate is charged when a Customer requests that the "No Light" service call be scheduled outside of normal Company work hours. Normal Company work hours shall

be 7:00 a.m. to 8:00 p.m., Monday through Friday, and 7:00 a.m. to 3:30 p.m. on Saturday, excluding holidays.

NON-PAY RECONNECT CHARGE @ METER

The charge when the Customer requests reconnection of electric service following a disconnection of service due to the non-payment of the Customer's bill. All reconnections will be scheduled for same day or next day, during normal Company work hours. Normal Company work hours shall be 7:00 a.m. to 8:00 p.m., Monday through Friday, and 7:00 a.m. to 3:30 p.m. on Saturday, excluding holidays.

NON-PAY RECONNECT CHARGE @ POLE

The charge for the reconnection of electric service when the Customer was disconnected at the pole or riser for non-payment of its bill and Company personnel were unable to gain access to the meter for disconnection due to a condition at the Customer's premise (i.e., locked gate, dog, blocked meter, fence, etc.). Reconnection will be made on a next-day or scheduled basis during normal Company work hours. Normal Company work hours shall be 7:00 a.m. to 8:00 p.m., Monday through Friday, and 7:00 a.m. to 3:30 p.m. on Saturday, excluding holidays.

PULSE METERING EQUIPMENT INSTALLATION

The charge when the Customer requests that the Company install an isolation relay and output wiring to provide output electric pulses for the purpose of load management and energy conservation.

PULSE METERING EQUIPMENT REPAIR

The charge when the Customer requests that the Company repair pulse metering equipment due to a loss of pulse and it is determined that the cause is a problem in Customer-owned wiring or equipment on the Customer's side of the point of delivery.

RETURNED PAYMENT CHARGE

The charge for each payment made by check, bank draft, credit card, debit card, or other electronic means that is returned to the Company without payment.

X

Upon request by a Customer, the Company will test the accuracy of the meter serving that Customer. If initially requested, the Customer or their representative may be present during the meter test. The Company will provide reasonable advance notification of the date, time, and location of the test. A report of the test results will be made to the Customer within a reasonable time after completion of the test.

The charge will be made if the meter has been previously tested by the Company or by an authorized agency within a period of eighteen (18) months from the date of the requested test. The charge reflects the Company's cost to test the meter in accordance with 17.9.560.14 NMAC (Inspection and Tests). If the meter is found to be more than two percent (2%) in error pursuant to 17.9.560.14 NMAC, the charge will be refunded in accordance with 17.9.560.12 NMAC (Customer Relations).

REQUESTED METER TEST (THREE PHASE)

Upon request by a Customer, the Company will test the accuracy of the meter serving that Customer. If initially requested, the Customer or their representative may be present during the meter test. The Company will provide reasonable advance notification of the date, time, and location of the test. A report of the test results will be made to the Customer within a reasonable time after completion of the test.

The charge will be made if the meter has been previously tested by the Company or by an authorized agency within a period of eighteen (18) months from the date of the requested test. The charge reflects the Company's cost to test the meter and is made in accordance with 17.9.560.14 NMAC (Inspection and Tests). If any meter is found to be more than two percent (2%) in error pursuant to 17.9.560.14 NMAC, the charge will be refunded in accordance with 17.9.560.12 NMAC (Customer Relations).

TEMPORARY OVERHEAD CONNECTION CHARGE

The charge when a Customer requests temporary overhead service and single or three phase 120/240 volt service is ninety (90) feet or less from the Customer's point of delivery.

If the desired type of service is not single or three phase 120/240 volt service and/or is over ninety (90) feet from the Customer's point of delivery, temporary service will be provided only when the Customer pays the entire cost of installing and removing the necessary overhead facilities in advance to the Company.

TEMPORARY UNDERGROUND CONNECTION CHARGE

The charge when a Customer requests temporary underground service and single or three phase 120/240 volt service is available at the Customer's point of delivery.

If the desired type of service is not single or three phase 120/240 volt service and/or is not available at the Customer's point of delivery, temporary service will be provided only when the Customer pays the entire cost of installing and removing the necessary facilities to provide the temporary service in advance to the Company.

UNABLE TO CONNECT REQUESTED SERVICE FOR FAILED INSPECTION

The charge when the Customer or Customer's electrical contractor applies for service and the Company is unable to connect the service due to a failed inspection for failure to meet applicable codes.

FACILITIES RENTAL CHARGE

The charge calculated and assessed on the replacement cost of equipment or facilities owned and maintained by the Company (excluding substation facilities) when the Customer elects to rent the equipment or facilities from the Company rather than own them.

SPECIAL BILLING ANALYSIS CHARGE

The Company encourages Customers to access its online service that provides Customer usage and billing information free of charge through EPE's web portal at www.epelectric.com. In the event the Customer would like the Company to perform this activity, this minimum charge will be assessed each time a Customer requests and the Company provides a manually prepared billing history or special billing analysis or rate comparison. The charge will equal the Company's cost of fulfilling the request, including but not limited to labor, overheads, materials, and data processing expenses, or the minimum charge, whichever is greater.

NON-ROUTINE MISCELLANEOUS CHARGE

The charge is in addition to the costs for services performed by the Company at the request of the Customer and upon acceptance of the request by the Company and which are not covered by a

specific rate schedule or service charge. The Customer will be charged the reasonable costs incurred in performing the requested service including but not limited to labor, materials, parts, special equipment, transportation, meter testing and related overhead costs.

OUT OF CYCLE METER READING CHARGE

The charge will be made when a Customer requests a re-read of their meter outside the Company's scheduled reading cycle for the Customer's meter, and the Company determines the out of cycle reading to be within acceptable parameters pursuant to.17.9.560.14 NMAC (Inspection and Tests).

FACILITY PLUS RENTAL CHARGE (MONTHLY) *NEW*

The charge calculated and assessed monthly on the replacement cost of equipment or facilities owned and maintained by the Company (including substation facilities) when the Customer elects to rent the equipment or facilities from the Company rather than own them.

TRANSMISSION FACILITIES CHARGE (MONTHLY) *NEW*

The charge calculated and assessed monthly to recover the cost of the Company's investment in infrastructure, operation and maintenance of infrastructure dedicated to serve an individual Customer. The expected connected load of the customer-dedicated infrastructure must exceed thirty (30) MW.

CUSTOMER INITIATED LIGHTING RECONNECT/DISCONNECT CHARGE *NEW*

The charge when the Customer requests reconnection of electric service following a disconnection of service at the request of the Customer. All reconnections will be scheduled for same day or next day, during normal Company work hours. The charge requires a two-hour work minimum.

CUSTOMER INITIATED LIGHTING RECONNECT/DISCONNECT ADDITIONAL TIME CHARGE *NEW*

The charge when the Customer requests reconnection of electric service following a disconnection of service at the request of the Customer. All reconnections will be scheduled for same day or next day, during normal Company work hours. The charge will be in addition to the Customer Initiated

CANCELLING FORTY-FOURTH~~THIRD~~ REVISED RATE NO. 16 X

PURCHASED POWER SERVICE

APPLICABILITY

This rate schedule is applicable to Qualifying Facilities who qualify as small power production and cogeneration facilities as defined in 18 CFR, Part 292, Subpart B, of the final rules issued by the Federal Energy Regulatory Commission to implement Sections 201 and 210 of the Public Utility Regulatory Policy Act of 1978. Pursuant to 18 CFR Part 292.204(a), a qualifying power production facility is "small" when it does not exceed 80 megawatts ("MW").

This rate schedule sets forth the energy rates for purchases made by the Company for the energy generated by the Qualifying Facility ("QF") pursuant to 17.9.570.11 NMAC. 17.9.568 NMAC shall control for Customer-owned QF of 100 kW or smaller, to the extent that the terms and conditions of this rate schedule are inconsistent with 17.9.568 NMAC.

DEFINITION – PURCHASED POWER

Purchased Power means the purchase of electric energy from a QF by El Paso Electric Company, ("Company" or "EPE").

TERRITORY

Areas served by the Company in Doña Ana, Sierra, Otero and Luna Counties.

TYPE OF SERVICE

Service available under this rate schedule will be determined by the Company and will either be single or three-phase, at 60 Hertz, at the option of the Company and at a standard Company approved voltage. The harmonic content of the Customer's generation must not cause interference or equipment problems for the Company or other Company customers. The Company reserves the right to disconnect from its electrical system any Qualifying Facility that causes harmful or annoying voltage fluctuations. All service will be taken at a single point of delivery designated by the Company. Electric energy will be measured by a single meter, or other measuring device, of each kind needed.

EL PASO ELECTRIC COMPANY

FORTY-FIFTH~~OURTH~~ AMENDEDREVISED RATE NO. 16 X
CANCELLING FORTY-FOURTH~~THIRD~~ REVISED RATE NO. 16 X

PURCHASED POWER SERVICE

The Energy Payment Rates, differentiated by service voltage, apply to all excess generated kilowatt hours (kWh) by customers taking retail service under the Company's retail rate schedules and will appear on the Customer's monthly bill as a line item calculated based on metered energy.

ENERGY PAYMENTS TO QF RATED AT 5 MW AND BELOW

The Purchase Power Energy Payment Rate for a QF rated at 5 MW and below shall be calculated as an average of the Western Energy Imbalance Market (EIM) EPE System ELAP prices times the Rate No.18 (Fuel and Purchased Power Cost Adjustment Clause) loss adjustments due to service at different voltage levels.

The energy payment rates shall be based on a thirty-day average of Western Energy Imbalance Market (EIM) EPE System ELAP prices ending 5 days prior to the start of each calendar month in which the payment will occur. For a QF rated at 5 MW and below that elects to contract for energy sales to the Company, EPE will use the QF's excess generated kWh in the billing month multiplied by the monthly calculated Purchase Power Energy Payment Rate.

ENERGY PURCHASE PAYMENTS TO QF RATED MORE THAN 5 MW

For a QF rated at more than 5 MW that elects to contract for energy sales to the Company, the Purchase Power Energy Payment Rate shall be based on hourly Western EIM EPE System ELAP prices times the Rate No.18 (Fuel and Purchased Power Cost Adjustment Clause) loss adjustments due to service at different voltage levels. EPE will use actual hourly QF production during the billing month multiplied by the hourly Western EIM EPE System ELAP price.

WESTERN EIM EPE SYSTEM ELAP PRICE REFERENCE

CAISO publishes public market information pursuant to the requirements detailed in the CAISO Tariff Section 6.5, CAISO Communications. Hourly RTM LAP Prices are published daily for the prior trade day at an hourly granularity and can be accessed through CAISO's OASIS web page (http://oasis.caiso.com/). To retrieve the report, navigate to the following tabs: Prices > Energy Prices > Hourly RTM Prices. Once the report page has loaded, El Paso LAP prices can be retrieved by selecting the 'ELAP_EPE-APND' from the available Node drop down and selecting the appropriate date from the Trade Date field.

EL PASO ELECTRIC COMPANY

FORTY-FIFTH~~OURTH~~ AMENDEDREVISED RATE NO. 16 X
CANCELLING FORTY-FOURTH~~THIRD~~ REVISED RATE NO. 16 X

PURCHASED POWER SERVICE

METER OPTIONS

The QF contracting for energy payments may choose one of the following meter options for measurement of energy to be purchased by the Company:

1. Load Displacement Option

   Where the Customer primarily wishes to serve his own load, the Company will measure the flow of energy from the Company to the Customer with a single meter. There will be no additional Customer Charge and no payment by the Company for any excess power which may be generated by the Customer. The Customer shall be billed for all energy supplied by the Company under the applicable standard rate.

2. Net Metering Option

   The Company shall install an additional meter to separately measure the flow of energy generated by the Customer into the Company's electrical system. The Company shall calculate the net energy consumed or supplied by the Customer and the Customer shall be paid for the energy supplied above the amount consumed by the Customer at the rate specified in the Monthly Rate Section of this rate. The Customer shall be billed for the energy consumed by the Customer above the energy supplied by the Customer under the applicable standard rate, absent the QF's generation.

3. Separate Load Metering (Simultaneous Buy/Sell) Option

   The Company shall install metering to separately measure all the energy produced by the QF and all the power consumed by the Customer. The Company shall purchase all energy produced by the QF at the rate specified in the Monthly Rate Section of this rate schedule. The Customer shall be billed for all power consumed under the applicable standard rate.

COMMON PROVISIONS

Interconnection Charge:

Customers on this rate schedule shall be subject to a charge for interconnection costs.

Interconnection costs are the reasonable costs of connection, switching, metering, transmission, distribution, safety provisions, and administrative costs incurred by the Company which are

Advice Notice No. 317

CANCELLING FORTY-FOURTH~~THIRD~~ REVISED RATE NO. 16 X

PURCHASED POWER SERVICE

directly related to the installation and maintenance of the physical facilities necessary to permit interconnect operations with a QF, to the extent such costs are in excess of the corresponding costs that the Company would have incurred if it had not engaged in interconnected operations but instead generated an equivalent amount of electric energy itself or purchased an equivalent amount of electric energy or capacity from other sources.

In conformance with 17.9.570.9 NMAC, the QF shall give the Company at least sixty (60) days written advance notice to interconnect. Such notice shall specify the date the QF will be ready for interconnection, the date the QF will be able to commence testing, and the anticipated date of operation after testing. The Customer shall pay the estimated interconnection costs in full at the time notice to interconnect is provided to the Company. Upon completion of the interconnection the actual costs shall be computed and reimbursements to the appropriate party shall be made for any differences between the actual and estimated cost of interconnection.

In addition, Customers with a design capacity greater than 100 kilowatts (kW) shall pay an annual charge of ~~4.8732~~5.4414% of the capital costs of interconnection to provide for the recovery of X
property taxes, revenue related taxes, depreciation expense, and operation and maintenance expenses. The annual charge of ~~4.8732~~5.4414% is payable by the Customer in monthly X
installments at the rate of one-twelfth (1/12) of the annual charge per month.

METERING EQUIPMENT AND FACILITIES

The Company will install, own and maintain all meters and metering equipment. The Customer will install Company approved meter sockets and metering cabinets.

The Company may install, at its expense, on the Customer's premises load research metering. The Customer shall supply, at no expense to the Company, a suitable location for meters and associated equipment used for billing and for load research.

CUSTOMER FACILITIES

The Customer shall design, furnish, install, own, operate, and maintain in good order and repair, and at no cost to the Company, facilities such as relays, switches, synchronizing equipment, control and protective devices designated by the Company as necessary for parallel operation with the Company system to permit safe and practical operation.

The Customer's generation equipment shall not be connected in parallel with the Company's system without written consent of the Company.

Advice Notice No. 317

EL PASO ELECTRIC COMPANY

FORTY-FIFTH~~OURTH~~ AMENDEDREVISED RATE NO. 16 X
CANCELLING FORTY-FOURTH~~THIRD~~ REVISED RATE NO. 16 X

PURCHASED POWER SERVICE

OPERATION OF FACILITIES

The Customer shall notify the Company before the initial energizing and start-up testing of the Customer-owned generator and the Company shall have the right to have a representative present at such test.

NEGOTIATIONS

The Company and the QF may, at the QF's option, negotiate the energy to be supplied by the QF. Negotiated agreements shall meet the applicable general principles and conditions established in 17.9.568 NMAC and 17.9.570 NMAC.

TERMS OF PAYMENT

All bills under this rate schedule are due and payable when rendered and become delinquent twenty (20) calendar days thereafter. If the twentieth day falls on a holiday or weekend, the next Company business day will apply.

If a net amount is owed to the QF for the billing period, and is less than $50, the payment amount may be carried over to the following billing period. If a net amount is owed to the QF and is $50 or more, the utility shall make payment to the QF prior to the end of the next billing period.

TERMS AND CONDITIONS

Service supplied under this rate schedule is subject to the Company's Rules and Regulations on file with the New Mexico Public Regulation Commission and available for inspection at Company offices. The provisions of any contract associated with service under this rate schedule are also applicable.

This rate schedule shall be binding upon the Company and the Customer for a period coterminous with the interconnection agreement; provided, however, that the Customer may terminate service provided under this rate schedule at any time during such term by providing the Company with written notice at least one (1) year prior to the effective date of such termination and the Company may terminate in accordance with regulatory regulations. Any change in this rate schedule approved by a regulatory authority with the requisite jurisdiction shall become effective upon such approval and remain in force until the expiration of the term of this rate schedule or the termination by the Customer in accordance with the requirements herein contained, whichever events occurs

FUEL AND PURCHASED POWER COST ADJUSTMENT CLAUSE (FPPCAC)

APPLICABILITY

Pursuant to the New Mexico Public Regulation Commission's Final Order in Case No. 15-00127-UT, the Company is required to remove all fuel and purchased power costs from base rates and bill such costs through the Fuel and Purchased Power Cost Adjustment Clause (FPPCAC).

Electric service shall be subject to a FPPCAC pursuant to 17.9.550 NMAC (Fuel and Purchased Power Cost Adjustment Clauses for Electric Utilities) and the Final Order in Case No. 18-00006-UT.

The FPPCAC factors, differentiated by service voltage, apply to all kilowatt hours (kWh) consumed by customers taking retail service under the Company's retail rate schedules and will appear on the Customer's monthly bill as a line item calculated based on metered energy.

TERRITORY

Areas served by the Company in Doña Ana, Sierra, Otero and Luna Counties.

FPPCAC ADJUSTMENT

The FPPCAC recognizes loss adjustments due to service at different voltage levels:

		Line Losses	Voltage Factor	
A.	New Mexico System	~~7.2819~~6.8682%	100.0000%	X
B.	Secondary Voltage (If Customer takes service and is metered at 480 volts and below)	~~7.850~~7.403%	100.~~53005~~5004%	X
C.	Primary Voltage (If Customer takes service and is metered at 2,400 volts or higher but less than 69,000 volts)	~~5.123~~4.670%	97.~~9880~~9431%	X
D.	Transmission Voltage (If Customer takes service and is metered at 69,000 volts and higher but less than 115,000 volts)	~~2.916~~2.850%	~~95.9300~~96.2400%	X

SEASONAL AGRICULTURE PROCESSING SERVICE RATE

APPLICABILITY

This rate schedule is available to Customers whose seasonal service is for processing agricultural products. The Customer's service requirements must be distinctly of a recurring seasonal nature.

This rate schedule is not applicable for temporary, breakdown, standby or supplementary resale service.

TERRITORY

Areas served by the Company in Doña Ana, Sierra, Otero and Luna Counties.

TYPE OF SERVICE

Service available under this rate schedule will be determined by the Company and will either be single or three phase at the option of the Company and at a standard Company approved voltage. All service will be taken at a single point of delivery designated by the Company. Electric energy will be measured by a single meter, or other measuring device, of each kind needed.

MONTHLY RATE

Customer Charge (per meter per month)	$~~20.00~~26.65

X

In the event a Customer terminates service prior to the end of the current twelve (12) month period since the initiation of service under this rate schedule, the remaining portion of unpaid monthly Customer Charges will be assessed and due with the final bill.

	Summer (June through September)	**Non-Summer** (October through May)
Energy Charge per kWh	$0.~~1219~~09542	$0.~~0837~~08408

X

SPECIAL CONDITIONS

When a line extension is required, a written contract with an annual minimum charge for an initial term of three (3) years will be required to support the cost of the line extension.

SEASONAL AGRICULTURE PROCESSING SERVICE RATE

MONTHLY MINIMUM CHARGE

The Monthly Minimum Charge is the Customer Charge, Other Non-Consumption Based Applicable Riders and Tax Adjustment. X

FUEL AND PURCHASE POWER COST ADJUSTMENT CLAUSE (FPPCAC)

All service taken under this rate schedule is subject to the provisions of the Company's Rate No. 18 (FPPCAC). For Distributed Generation (DG) customers, the net energy metering X
provision will be applied by TOD period. X

OTHER APPLICABLE RIDERS

All service taken under this rate schedule is subject to the provisions of other Company riders that may apply to this rate schedule and shall be billed pursuant to provisions of those riders. For Distributed Generation (DG) customers, the net energy metering provision will be applied by X
TOD period. X

TAX ADJUSTMENT

Billings under this rate schedule may be increased by an amount equal to the sum of taxes payable under the Gross Receipts and Compensating Tax Act and of all other taxes, fees or charges (exclusive of ad valorem, state and federal income taxes) payable by the utility and levied or assessed by any governmental authority on the public utility service rendered, or on the right or privilege of rendering the service, or on any object or event incidental to the rendition of the service.

TERMS OF PAYMENT

All bills under this rate schedule are due and payable when rendered and become delinquent twenty (20) calendar days thereafter. If the twentieth day falls on a holiday or weekend, the next Company business day will apply.

SEASONAL AGRICULTURE PROCESSING SERVICE RATE

Service supplied under this rate schedule is subject to the Company's Rules and Regulations on file with the New Mexico Public Regulation Commission and available for inspection at Company offices.

The Company and Customer will determine whether a new Customer qualifies for this rate schedule.

The non-processing portion of the Customer's service, such as lighting and miscellaneous office load, must be separately metered and billed under the applicable rate schedule.

Maximum Demand is defined as the highest measured thirty (30) minute average kW load. The Company, at its option, may install metering equipment to measure the Customer's Maximum Demand for purposes of determining the applicable rate schedule.

SUPPLEMENTARY POWER SERVICE FOR
COGENERATION AND SMALL POWER PRODUCTION FACILITIES

APPLICABILITY

This rate schedule is applicable to Qualifying Facilities and to Customers taking service from a third party Qualifying Facility which qualifies as a small power production facility or cogeneration facility as defined in 18 CFR, Part 292, Subpart B, of the final rules issued by the Federal Energy Regulatory Commission to implement Sections 201 and 210 of the Public Utility Regulatory Policies Act of 1978.

Pursuant to 18 CFR Part 292.204(a), a qualifying power production facility is “small” when it does not exceed 80 megawatts.

DEFINITION – SUPPLEMENTARY POWER

Supplementary Power means electric energy and/or capacity regularly used by a Customer of the Company in addition to the energy and/or capacity supplied by a Qualifying Facility.

TERRITORY

Areas served by the Company in Doña Ana, Sierra, Otero and Luna Counties.

TYPE OF SERVICE

Service available under this rate schedule will be determined by the Company and will either be single or three phase at the option of the Company and at a standard Company approved voltage. All service will be taken at a single point of delivery designated by the Company. Electric energy will be measured by a single meter, or other measuring device, of each kind needed.

SUPPLEMENTARY POWER SERVICE RATE

Supplementary Power shall be billed under the retail rate schedule currently in effect and applicable to the Customer having power requirements equal to the supplementary power requirements of the Qualifying Facility. All provisions in the retail rate schedule are applicable, except as specifically excluded in this rate schedule.

COMMON PROVISIONS

Interconnection Charge:

EL PASO ELECTRIC COMPANY

~~ELEVEN~~TWELFTH~~TH~~ REVISED RATE NO. 21 X
CANCELLING ~~TENTH~~ELEVENTH REVISED RATE NO. 21 X

SUPPLEMENTARY POWER SERVICE FOR
COGENERATION AND SMALL POWER PRODUCTION FACILITIES

Customers on this rate schedule shall be subject to a charge for interconnection costs.

Interconnection costs are the reasonable costs of connection, switching, metering, transmission, distribution, safety provisions, and administrative costs incurred by the Company which are directly related to the installation and maintenance of the physical facilities necessary to permit interconnected operations with a Qualifying Facility, to the extent such costs are in excess of the costs that the Company would have incurred if it had not engaged in interconnected operations but instead generated an equivalent amount of electric energy or capacity itself or purchased an equivalent amount of electric energy or capacity from other sources.

In conformance with 17.9.570.9 NMAC, the Qualifying Facility shall give the Company at least sixty (60) days written advance notice to interconnect. Such notice shall specify the date the Qualifying Facility will be ready for interconnection, the date the Qualifying Facility will be able to commence testing, and the anticipated date of operation after testing. The Customer shall pay the estimated interconnection costs in full at the time notice to interconnect is provided to the Company. Upon completion of the interconnection the actual costs shall be computed and reimbursements to the appropriate party shall be made for any differences between the actual and estimated cost of interconnection.

In addition, Customers with a design capacity greater than 100 kilowatts (kW) shall pay an annual charge of ~~4.8732~~5.4414% of the capital costs of interconnection to provide for the recovery of property taxes, revenue related taxes, depreciation expense, and operation and maintenance expenses. The annual charge of ~~4.8732~~5.4414% is payable by the Customer in monthly installments at the rate of one-twelfth (1/12) of the annual charge per month. X X X

METERING EQUIPMENT AND FACILITIES

The metering options available to the Qualifying Facility are described in the Company's Rate No. 16 Purchased Power Service.

The Company will install, own and maintain all meters and metering equipment. The Customer will install Company approved meter sockets and metering cabinets.

The Company may install, at its expense, on the Customer's premises, load research metering. The Customer shall supply, at no expense to the Company, a suitable location for meters and associated equipment used for billing and for load research purposes.

All bills under this rate schedule are due and payable when rendered and become delinquent twenty (20) calendar days thereafter. If the twentieth day falls on a holiday or weekend, the next Company business day will apply.

TERMS AND CONDITIONS

Service supplied under this rate schedule is subject to the Company's Rules and Regulations on file with the New Mexico Public Regulation Commission and available for inspection at Company offices. The provisions of any contract associated with service under this rate schedule are also applicable.

This rate schedule shall be binding upon the Company and the Customer for a period coterminous with the interconnection agreement; provided, however, that the Customer may terminate service provided under this rate schedule at any time during such term by providing the Company with written notice at least one (1) year prior to the effective date of such termination, and the Company may terminate in accordance with regulatory regulations. Any change in this rate schedule approved by a regulatory authority with the requisite jurisdiction shall become effective upon such approval and remain in force until the expiration of the term of this rate schedule or the termination by Customer in accordance with the requirements herein contained, whichever event occurs first in time. The service supplied hereunder is to be used exclusively within the premises of the Customer, as defined in the Customer's application for service.

The Customer will furnish the Company such data as required by the Company to determine that the Customer meets the requirements for qualification.

The Qualifying Facility may be connected for (1) parallel operation with the Company's service, or (2) isolated operation with Supplementary Power Service provided by the Company by means of a double-throw switch or other Company approved switching solution.

BACKUP POWER SERVICE FOR
COGENERATION AND SMALL POWER PRODUCTION FACILITIES

APPLICABILITY

This rate schedule is applicable to Qualifying Facilities and to Customers taking service from a third party Qualifying Facility which qualifies as a small power production facility or cogeneration facility as defined in 18 CFR, Part 292, Subpart B, of the final rules issued by the Federal Energy Regulatory Commission to implement Sections 201 and 210 of the Public Utility Regulatory Policies Act of 1978. Pursuant to 18 CFR Part 292.204(a), a qualifying power production facility is "small" when it does not exceed 80 megawatts.

DEFINITION – BACKUP POWER

Backup Power means electric energy and/or capacity supplied by the Company during an unscheduled outage of the Qualifying Facility to replace energy and/or capacity ordinarily supplied by the Qualifying Facility.

TERRITORY

Areas served by the Company in Doña Ana, Sierra, Otero and Luna Counties.

TYPE OF SERVICE

Service available under this rate schedule will be determined by the Company and will either be single or three phase at the option of the Company and at a standard Company approved voltage. All service will be taken at a single point of delivery designated by the Company. Electric energy will be measured by a single meter, or other measuring device, of each kind needed.

BACKUP POWER SERVICE RATE

Backup Power shall be billed under the retail rate schedule currently in effect and applicable to the Customer absent its Qualifying Facility generation. All provisions in the retail rate schedule are applicable, except as specifically excluded in this rate schedule. No demand ratchets or power factor penalties will apply to this service.

MONTHLY RESERVATION FEE

A monthly reservation fee will be charged in the months that Backup Power is not utilized by the Qualifying Facility. The reservation fee will be ten percent (10%) of the monthly demand charge

INTERRUPTIBLE POWER SERVICE FOR
COGENERATION AND SMALL POWER PRODUCTION FACILITIES

The annual charge of ~~4.8681~~5.4414% is payable by the Customer in monthly installments at the rate of one-twelfth (1/12) of the annual charge per month. X

METERING EQUIPMENT AND FACILITIES

The metering options available to the Qualifying Facility are described in the Company's Rate No. 16 Purchased Power Service.

The Company will install, own and maintain all meters and metering equipment. The Customer will install Company approved meter sockets and metering cabinets.

The Company may install, at its expense, on the Customer's premises, load research metering. The Customer shall supply, at no expense to the Company, a suitable location for meters and associated equipment used for billing and for load research purposes.

TERMS OF PAYMENT

All bills under this rate schedule are due and payable when rendered and become delinquent twenty (20) calendar days thereafter. If the twentieth day falls on a holiday or weekend, the next Company business day will apply.

TERMS AND CONDITIONS

Service supplied under this rate schedule is subject to the Company's Rules and Regulations on file with the New Mexico Public Regulation Commission and available for inspection at Company offices. The provisions of any contract associated with service under this rate schedule are also applicable.

This rate schedule shall be binding upon the Company and the Customer for a period coterminous with the interconnection agreement; provided, however, that the Customer may terminate service provided under this rate schedule at any time during such term by providing the Company with written notice at least one (1) year prior to the effective date of such termination and the Company may terminate in accordance with regulatory regulations. Any change in this rate schedule approved by a regulatory authority with the requisite jurisdiction, shall become effective upon such approval and remain in force until the expiration of the term of this rate schedule or the termination by Customer in accordance with the requirements herein contained, whichever event occurs first

Energy Charge per kWh		
On-Peak Period	$0.14218	-------
Off Peak Period	$0.01129	$0.01129

The On-Peak Period shall be from 3:00 P.M. to 7:00 P.M, Mountain Daylight Time, Monday through Friday, for the Summer months. There is no On-Peak Period for the Non-Summer months. The Off-Peak Period shall be all other hours not covered in the On-Peak Period.

MONTHLY MINIMUM CHARGE

The Monthly Minimum Charge is the Customer Charge plus Demand Charge, Other Non-Consumption Based Applicable Riders, and Tax Adjustment.

DETERMINATION OF BILLING DEMAND

Maximum Demand is defined as the highest measured thirty (30) minute ~~average~~ interval kW load.

The billing demand (in kW) will be the highest of:

(a) the Maximum Demand, adjusted by the Meter Voltage Adjustment, if applicable; or,
(b) the demand ratchet of 65% of the Maximum Demand established during the billing months of June through September in the preceding twelve (12) month period; or
(c) 6,000 kW.

POWER FACTOR ADJUSTMENT

If the power factor at the time of Maximum Demand is below 90% lagging, a power factor adjustment shall be calculated as follows:

ADJ = ((kW x .95 / PF) – kW) x DC, where
ADJ = Increase to applicable Demand Charge,
kW = Maximum Demand,
PF = Monthly measured Power Factor, and
DC = Demand Charge.

EL PASO ELECTRIC COMPANY

~~SEVENTH~~ EIGHTH REVISED RATE NO. 29 X
CANCELLING ~~SIXTH~~ SEVENTH REVISED RATE NO. 29 X

NOTICED INTERRUPTIBLE SERVICE RATE
FOR LARGE POWER SERVICE

APPLICABILITY

~~This rate schedule is closed to new service applications.~~ X

The availability of this rate schedule will be limited to a maximum of 100 megawatts (MW) of total applicable interruptible demand for all participating Customers at any one time, as measured by the difference between each customer's contracted firm demand and each customer's expected maximum demand at the time of the Company's expected native system peak; however, this limitation of 100 MW will not be the basis for the termination of a customer's service under this rate while the Customer is under a contract for service under this rate. This rate schedule is available to current Customers with total connected capacity requirements of at least 1,000 kilowatts (kW) and not served at a transmission voltage level, and at the sole discretion of the Company. The minimum level of firm demand to be required from qualifying Customers is ~~500~~ 800 kW, unless a different amount is provided by a contract with a customer existing prior to the effective date of the eighth revised version of this rate schedule. X

Noticed Interruptible Power Service is available under this schedule only if the utilization of this service is of such character that the service is capable of being interrupted at any time, upon Company request, without damage to property or persons and without adversely affecting the public health, safety and welfare. This rate schedule is available only in conjunction with firm service under other applicable rate schedules.

At Customer's expense, the Customer will install all necessary communication, relay and breaker equipment to qualify for service under this rate schedule, subject to Company approval. The Customer will pay for associated hardware costs.

TERRITORY

Areas served by the Company in Doña Ana, Sierra, Otero and Luna Counties.

TYPE OF SERVICE

Service available under this rate schedule will be determined by the Company and will either be single or three phase at the option of the Company and at a standard Company approved voltage. All service will be taken at a single point of delivery designated by the Company. Electric energy will be measured by a single meter, or other measuring device, of each kind needed.

Energy Charge per kWh	$0.~~0076~~01134	$0.~~0076~~01134	$0.001134	X

DETERMINATION OF BILLING DEMAND AND ENERGY

Maximum Demand will consist of both firm and interruptible demand, and is defined as the highest measured thirty (30) minute ~~average~~ interval kW load. The Maximum Demand will be adjusted for billing when the Meter Voltage Adjustment clause is applicable. X

The Total Billing Demand will be the Maximum Demand. In no event shall Total Billing Demand be less than the Minimum Firm Contract Capacity specified in the Contract for Power Service.

Firm Power Billing Demand shall be the lesser of (1) the Total Billing Demand or (2) the Contract Firm Power Demand established in the Contract for Power Service, but not less than the Minimum Firm Contract Capacity specified in the Contract for Power Service.

Firm Power Billing Demand as defined herein shall constitute the "demand used for billing" under the Customer's firm service rate schedule, and shall be billed in accordance with the rate schedule applicable to Customer's firm service. Noticed Interruptible Power Billing Demand shall be determined as Total Billing Demand minus Firm Power Billing Demand, and shall be billed in accordance with this rate schedule.

Firm Energy shall be determined by multiplying the ratio of the Firm Power Billing Demand to the Total Billing Demand times the metered kWh. Firm Energy shall be billed in accordance with the rate schedule applicable to the Customer's firm service. Noticed Interruptible Energy shall be the difference between the metered kWh and the Firm Energy. Noticed Interruptible Energy shall be billed in accordance with this rate schedule.

TAX ADJUSTMENT

Billings under this rate schedule may be increased by an amount equal to the sum of taxes payable under the Gross Receipts and Compensating Tax Act and of all other taxes, fees or charges (exclusive of ad valorem, state and federal income taxes) payable by the utility and levied or assessed by any governmental authority on the public utility service rendered, or on the right or privilege of rendering the service, or on any object or event incidental to the rendition of the service.

CONTRACT FOR SERVICE

A Contract for Power Service (Contract) must be executed between the Company and the Customer prior to taking service under this rate schedule. The Contract shall define the amount of the Customer's demand that shall be served as firm demand. All demand in excess of the amount of firm demand specified in the Contract shall constitute interruptible demand and shall be served and billed on that basis. The Contract term shall be for an initial period of three (3) years, and shall continue year-to-year thereafter until canceled by either party upon one (1) year prior written notice. The amount of Contract Firm Power Demand and Minimum Firm Contract Capacity specified in the Contract will supersede and control over any inconsistent level of demand specified in any pre-existing agreement between the Company and the Customer.

SCHEDULING PROCEDURES

The Company and the Customer shall agree upon detailed procedures for requesting, providing notice of, and implementing interruptions, and shall set forth the same in the Contract for Power Service.

GENERAL CONDITIONS

The Company may make intentional interruptions at any time ~~and from time to time~~, at the Company's sole discretion, for up to two hundred (200) hours in any calendar year with individual interruptions limited to no more than six (6) hours per interruption, and no more than three (3) interruptions per calendar week. (30) minute notice prior to the interruption. Emergency conditions are deemed to exist at any time, in the sole judgment of the Company, that demands for electricity exceed or are expected to exceed the Company's available electric supply for whatever reason, including, but not limited to, breakdown of generating units, distribution equipment or other critical facilities; short or long term shortages of fuel or generation, distribution, and other facilities; and requirements or orders of governmental agencies. The Company may not interrupt the Customer: (1) due solely to differences between the Company's marginal cost of energy and the energy-related charges for Noticed Interruptible Power Service; or (2) to continue or make non-firm off-system sales.

An hour of interruption shall be any clock-hour or part thereof during which the Company invokes an intentional interruption. The number of hours of interruption remaining during the calendar year for the term of the contract shall be reduced by a minimum of four (4) hours each interruption occasion, even though the actual interruption may last for a lesser period.

Interruptions will be directly controlled by the Company's system operator with the appropriate notice provided to Customer.

TERMS OF PAYMENT

All bills under this rate schedule are due and payable when rendered and become delinquent twenty (20) calendar days thereafter. If the twentieth day falls on a holiday or weekend, the next Company business day will apply.

TERMS AND CONDITIONS

Service supplied under this rate schedule is subject to the Company's Rules and Regulations on file with the New Mexico Public Regulation Commission and available for inspection at Company offices. The provisions of any contract associated with service under this rate schedule are also applicable.

During the term of the Customers' Contract for Power Service, Customer may not engage in self-generation other than periodic operation of self-generation facilities for emergency situations or to comply with an interruption request.

NOTICED INTERRUPTIBLE SERVICE RATE
FOR LARGE POWER SERVICE

Charges for service supplied under this rate schedule, except the Customer Charge, are subject to proration adjustments.

NON-COMPLIANCE

Noticed Interruptible Power Service is provided to the Customer with the explicit knowledge and understanding that such service shall be subject to curtailment by the customer with notice from the Company. Failure to comply with the Company's request to curtail shall result in the following adjustments to Customer billings and service:

(1) During a calendar year, the first occasion in which the Customer fails to comply with a request for curtailment shall result in the customer being billed (or re-billed, if necessary) for the entire month at the retail rates currently in effect and otherwise applicable to the Customer ("Retail Rate"); and

(2) During the same calendar year, the second occasion in which the Customer fails to comply with a request for curtailment shall result in the Customer re-billed at the Retail Rate for the period from January 1 of such calendar year through the end of the month in which such second failure occurred (less amounts previously remitted by Customer for such period) with an additional five percent (5%) charge applied to the additional base portion of the recalculated monthly bills (less amounts previously remitted by Customer for such period); and

(3) During the same calendar year, the third occasion in which the Customer fails to comply with a request for curtailment shall result in the immediate termination of service under the Noticed Interruptible Service Rate, and the Customer will be served and billed for electric service for that entire month and thereafter at the Retail Rate. Additionally, the Customer will be re-billed at the Retail Rate for each month of such calendar year that was not previously billed or re-billed at the Retail Rate under this Non-Compliance provision, with an additional five percent (5%) charge applied to the additional base portion of the recalculated monthly bills (less amounts previously remitted by the Customer for such period).

EL PASO ELECTRIC COMPANY

~~SEVENTH~~ EIGHTH REVISED RATE NO. 30 X
CANCELLING ~~SIXTH~~ SEVENTH REVISED RATE NO. 30 X

LOAD RETENTION RATE

APPLICABILITY

This rate schedule is applicable to all non-governmental commercial and industrial customers of the Company that have taken service from the Company for a period of at least twelve (12) consecutive months and have Maximum Demand of at least 500 kilowatts (kW).

TERRITORY

Areas served by the Company in Doña Ana, Sierra, Otero and Luna Counties.

AVAILABILITY

The Load Retention Rate is available to Customers who meet the following criteria:

1. The Customer must provide notice to the Company that they will request termination of electrical service for either a portion or all of their electrical power and energy requirements due to an alternative generation source, or

2. The Customer must demonstrate that they will leave the Company's system, or discontinue or curtail service for financial reasons.

3. The Customer must submit a notarized affidavit that attests to the fact that but for the Load Retention Rate contained herein, the Customer will leave the Company's system.

MONTHLY RATE

The Company may enter into negotiations with the Customer for a mutual agreement to establish a lower rate not less than the Company's incremental cost of power and energy as estimated over the term of the contract. Sufficient documentation of the cost estimates used in determining the economic feasibility of an alternative generation source shall be provided to the Company for their review. The negotiated agreement shall be subject to the review and final approval of the New Mexico Public Regulation Commission (NMPRC).

The Company, at its option, will annually review its incremental cost of providing service to a contracted Load Retention Customer to determine if such costs exceed the Customer's contracted charges. Should the incremental costs exceed the Customer's contracted rate, the Company will adjust the charge to be above or equal to the incremental cost.

EL PASO ELECTRIC COMPANY

~~FIRST~~ SECOND REVISED RATE NO. 39 X
CANCELLING ~~ORIGINAL~~ FIRST RATE NO. 39 X

ECONOMIC DEVELOPMENT RATE

APPLICABILITY

This rate schedule is available for the total maximum demand of a new Customer or for the additional maximum demand of an existing Customer. The minimum monthly billing demand for any Customer to be eligible for service under this rate schedule must be at least 500 kilowatts ("kW"). A New Customer must not have taken electric service from the Company in New Mexico or Texas within the twelve (12) consecutive months prior to requesting the EDR. An Existing Customer must have taken electric service from the Company for a period of at least twelve (12) consecutive months prior to requesting the Economic Development Rate ("EDR") and must have a proposed incremental demand of at least 100 kW. The availability of this rate schedule will be limited to 50 megawatts of total applicable demand for all participating Customers at any one time. Participation will be based upon the date on which Customers complete all requirements for participation.

Customers taking service under this rate schedule must permanently increase employment by a minimum of two (2) full-time employees per 100 kW of new or additional load ("Qualifying Employees"). The Customer must furnish the Company with a notarized affidavit from an officer, owner, or other appropriate official of the Customer identifying the number of Qualifying Employees directly associated with the new or increased connected load. The Customer must also furnish the Company with similar affidavits stating the actual number of Qualifying Employees as of December 31 of each year that this rate schedule is in effect. Such subsequent written affidavits will be submitted to the Company no later than January 31 of the following year.

The Customer taking service under this rate schedule must also furnish the Company with a notarized affidavit from an officer, owner, or other official responsible for the decision that resulted in the new load or addition thereto, confirming that availability of this rate schedule was an important contributing factor in the Customer's decision to add the new or additional load, and that absent this rate schedule, the customer would have exercised other available options and added new load or located new service outside of the Company's New Mexico service territory. The Company reserves the right to verify the statements included in each Customer's affidavit.

EL PASO ELECTRIC COMPANY

~~FIRST~~ SECOND REVISED RATE NO. 39 X
CANCELLING ~~ORIGINAL~~ FIRST RATE NO. 39 X

ECONOMIC DEVELOPMENT RATE

TYPE OF SERVICE

The type of service available to the Customer will be determined by the Company and will either be single or three phase, at the option of the Company, and at a standard Company approved voltage. All service will be taken at a single point of delivery designated by the Company and will be measured by a single meter of each kind needed as determined by the Company. Discounts available under this rate schedule will be applicable to the voltage under which the Customer is currently or projected to receive service.

DEFINITIONS

Base Period – For an Existing Customer, the Base Period is the twelve (12) months immediately preceding the month that service is requested under this rate schedule. For a New Customer, there is no Base Period.

Base Period Demand – For an Existing Customer, the Maximum Demand, as defined in the Customer's applicable retail rate schedule, under normal operating conditions for the Base Period used to determine the additional demand to be billed under this rate schedule. For a New Customer, this amount is 0 kW. In the event an Existing Customer installs energy efficiency measures that reduce its demand, the Maximum Demand for the Base Period will be adjusted to compensate for any such verified demand reduction.

Existing Customer – As defined in the Applicability section of this rate schedule.

Full-Time Employment – Employment existing at the end of the Base Period for those whose employment has been regularly scheduled for at least 1,500 hours during the Base Period for the purpose of normal operations. Full-Time Employment for New Customers will be mutually agreed upon between the Company and the New Customer. Employment verification procedures will be mutually agreed upon between the Company and the Customer.

Incremental Cost – For purposes of this rate schedule, incremental cost, at a minimum, shall include all additional costs incurred to serve the Customer taking service under this rate schedule that would not otherwise have been incurred to serve other Customers, including but not limited to: fuel and purchased power costs, costs recoverable from Customers pursuant to the Renewable Energy Act and the Efficient Use of Energy Act, and the direct costs of facilities necessary to provide service to the Customer.

EL PASO ELECTRIC COMPANY

~~FIRST~~ SECOND REVISED RATE NO. 39 X
CANCELLING ~~ORIGINAL~~ FIRST RATE NO. 39 X

ECONOMIC DEVELOPMENT RATE

Incremental Demand – For purposes of this rate schedule, incremental demand is all kW billing demand above the Base Period Demand, and represents the additional demand to be billed at the discounted EDR pursuant to this rate schedule.

New Customer – As defined in the Applicability section of this rate schedule.

Qualifying Employee – As defined in the Applicability section of this rate schedule.

MONTHLY RATE

The Economic Development Rate shall be the retail rate schedule currently in effect and applicable to Customer, except as modified by this section. All provisions in the retail rate schedule are applicable, except as specifically excluded in this rate schedule.

The Company may enter into negotiations with the Customer for a mutual agreement to establish lower rates not less than the Company's incremental cost of demand and energy as estimated over the term of the agreement, subject to the provisions below:

1. The proposed EDR agreement shall be subject to NMPRC review and approval.

2. An EDR agreement approved or otherwise allowed to become effective for any Customer shall last no longer than four (4) years, except that the NMPRC may approve the EDR contract for up to twelve (12) additional months if the NMPRC determines that the additional period is necessary to attract a particular Customer to New Mexico.

3. During the term of the EDR contract, should circumstances occur that disqualify a Customer from eligibility for an EDR, the Company shall promptly provide written notice to the Customer of the termination of the EDR contract and the associated EDR. EDR contract termination and removal of the discounted EDR shall be effective with the first billing cycle occurring a minimum of ten (10) days from the date of the written notice.

4. In the event that the Customer terminates electric service prior to the end of the EDR agreement termination date, the Company shall bill the Customer and the Customer shall reimburse the Company for the difference between the amounts charged to the Customer

Advice Notice No. 317

EL PASO ELECTRIC COMPANY

~~FIRST~~ SECOND REVISED RATE NO. 39 X
CANCELLING ~~ORIGINAL~~ FIRST RATE NO. 39 X

ECONOMIC DEVELOPMENT RATE

for the billing periods the EDR was in effect and the amounts that would have been charged under the otherwise applicable rate schedule.

TERMS AND CONDITIONS

Service supplied under this rate schedule is subject to the Company's Rules and Regulations on file with the NMPRC and available for inspection at Company offices. The provisions of any agreement associated with service under this rate schedule are also applicable.

A Customer without a prior service history with the Company will be classified under the appropriate rate schedule in accordance with the demand estimate performed by the Company.

Existing businesses changing ownership, location, or name do not qualify as new Customers. Those businesses must assume the same Base Period Demand as though they were continuing businesses and may qualify for an EDR as any other existing business. If a business ceases to exist and the premises are occupied by a new owner and a new business is created, it may qualify as a New Customer. The designation as a New Customer shall be determined by the Company, subject to the Customer's right to seek NMPRC review of such determination.

In the event the maximum monthly demand of an Existing Customer falls below the Base Period monthly maximum demand, the EDR contract between the Company and Customer will be void and the Customer will take service under the applicable rate schedule.

The Company retains the right to modify specific EDR contracts, with notice, to ensure compliance with applicable laws and regulations.

The Company retains the right to modify this rate schedule, with notice and upon NMPRC approval, as economic conditions in its New Mexico service area dictate.

EL PASO ELECTRIC COMPANY

~~FIRST~~ SECOND REVISED RATE NO. 42
CANCELLING ~~ORIGINAL~~FIRST RATE NO. 42

EXPERIMENTAL ELECTRIC VEHICLE CHARGING RATE (EEVC)
X

APPLICABILITY

This rate schedule is available for service to residential and commercial Customers using a facility dedicated solely for the charging of an electric vehicle (EV).

TERRITORY

Areas served by the Company in Doña Ana, Sierra, Otero and Luna Counties.

TYPE OF SERVICE

Service available under this rate schedule will be determined by the Company and will either be single or three phase at the option of the Company and at a standard Company approved voltage. ~~Only charging activity operating at 120V and up to 480V are eligible for service under this rate schedule.~~ Only charging activity, with or without storage and other associated appurtenances, will be eligible for service under this rate schedule. All service will be taken at one point of delivery, designated by the Company and dedicated solely for the charging of an EV. Electric energy will be measured by a single meter, or other measuring device, of each kind needed.

MONTHLY TIME-OF-~~USE~~DAY RATE

The Combined Service Customer Charge applies to EV charging service that is billed in combination with service billed under a retail rate schedule. Otherwise, the Single Service Customer Charge applies.

ELECTRIC VEHICLE CHARGING RATE (Maximum Demand below 15kW in all months)

If Maximum Demand meets or exceeds 15 kW in the current month and previous month, the service will be transferred to and remain under the Electric Vehicle Charging Demand Rate, starting with the following billing month.

The Electric Vehicle Charging Rate applies to all existing EV charging services billed under Rate No. 42 until the effective date of this rate schedule in a subsequent rate case filing. At the Customer's option, the existing EV charging service can be transferred to and remain under the Electric Vehicle Charging Demand Rate.

Maximum Demand is defined as the highest measured thirty (30) minute interval kW load.

The billing demand (in kW) will be the highest of:

(a) the Maximum Demand; or
(b) the demand ratchet of 60% of the Maximum Demand established during the billing months of June through September in the preceding twelve (12) month period; or
(c) 15 kW.

The Company will reset the demand ratchet for customers installing Distributed Generation (DG) and/or storage following interconnection of the DG and/or storage, restarting the historical demand used for purposes of applying (b) above.

FUEL AND PURCHASED POWER COST ADJUSTMENT CLAUSE (FPPCAC)

All service taken under this rate schedule is subject to the provisions of the Company's Rate No. 18 (FPPCAC). For Distributed Generation (DG) customers, the net energy metering provision will be applied by TOD period.

OTHER APPLICABLE RIDERS

All service taken under this rate schedule is subject to the provisions of other Company riders that may apply to this rate schedule and shall be billed pursuant to the provisions of those riders. For Distributed Generation (DG) customers, the net energy metering provision will be applied by TOD period.

TAX ADJUSTMENT

Billings under this rate schedule may be increased by an amount equal to the sum of taxes payable under the Gross Receipts and Compensating Tax Act and of all other taxes, fees or charges (exclusive of ad valorem, state and federal income taxes) payable by the utility and levied or assessed by any governmental authority on the public utility service rendered, or on the right or privilege of rendering the service, or on any object or event incidental to the rendition of the service.

TERMS OF PAYMENT

All bills under this rate schedule are due and payable when rendered and become delinquent twenty (20) calendar days thereafter. If the twentieth day falls on a holiday or weekend, the next Company business day will apply.

TERMS AND CONDITIONS

Service supplied under this rate schedule is subject to the Company's Rules and Regulations on file with the New Mexico Public Regulation Commission and available for inspection at Company offices.

Service under this rate schedule shall not be not less than twelve (12) months during which time the Customer will maintain an active account and will pay the monthly minimum charges regardless of whether or not service is used under this rate schedule.

Prior to initiation of service under this rate schedule, Company personnel will verify the installation of the Customer's charging station and that the load behind the meter is exclusively related to EV charging.

As an alternative to service under this rate schedule, Customers may choose to have the EV charging installation electrically connected behind their existing meter and the entire load billed under the Time Of Day Rate of the applicable rate schedule.

EL PASO ELECTRIC COMPANY

ORIGINAL RATE NO. 50

HIGH LOAD FACTOR POWER SERVICE RATE

APPLICABILITY

Service under this rate schedule shall be limited to Customers whose Maximum Demand, during the current month and previous eleven (11) month period, equaled or exceeded thirty thousand (30,000) kilowatts (kW) and whose average monthly load factor equaled or exceeded eighty-five percent (85%). For new Customers, initial applicability and monthly billing under this rate schedule are subject to expected Load Ramp Period requirements as established in an Energy Service Agreement.

TERRITORY

Areas served by the Company in Doña Ana, Sierra, Otero and Luna Counties.

TYPE OF SERVICE

Service available under this rate schedule will be determined by the Company and will be three phase transmission voltage. All service will be taken at the single point of delivery into a customer-dedicated substation, which substation may be owned by the Company or the Customer. Electric energy will be measured by a meter or meters, or other measuring devices, of each kind needed based on the designated point or points of delivery.

"Energy Service Agreement" or "ESA" is defined as the executed written service agreement entered into by the Customer and the Company in accordance with this rate schedule.

"Contract Capacity" is defined as the Customer specified monthly post-Load Ramp Period peak load requirements for each month as set forth in the ESA.

"Load Ramp Contract Capacity" is defined as the mutually agreed monthly peak load requirements defined in the ESA associated with the Load Ramp Period.

"Load Ramp Period" is defined as the time between commencement of retail service until the customer reaches full Contract Capacity. The ESA must require that the Load Ramp Period cannot exceed 4 years.

Energy Charge per kWh		
On-Peak Period	$0.15178	---
Off-Peak Period	$0.01260	$0.01260

The Summer period shall be the months of June through September. The Non-Summer period shall be all other months. The On-Peak Period shall be from 3:00 P.M. to 7:00 P.M., Mountain Daylight Time, Monday through Friday, for the Summer months. There is no On-Peak Period for the Non-Summer months. The Off-Peak Period shall be all other hours not covered in the On-Peak Period.

MONTHLY MINIMUM CHARGE

The Monthly Minimum Charge is the Customer Charge plus Demand Charge, Other Non-Consumption Based Applicable Riders, Tax Adjustment, plus any applicable Facility Charge.

DETERMINATION OF BILLING DEMAND

Maximum Demand is defined as the highest measured thirty (30) minute interval kW load during the billing month.

The billing demand (in kW) will be the highest of:

(a) the Maximum Demand occurring in the On-Peak Period; or
(b) the Maximum Demand occurring in the Off-Peak Period; or
(c) 80% of the Contract Capacity; or
(d) the demand ratchet of 80% of the Maximum Demand established during the billing months of June through September in the preceding twelve (12) month period; or
(e) 30,000 kW.

Customer will have no more time than the Load Ramp Period to reach full Contract Capacity, during which time, (b) above, monthly billing demand shall not be less than 80% of the customer's Load Ramp Contract Capacity rather than 80% of the Contract Capacity.

The billing demands under (c) through (e), will be prorated based on number of hours in the On-Peak Period and in the Off-Peak Period during the billing month.

ORIGINAL RATE NO. 50

HIGH LOAD FACTOR POWER SERVICE RATE

POWER FACTOR ADJUSTMENT

If the power factor at the time of Maximum Demand is below 90% lagging, a power factor adjustment shall be calculated as follows:

ADJ = ((kW x .95 / PF) – kW) x DC, where
ADJ = Increase to applicable Demand Charge,
kW = Maximum Demand,
PF = Monthly measured Power Factor, and
DC = Demand Charge.

FUEL AND PURCHASED POWER COST ADJUSTMENT CLAUSE (FPPCAC)

All service taken under this rate schedule is subject to the provisions of the Company's Rate No. 18 (FPPCAC).

OTHER APPLICABLE RIDERS

All service taken under this rate schedule is subject to the provisions of other Company riders that may apply to this rate schedule and shall be billed pursuant to provisions of those riders.

TAX ADJUSTMENT

Billings under this rate schedule may be increased by an amount equal to the sum of taxes payable under the Gross Receipts and Compensating Tax Act and of all other taxes, fees or charges (exclusive of ad valorem, state and federal income taxes) payable by the utility and levied or assessed by any governmental authority on the public utility service rendered, or on the right or privilege of rendering the service, or on any object or event incidental to the rendition of the service.

CONTRACT FOR SERVICE

An Energy Service Agreement, and any associated addenda, must be executed between the Company and the Customer which shall be filed by the Company with the New Mexico Public Regulation Commission prior to taking service under this rate schedule. The ESA shall include, among other things, the following provisions:

Advice Notice No. 317

Signature/Title */s/ James Schichtl*
James Schichtl
Vice President – Customer and Regulatory Solutions

EL PASO ELECTRIC COMPANY

ORIGINAL RATE NO. 50

HIGH LOAD FACTOR POWER SERVICE RATE

Initial Term Minimum: Twenty (20) year minimum initial term, with automatic annual renewal after the Initial Term, as further provided in the ESA. The Load Ramp Period is included in the Initial Term Minimum.

Security: If the Customer executing the Energy Service Agreement has at least two of the following three ratings (i) an Issuer Credit Rating of at least "A-" from Standard and Poor's (S&P), (ii) an Issuer Rating of at least "A3" from Moody's Investor Service (Moody's), or (iii) a Long-Term Issuer Default Rating of at least "A-" from Fitch Ratings (Fitch), then financial security will not be required. If financial security is required, it shall be provided in a form acceptable to the Company, in an amount and subject to other terms specified in the Energy Service Agreement and may be modified annually, as set forth below. The Security Amount must be provided in one or more of the following forms:

(1) Post of cash or cash equivalents.
(2) An irrevocable standby letter of credit ("Letter of Credit") issued by a U.S. bank or the U.S. branch of a foreign bank, which is not affiliated with the customer, with an Issuer Credit Rating of at least "A-" from S&P or an Issuer Rating of at least "A3" from Moody's. Such security must be issued for a minimum term of 365 days. The Customer must cause the renewal or extension of the security for additional consecutive terms of 365 days or more no later than 30 days prior to each expiration date of the security. If the security is not renewed or extended as required herein, the Company will have the right to draw immediately upon the Letter of Credit and be entitled to hold the amounts drawn as security.
(3) An irrevocable and unconditional guarantee from the ultimate parent or a corporate affiliate of the Customer (the "Guarantor"), so long as the Guarantor has (a) at least two of the following three ratings (i) an Issuer Credit Rating of at least A- from S&P, (ii) an Issuer Rating of at least A3 from Moody's, or (iii) a Long-Term Issuer Default Rating of at least "A-" from Fitch, or (b) is approved by EPE in its reasonable discretion.

If such requirements are no longer met, then Customer must provide replacement security in an acceptable form, as specified above, within 30 days or the Customer may enter into an event of default, as outlined in the ESA.

Initial Security Amount: If financial security is required pursuant to the above, then the Company and Customer will agree on an Initial Security Amount to be included in the Energy Service Agreement and such amount is subject to change annually, as described below. The Initial Security Amount shall reflect the initial incremental investment exposure of the

Advice Notice No. 317

Vice President – Customer and Regulatory Solutions

EL PASO ELECTRIC COMPANY

ORIGINAL RATE NO. 50

HIGH LOAD FACTOR POWER SERVICE RATE

Company prior to the Annual Security Adjustment, Customer's Estimated Load Forecast, Customer's cash contributions for Facilities, and other Customer characteristics as necessary.

Security provided by the Customer shall be calculated on a dollar per MW basis of the requested maximum Monthly Contract Demand over the Initial Term and included in the Energy Service Agreement.

Annual Security Adjustment: On an annual basis the Security Amount will be adjusted (the "Adjusted Security Amount") by Company based on the Customer Estimated Load Forecast and the Company's projected incremental cost of resources necessary for service of Customer for the remainder of the Initial Term or any renewal thereof. Prior to the execution of any procurement agreements, the Company will provide Customer the estimated cost of, and annual revenue requirement for, incremental new generation assets and incremental new transmission assets, and the Customer's allocated share of the annual revenue requirement consistent with the most recent Commission-approved cost of service study, adjusted for other executed Energy Service Agreements under this Tariff not yet included in the cost of service study. The Adjusted Security Amount will be equal to the net present value, using a discount rate equal to Company's weighted average cost of capital approved by the New Mexico Public Regulation Commission at the time of the calculation, of the sum of the allocated annual revenue requirements for the remainder of the Initial Term or any renewal thereof. The Company will provide Customer with all inputs and assumptions. The Customer will have no less than 90 days to review the inputs, assumptions, and calculations. In the event of an error or disagreement, the Company and Customer will work together in good faith to resolve such error or disagreement.

Termination for Default: Customers terminating service, as the result of an Event of Default under the terms of the Energy Service Agreement or this rate schedule prior to the end of the Initial Term may be subject to damages as set forth in the Energy Services Agreement.

FACILITY CHARGE

Customer-dedicated Facility Cost Recovery ("Facility Charge): A Facility Charge shall be based on the actual customer-dedicated facility costs incurred by the Company on behalf of the Customer and provide for full recovery of such costs and the associated operating and maintenance costs of the facility, as defined in the ESA. The amount and duration of the Facility Charge shall be determined by separate agreement between the Company and the Customer and included in the ESA.

HIGH LOAD FACTOR POWER SERVICE RATE

TERMS OF PAYMENT

All bills under this rate schedule are due and payable when rendered and become delinquent twenty (20) calendar days thereafter. If the twentieth day falls on a holiday or weekend, the next Company business day will apply.

TERMS AND CONDITIONS

Service supplied under this rate schedule is subject to the Company's Rules and Regulations on file with the New Mexico Public Regulation Commission and available for inspection at Company offices.

The Customer and the Company will determine whether a new Customer qualifies for this rate schedule.

If the Customer's Maximum Demand falls below 30,000 kW in the current month and previous month after the Load Ramp Period, the Customer shall no longer be eligible for service under this rate schedule and shall be placed on Rate No. 04 – General Service Rate or Rate No. 09 – Large Power Service or Rate No. 51 – Large Load Power Service Rate, as applicable, starting with the following billing month. After a minimum of twelve (12) months on the applicable rate schedule, should the Customer's Maximum Demand equal or exceed 30,000 kW in any two (2) consecutive months thereafter, the Customer shall be returned to Rate No. 50 – High Load Factor Power Service. The provisions of the ESA will continue to apply regardless of rate schedule that Customer is placed under.

If the Customer’s average monthly load factor falls below 85% in the current month and previous month after the Load Ramp Period, the Customer shall no longer be eligible for service under this rate schedule and shall be placed on Rate No. 51 – Large Load Power Service starting with the following billing month. After a minimum of twelve (12) months on Rate No. 51 – Large Load Power Service, should the Customer's average monthly load factor equal or exceed 85% in any two (2) consecutive months thereafter, the Customer shall be returned to Rate No. 50 – High Load Factor Power Service.

Any new Customer that has not established a prior service history with the Company shall be classified under the appropriate rate schedule in accordance with a demand estimate performed by the Company.

The Security Amount must be provided in one or more of the following forms:

(1) Post of cash or cash equivalents.
(2) An irrevocable standby letter of credit ("Letter of Credit") issued by a U.S. bank or the U.S. branch of a foreign bank, which is not affiliated with the customer, with an Issuer Credit Rating of at least "A-" from S&P or an Issuer Rating of at least "A3" from Moody's. Such security must be issued for a minimum term of 365 days. The Customer must cause the renewal or extension of the security for additional consecutive terms of 365 days or more no later than 30 days prior to each expiration date of the security. If the security is not renewed or extended as required herein, the Company will have the right to draw immediately upon the Letter of Credit and be entitled to hold the amounts drawn as security.
(3) An irrevocable and unconditional guarantee from the ultimate parent or a corporate affiliate of the Customer (the "Guarantor"), so long as the Guarantor has (a) at least two of the following three ratings (i) an Issuer Credit Rating of at least A- from S&P, (ii) an Issuer Rating of at least A3 from Moody's, or (iii) a Long-Term Issuer Default Rating of at least "A-" from Fitch, or (b) is approved by EPE in its reasonable discretion.

If such requirements are no longer met, then Customer must provide replacement security in an acceptable form, as specified above, within 30 days or the Customer may enter into an event of default, as outlined in the ESA.

Initial Security Amount: If financial security is required pursuant to the above, then the Company and Customer will agree on an Initial Security Amount to be included in the Energy Service Agreement and such amount is subject to change annually, as described below. The Initial Security Amount shall reflect the initial incremental investment exposure of the

EL PASO ELECTRIC COMPANY

ORIGINAL RATE NO. 51

LARGE LOAD POWER SERVICE RATE

Company prior to the Annual Security Adjustment, Customer's Estimated Load Forecast, Customer's cash contributions for Facilities, and other Customer characteristics as necessary.

Security provided by the Customer shall be calculated on a dollar per MW basis of the requested maximum Monthly Contract Demand over the Initial Term and included in the Energy Service Agreement.

Annual Security Adjustment: On an annual basis the Security Amount will be adjusted (the "Adjusted Security Amount") by Company based on the Customer Estimated Load Forecast and the Company's projected incremental cost of resources necessary for service of Customer for the remainder of the Initial Term or any renewal thereof. Prior to the execution of any procurement agreements, the Company will provide Customer the estimated cost of, and annual revenue requirement for, incremental new generation assets and incremental new transmission assets, and the Customer's allocated share of the annual revenue requirement consistent with the most recent Commission-approved cost of service study, adjusted for other executed Energy Service Agreements under this Tariff not yet included in the cost of service study. The Adjusted Security Amount will be equal to the net present value, using a discount rate equal to Company's weighted average cost of capital approved by the New Mexico Public Regulation Commission at the time of the calculation, of the sum of the allocated annual revenue requirements for the remainder of the Initial Term or any renewal thereof. The Company will provide Customer with all inputs and assumptions. The Customer will have no less than 90 days to review the inputs, assumptions, and calculations. In the event of an error or disagreement, the Company and Customer will work together in good faith to resolve such error or disagreement.

Termination for Default: Customers terminating service, as the result of an Event of Default under the terms of the Energy Service Agreement or this rate schedule prior to the end of the Initial Term may be subject to damages as set forth in the Energy Services Agreement.

FACILITY CHARGE

Customer-dedicated Facility Cost Recovery ("Facility Charge): A Facility Charge shall be based on the actual customer-dedicated facility costs incurred by the Company on behalf of the Customer and provide for full recovery of such costs and the associated operating and maintenance costs of the facility, as defined in the ESA. The amount and duration of the Facility Charge shall be determined by separate agreement between the Company and the Customer and included in the ESA.

EL PASO ELECTRIC COMPANY

ORIGINAL RATE NO. 51

LARGE LOAD POWER SERVICE RATE

TERMS OF PAYMENT

All bills under this rate schedule are due and payable when rendered and become delinquent twenty (20) calendar days thereafter. If the twentieth day falls on a holiday or weekend, the next Company business day will apply.

TERMS AND CONDITIONS

Service supplied under this rate schedule is subject to the Company's Rules and Regulations on file with the New Mexico Public Regulation Commission and available for inspection at Company offices.

The Customer and the Company will determine whether a new Customer qualifies for this rate schedule.

If the Customer's Maximum Demand falls below 10,000 kW in the current month and previous month after the Load Ramp Period, the Customer shall no longer be eligible for service under this rate schedule and shall be placed on Rate No. 04 – General Service Rate or Rate No. 09 – Large Power Service, as applicable, starting with the following billing month. After a minimum of twelve (12) months on the applicable rate schedule, should the Customer's Maximum Demand equal or exceed 10,000 kW in any two (2) consecutive months thereafter, the Customer shall be returned to Rate No. 51 – Large Load Power Service. The provisions of the ESA will continue to apply regardless of rate schedule that Customer is placed under.

Any new Customer that has not established a prior service history with the Company shall be classified under the appropriate rate schedule in accordance with a demand estimate performed by the Company.

PRORATION ADJUSTMENTS

Charges for service supplied under this rate schedule, except the Customer Charge, are subject to proration adjustments.

EL PASO ELECTRIC COMPANY

ORIGINAL RATE NO. 52

PEAK TIME REBATE PILOT

APPLICABILITY

This Peak Time Rebate ("PTRP") Credit provided by this rate schedule is applicable to bills for electric service provided under Rate No. 01 Residential Service Rate. Customers must have an existing Advanced Metering System meter installed to participate. To be eligible for a PTRP Credit, the customer must enroll for the consecutive months of May through October ("PTRP Season") during the pilot period and agree to receive PTRP notifications via the preferred communication method listed on the account.

TERRITORY

Areas served by the Company in Doña Ana, Sierra, Otero and Luna Counties.

TYPE OF SERVICE

The reduction in energy use during Company-called PTRP events, relative to each Customer's baseline energy use, as determined by the Company, will be multiplied by the PTRP Credit rate to calculate the incentive credit presented on the monthly bill. Energy usage for all hours will be charged at the applicable Rate No. 01 rate.

MONTHLY RATES

PTRP Credit Rate, per kWh	See EPE's On-Peak Monthly Energy Payment Rate, filed pursuant to §17.9.570.11(B)(1)(a) NMAC, Rate No. 16 Purchased Power Service.

To receive the PTRP Credit, the Customer must reduce energy use during a PTRP Event. Such event will be a four-consecutive-hour window between the hours of 3:00 PM to 7:00 PM. Events will not be called on holidays. Holidays are New Year's Day on January 1; Memorial Day, the last Monday in May; Independence Day on July 4; Labor Day, the first Monday in September; Thanksgiving Day, the fourth Thursday in November; and Christmas Day on December 25. If a holiday falls on a Saturday, the preceding Friday will be designated the holiday. If a holiday falls on a Sunday, the following Monday will be designated the holiday.

EL PASO ELECTRIC COMPANY

ORIGINAL RATE NO. 52

PEAK TIME REBATE PILOT

MONTHLY MINIMUM CHARGE

The PTRP Credit presented on the monthly bill shall be limited so that the Monthly Minimum Charge provision of Schedule No. 01 Residential Service Rate is followed.

TERMS AND CONDITIONS

Service supplied under this rate schedule is subject to the Company's Rules and Regulations on file with the New Mexico Public Regulation Commission and available for inspection at Company offices.

The Company initiates PTRP events with an event notification to participating Customers the day prior to the PTRP event. Participating Customers must choose at least one method for receipt of notification: email, text, or another available option. The Company will not call PTRP events for more than two consecutive days.

The Customer may unsubscribe from the PTRP event notifications at any time after the PTRP Season. If the Customer unsubscribes, they will receive credit only for those events for which they are enrolled and receive notifications.

PRORATION ADJUSTMENTS

Charges for service supplied under this rate schedule are subject to proration adjustments.

Operating earnings: Income from product (goods and services), excludes corporate (M&A, financing, layoffs), and unusual items
As Reported earnings: Income from continuing operations, also known GAAP (Generally Accepted Accounting Principles) and As Reported
Bottom up estimate: Capital IQ consensus estimate for specific issue, building from the bottom up to the index level estimate

Actual earnings are bottom up

Please note the disclaimer, which refers to the entire file's content:
Please note that the statistical data is based on publicly available information, most of which is available in S&P products such as Capital IQ, Compustat Research Insight and S&P Index Alert. Analysis and projections are my own, and may differ from others within S&P/S&P Global. Nothing presented is intended to, or should be interpreted as, a buy/sell/hold recommendation.
My notes vary in topics, but are market related. The intent is to quickly inform. The assumption is that you don't need a basic education, editorial or sales pitch, just specific facts and maybe some observations. If the information does not suit your needs, please e-mail me and I will take you off the list. Unless otherwise noted all data is for public dissemination, and may not be used for commercial purposes. Finally, any incoming correspondence from you will be considered confidential unless you specify otherwise (as will your email address, to the best of my ability).

Consumer Price Index for All Urban Consumers (CPI-U)
Original Data Value

Series Id: CUSR0000SA0
Seasonally Adjusted
Series Title: All items in U.S. city average, all urban consumers,
Area: U.S. city average
Item: All items
Base Period: 1982-84=100
Years: 2015 to 2025

Series ID	Year	Period	Value	Y-o-Y Increase	
CUSR0000SA0	2015	M01	234.747		Jan-15
CUSR0000SA0	2015	M02	235.342		Feb-15
