

Energy Saving Tips:

- Set your thermostat at 78°F or higher - every degree of extra cooling will increase energy usage six to eight percent
 - Raise your thermostat to 80°F or higher if leaving for more than four hours
- Limit use of high consumption appliances between the hours of 4 to 8 p.m. (cooking, laundering, and dishwashing)
- Close interior blinds, drapes, or shades to block the sun and heat during warm weather
- Use ceiling fans and portable fans to circulate the cooled air
- Shade outside air conditioning units, or condensers
- Consider using a clothesline instead of a clothes dryer
